Combining all the advantages of an Inside and Outside Moulder, together with several improvements not found on any other. Instantaneous locking and unlocking of side spindles and top arbor boxes, with micrometer adjustment of top arbor.

It has the most powerful feed ever placed on a moulder. Superior to any moulding machine yet produced.

Write for a pamphlet. Our nearest salesroom will gladly furnish you with any information desired.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

CADILLAC

CELEBRATED FOR HIGH STANDARD OF QUALITY AND MILL WORK

Mitchells - Make

Rockhard, Maple and Beech FLOORING

The Northern part of the lower peninsula of Michigan is noted for the finest Maple and Beech timber that grows.

We own enough of this timber to keep our flooring factory running ten to twelve years.

We do our own logging, sawing and handling, and are so organized that we control every step of the manufacturing from the stump to finished product.

All of our lumber is first air dried and then kiln dried.

All of our 13-16 inch Flooring is thoroly kiln dried, end matched, machine scraped and polished, bored and bundled.

Our grades are of a high standard, and under no condition do we mix them to enable us to meet competition and low prices.

Please keep in mind also that especially is it true of Hardwood Flooring that

Quality is Remembered after Price is Forgotten

PLEASE SEND US YOUR INQUIRIES

General Electric Company**Motor Drive
for
Saw Mills**

INDUCTION MOTOR CONNECTED TO TRIMMER

With the system of individual motor drive each piece of saw mill machinery is connected direct with an electric motor of just the right size to do the work.

The greatest value of motor drive is the saving of power, because it does away with shafting, belting and loss of energy in transmission. You pay only for the power actually used. It is not necessary to start the entire plant to run one machine.

Economy in production interests every manufacturer. Motor drive guarantees a saving, better working facilities and increased production.

The story is better told in booklet No. 47 S—write for it.

Michigan Hardwood Manufacturers' Association.

The first annual meeting of this association will be held at Cadillac, Mich., on Wednesday, July 31. This is a very important meeting and a full attendance of the hardwood manufacturers of Michigan is solicited.

WM. H. WHITE, President.
BRUCE ODELL, Secretary.

General Market Conditions.

The general market conditions of the country are somewhat uncertain and hard to analyze. Buying is in very fair volume all over the country, and stocks are remarkably short. At the same time there is a feeling that trade is soon going to encounter a considerable falling off. There are no apparent grounds for this sentiment, but still it prevails.

The most notable feature of the last month is the slowness of collections. Practically everyone is complaining about slow payments. The banks have ample funds for all legitimate purposes, and are loaning them with reasonable freedom, at comparatively moderate rates. There is this in the situation that it would be well for the conservative man to think about: The monthly building reports issued by one or two trade journals would carry the conviction that building operations are progressing in practically the same volume that they did a year ago. One paper's report, covering the operations of June, indicates a falling off of only about one-half per cent in the total of a year ago. Several of the worthy contemporaries of the HARDWOOD RECORD insist that these figures are faulty and that business in building operations is in excess of a year ago. It is true that they are holding up very well, but when they are analyzed it will be found that the consumption of lumber in structural work is based on business placed from six months to a year ago. There certainly is not in sight nearly as much building as a year ago, and it is quite possible that the present number of new structures under contract will fall off more and more as the year progresses. It is undeniable that the high prices prevailing for not only lumber but all other building materials, and for labor, have put speculative building practically out of existence for some time to come. A conservative prophecy would be that the building

trade can bank on a fair volume of lumber consumption in structural work for some months, and then witness a material decline.

As an evidence of this fact there is scarcely a building and loan association in Chicago that is not loaded down with money which it is unable to loan for new structures. The one hundred and sixty-seven cooperative concerns of this kind in Cook county have assets of over \$13,000,000 on hand and no one seems to want to borrow it. As the RECORD goes to press there is a meeting of building and loan associations of the United States taking place, comprising more than six hundred delegates, and the chief object of the meeting is to devise means for loaning building association money with safety.

The HARDWOOD RECORD is not a pessimistic journal and at all times attempts to give a conservative reflection of conditions, leaning toward the optimistic. It is well-known that the yellow pine market is far from being in good shape and prices on other building woods have eased off materially. Hardwoods of all classes today and for some time to come will be in far better condition than any of the building woods, owing to the fact that stocks are so remarkably short, and that another period of car famine is close at hand. The hardwood trade will probably work through the season in fair volume at about current prices, owing to these conditions, but neither seller nor buyer should look for fancy prices or boom demand for some time to come.

The Never-Ending Inspection Question.

The HARDWOOD RECORD is in receipt of the following pertinent, forceful and convincing letter from E. W. McCullough, secretary of the National Wagon Manufacturers' Association of the United States of America:

As an interested reader of your popular journal, I have noted with more than passing interest the discussion that has gone on from time to time regarding grading and inspection rules, and have observed the conflict there seems to be between the rules of the several hardwood associations, and it occurred to me that this controversy might very largely be avoided if instead of the seller taking this whole matter into his own hands and laying down his own rules—some of them rather arbitrary—he would discuss the question with the consumer and agree with him on a basis that would be mutually satisfactory.

I find concerning our own line, the manufacture of which consumes a vast amount of hardwood lumber, that the rules published by the several associations are not any of them complete, nor are they satisfactory to the consumer, and while he may submit to them under present conditions, which are abnormal, you will find it to be the case, when the present demand ceases to be what it is now, and the new sawmill and other machinery go into operation so that the supply is at least equal to the demand, that the rules these various associations have been attempting to establish will amount to little where they conflict with what is right and proper in the requirements of the consumer, as competition will render them inoperative.

I am a firm believer in associations for the betterment of conditions, but believe their work must be done on the broadest possible basis, consulting and conferring with the consumer as to their mutual interests, and, by concessions where necessary, arrive at a mutually satisfactory understanding. Then the seller, in disposing of his material under such rules, knows exactly what he must furnish, and the buyer, because of his agreeing to the rules, can expect no more than they give him; but if either of the parties in interest insist on exacting from the other more than they should have, or ignore the requirements of the other, the situation on this inspection question remains just as unsettled as it has ever been, notwithstanding these rules which the producers are attempting to put in force and which it may be possible for them to enforce under present conditions.

It should also be remembered that the greater portion of rough lumber and dimension stock is the raw material for some other manufacturer and that any attempt to enforce arbitrary conditions

will, in many cases, cause such manufacturers to produce their own raw materials.

We have found in our own experience that it has paid in most cases to confer with those who are marketing our product to the consumer, and in the instance of the "uniform warranty" on farm wagons this document, that is of great value to the manufacturer and selling interests as well, was the outcome of this co-operation.

It is not because our fraternity have had any difficulty with the grading and inspection rules that I write you this, as I know of no cases where we have been compelled to submit to them, and do not expect there will be any, but I believe it would be a source of satisfaction and profit if such rules might be made mutually agreeable to both buyer and seller, for I believe and know that such a thing is possible, for we have proven it.

Mr. McCullough is a student of lumber which eventually enters into wagon construction and is also an authority on association affairs, and his communication is well worth the consideration of lumber associations. There is no one organization, no one group of individuals, no one newspaper that can force all its opinions or all its methods of handling inspection matters upon the totality of the manufacturing, jobbing and wholesale consuming trade of the country. In striving to accomplish ultimate and sweeping success in securing universal inspection and the universal application of it, there are many other parties in interest than the one primarily promulgating the rules to be considered. The manufacturer must needs be satisfied with the grades of lumber, to the end that his logs can be reduced thereto without an excessive woods and sawmill loss; the jobber must buy lumber of such grades and at such a price that he can secure a generous margin to cover sales expenses and profit; the consumer must be satisfied with specific grades that will enable him to cut his various sizes of dimension with a moderate amount of waste. This applies to the furniture maker as well as to the wagon manufacturer.

Until such time, therefore, as the requirements of all parties in interest can be taken into consideration in the formation of inspection rules and until such time as all these parties, after agreeing on a specific set of rules, can be taken into consideration in the interpretation and practical application of them—must actual universal inspection remain a chimerical proposition.

Problems of Veneer Making.

A veteran veneer manufacturer once observed to the writer that if a man had any gambling instincts it was not necessary for him to have recourse to the stock market, the poker game or the ponies, because he could get all the "action" he wanted by engaging in the veneer industry. What the man meant was that there is an unvarying uncertainty as to the ultimate product of every veneer log that he handles. There is no way of determining the character of the interior of a log save by cutting it up. The log that gives every indication of developing into a lot of handsome veneers may turn out only plain wood or even worthless stock, while the most ordinary looking log will often surprise the owner by developing a quantity of remarkably fine stock.

Primarily, veneers take the best logs from the best trees of the choicest forests in the land. This means raw material at high cost as compared with the logs used in everyday lumber production. As a great commercial pursuit veneer making is in its infancy. People who have gone into the business have analyzed the proposition with as much care as was possible with the data at hand. Specious estimates of cost and resultant product have been made to amateurs in the trade by sundry persons interested in the sale of veneer manufacturing machinery, and, generally speaking, they have often been misled. It was easy to believe that a thousand foot log scale would produce 20,000 feet of one-twentieth inch veneers, but experience shows that this estimate is practically double the actual quantity that is delivered from the tail end of the factory. These prospective purchasers have been told that in rotary cutting quarter inch stock they could count on four times the inch measure of lumber as produced from the sawmill. Of course they found this estimate faulty also and have awakened to discover that rotary cut quarter inch stock shows on an average only about two and seven-twelfths times as much thin lumber as inch, under ordinary sawing.

Again, with the uncertainty of what the log will produce the veneer maker is up against an almost impossible problem in determining, in advance, cost. He constantly hopes against hope that his

logs will turn out good, and makes prices in accordance therewith, with the result that he just as often makes veneers at a loss as he does at a profit. It would seem logical, therefore, that the way to make prices on veneers would be to add a very liberal percentage for the waste incident to logs that do not turn out well, in addition to manufacturing waste, and make this a base of cost rather than a lower one based on the product of logs if all were good.

In short, when the character of veneers and veneer work is considered, the price of this material is very much below current lumber values. The sooner veneer makers—large and small—awake to the situation, the sooner will the business be put on a profitable basis. The veneer man need not fear that his customers will not pay a just price, for every man who has entered into the utilization of veneers knows he is making so much higher grade product by their aid that he can afford to pay more money for this class of stock.

The Dead-Head List.

Through business ethics, business courtesy, deficiency in good business principles, or perhaps through all of these causes, the average newspaper and especially the trade newspaper, has on its subscription list an unnecessarily large number of addresses following which is "D. H." This legend means that the paper is furnished without cost. The average publisher's deadhead roster is very long on what he pleases to term his "prospective advertising list." If he sees the advertisement of a concern in any of his contemporaries the name immediately goes on his list. The result of this prodigality is that the trade press is fast coming into disrepute with the postoffice authorities by reason of its failure to conform to official regulations. The department is entirely justified in its criticism and the sooner the stringent rules enforced by the superintendent of second-class mail matter at the Chicago postoffice become universal the better it will be for the trade press and for the revenues of the department.

The HARDWOOD RECORD recently had a letter in response to a circular soliciting subscriptions, from a small institution in Detroit which manufactures carriage and automobile bodies, saying "We receive nearly all the lumber papers free of charge, as their publishers seem to feel it very important that we should receive their papers." The RECORD has a very large list of contributors and news and market reporters; it has a fairly generous exchange list; it also sends free copies of the publication to advertisers whose sole interest in the paper is to check their advertisements, but including this number of free copies it has less than 450 papers going through the mails that are not paid for.

The publishers are thorough believers in the fact that there is no advertising value in dead-head circulation; that the man who has not interest enough to pay the moderate subscription price for a lumber paper has not interest enough to take it out of its wrapper and read it, and that no permanent good comes from the forced circulation brought about through "a hard-boiled egg with every drink" idea, dollar watches or any other scheme that induces a temporary circulation of people who by no possible chance can have any personal interest in the publication.

The HARDWOOD RECORD has had a steady and prosperous growth in circulation since January, 1905, when it was taken over by the present publishers. Its circulation has doubled and doubled again, and the percentage of cancellations of subscriptions is so small that it does not enter into the calculations of the business office. The paper can honestly lay claim to having the largest circulation among manufacturers, jobbers and consumers of hardwoods, dimension stock and veneers of not only any of its contemporaries but probably all of them combined.

Another source of satisfaction is the fact that the average advertiser frequently takes occasion to make enthusiastic reports over the results that he is receiving through his announcements. In advertising patronage the publication is constantly gaining new recruits and the percentage of cancellations is so small as not to be worth consideration. Without undue self-laudation the publishers are very proud of the fact that the RECORD's clientage approves and is willing to support a live, up-to-date, conservative, honestly and intelligently conducted, semi-technical and semi-news hardwood publication.

The Old Cross-Cut Saw.

BY LUELLA WILSON SMITH.

On a January morning when the air showed signs of thaw,
Dad would go out to the woodshed and take down the cross-cut saw;
Then we'd hear him filing, scraping, making an unearthly noise,
And we knew that meant employment for a couple of lively boys.
Quick we'd have alarming symptoms—on the lounge we both would crawl,—
Dick would have a jumping toothache—with the stomachache I'd bawl;

And we'd lay there moaning, groaning—sickest boys you ever saw—
Just because we heard Dad filing that old creaking cross-cut saw.
'Twas no use—our Dad had been a scheming lad himself, you know,
And those little subterfuges with our parent wouldn't go.
So with boots all freshly tallowed, "warmuses" all buttoned tight,
Pockets filled with spicy "rambos," just to coax our appetite,

Slow we trudged along behind him—saddest boys you ever saw—
Through the pasture to the wood-lot in the January thaw.
When we reached the scene of labor followed by our faithful dog,
There we saw stretched out before us our big "stunt"—a hick'ry log.
How we listened for the farm-bell, how we felt our stomachs gnaw;
As we stood there pushing, pulling that old creaking cross-cut saw!

When the task was half completed, Dick, the younger brother, cried:
"We could get along lots faster if you didn't have to ride."
"I ain't ridin'!" "Yes you are, too." "You're another, now—so there!"
"Jus' come on you little 'fraid-cat." "Guess I always take a dare!"
And we fought it out together—maddest boys you ever saw—
On that wet and snowy hillside in the January thaw.

How we scrapped! 'Twas one confusing mass of legs and fists and arms,
Dog beside us barking loudly—he was used to war's alarms—
Down the hill we rolled together, where the underbrush, grown thick,
Saved us from a bath, untimely, in the waters of Bean Creek;
Then from hill-top came the summons in a voice we understood,
"Now you boys just quit that fighting and get back to sawing wood!"

Years have passed; long separated, burdened with affairs of men,
We no longer push the cross-cut—now our tool's the faithful pen;
For my sturdy little brother—older grown and more sedate,
In a far-off western city wrestles with affairs of state;
And I sit here in the twilight by the grate-fire's cheery glow,
Musing o'er the days of boyhood in the dear old long ago;

As I watch the burning hick'ry, hear its quick, familiar snap,
I can hear the old saw's music, I can smell the fragrant sap;
Work that once seemed hard and dreary, looked at through the mists of years
Beside harder tasks that followed, recreation now appears;
We have found in life's hard struggle—he succeeds who can make good,
And whate'er our occupation—we must keep on "sawing wood."

AMERICAN FOREST TREES.

FIFTY-SEVENTH PAPER.

Tupelo.

Nyssa aquatica—Linn.

The range of growth of this tree is from the coast region of southern Virginia into northern Florida; through the Gulf states to the Nueces river in Texas; northward through the states of Arkansas, Tennessee and Kentucky, through southern Missouri and Illinois, along the Wabash river.

It is commonly known as large tupelo in Alabama, Louisiana and Texas; as tupelo gum in Georgia, Alabama, Mississippi and Louisiana; as sour gum in Arkansas and Missouri; as swamp tupelo in South Carolina and Louisiana; as cotton gum in North and South Carolina and Florida; as wild olivetree in Louisiana; as olivetree in Mississippi; as olivier à grandes feuilles in Louisiana; as tupelo in North and South Carolina and Missouri; in the European markets it is called bay-poplar; and the name Circassian walnut is often applied to it.

The leaves of tupelo are ovate-oblong, acute and long-pointed at the apex, usually entire, but sometimes remotely and irregularly toothed; young leaves are white and downy, but at maturity they are firm and bright green on top, pale on the lower surface; from five to seven inches long, and two to four wide; midrib broad and thick, veins prominent.

The flowers appear in March and April on long, pubescent peduncles; the staminate grow in dense clusters, the pistillate solitary. The purple fruit ripens in the early fall on a slender stalk three to four inches long; it is about an inch long, with thick skin and acid flesh; the stone is brown or nearly white.

Tupelo bark is about a quarter of an inch in thickness, dark brown and furrowed lengthwise, the surface rough. The tree is large and stately, with an unusually broad base, an abundance of roots, showing somewhat above the ground, and a fine pyramidal crown. The trunk is often three to four feet in diameter, and the tree from eighty to a hundred feet high. It reaches its maximum development in the cypress swamps of western Louisiana and eastern Texas. Tupelo is one of the characteristic trees of the southern marshes, where it grows intermingled with swamp white oak, red gum and cypress. It often thrives in regions covered with two to three feet of water the year round. The large straight trunks are usually free from defects, a fact which scientists attribute to the ancient race of plants from which it

springs; during certain geological eras the tree was scattered over the entire continent of North America, doubtless as far north as the Arctic Circle.

The wood of tupelo is nearly white, slightly tinged with yellow, however, and the heartwood and sapwood present practically the same appearance, although the latter is slightly more creamy; the percentage of sap-

vantage. Tupelo seldom grows in pure stands which are large enough to warrant its being logged as a separate proposition; since it is usually mingled with cypress, it ordinarily is logged with that wood. It is now considered practical to cut tupelo logs without previous girdling, piling them on the banks of streams until they are sufficiently dried out to float. Sap rot during the drying-out period can be very much retarded by coating the ends of fresh logs immediately after they are cut with hot coal tar creosote, and piling them in single layers.

Tupelo is a wood which requires extraordinary care in seasoning, since the large quantity of water in green wood and its peculiar structure render it extremely liable to warp and twist. The less delay there is in piling the better, and piles should be constructed with only even lengths in each, while the cross strips should be of some other wood, narrow as possible, and directly under each other in the pile. The piles should not be more than four and a half feet in width, and three or four feet apart; their pitch should be fully twenty inches to a sixteen-foot pile; all piles to be laid so that the prevailing wind will blow parallel to the cross-strips.

Although many have become discouraged by their experiments with tupelo, as manufacturers study it more closely they are finding that it can be air and kiln dried with the greatest satisfaction. It is destined to become popular and already the uses to which it is put are many and varied. For all sorts of manufactured articles in which certain grades of poplar are employed, tupelo may be used with equal satisfaction, and European markets are buying it largely for furniture. The wood is best suited for interior use, owing to the liability of sapwood to decay. For instance, flooring is now being made from it, which is claimed to be superior to cypress for this purpose, as the latter often "slivers," while tupelo becomes harder and smoother. Such flooring is well adapted for depots, factories or

TYPICAL GROWTH TUPELO SHOWING GIRDLING, GULF COAST.

wood is large. The wood is light and soft, and takes a fine, smooth finish; it is very close-grained and difficult to split. A cubic foot of seasoned wood weighs about thirty-two pounds; the green wood is too heavy to float. Sapwood is very susceptible to decay, especially when in contact with the ground, while heartwood shows considerable resistance to such conditions. The timber can be treated with preservatives to great ad-

warehouses.

Tupelo is becoming very popular with manufacturers of molding, because of the even quality of its grain, the ease with which it is worked, and the highly polished surface it presents when finished. Large quantities of the wood, particularly the low grades, are used in the manufacture of wagon and other box boards and it holds nails readily, without liability to split where they are driven.

CHAS. A. BIGELOW
BAY CITY, MICH.

It is being used extensively for furniture interior finish, laths and pump stock, in addition to the purposes named, and certain southern railroads have experimented with cross-ties of tupelo, which up to date are giving satisfaction.

Dr. Herman von Schrenck of St. Louis, probably the best authority on tupelo in this country, kindly furnished the **HARDWOOD RECORD** with the accompanying illustrations as well as much valuable information concerning the wood. In writing of its great possibilities he says:

"In summing up one will find that tupelo is a wood well worthy of consideration, although it has only been manufactured for a brief number of years. Its value, due to its inherent qualities, has already become well established. While it partakes in general of the characteristics of poplar, it nevertheless has qualities distinctly different from this wood. Most users are still unfamiliar with its nature, but they are rapidly coming to realize that in tupelo a distinct addition to the classes of lumber available for flooring and finish work in particular has been found. The introduction of a new wood is always attended with more or less difficulty, and that tupelo has found favor in the eyes of consumers as rapidly as it has would indicate that future development in the manufacture of this lumber will probably be

PRINT OF TUPELO LEAF.

very extensive; new uses will be found for it as it becomes better known, and it is safe to predict that ere long it will be one of the staple products of the southern lumber markets."

Builders of Lumber History.

NUMBER XLIX.

Charles Albert Bigelow.

(See Portrait Supplement.)

Notwithstanding the fact that there are only ninety per cent of the sawmills which were once running full blast along the Saginaw river in operation today and that owners have been continually dismantling them for some time, saying there is no more money in lumbering in that country, ten were successfully operated last year manufacturing hardwood lumber entirely or in part. The year was a satisfactory one all around, both in point of production and in trade conditions. Moreover the hardwood output was more than 6,000,000 feet in excess of what it was in 1905.

To enter a business which older and more experienced men have branded as "played out" and the future of which is at least conjectural to the most optimistic requires some courage and more than ordinary foresight. Embued with the idea that there were still great possibilities in lumbering along the Saginaw, and disregarding arguments and even apparent evidence to the contrary, Charles A. Bigelow commenced operations at Bay City, Mich., only a few years ago, with the result that today he is at the head of two of the largest and most prosperous lumber institutions in the entire state.

Mr. Bigelow was born in Redford, Wayne county, Mich., on July 18, 1866. His father also was a native of that state, while his

mother came of good old Vermont families. After receiving an excellent education in the schools of Detroit, he entered the employ of his father, who conducted a retail lumber business there between the years 1868 and 1895. He remained in the service of the elder Bigelow for eleven years, or until 1894, when he became traveling salesman for the Michelson-Hanson Lumber Company of Lewiston, continuing in this capacity until June, 1901. At that time The Kneeland-Bigelow Company was organized by Mr. Bigelow and David M. Kneeland, manager of Michelson-Hanson Lumber Company. Mr. Kneeland was made president of the new concern, which office he holds at the present time; Mr. Bigelow became secretary-treasurer and general manager, and still continues in that capacity; Herman Lundene is vice president and has charge of the company's woods operations. The mill is of the single band type and is kept running continuously day and night.

Two years ago The Kneeland-Bigelow Company purchased a controlling interest in what is now the Kneeland, Buell & Bigelow Company by taking over the entire Bay City property of the Wylie & Buell Lumber Company—sawmill, lumber on hand, etc., and organizing the new concern. Mr. Kneeland is president, Mr. Bigelow secretary-treasurer and manager, and Frank Buell vice president. Mr. Buell owned 80,000,000 feet of timber which went into the new enterprise to be

lumbered and cut at the mill; the latter is of the double band type, with a capacity of 100,000 feet every ten hours. The two corporations are entirely distinct; each has from ten to twelve years' timber supply ahead of it and each is manufacturing slightly in excess of 20,000,000 feet of hemlock and hardwoods annually; their output for 1906 was perhaps larger than that of any other concern in the state of Michigan. The company expects to manufacture about 15,000,000 feet of maple and 3,000,000 feet of basswood this year, all of which is contracted for.

Thirty years ago very little value was attached to anything but oak, and the entire state was literally skinned of the wood; after it pine lands were devastated, while hundreds of millions of feet of excellent hardwood timber were burned up in clearing off the land and because it then had no commercial value. Today, however, hardwood stumpage in the territory between the Saginaw river and the Straits of Mackinac is in comparatively few hands, and there has been a marvelous appreciation in values during even the last few years.

Mr. Bigelow was married in October, 1887, to Minnie A. Durkee, of Birmingham, Mich. In politics he is a Republican, although he takes no very prominent part in campaign work. He is active in association affairs, and was one of the charter members of the Michigan Hardwood Manufacturers' Association, of which organization he is now a director.

Not only is Mr. Bigelow an excellent salesman, popular with his immediate trade and with the lumber manufacturing element of the entire state, but he is regarded as a close student of timber and lumber values, and one of the best scientific operators in the hardwood field. Personally he is a man of exemplary habits, clean thought and high ideas, which, combined with great energy and capacity for hard work and above all penetration and logical foresight, have made him one of the very successful business men of the north country.

Probable Settlement of Ross Lumber Company's Embarrassment.

The creditors' committee of the Ross Lumber Company of Jamestown and New York, N. Y., which recently got into financial difficulties, has recommended a settlement with the creditors on the basis of 65 cents on the dollar. The committee, which consists of Arthur C. Wade, A. T. Peel, Harry S. Dewey, F. J. Johnston, J. D. Moir and T. A. Updegraff, has gone over the affairs of the company very carefully and found good assets of \$114,000 and assets, more or less doubtful, of upwards of \$50,000, while the liabilities are a little in excess of \$126,000. The committee recommends that a committee of five be elected by the creditors to become directors of the company and take over the management of the business, realizing the most it can from the assets and paying dividends to creditors as often as possible, until they have been paid 65 cents on the dollar. This deal entails the turning over of the stock of the company to the committee with the understanding that it is to be retransferred to the original stockholders after the above named sum is paid. It is said that the majority of the large stockholders have agreed to this arrangement.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

A Sensible Letter.

The following interesting communication was received from Prof. E. E. Bogue, in charge of the forestry department at Michigan Agricultural College—a man who is not only accomplishing much in training young men for future usefulness in the lumber world, but for the cause of practical forestry in all its branches:

AGRICULTURAL COLLEGE, MICH., June 6. Editor HARDWOOD RECORD: I wish to thank you for your willingness to receive a suggestion from me. The thought comes to me now that you could perhaps demonstrate to your readers who have large lumber interests that, for their continued prosperity and the prosperity of those who are to succeed them, attention must be given to a future crop of timber. A few lumber companies have seen this and have taken steps toward a continuous supply, but most of them are skinning the land of its virgin crop and then selling it for what they can get or letting it go for taxes. They say they are in business for themselves and not for future generations. They seem to expect that all the next generation will have to do is to spend the money they are making out of the virgin stand and will not need to run saw mills and build freight cars.

Is this not true and is it not at the same time a very shortsighted policy? With the present dearth of freight cars and steadily advancing price of timber of all kinds for all purposes it seems to me that the American lumberman is a mighty stupid fellow that he does not invest some of the shekels he gathers in a future supply of timber. A small fraction of the value of a virgin crop will set another and better growing, and a small annuity will protect it and keep it growing. There is no need for experimental planting in the great majority of cases. Nature through unnumbered thousands of years has demonstrated the kinds of trees best suited to different soils and locations. The species that are likely to prove profitable for lumber are comparatively few, but where they grow naturally will develop with surprising rapidity.

My suggestion has now lengthened far beyond the limits I expected, so will stop by thanking you again for the opportunity of saying a word.

E. E. BOGUE.

What He Wants to Know.

The following humorous communication was recently received in response to a circular letter soliciting suggestions in regard to improving and broadening the scope of the HARDWOOD RECORD:

BLUE MOUNTAIN, MISS., May 30. Editor HARDWOOD RECORD: In reply to yours of the 27th asking for suggestions in regard to broadening the scope of your publication, will say what we of Mississippi need most is a few pages devoted to forecasts of the future. Tell us if the market is really going to the bad. Will it ever quit raining? While the reports from the North and East would lead one to think that the demand was easing off on one side, then listen to the millman as he has just come on from the bottom, saying that he

is losing money every day. We as a middleman are wanting advice as to whether it will be best to go on piling up what lumber we can get, to stick rot, flood, black and let the bugs feed upon, while we are waiting and begging for a market that will bring us out with a little profit; or would it be best to invest our accumulated wealth in cotton futures? This is all we want to know.

The past we want to forget; for the present, it is raining; the future—that is what we want to know about; something more than the weather man can tell; something more than the lady with the dark hair and painted cheeks can tell us when she reads our hand. She can tell us how many wives and babies we are going to have, some of which is true, and some we could not dispute, as we have spent twenty years of our life through the tangled wildwoods from Cobacok, Ont., to Vardiman, Miss., in pursuit of the ever alluring hardwood.

If you can open up a department in your paper devoted strictly to truths on this matter I am sure it will be appreciated by one, if not by millions.

Thanking you in advance for same. —

Wants Wood for Butter Packages.

ROTTERDAM, HOLLAND, July 5. Editor HARDWOOD RECORD: We beg herewith to inform you that we are doing business as timber agents with different ports of your country and that we are at present investigating whether we can find sawn chestnut of prime quality, of a white color, and without any smell, for making margarine and butter packages. We should like to know whether you can mention other woods which might be suitable for the purpose mentioned. You will no doubt answer that cottonwood very likely will meet our requirements, and we can say that this wood is regularly imported here, but that on account of some technical difficulties our buyers should like to have a new kind which will meet the requirements and which should not be as high in price as cottonwood at present. We are also looking for absolutely white maple.

We should like to know whether you issue any statistics and reports concerning the quantity of timber, the difference in quality between the different districts, the different kinds of wood, that grow in the different states, etc., and if such statistics and reports are issued by you, you would very much oblige us if you would forward us a copy of same. Kindly mention in your answer what the disbursements were and we will be very much pleased to remit you the amount in question. Yours respectfully,

R. & G.

Anyone wishing the address of this importer, or able to give pointers on material for butter packages, should address this office. We have replied that clear chestnut is obtainable in this country in considerable quantity; it is not white in color and it has some odor. From the fact that it contains quite a large percentage of tannic acid, it is not suitable for the manufacture of butter and oleo-margarine packages. I know of no material other than white ash that is employed for this purpose in this country. Dairymen have been searching for years for some substitute but have not been able to find it. The price of white ash has gone very high, but I can suggest no other wood to take its place for this use.

I can supply you with a very comprehensive list of the manufacturers of any kind of

wood produced in this country if you will specify what you care to have covered. In making up this list I can specify the sections which produce the highest quality of timber of a given kind.

Absolutely white maple, you must know, is the clear sap of maple growth, and manufacturers succeed in drying it absolutely white only by sawing it in the winter season and end-sticking it under sheds. The section that produces the highest type of white maple in this country is the northern portion of the lower peninsula of Michigan.—EDITOR.

Differs With Correspondent.

LIVERPOOL, ENGLAND, July 4.—Editor HARDWOOD RECORD: As readers of your paper we have been intending for some time to write you with reference to your Liverpool reports because we cannot understand same. In the paper of June 25 part of your market letter reads: "Hickory is stronger than it has been for some time"; also "Poplar boards are somewhat weaker, the heavy import on consignment having had its usual effect." We have been in the business for many, many years and the following is our opinion of same: There has been a very large import of hickory and the market is very weak for this wood, weaker than it has been for a long time; the market for poplar is very strong, stronger than it has been for years, shippers' prices being almost exorbitant, and the market for this at present is very bare. We merely mention this because we have seen some of your reports which are so absolutely at variance with our own ideas that we think it only right to call your attention to same. We could point several other times when the reports have just been similar to above, and we have been wondering whether they have been put in as a joke or what.

Not having a representative on the ground, the HARDWOOD RECORD relies upon the work of a correspondent in Liverpool and upon Challoner's Wood Circular for market reports. The former is in touch with one of the high-class concerns of that city, and we know faithfully reflects the situation as he finds it. However, criticisms or opinions of the nature above quoted are welcome at any time and will be given due consideration.

—EDITOR.

Good Advice.

HUNTINGBERG, IND., May 29.—Editor HARDWOOD RECORD: As far as suggestions or criticisms of the RECORD are concerned, I do not know of anything I could suggest to you either one way or the other; the fact is, I hardly know what you expect me to cover in a letter of this sort. The facts are that I don't suppose any of us read the lumber journals with much patience or care. The most of us are taking from six to eight lumber newspapers, some of them very large, and in fact many of them contain more material than we have time or are inclined to read during the week. We perhaps miss much that we should read in some of the journals that come into our house or office, and when we do this sort of acknowledgment of the papers one is scarcely able to make any criticisms. There was a time when we were only taking on the average about two lumber newspapers a week, and we read them thoroughly and read them so that we got something out of them.

Now, I believe that this is one of the most serious faults that exist today, and if we would take one or two good lumber journals and read them carefully we would get much more out of

them than we would from a whole bunch of papers, yet we do the latter thing all the time.
J. V. STIMSON.

Interested in Eucalyptus.

WEST CHESTER, PA., July 17.—Editor HARDWOOD RECORD: We are much interested in the article in your journal of July 10 about *Eucalyptus globulus*. We have some land in Florida that we think perhaps adapted to its growth; would like to try the experiment, and if you could advise us where we could secure seed and information about propagation, we would be very much obliged. HOOPES, BRO. & DARLINGTON, INC.

The Fancher Creek Nurseries at Fresno, Cal., and the Armstrong Nurseries at Ontario,

Cal., deal in the young trees and probably in seeds also, while Theodore Payne, 345 South Main street, Los Angeles, sells the seeds of all the standard varieties. As regards the fitness of your land for the planting of this tree you might write John P. Brown, editor Arboriculture, Connersville, Ind., who has made a study of it and has traveled all over the United States making experiments in growing various trees comparatively unknown as timber. He can tell you whether or not it would be practicable if anyone can.

—EDITOR.

Hardwood Articles from Sunken Timbers.

Formerly when heavy timber became water-logged and sank it was left at the bottom of the river to decay; but it has been discovered that logs are unharmed by long submersion in water. Sound timber of certain species does not deteriorate, even though it may have been under water for many years. The log-raising industry is extensive, and is particularly concerned with pine, owing to the fact that large rafts of these logs have been moved on the rivers in years past, many of which were lost and sank; however, there are many kinds of hardwoods represented in the "deadheads" which have been brought to the surface. These hardwood logs, although soggy and weighty, are put through certain drying and treating operations, which make them serviceable once more in woodworking lines.

Records indicate that millions of feet of water-soaked logs lie in various rivers, a large proportion of which are suitable for use if redeemed. In recent years lumbermen have undertaken to get some of the submerged timber, and have succeeded very well. They have chosen for their operations those rivers on which large rafts of logs have been floated for the past half century. It has been stated that the bottom of the Mississippi river is well sprinkled with good logs at lumbering points. Hoisting engines have been fitted up on floating rafts and with grappling devices the river bottoms have been dragged and the logs hauled to the surface by means of hooks. They are bolstered up with floating contrivances, and the accumulated moss, weeds, shells and mud are scraped off to lighten them as much as possible, after which they are transported to the point of drying. Upon arrival at the place where the logs are to be treated they are piled in order for seasoning in the sun, as in Fig. 1, the air being allowed to circulate around them freely. After about three weeks of exposure to air and sun the fiber gets comparatively dry. The heart of the timber may not be completely dried out until the timber is subjected to more strenuous treatment. In some cases, drying ovens or kilns are used.

After the timber is thus prepared it is

worked up into a variety of commercial articles. The long saturation to which the fiber of the wood has been exposed often serves to make the log firmer. Hence much of the water-logged stock is close-grained and suitable for use in the manufacture of special articles. Ordinarily the logs are reduced to convenient billets, as in Fig. 2, averaging about a foot square and 4 feet in length, or the sticks are made as in Fig. 3, about 5 inches square and 8 feet long.

House trimmings are often made from the

be produced from the lumber. The usual operation of turning down the lumber is followed. Fig. 4 is a drawing of one of the lathes arranged for special work. In this case balls are made. Fig. 5 is a type of box made from the once submerged material. This is an age of canned and boxed stuffs. Makers of tin cans and small boxes are constantly increasing the capacity of their plants in order to manufacture these receptacles in larger number. The fancy wood box will often sell the soap, the candy, the gum, or the article of merchandise which it contains. In fact, many of the wooden boxes are now made with a view to future use. Some are fitted with sewing outfits, so that when the candy is gone the work-box can be used. The log raisers manufacture many of these handy boxes from stock which was once hidden in the muddy bottom of a river or lake.

There are forms turned out, as in Fig. 7, for use in ornamental work in buildings. Likewise studs are made from this kind of lumber. Fig. 8 shows the plan of construction. The stud is turned to the form of a ball and then the flanged section is inserted and pinned or cemented as shown.

Fig. 9 shows one of the forms of buttons

redeemed lumber; also picture frames. Balls are manufactured with good results, as are tops, clothespins, small boxes, buttons, cabinets, etc. Woodenware of all kinds can

made from submerged wood. Of course these articles have to be thoroughly polished in order to fit them for sale. The polishing is done on emery wheels, followed with buffing

on cloth and velvet wheels. Hair wheels also come into play for this work. Then follows varnishing, shellacing, etc.

Parts of tools are also made from the wood. Fig. 10 shows a hardwood handle, and Fig. 11 a hammer head, capped with

rawhide. The firmness of much of the water-logged wood makes it suitable for this service. It can also be employed in fencing, and Fig. 12 illustrates a design made accordingly. Finally is shown the hardwood picture frame.

The Cross-Tie Problem.

Swelling the general cry of distress over the failing timber supply of the United States comes the plaint of the railroads that they are uncertain where to turn for a future supply of cross-ties. The opinion is expressed by experts who have studied this question particularly, that were there no other great consumers of forest products, at the present rate of demand for material of this kind, it would be a question of only a few years before the timber of the country would disappear before its growing insistence.

In 1905 the steam railroads of the United States purchased a total of 77,981,227 ties, of which a very large percentage was oak. In 1906 the steam and street railroads purchased a total of 102,834,042 ties. Of this great number 45,363,426, or nearly fifty per cent, were of oak; the southern pines furnished the next largest quantity, or 18,834,514; of cedar ties there were purchased 8,085,302; of Douglas fir, 7,248,562; of chestnut, 6,588,966; of cypress, 4,103,296. The remainder consisted of western, lodgepole and white pine, hemlock, tamarack, redwood and a few other kinds, small in comparison with the above figures. Of the total purchased in 1906, 77,493,994 were hewn, while 25,340,048 were sawn. It is estimated that one-fourth the total quantity of oak timber cut last year went into railroad ties.

The seriousness of the situation has resulted in prolonged experimenting with various wood-preserving methods, as it is fully realized that the life of each individual tie must be prolonged as far as possible. The chemical treatment of wood has been found advantageous in other lines of consumption, so that it is becoming increasingly popular with railroads, and nearly ten per cent of the total number of ties purchased in 1905 were given some sort of preservative treatment.

On account of the increasing difficulty in obtaining a supply of cross-ties and other timbers, and the rapidly advancing prices, the American Railway Association has assigned to its Tie Committee the work of studying existing conditions and presenting a report of their investigations and recommendations at its next meeting. The committee will hold a series of conferences and take up methods of preserving ties, the best materials for making a lasting product, and the value of metal and concrete for this purpose.

One of the large industries of Evansville, Ind., is its tie-preserving plant. From all parts of the Ohio and Mississippi valleys they are shipped and chemically treated at the rate of 3,000 a day. It is claimed that

this number of ties will lay a mile of track and that they will last for fifteen years. With the preservative process in use there timber heretofore unavailable is made highly desirable. For example, there is considerable red oak sapling growth in Indiana which has not been used owing to the fact that the timber was not thought fit for any of the uses which would cause it to be exposed to any considerable degree. It is hard and strong, but soon decays in the ground. Treated with chemicals, however, red oak ties will remain solid for fifteen years or more. The process employed is to place them in a retort and then draw out all the sap and tannic acid by a vacuum pressure. At the end of five hours the ties are filled with the preservative inside and out, and so permeated that when laid open with an axe they show black through and through. This particular plant has been in operation only a few months, and already has more standing orders than it can turn out in a year, so that it will be necessary to increase its capacity several times over. It is estimated that 10,000 lumber jacks are at work along Green river and its Kentucky tributaries cutting up timber for railroad ties. In the forest they bring from 25 cents to 50 cents each, but when treated will sell for two or three times this amount.

It is not generally known that trees killed by forest fires can be used for important purposes, the common opinion being that dead timber is synonymous with decayed wood. In the West, however, there are a number of large tracts of fire-killed trees which are just as sound as ever, thirty years after they were burned. It has been found that the strength of this timber is not impaired by fire, and that its durability is often increased; hence it is now being used to considerable extent for ties. As compared with green ties, the fire-killed ones have been found to show remarkably good results, in some cases lasting even longer; that their value is appreciated is shown by the fact that their selling price is often the same as for green stock, and that where they are well known there is a strong demand for them. The Forest Service is effecting desirable economy by disposing of this dead material for ties before it becomes useless from other reasons, thus conserving that much green timber for future supply.

The Southern Pacific railroad has imported 1,500,000 oak ties from Japan of late, to be used mainly on its California lines. Not only the fact that the supply of timber for this purpose is so limited has caused the road to seek ties from the Orient, but the shortage

of cars is so great that none are available for transporting them from the East, and furthermore the company's big steamships plying between San Francisco and Japan can carry the timber at very little expense. It is claimed the oak ties so far imported have cost the Southern Pacific, including duty, less than soft redwood ties of smaller dimensions. California electric lines have purchased 50,000 oak ties from Japan up to this time, and intend to order many more.

The Union Pacific has a tie preserving plant at Laramie, Wyo., and its tie drive from the Platte river, which arrived at Ft. Steele this spring, will amount to more than 1,200,000 railroad ties and bridge timbers, all of which will be treated in the Laramie plant.

Among the railways which have begun tree planting on a large scale, the Louisville & Nashville is foremost. Beginning in 1904 with ten medium-sized groves, it has increased its holdings until in 1905-6, 400,000 trees were planted. Along its right of way between Carmi, Ill., and St. Louis, Mo., the company is making a forestry test to determine the advisability of growing catalpa for ties. An extensive plantation has been made, and the development of the catalpa trees will be carefully watched. They are set about eighteen feet apart and will be given careful attention all along the line. This company has great faith in the advantages of catalpa for ties, since the wood is extremely lasting, holds spikes well, and is not decayed by corrosion where metal comes in contact with it. A catalpa tie will last twenty years, and it requires only that length of time to mature a tree for commercial use. The L. & N. also has a plantation near Pensacola, Fla., one at Newport, Ky., and several in southern Illinois. The Illinois Central, Big Four and Southern Pacific roads also have several of the kind.

The Santa Fe is entering upon the culture of eucalyptus for its own use on a large scale. It has bought a ranch containing 8,650 acres, of which 300 have already been planted with eucalyptus. It is the intention to plant 700 acres a year for ten years, with varieties suitable for railroad use. The company estimates that allowing ten per cent for failures, 500 trees will be obtained per acre, and that after fifteen to eighteen years, six to eight ties may be obtained from each tree. The Southern Pacific is said to be considering the matter of establishing a similar eucalyptus plantation.

The Canadian Pacific has commenced tree planting extensively along its western lines. Near the town of Wolsley, Assiniboia, it is the intention to conduct experiments in growing tamarack for ties, and at Medicine Hat, jack pine and tamarack will be planted.

The Pennsylvania system last year used 5,125,000 cross-ties. This year it is planting 550,000 trees in its prospective forests, bringing the total up to 2,250,000 now being grown on 1,000 acres. It has selected catalpa, locust and oak as most desirable. The

planting is done with great attention to scientific detail, under the direction of For-ester A. E. Sterling, formerly of the United States Forest Service. This road was the first to appoint such an officer. At Altoona, Pa., red oak trees are being set out; work is also carried on near Mt. Union and Hollidaysburg. The Pennsylvania road expends about \$4,000,000 annually for cross-ties, and by its forestry and wood-preservative operations, expects to materially reduce this big item.

The Mexican Central uses about 1,500,000 ties every year, and always has standing orders for them in various parts of the country. The company purchased a shipment of 40,000 hardwood cross-ties brought to Vera Cruz from Tasmania recently, and will make a thorough test of them. It has just placed a requisition for 3,000,000 hardwood ties to be used in repair work throughout the republic. They will be procured at the head of the Panuco river, in the Huasteca country, and it will be a difficult task to transport them. Eight large barges will be built to take them from the head of the river to Tampico, and a tug purchased to pull them down stream, it being impossible to raft the variety of wood ordered.

Mahogany is often used by Cuban railroads, as well as in other tropical countries, but Sir William Van Horne has forbidden it on his line. He considers it almost criminal to cut small mahogany trees, and there is an abundance of other timber in Cuban forests suitable for construction purposes. A bridge on the Van Horne railroad near Santiago is built entirely of mahogany, in violation of instructions. The contractor claimed not to know that the caoba tree, as it is called in Spanish, was the mahogany which the owner had tabooed, and the latter did not learn that he had a mahogany bridge on the line until it had been in use for several months. Jique, acana, jucaro, negro and other hardwoods which do not attain large size and cannot be utilized for cabinet work are as good as mahogany for ties, and will outlast steel rails in tropical climates. On the old railroad between Nuevitas and Camaguey, built in 1838, there are jique ties which have been in use for fifty years. Some of them were removed and utilized for fence posts after thirty years of service for the railroad. There is also a tramway at Camaguey with rails of jique over which cars have been running for more than twenty-five years, and they do not show any great amount of wear. Much of the tropical hardwood is so heavy that it will sink in water.

Several experiments have been made with steel ties in this country, but as yet no definite decisions and results have been obtained. In Europe some roads employ them, but conditions are entirely different from those surrounding traffic in this country. However, it has not been decided there that metal ties are profitable, nor how durable they are in comparison with wood.

While it is scarcely probable that railroad

companies will engage in forest planting upon a scale sufficiently large to meet all their requirements, it is important that they plant trees in as large quantities as possible

upon their holdings, thus aiding greatly the conservation of the standing timber of the country, and affording a notable object lesson to other large property owners.

Cutting Dimension Stock.

The HARDWOOD RECORD, from time to time, receives numerous inquiries from manufacturers of dimension stock and others who would like to enter upon this pursuit, as to the most approved method of making and seasoning this material. Of course, various manufacturers have their own particular systems of doing this work, which give more or less satisfaction, but in a general way it may be said that for chair and furniture dimensions running four feet and under, in squares, the best kind of saw to make them on is the ordinary ax-handle or slab saw, with a table that the operator pushes himself. This has been the experience of many expert manufacturers. The same saw is used for making quartered chair backs, because it is much faster and just as accurate as the short log saw.

When the logs have been cut up into flitches of whatever thickness is being made, the flitches are turned down singly and put through the slab saw in the same manner. For pieces longer than four feet, the short log mill with friction-feed is used, although it is a decidedly slower process than the hand-feed slab saw. Also in cases of emergency in making quartered backs, this short log mill can be used. A skillful operator of the slab saw can far excel the man on the short log saw in the amount of stuff he will turn out in a day in squares or quartered backs.

After cutting up three-quarter-inch lumber into backs, pass it over to a hand-feed edger, in order to get all the widths in the backs without waste. Also cut off the squares on a hand-feed cut-off saw to get the clear stuff out of them. In cutting up inch dimension stock out of boards, the best method is the

use of a swing cut-off saw and a power-feed rip saw.

To season green oak squares and backs, pile the backs in a circle, lapping ends on ends, and the squares crossing each other, leaving a space of one-half to one inch between the squares. If they are so piled, and dried in the sun, there should be no trouble with checking, and by employing a careful operator on the rip and cut-off saws, there should be no difficulty in getting thickness right—with the result that the product which is sent out to customers is absolutely right in every respect. Loaders will have to cull out very little stock in making up a shipment, the most of it having been done right at the saw, when the lumber was green.

Many manufacturers of dimension stock brand this phase of the lumber business as decidedly "unsatisfactory," and they cannot understand the reason for a great variety of the "kicks" regarding shipments that are forthcoming. The great trouble, perhaps, is that their method of making and grading is a careless one. Dimension stock manufacture is something that is worth while experimenting with carefully if undertaken at all, or at least it is worth while to follow methods recommended by those who have triumphantly passed the experimental stage. When it is put upon the market in a poorly-made, ill-seasoned condition, it is no wonder that consumers reject it in large quantities, or at least refuse to pay what the manufacturer considers a reasonable price; while if it is true to sizes and free from defects, buyers contend that they are only too willing to pay a top price, knowing that they are getting goods which will exactly fulfill their requirements, at less than straight lumber cost.

The Manufacture of Veneers.

Veneer making is by no means a new art, but not so very many years ago it was done entirely by hand, making the process an exceedingly tedious and expensive one. Today machines, so perfect in adjustment that the veneer does not vary a hair's breadth throughout its entire length, are employed, and they have not only revolutionized the process but have in many ways altered the status of the entire lumber and furniture trades. A fine hardwood log can now be employed to far greater advantage than formerly, because it will furnish many layers of good material; while the resultant product instead of being an inferior or "sham" article, is really in many ways superior to the old-fashioned solid hardwood furniture or doors, in that it is easier to handle, will not warp or crack so readily, and shows a finer figure, both as regards grain and finish. Again, were it

not for modern processes people in moderate circumstances would be obliged to do without fine cabinet articles of every description. As it is now ornamental furniture and handsome woodwork appear in nearly every modern home.

How veneer is made is a matter of conjecture and mystery to the average person, if he troubles himself about it at all, and it is indeed an interesting process. For fine work only the very best of mahogany, oak, walnut or birch logs are selected. A large, handsomely-grained tree is worth a good deal of money, since it can be made into many thousand feet of fine veneer.

The stages through which trees pass from the day they are felled in the forest until placed upon the market as part of the output of some great factory are indeed many and varied. After being trimmed and cut into

lengths of from ten to twenty feet they are shipped to the veneer mill, where they are rolled into the log pond. When lifted from the pond they encounter the drag-saw, which cuts them into various lengths. They are then placed into a vat of hot water, where they are left for twelve hours or so, or until they become soft and pliable.

Then comes the peeling process, which is easy of accomplishment when the timber is soft and hot. After this it is ready to enter the mill proper, and is hoisted upon a crane to the veneer cutting machines. When it emerges it is in the form of long, thin sheets 1/100 of an inch in thickness, or thicker, as desired.

Veneers are made by three processes—sawing, slicing and rotary cutting. Sawn veneers are taken from the prepared flitches by thin segment saws, and are usually of an average thickness of 1/20 of an inch, although often much thinner. Sliced veneers are produced by the aid of a machine carrying a heavy sliding knife, which by each downward stroke takes off a small piece of lumber from the face of the flitch, which is automatically advanced until nothing remains of it. The rotary cut method is the one by which the great bulk of veneers is produced, owing to its economical advantages, the veneer leaving the log in a continuous sheet, thus avoiding a large amount of waste. As it leaves the machine it slides along a table to a clipper, where it is clipped into various widths, with due allowance for drying. It is then ready to encounter this latter process.

The original and primitive method of drying veneers consisted in suspending the thin sheets with clothes-pins on lines, very much as the washerwoman dries clothes indoors. This drying room was sometimes artificially ventilated, and sometimes natural circulation of air was depended upon. During the last few years several veneer dryers of various types have been invented, and these machines are now in general use. One type is a machine which compresses the veneers between steam-heated platens; then there are roller dryers, while the latest development in veneer drying machinery is the automatic girt conveyor type. This modern process will dry thin lumber up to one-fourth of an inch in thickness in from ten minutes to one hour.

* After a thorough seasoning, the veneer is often sorted and crated for shipment to the various manufacturers to whom it is to be consigned, although many veneer factories have a glue room, and cabinet-makers also give great attention to this branch of the work. They lay the veneers on so that no joints are visible, and they are always placed so that the grain on each piece runs opposite to that next to it, thus forming a body that cannot shrink or warp. Panels are usually made up either three or five ply.

After the glue or cement which is intended to fasten the various layers of veneers together is applied they are packed in sections two or three feet high, within a hydraulic or other power press, and immense pressure is applied, which forces out the sur-

plus glue and fixes the joints so firmly that they rarely if ever come apart. The sections of panels thus formed are left in the press until the glue becomes thoroughly hardened, when they are taken out and trimmed, sanded or scraped for the use of the consumer.

Lumber Lore from "Near the Soil."

The following "side-lights" on the lumber business furnish amusing reading to say the least, as is usually the case when the laity attempt to discuss, learnedly, matters which they know not of:

A PIECE OF ADVICE.

Prospective builders are doing the right thing in resting on their oars and waiting for the price of lumber to make a still further decline. The present lull, if it continues a little longer, will force the grafters who control the lumber output to give more slack, and the man who contemplates building can make good money by holding his plans in abeyance for a while. The highway-men have had their way long enough and the most effective method to stamp out their system of wholesale plundering is to diminish the demand for their stock in trade. Supply and demand regulate the markets of the world and whenever the demand is lessened the supply increases and prices are forced down. The lumber barons have had their day and the plain people are beginning to free themselves from the most diabolical aggregation of thieves that ever existed on the Pacific coast. SEBASTOPOL, CAL., TIMES.

LUMBERMEN, BEWARE!

It is reported from Washington that Senator Clapp of Minnesota opposes further sales of timber on Indian reservations in this state by present methods, and favors some arrangement under which the Indians may manufacture their own lumber.

His idea is interesting, when you come to think of it.

According to popular belief, at least, there is a lumber trust. Members of it say there is no such thing, but their denials do not convince the people, who find more than coincidence in the fact that lumber prices are the same everywhere at the same time, and are constantly increasing.

Now if the Indians, who possess a good deal of pine, should go into the lumber manufacturing business, they would hardly become members of the trust. They might be simple enough to sell lumber for what it is worth, and to be content with fair profits.

In that event, what would the lumber trust—assuming that there is a lumber trust—think of the situation?

At any rate, Senator Clapp's idea sounds good. If there is money to be made out of Indian pine, why not let the Indians make it? And perhaps—who knows?—the Indians might be gentle enough with the public to sell their product at fairly reasonable prices.

Nearly everything in the hardwood line that we see about us today is veneered—from the piano to the interior of railroad cars. Manufacturers of cars and furniture are among the heaviest consumers of veneers and panels.

If they did it might add a little more doubt to the repeated denials that there is a lumber trust that controls the output and price of the forest products.

TEDDY, GET YOUR GUN!

It's about time President Teddy were getting after the big lumber trust with the Big Stick.

Friends of the members of the local lumber trust who were recently indicted by the Lucas county grand jury—and who entered pleas of guilty and are awaiting sentence—claim that the big lumber trust is responsible for the little ones; and that the small dealers are forced to organize in self-defense.

If it be true that the national lumber trust dictates to lumber dealers, forces them to fix prices contrary to law and then walks off with the big rake-off, Uncle Sam had better get after the big criminal and put it out of business.—TOLEDO TIMES.

A BUSINESS PROPOSITION.

In the face of a prospective fuel famine and thousands of cords of slab-wood being burned up by the Hinze Lumber Company at Council, and in view of the fact that the company will give it to any one who will take it away from the saw, and we are informed that the wood can be laid down in Weiser at \$3.50 in car loads, it looks like some business man could take the matter up and not only ease the fuel situation but at the same time make a profit on his investment.—WEISER, IDA., SIGNAL.

THE GIST OF THE WHOLE MATTER.

Lumber is high, very high. Some people think it would be much cheaper if the duty were removed. In all probability it would make no difference whatever in the price; certainly not much. The duty is only \$2 a thousand. Compare that with the price list. Besides, logs are on the free list. The real reasons for the great advance in the price of lumber is the scarcity of both trees and labor.—BURLINGTON HAWKEYE.

NOT NECESSARILY.

The New Wabasha Lumber Company is adding another story to one of their large sheds which will be used for a storeroom for finished work. This company is steadily growing and these improvements go to show that the work they turn out is first-class and is in great demand.

NEWS FROM EAU CLAIRE.

Ole Oye, located on Water, has placed a new hardwood floor in his barber shop.

News Miscellany.

Getting Action.

It is an oft-expressed opinion that a slow running, dragging factory begets languid movements among the employees, while a high speed plant with plenty of power inspires quick action, better work and more of it. If this be true, and no observant person can doubt that it is, it forms an excellent reason why the Gordon Hollow Blast Grate, manufactured by the Gordon Hollow Blast Grate Company of Greenville, Mich., is such a profitable appliance, as it insures the high speed plant, with plenty of power that, according to the sentiments quoted, "inspires quick action, better work and more of it."

Michigan Central Buys Ward Railroad.

The New York Central railway system, through the Michigan Central, has acquired the Detroit & Charlevoix railroad, popularly known as the Ward road. The line is forty-three and a half miles long and extends from Frederic on the Mackinaw division of the Michigan Central in a northwestern direction to East Jordan, where it has a harbor on Pine lake, thus having access to Lake Michigan via Charlevoix. The road was built by the late David Ward and traverses one of the finest hardwood sections in Michigan, and the only remaining white pine district of the state.

CYPRESS TREE AT CHAPULTEPEC

Unique Timber Pictures.

The HARDWOOD RECORD is indebted to John H. Talge of the Talge Mahogany Company, Indianapolis, for the unique timber pictures appearing on this page. The first picture is that of a cypress tree at Chapultepec, Mexico. It is thought that this tree is of different botany than the American species; there is, however, a cypress tree at Chapultepec of the same variety as that growing along the Gulf coast of the United States, which at the time of the Spanish invasion of 1520 was known as the "Cypress of Montezuma," being then forty feet in diameter and 120 feet in height.

The second picture is that of the giant vine-like tree known as amati. While this tree begins as a creeper, as it grows the various stems graft themselves into each other until it becomes a great open work tree.

The small picture in the center of the page illustrates the primitive method of sawing timber pursued by the natives in Tabasco, Mex., the province which produces such fine mahogany.

The fourth picture is that of an immense cypress tree near Oaxaca, Mex., which, while not of great height, has a circumference of 146 feet. It is doubtless one of the largest and oldest known trees in the world.

The last picture of the group is from a photo-

graph Mr. Talge obtained in Liverpool, showing the largest African mahogany crotch that has ever been cut and imported. The log was fourteen feet in length and nine feet actual depth at crotch end. It measured 2,719 feet board measure, and its weight was seven and a half tons.

Lumber for Holland.

Official reports from Amsterdam, Holland indicate that the year 1906 was not a good one with regard to the timber trade there, importers having large stocks on hand and contracts for further delivery, which tended to greatly dull the market. The building trade was practically at a standstill because of financial difficulties of a large house with mortgaged buildings and land, and the high rate of money, which restricted building. The first of the year contracting was lively, but with the end of the spring season consumption was dull and large holdings in first hands led to a great falling off in imports. Balks from northern Europe were offered later on in large quantities, and prices sank even lower. Still, northern European exporters could not place

PRIMITIVE SAWING METHODS PRACTICED AT LAGUNA.

their unsold goods. Prices continued to fall and balks are now to be had at figures below any known for a long time. Later in the year prices advanced for lumber to be delivered f. o. w. 1907, as Germany and other neighboring countries bought large stocks, but importers in Amsterdam held back, having large left-overs from f. o. w. 1906 and summer stocks. Low prices for balks make it possible to produce lumber at a lower figure here than that at which ready sawn lumber from Sweden can be bought.

Pitch pine from the United States has been imported in greatly reduced quantities, as the exceedingly high prices asked by exporters cannot be obtained. Very often the wood is replaced by prime north Russia redwood. Prices for American hardwoods increased dur-

AMATI TREE OF MEXICO.

ing the last year, which has had the effect of stocking the market with more east European hardwoods than formerly. Prime plain white oak from the States rose in price about \$8 per thousand feet. So-called oak car-bottom stock is in good demand, and offers are wanted for good material to be delivered promptly, and later on. The quality of American ash and hickory imported into Holland last year was so poor that only low prices were forthcoming; at present there is some call for good stock. Poplar and black walnut logs are in request and should bring good prices. Cypress has given good satisfaction, so that further business in this lumber is looked for.

Large Plant Burned.

The excelsior mill of the Michigan Veneer Company at Alpena, Mich., was destroyed by fire July 13, entailing a loss of about \$20,000, with \$4,000 insurance, mostly on the mill, very little on the wood. The mill proper, engine room, warehouse, dry kiln, many wood piles and large quantities of baled excelsior were all burned up in a remarkably short space of time. Only the boiler room and two or three piles of wood remain. The fire started about 6 p. m., when all the workmen had gone, and spread rapidly, getting a good start in the interior of the mill.

IMMENSE CYPRESS TREE, OAXACA, MEXICO

MONSTER MAHOGANY CROUCH FROM AFRICA

before firemen arrived. When hose was attached to hydrants in the yard no water was to be had. By the time two engines arrived there was little hope for the plant, and one of them soon refused to work. Several houses and other buildings in the neighborhood were set ablaze, but all but one were saved by a bucket brigade. With the wind in any other direction, an extensive disaster would have been inevitable.

The loss of the excelsior wood is particularly unfortunate just now. The company is constructing a modern fireproof, stone, cement and steel building at its veneer plant on Eleventh street and intended to move the old excelsior plant therein this fall. The capacity of the plant was to have been doubled. The machinery in the old plant was to have been remodeled and used in the new plant. It is impossible to replace the wood. Of course, excelsior wood can be purchased, but it will be green, will have to be peeled and stand for many months before being fit to use. Some of the burned wood had been in the yard two and three years. Kiln dried wood is used considerably, but is not so good as the air dried.

The members of the company are R. H. Rayburn, W. H. Campbell and Frank A. Richardson.

New Wood Preservative.

Recent experiments in Belgium made with a new coal tar extract, known as "injectol," have given satisfactory results. Concerning them Vice Consul J. A. Van Hee of Ghent writes that they were principally devoted to the treatment of wooden poles and blocks used in street paving. The product is a liquid, of a dark brown color, very thin and of regular density. Its degree of viscosity changes very little with atmospheric variations. One of the principal advantages is its penetration into certain woods without any pressure. For the antiseptic treatment of compact woods, using the apparatus similar to the "Breant" system, the time necessary for the pressure and soaking into of a given quantity of injectol is considerably less than for any other antiseptic liquid, including creosote. As regards its antiseptic qualities, the following experiments and results obtained therefrom speak for themselves:

It has been found that where creosoted poles in the ground have only resisted decay for a few months, those treated with injectol remained unattacked after three years. Similar experiments were also made with railway sleepers; the latter were treated with different antiseptics. Some were soaked in a mixture of coal creosote, creosote and chloride of zinc, and two were treated with injectol. After having been left for a period of two years in a steeping vat composed of liquid manure and other miscellaneous decomposing substances it was found that the two treated with injectol were still in good condition while the others were almost completely destroyed. Similar results were obtained with wooden blocks for street paving. Other experiments are now being carried on and the results obtained will soon be made public.

Building Operations for June.

Official building reports from some fifty of the leading cities of the country, received by the American Contractor, Chicago, and tabulated, show in the aggregate value of building permits granted in June, 1907, as compared with those for the corresponding month of last year, very nearly equal, the losses slightly predominating. Some cities show astonishing gains and others equally remarkable losses. This is largely due to the issuance of large single permits during June, 1906. For the most part the construction business of the country is moving forward in a satisfactory manner, the total reported loss being a very small fraction of 1 per cent. When the immense amount of building done last year is taken into account, this must be regarded as

indicating that our present large operations are quite normal and may well be expected to continue, since the freely predicted reaction has not materialized.

Slack Cooperage Stock.

The director of the census announces the following preliminary report on the manufacture of slack cooperage stock in the United States for the year ending December 31, 1906. Statistics concerning the production and consumption of lumber and timber products have heretofore been collected in connection with the decennial and quinquennial censuses of manufactures. To satisfy the urgent demand for more frequent information relating to these important products, the Forest Service collected statistics pertaining to them for 1905, and for purposes of comparison the totals for slack cooperage stock are presented below. In order to avoid duplication of work, however, and insure uniformity of results, the preparation of the annual statistics has been committed to the Bureau of the Census, which has worked in cooperation with the Forest Service. The figures cover the production of 712 mills in 1906 and 350 in 1905:

Kind of Wood—	—Staves— 1906	Thousands— 1905
Flm	248,118	217,698
Pine	187,584	58,401

All other	21,845	212,012
Total	1,097,063	697,633

(1) Included in all other.

A Convincing Sermonette.

The Darnell-Taenzer Lumber Company has issued a little printed card on which it outlines its business policy. The company does not claim that the sermonette is a new one, but it is pertinent and convincing for all that:

DON'T BE A KNOCKER.

If there is any chance to boom business, boom it. Don't pull a long face and look as though you had a sour stomach. Hold up your head, smile and look for better things. Hide your little hammer and try to speak well of others, no matter how small you may really know yourself to be. When a stranger drops in, jolly him. Tell him this is the greatest town on earth—and it is. Don't discourage him by speaking ill of your neighbors. Lead him to believe he has at last struck a place where white people live. Don't knock.

Help yourself along by becoming popular, and push your friends with you. It's dead easy. Be a good fellow and soon you'll have a procession of followers. No man ever helped himself by knocking other people down in character and business. No man ever got rich by trying to make others believe he was the only man in town, or the only man in town who knew anything. You can't climb the ladder of success by treading on others' corns. Keep off the corns and don't knock.

You're not the only. There are others, and they have brains and know something as well as you. There's no end of fun minding your own business. It makes other people like you. Nobody gets stuck on a knocker. Don't be one, or two.

Wooden Houses in the Levant.

Reports from Smyrna state that several inquiries have been made through Asiatic Turkey of late in regard to the possibilities of importing wooden houses. The United States consul at that city writes that over thirty years ago a wooden chapel was imported from the United States. It was erected on an elevation by the sea, and in spite of the severe exposure it was subjected to was in such good condition five years ago that it was taken apart and carried into the interior and erected once more as a chapel on a site near Ephesus. If the transportation charges from America to this port could be reduced to a minimum a good business could be gradually started in wooden houses for the suburbs, for the reason that stone houses, as now built in the suburban villages, are somewhat costly, owing to the fact that, with the exception of the stone and the tiles, every other material has to be imported. On the other hand, there is such a uniformity in the style of country residences here that the pleasant varied characteristic of American homes would appeal to the people's taste and facilitate the introduction of wooden houses. The only objection to them would be perhaps the greater risk of fire as compared with stone houses. But this could be obviated by impregnating or painting the wood with some incombustible substance. The consul wishes to call the attention of American manufacturers of such houses to this market and get them interested in its possibilities, and would therefore recommend that manufacturers in that line address their catalogues and prices to the consulate, as well as any other information which would enable him to furnish correct data to interested parties.

New Hardwood House at Cairo.

The Ryan-Lusk Lumber Company is the name of a new hardwood jobbing house, with office and assembling yards at Cairo, Ill. The company is made up of W. P. Ryan and Frank H. Lusk. Mr. Ryan has long been associated with the E. Sondheimer Company of Memphis as buyer, and Mr. Lusk is the son of George H. Lusk of the Nye, Lusk & Hudson Company of Thorp, Wis. The members of the company have excellent reputations and ample capital for their requirements, and while they will handle a general line of southern hardwoods their specialty will be red gum.

Lumber for Manchuria.

During 1906 1,800,000 feet of American lumber was imported into Newchwang, the value being \$38,736 gold. The total lumber imported amounted to 17,497,857 feet, value \$302,696 gold. The bulk of the trade during the year was captured by the Japanese, who, by their great activity and nearness of supply, had things practically their own way. The major part of the Japanese lumber imported came from Korea and cannot be classed with Oregon pine, being a cheaper wood in every way. In constructing buildings American lumber is always used in the heavier work and the Japanese lumber, being somewhat cheaper in price, is used in the lighter framework. In the construction of foreign buildings all window frames, sills, doors, mouldings, etc., are generally ordered from Shanghai.

In view of the fact that a large trade in imports in that locality is bound to ensue from now on, it is considered advisable that representatives of the more important goods of American import be personally on the field to look after the interests of their American employers.

The Old Plane Tree of Cos.

On the island of Cos, in the Egean sea, there stands, jealously guarded, a huge plane tree measuring nearly eighteen yards in circumference. It is surrounded by a podium, or raised platform, breast high, doubtless built to support the trunk of the tree after it had become hollow and weak from age. The lower branches are still well preserved and have been shored up by pieces of antique columns, over the upper ends of which the branches have grown like caps in consequence of the pressure of their own weight.

Close by the tree is a solid marble seat, which is said to be the chair of Hippocrates, the father of medicine, and it is supposed that he taught the art of healing from that seat. He was born at Cos 460 B. C. This gives a clew to the age of the celebrated plane tree, which must be considerably more than 2,000 years old.

Miscellaneous Notes.

Over 1,000 acres of oak, spruce and hemlock in West Virginia have been purchased by the Schaeffer Lumber Company of Irwin, Pa. Mills will be built in the near future.

The Thompson & Ford Lumber Company, which is building a new factory at Sour Lake, La., has decided to put in a hardwood mill at once. The company owns timber lands capable of producing 100,000,000 feet of hardwood lumber.

The Beach City Lumber and Manufacturing Company of Beach City, O., has removed its factory and business to Piedmont, O., and will hereafter be known as the Piedmont Lumber and Manufacturing Company.

Scientists claim to have discovered that the wood of the linden tree, which is very soft, gives more heat in burning than any other variety, fir standing next, after which comes pine. It has been the common belief that hardwoods afforded more heat, but hard oak possesses 8 per cent less heating capacity than linden, and red beech 10 per cent less.

J. S. Emigh, a prominent mill man who

operates a large hardwood plant at McArthur, Ark., is preparing to establish headquarters at Pine Bluff and locate a big mill near Altheimer. He will employ a large number of men.

The Veneered Door and Finish Company has been incorporated to enter business at Athens, O.; it is capitalized at \$50,000. W. M. G. A. and F. B. Kurtz and D. W. Peoples and F. O. Shelan are the incorporators.

The plant of the Charleston (W. Va.) Lumber Company, recently destroyed by fire, is to be rebuilt. The loss was \$20,000, covered by insurance.

The location of a big hardwood sawmill at Bunkie, La., hinges upon securing satisfactory rates to competitive points, and the matter has been put up to the Texas & Pacific road. The sum of \$50,000 will be spent on the mill if satisfactory rates are secured.

The Arkansas Oak Company, capitalized at \$50,000, has filed its papers with the secretary of state at Little Rock. Charles R. Hartung is president.

The latest in railroad ties is a combination of wood and metal, which of course it is claimed, solves the present difficulties surrounding the tie proposition. The amount of wood used is quite small and yet is sufficient to impart the needed elasticity which the steel ties lack. The steel tie is the same length as the wooden one, and consists of steel channels five inches deep. The wood used is in the shape of bearings, which are two feet long, eight feet wide and six deep, forming a solid foundation for the rails. The tracks are spiked in the usual manner. The wooden bearings becoming damaged by use may be replaced by the removal of one bolt without disturbing the tie. This combination is such that the life of the tie is greatly prolonged, as the wood does not come in contact with the ground.

Consul General J. P. Bray reports that a few months ago the first cargo of Japanese lumber ever shipped to Australia was landed in Melbourne and met with such a ready market that a further shipment has just arrived and there seems every probability of a permanent business being established. The cargoes consist of pine, oak, ash and basswood, in logs of various sizes squared by the ax only, and, it is said, can be landed in Australia at a lower figure than other imported lumber.

The Pioneer Hardwood Company, Wagoner, I. T., has succeeded the Field-Reynolds Lumber and Coopersage Company of that place.

A 217-acre cypress brake near Buckner, La., nine miles from the main line of the St. Louis & Iron Mountain railroad, recently passed into the hands of James W. Quinn and James L. Hale of Memphis, Tenn., for a consideration of \$35,000. It is estimated that more than 30,000,000 feet of choice cypress will be cut from this brake.

The mill being erected by the Baldwin Cypress Company at Bayou Sale, La., on the line of the Southern Pacific railroad, is nearly completed. It will be operated in connection with the company's other mill at Baldwin, La.

The Hartzell Handle Company, with an authorized capital of \$10,000, has been incorporated at Memphis, Tenn.

The Wisconsin Hardwood Square Company of Glen Flora, Wis., has been succeeded by the Noble Brothers Lumber Company and will operate hereafter at Park Falls, Wis.

The Hardwood Novelty Company, with headquarters at Durham, N. C., has been incorporated with a capital stock of \$100,000. Incorporators are W. A. Erwin, R. J. Fragen, A. Crumpacker, R. L. Lindsey, J. E. McDowell, W. J. Driswald, A. E. Lloyd and K. P. Lewis.

The National Lumber and Woodenware Company, recently incorporated at Cairo, Ill., to succeed the Carey-Halliday Lumber Com-

pany, has increased its capital stock to \$250,000 and moved to Cairo, Ill.

Pine Bluff, Ark., may be the location of the Dexter Handle Manufacturing Company's operations in the future. The company is contemplating combining its three mills, located at Dexter and Campbell, Mo., into one large operation to be located at Pine Bluff.

The officials of the Canada Woodenware Company of Hampton, N. B., are thinking seriously of locating at Fairville, N. B. W. J. Brown, manager of the company, states that it would cost \$5,000 to build in Fairville. The company employs a large force of workmen and would be a desirable addition to any city.

C. Winders, C. E. Woods and others are the incorporators of the American Churn Manufacturing Company, recently organized at Meridian, Miss. The concern is capitalized at \$16,000.

The Washing Machine and Wringer factory of R. M. Balls at Muncie, Ind., was recently transferred to Nathan Leisure, president of the First National Bank of Elwood, Ind. Mr. Leisure expects to operate the factory just as it has been in the past. Walter M. Clark, formerly office manager, will continue in that capacity, as will also the former superintendent of the factory, D. L. Wood. One of Mr. Leisure's sons will have general charge of the plant.

C. M. Barnes, G. E. Rieff, Robert M. Burgess, Peter P. Kiel, Frank L. Weaver and Alphonse J. Kennedy are the incorporators of the Kiel Manufacturing Company, recently incorporated with \$15,000 capital stock. The company will manufacture washing machines, washboards, wringers and other wood specialties.

The New Rochelle Woodworking Company has been incorporated at New Rochelle, N. Y., with a capital stock of \$15,000.

The W. E. Dillard Manufacturing Company has been incorporated to manufacture handles and spokes at Petersburg, Va.; capital stock \$25,000.

The entire interests of the Cypress Lumber Company at Gest and Dalton streets, Cincinnati, O., was recently purchased by E. L. Edwards of Dayton. Mr. Edwards has been contemplating the establishment of a hardwood branch at Cincinnati for some time and is to be congratulated on taking advantage of so excellent an opportunity to enlarge his business as was offered in the sale of the Cypress Lumber Company's property there. Mr. Edwards' main office will still be at Dayton and he will be in position in the future to take care of orders for anything in the way of plain or quarter sawed oak, walnut, poplar, ash, chestnut and cypress.

A new concern has been organized by residents of Banks, Ark., to be known as the Southern Hardwood Manufacturing Company; capital stock \$10,000.

The H. A. Green Woodworking Company has been incorporated with \$100,000 capital stock to do a general business in woodworking. The company's headquarters will be at San Francisco, Cal.

The Screen and Cabinet Manufacturing Company has been incorporated with \$50,000 capital stock; headquarters will be at Atlanta, Ga.

The Carrollton Novelty Company is a new concern recently organized at Carrollton, Ga., with \$10,000 capital stock.

Des Moines, Ia., is to be the home of the Uncle Sam Washer Company, recently incorporated with \$20,000 capital stock, to manufacture washing machines.

The Michigan Door Company has been organized with \$50,000 capital to engage in business at Lansing, Mich.

The National Table and Manufacturing Com-

pany has been organized at Niles, Mich., with a capital stock of \$40,000, to manufacture a line of high-class furniture.

The Ritter Folding Door Company has been organized by business men of Columbus, O.; capital stock \$50,000.

Elizabeth, W. Va., is the home of the re-

cently organized Mountain State Casket Company, which has engaged in the manufacture of caskets on an extensive scale; capital stock \$50,000.

The Wisconsin Art Cabinet Company has been incorporated with \$35,000 capital stock, to be located at Fond du Lac.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

Burdie Anderson of the Great Lakes Veneer Company, Munising, Mich., was a Chicago visitor July 16. Mr. Anderson was en route to a meeting of the Rotary Cut Club, held at Indianapolis on July 17. From there he went to Cincinnati and Grand Rapids before returning home.

Franklin Greenwood, general manager of the Louisiana Red Cypress Company of New Orleans, was in the city July 12. Mr. Greenwood was making a tour of the company's various offices, coming here from Cincinnati and going home via St. Louis and Kansas City.

J. S. Garetson and daughter, Mrs. W. W. Dings, of St. Louis, were Chicago visitors for a few days last week.

Robert Fair of the Edwards-Fair Lumber Company of Lansing, Ark., spent a week in Chicago recently. His company has just established a spoke factory and bolting mill with five turning lathes in Lansing and will make wagon spokes from hickory, of which it has large holdings. Mr. Fair is well known in Wisconsin and Chicago, having formerly been in business here. He has been in the South about eight years.

J. H. P. Smith of R. M. Smith & Co., Parkersburg, W. Va., was in Chicago July 11-12.

John W. Dickson of the J. W. Dickson Lumber Company, Memphis, was a welcome caller on the trade last week.

Tickle, Bell & Co., 5 St. Albans Road, Liverpool, general brokers and dealers in mahogany and American lumber, announce that they will in future conduct their business from 36 State Insurance building, 14 Dale street, Liverpool, the cable and telegraphic address to continue as at present—"Corolla, Liverpool."

E. P. Alberts has removed from Allenville to Rockview, Mo., where he has entered the sawmill and lumber business, and built a handsome new home.

The Vehicle Woodstock Company of this city held a meeting at the Great Northern Hotel, July 17-18. The deliberations were executive in character.

Edward E. Skeele of the Estabrook-Skeele Lumber Company, Fisher building, this city, is in the North on a fishing trip.

Ryan & McParland, local manufacturers and dealers in hardwood lumber and wagon stock, have removed their office and yards to 573-81 Laflin street.

THE HARDWOOD RECORD office was illumined July 17 by the presence of George H. Lusk, the veteran hardwood operator of Thorp, Wis., of Nye, Lusk & Hudson Company, and his son, Frank H. Lusk, of the recently organized Ryan-Lusk Lumber Company of Cairo, Ill.

In a letter received from the Grand Rapids Veneer Works they state that they have installed between sixty and seventy of their new dryers within the past year and as they are only infants in the dry kiln business they naturally feel highly gratified at the results. Incidentally, they compliment THE HARDWOOD RECORD on its value as an advertising medium in assisting them to exploit their new drying apparatus.

George B. Maegly, dealer in wholesale yel-

low pine and hardwood lumber, located at 417 Long building, Kansas City, Mo., was a welcome caller at the RECORD office July 16.

N. A. Gladding, vice president and manager of sales for E. C. Atkins & Co., Inc., of Indianapolis, left on July 15 for his regular tour of inspection of the company's western branches. Mr. Gladding intends to stop in Chicago, Minneapolis and Omaha before proceeding to San Francisco, Portland and Seattle. He will be away about a month.

THE RECORD is indebted to the Indiana Quartermaster Oak Company, lumber wholesalers, at 5 East Forty-second street, New York, for a handsome little letter opener.

The office of the secretary of the Hardwood Manufacturers' Association of the United States was removed on July 19 from 1535 First National Bank building, Chicago, where it has been located for the past eighteen months, and is now established at 1020 Stahlman building, Nashville, Tenn. The telephone number is Main 710.

So-long, Lewie!

How we hate to see you go!

So-long, Lewie!

Lewie, we will miss you so.

And we'll all be longing for you, Lewie,

While you roam!

So-long, Lewie!

Don't forget to come back home.

Dreyfus & Mayer-Dinkel of Mannheim, Germany, announce that Herr Leopold Mayer-Dinkel, son of a partner in the firm, has also become identified with the house in that capacity.

Boston.

C. S. Wentworth of C. S. Wentworth & Co. has been on a trip to New Brunswick.

Henry McDowell of the Davenport, Peters Company sailed for Europe last week.

William E. Litchfield left Boston last Saturday for a ten days' trip in the West.

A. A. Titcomb, for several years salesman for Waldo H. Bigelow, is now associated with the Jones Hardwood Company.

The Export Lumber Company, recently organized in Maine with a capital stock of \$500,000, retains the old office at 53 State street, Boston, which has been occupied for some time by the old Export Lumber Company and the Atlantic Coast Lumber Company. W. A. Taft is president of the new organization; Charles Weston, vice president, and W. W. Weaver, treasurer. W. Allen Taft, Jr., is secretary of the company and H. K. Weaver, assistant treasurer. The old Export Lumber Company went into the hands of a receiver about five years ago and has been in this condition until recently. The president of the new company was a receiver of the old company.

The Johnson Lumber Company, Quincy, Mass., has been incorporated with a capital stock of \$50,000. The promoters are Benjamin Johnson, Robert T. Johnson and Morris I. Gatcomb.

C. W. Leatherbee of the C. W. Leatherbee Lumber Company, Boston, is spending the summer at Marion, Mass.

Frank J. Orcutt is now general manager of the wholesale department of Nellis, Amos & Swift of Utica, N. Y. Mr. Orcutt has been closely associated with the lumber business for the past nineteen years, having been formerly

with Weston & Bigelow and for the past seven years with W. H. Bigelow. He has secured an office at 902 Penn Mutual building, 24 Milk street, Boston. The retail and wholesale business of this company has in the past been conducted through Utica, N. Y., but the concern has now separated the two branches and in the future the wholesale business will be operated from Boston. Dorr D. Nellis, senior member of the concern, will be located in the South, where he will buy and ship hardwood lumber. Charles H. Swift will represent the firm on the road, and Mr. Amos, it is reported, will continue in charge of the firm's retail business in Utica. In addition to the lumber business, they operate a large furniture and box plant in Utica. This company has never dealt in a large way in southern and western hardwoods, but these lines are to be added. The firm will handle all kinds of hardwoods, including maple flooring, etc.

The Frost Veneer Seating Company of Newport, Vt., plans to erect a new warehouse 150x60 feet, two stories high.

George W. Hartzell of Dayton, O., who has large hardwood interests, was among the recent visitors in Boston.

Horatio Sprague McDowell, son of Henry M. McDowell of the Davenport, Peters Company, was recently graduated from Harvard College, and received the degree of S. B. in mechanical engineering. *Magna Cum Laude.*

New York.

F. A. Kirby, sales manager of the Cherry River Boom & Lumber Company, headquarters Scranton, Pa., was in town visiting W. W. Welch, representative of the company in the metropolitan district and throughout this section.

H. Shumway Lee of Mixer & Co., Buffalo, arrived in New York recently after a motoring trip through New England, on which he combined business with pleasure. He was accompanied by Mrs. Lee.

Lewis Dill of Baltimore, accompanied by Mrs. Dill and George F. Craig of Philadelphia, sailed from Europe July 13 after an extended trip abroad.

Walter Sharp of Churchill & Sim, London, England, was in New York during the last fortnight. He sailed for home on the Lucania of the Cunard Line.

George H. Mell of Kane, Pa., who is exclusive selling agent of the Mt. Mitchell Lumber Company, Swannanoa, N. C., manufacturers of hardwoods, hemlock and white pine, paid a visit to this city, accompanied by John F. Tyler, who was recently associated with H. D. Wiggins of Boston. Mr. Tyler will represent Mr. Mell's interests in the East.

W. H. Ames, manager of the oak flooring department of the M. B. Farrin Lumber Company, Cincinnati, O., is in the city to remain several days, looking after the company's local interests.

J. C. Turner of the J. C. Turner Lumber Company and Mrs. Turner, accompanied by W. A. Burnham and wife, are on tour to California and the Pacific Coast. Mr. Turner will look over lumber and timber matters in which he is interested and expects to return in about six weeks.

F. R. Whiting of the Janney-Whiting Lumber Company, Philadelphia, was in New York on his way to the summer home of Clayton W. Nichols at Brewsters, N. Y., where he will make quite a vacation visit.

Adler, Siegel & Co. have started in the sash, door and blind business at 340 Junius street, Brooklyn.

Transatlantic tourists have been much in evidence recently. F. B. Williams of the F. B. Williams Cypress Company, Patterson, La., sailed some time ago. Joseph Rathborns of the Louisiana Cypress Lumber Company, Harvey, La., recently sailed for Liverpool and will be in England and on the continent until about the first of September.

Philadelphia.

The great order of Elks has been holding its convention here this week, in consequence of which, together with the enormous influx of visitors, the city has been filled with an excitement absorbing almost every other interest. A spectacular parade of thousands of Elks with their floats, representing some distinguishing feature from almost every state in the union, and which was witnessed, it is estimated, by 750,000 people, was the climax of this gigantic organization, which will close its business here by the week's end. The Lumbermen's Exchange rooms are handsomely decorated in honor of the occasion. All the lumbermen closed on Thursday, the 18th, to view the parade.

After a few years' lapse, the Lumbermen's Exchange will resume its autumnal excursion on September 24, 25 and 26. It will consist of a three days' trip to the Gettysburg battlefield, Pennsylvania, and Blue Mountain House, Maryland. The charge, including all expenses from start to finish, will be \$21. A large turnout of members and their wives is expected, as a very enjoyable time is promised by the committee.

Joseph P. Dunwoody, of Joseph P. Dunwoody & Co., has been spending several weeks at the mill of the Norva Land and Lumber Company, of Wallaceton, Va., in which his firm is interested. Mr. Dunwoody recently met with an accident, through coming in contact with machinery, which might have cost him his life. He was fortunate enough to escape with only a badly lacerated finger, which first report stated would have to be amputated. The amputation will not be necessary, however. Mr. Dunwoody is thankful to escape thus easily.

Wilson H. Lear reports business excellent and the outlook for fall trading very satisfactory. Mr. Lear is one of the most prosperous and extensive wholesale and retail lumber dealers in this section. His large yard on North Front street, where he carried an average stock of 8,000,000 feet of lumber at all times, has now become inadequate for the stock required to supply his increased business, and he has purchased the old stove works and ground at East Girard avenue and Fletcher street, which is being dismantled and prepared, to be used as an additional yard. Mr. Lear states with the extra store room he will carry in Philadelphia from 15,000,000 to 18,000,000 feet of hardwoods and cypress at all times. He has just received thirty-three cars of excellent oak, ash, chestnut and poplar.

The Righter-Parry Lumber Company reports business a little quiet, but not more so than might be expected at this time. They are getting in some good orders, and do not complain of conditions. Charles K. Parry has been considerably indisposed, the result of unremitting hard work, and is taking a much needed rest. Frederick C. Righter will take a few weeks' vacation in the White mountains, going on July 25.

Watson Malone & Sons are satisfied with present trade conditions. Though certain lines have fallen off a little, others have picked up, and they report sufficient orders coming in to keep them busy. Edwin B. Malone regards the present status of things as only normal and the outlook good.

The S. B. Vrooman Company reports business moving along smoothly, though a trifle more quiet at this time than usual. Their plant keeps busy right along. Samuel B. Vrooman is enjoying a tour of Europe and will return September 15.

Wistar, Underhill & Co. find no fault with present business outlook and report business moving along in good style. F. S. Underhill is camping out at Greater Forge, Pa., where

he is entertaining a bevy of youngsters. J. W. Anderson recently had a satisfactory trip through New Jersey and is now taking a rest in the Pocono mountains. T. N. Nixon, also of this concern, brought home a good bunch of orders from his tour of Pennsylvania.

George Craig & Sons report trading very satisfactory for this time of the year. Their mills have been manufacturing mostly spruce and hemlock, but are now pushing the hardwood department. George F. Craig has been spending some little time abroad.

Among the many recent visitors to the trade were: T. H. Carrier, of the Adventure Lumber Company, Butler, Tenn.; John M. Broach, secretary and treasurer of the Meridian Lumber Company, Meridian, Miss., who was here with the Elks; Hugh McLean, of the Hugh McLean Lumber Company, Buffalo, N. Y.; W. A. McLean, vice president and general manager of the Wood-Mosaic Flooring and Lumber Company, New Albany, Ind.; D. S. Cunningham, of the Hendricks Lumber Company, Hendricks, W. Va.; I. D. Miller, of I. D. Miller & Co., Baker Mines, Va., and J. G. Rouse, of Swartmore Lumber Company, Baltimore, Md.

C. J. Kirschner, the well known Hoo-Hoo and lumberman of Hazelton, Pa., recently underwent a surgical operation at the German hospital in this city. His many friends will be pleased to hear that he is getting along nicely.

The Rumbarger Lumber Company testifies to an improvement in business since the weather has become settled, and looks for good fall trading. They have just engaged R. A. Caven to represent them in their office at 1 Madison avenue, New York. The ability and pleasing personality of Mr. Caven have made him one of the most popular salesmen in the New York lumber trade.

The Boice Lumber Company, Inc., reports trading satisfactory. J. W. Floyd, of this concern, has recently returned from a trip to New York, where he reports business picking up and where he gathered a fair number of orders. C. E. Lloyd, Jr., vice president and general manager of the company, is spending a two weeks' vacation in North Lovell, Me.

B. C. Currie, Jr., of R. M. Smith & Co., regards present trade conditions as only what might be looked for at this time of the year. He reports good orders coming in right along and hears of no cancelling of back orders, which fact indicates that values are holding steady.

Eli B. Hallowell & Co. report business holding up well and state that June was the best month this firm ever had. Eli B. Hallowell is still at Wernersville, Pa., and Ralph Souder is making his summer home at Bay Head, N. J.

The Brawley & Smith Company does not believe in forcing the market and recognizes the present trade status as a return to old normal conditions. Their mills are active, preparing for fall trade. Mr. Smith reports good orders coming in and sees no decided weakening anywhere in values.

The firm of Magargal & Harper, formed on January 1, succeeding John W. Harper, dissolved partnership on June 12, and Samuel H. Magargal will continue alone.

W. H. Fritz & Co. report the status of business satisfactory. Mr. Fritz, with his son, is taking a short trip to Niagara Falls, and may also visit North Tonawanda, N. Y. E. B. Hayman of this concern is on a selling trip through the Pennsylvania district, whence he reports trading satisfactory.

The Lincoln Furniture Company, this city, obtained a charter under Delaware state laws on July 5; authorized capital, \$200,000.

The Gottwals Manufacturing Company, Wil-

mington, Del., was chartered under Delaware state laws on July 2. Capitalization, \$100,000. The object of the company is to manufacture cabinets, filing cases, desks, etc. The incorporators are J. S. Gray, S. S. Adams, Jr., and M. B. F. Hawkins, all of Wilmington.

The E. T. Lippert Saw Company, Millvale, Pa., obtained a charter under Pennsylvania state laws on July 2; capitalization, \$100,000.

Catherine Porteger, trading as the Riverside Planing Mill, of Reading, Pa., was adjudged a voluntary bankrupt on July 12; liabilities, \$26,237.95; assets, \$10,100; referee, Samuel E. Bertolet.

Baltimore.

The bulletin on the lumbering industry of the United States, published by the Census Bureau, contains some interesting statistics about the saw and planing mills in Maryland, and gives a comprehensive exhibit of the lumber industry in the state. According to the bulletin there were in the state in 1905 a total of 203 sawmills, with a combined capital of \$1,132,862, and 1,039 employees, aside from salaried officials, receiving \$398,324 in wages, while the product of the mills was valued at \$2,341,242. In 1905 Maryland had 112 planing mills, capitalized at \$2,947,060, employing 1,505 workmen, outside of salaried officials and clerks, who received \$622,306 in wages, and turning out a product valued at \$3,817,933. There were ninety-nine logging camps in the state, having a capital of \$338,434, employing 835 men, who earned in wages \$421,726, and turning out products of a total value of \$1,268,797. The total value of the lumber and timber products turned out in Maryland rose from \$2,495,169 in 1900 to \$2,914,078 in 1905, and the value of the stumpage rose from \$2.92 per 1,000 feet in 1900 to \$4.17 in 1905. The increase in the value of the saw logs was from \$6.75 in 1900 to \$10.79 in 1905.

Under the direction of Vicegerent Snark Maurice W. Wiley, a concatenation of Baltimore Hoo Hoo was held on the grounds of the Baltimore Yacht Club July 8, a large number of members turning out to attend the initiation of half a dozen kittens. After the initiation an excellent dinner was served.

General regret has been expressed here over the death on July 11 of James Russell Bate of the Baltimore Mahogany Company, who passed away at his home, 1109 North Carey street, after a prolonged illness of a complication of diseases. Mr. Bate's body was taken to Cincinnati for interment. Mr. Bate was born in England and was lumber and log inspector for the British government for years. In this capacity he was sent to the United States. Later he connected himself with the old firm of George Shaddbolt & Son, the pioneer in the oak plank export trade, and remained with it until the concern was overtaken by financial reverses. About six or eight years ago Mr. Bate came to Baltimore, and established himself here as the Baltimore Mahogany Company. He also invented a machine for the manufacture of excelsior and organized the American Excelsior Company, with offices in the Maryland Trust building, the company operating a mill at Canton. The venture did not prove successful and Mr. Bate was forced to part with his holdings in the company. He was one of the best judges of figured mahogany and other fancy veneer woods in the United States, and a man of excellent repute.

The Ashby Lumber Company has been organized by a number of residents of Garrett county, Maryland, with a capital stock of \$50,000. The company has purchased a timber tract containing approximately 5,000,000 feet of timber, mostly hardwoods, two miles from Belington, W. Va., and will erect a mill on the tract, the plant having a capacity of about 50,000 feet per day. The principal

office will be in Oakland. The incorporators of the company are Charles A. Ashby, Albert Ashby, George M. Brown, Milton Rodamer and Dr. John E. Legge.

The Marshall Morton Lumber Company, composed of business men of Midland, Allegany county, Maryland, has applied for a charter. The company is to have a capital stock of \$50,000, and will conduct lumbering operations near Moorefield, W. Va., having purchased a large timber tract near that place.

The planing mill of George Sigel, near the iron bridge at Everett, Allegany county, Maryland, was destroyed by fire on July 14, the loss being \$6,000, with insurance of only \$1,200. A popular subscription fund has been started to rebuild the plant, which was started up by Mr. Sigel only a few months ago.

Among the visiting lumbermen here last week was John Hawkes of the Burton Veneer Company of Cincinnati. He stated that the veneer trade is rather dull at the present time.

C. E. Lloyd, vice-president of the Abingdon Lumber Company, of Abingdon, Va., was in town this week, and called on a number of firms here. Several days after him came O. E. Dunn of the same company, who looked after some legal business in connection with the company.

R. E. Wood, president of the R. E. Wood Lumber Company, is making a round of the North Carolina and Tennessee operations of the company. L. H. Bowman of the same company has been on the sick list for several weeks, but is again regularly at his desk.

The Valley River Lumber Company, a corporation organized at Piedmont, W. Va., July 23, will build a railroad from Mill Creek via Brady's Gate, Blue Springs, Sulphur Springs and along Elk river to Clover Lick, on the Chesapeake & Ohio. John Alden is engineer.

Pittsburg.

The big planing and sawmill of F. D. Beyer & Co. at Tyrone, Pa., with several adjoining buildings, were burned July 16.

The Broad Top Lumber Company of Clearfield, Pa., has been chartered by Isaac Stage, John McAllister, William P. Mahaffey, Richard Sheehy, George N. Ellenberger, Louis Shapiro and E. O. Hartshorne, all of Clearfield. Its capital is \$50,000.

The Palmyra Wood Working Company, which was chartered recently in Ohio with a capital of \$10,000, has organized as follows: President, G. H. Moyer; vice president, H. K. Kreider; secretary and general manager, W. H. Turby; treasurer, S. F. Engle; directors, C. S. Bachman, Jacob Gible and A. S. Stauffer.

J. E. McIlvain & Co. are not bothered about getting orders for oak. Their business in railroad and river stock this summer has been up to the average and they have had more difficulty in getting good West Virginia lumber to fill the orders than to get the business.

The C. P. Caughey Lumber Company is busy at its operation in western Pennsylvania and is wholesaling as fine a lot of oak as has gone through Pittsburg hands for a long time. Much of this is cut in ship timber sizes.

The Lawrence County Lumber Company has so far overstepped its credits that a receiver has been asked. It is located at New Castle, Pa., and has always been regarded as a sound concern financially.

The firm of M. C. Allen & Son of Delaware, Va., one of the best known hardwood concerns in that part of the state, has failed for about \$40,000. Its assets will meet nearly one-third of that amount. Judge Mont has been named receiver in bankruptcy.

The Parsons-Cross Lumber Company has disposed of a considerable amount of hardwood lately at very good prices. B. W. Cross is spend-

ing the week in Cleveland looking over stocks.

Since July 1 agents have ransacked Lawrence county, Pennsylvania, and have bought or optioned practically every acre of hardwood timber left. A few large operators there, among whom are some who have heavy connections with Pittsburg wholesalers, have enough timber now to keep their mills busy for two years.

The W. M. Ritter Lumber Company, which was charged a few weeks ago with peonage and conspiracy to avoid the alien labor law, was convicted last week on 10 of 22 counts in the courts of Charleston, W. Va. The company will have to pay the minimum fine of \$1,000 in each case.

The Nicola Lumber Company is doing a fine trade in crating lumber this month, red gum and cottonwood being favorites with its buyers.

By August 20 the L. L. Sattler Lumber Company expects to have its box shuck factory at Blackstone, W. Va., in full operation. The machinery is being put in now and when the plant is ready it will be the largest and most perfect in its equipment in the United States. Electricity will furnish light and power, and the plant will be taxed to its utmost capacity at the start.

The Pennsylvania Railroad Company has just compiled figures of interest to lumbermen. During the year 1906 the Pennsylvania system used nearly 8,000,000 ties and the Pennsylvania Railroad Company used about half of these on lines east of Pittsburg.

The Cheat River Lumber Company finds low-grade hardwood in good demand. According to its reports chestnut can be bought a little cheaper than June 1. The company has taken some nice orders for hickory lately, most of it log run stock.

W. M. Gillespie of the W. M. Gillespie Lumber Company is spending a few days in Buffalo. He views the hardwood situation with a hopeful eye.

J. Schoppe has severed his connection with the Clay-Schoppe Lumber Company, although the firm name will not be changed at present. The company is now getting out a big order for 35 and 40-foot piling to be delivered in the Pittsburg district and in Chicago. This month it has also booked orders for 600,000 feet of hardwood bill stuff and seventeen cars of sound wormy chestnut and other hardwoods for delivery in the Pittsburg district.

F. G. Lillo of the W. E. Terhune Lumber Company is spending his two weeks' vacation among his old haunts in Michigan. The company notes a slightly better call locally for hardwood. It has booked two orders for 300,000 feet each this month to date.

The Kendall Lumber Company is feeling good over an order for 8,000 ties to be delivered in the Pittsburg district from its Maryland plants. J. L. Kendall is spending much of his time at the mills.

The Pittsburgh Hardwood Floor Company reports that up to date this year it has done more than double the business of the first six months of 1906.

"Hardwood is O. K." This terse comment from the Curll & Lytle Lumber Company tells considerable about the state of affairs in Pittsburg and West Virginia. The company's mills are busy and it has been able to keep the price of poplar fully abreast of quotations all summer.

The Willson Brothers Lumber Company finds the poplar market steady to strong. There is no diminution in the demand for oak and it is bringing as good prices as ever. Most of the stock of this firm is sold on grade and they have a line of customers who take its product close up to the saw.

The Ralston-Wilson Lumber Company of Parkersburg, W. Va., has received the contract for furnishing 200,000 cross ties for the South & Western railroad, which runs from Kingsport, Tenn., to Dante, Va. The company operates

three mills on the Chinch river and is getting out 700 ties a day, the timber being white oak, chestnut, oak, locust and walnut. It has opened offices in the Phipps building in Bristol, Va.

The Curry & Bittner Lumber Company of Mable, W. Va., is building a railroad up the south branch of the Roaring Creek to the summit of the watershed between Cascade and Roaring Creek, about six miles. Heavy rains have interfered with its work seriously, but it will soon have the road ready to open up a large addition to its timber holdings.

The Ashby Lumber Company of Garrett county, Maryland, has been chartered under West Virginia laws with a capital of \$50,000. Its incorporators are: Charles A. and Albert Ashby, George M. Brown, Milton Rodamer and Dr. John E. Legge. The company has 5,000,000 feet of timber near Bellington, W. Va., and will build a mill to have a capacity of 30,000 feet a day. Its main offices will be at Oakland, Md.

The J. M. Hastings Lumber Company is putting in a busy summer at its hardwood plant at Jacksonville, W. Va. Its chief output there is oak and it finds a steady market at top-notch prices for all the dry stock it can load. J. M. Hastings, president of the company, is spending a few days in Nova Scotia, Can., at the immense plants of the Davison Lumber Company in which he is heavily interested.

The H. R. Walter Lumber Company is carrying at its yards at Fayette and Manhattan streets, Allegheny, Pa., the largest stock of high grade hardwoods to be found in western Pennsylvania. It has been hard pushed all summer to supply its needs in some lines, notably ash and maple. Its trade in hickory and oak has also been excellent. Just now it is moving a large lot of inch oak in firsts and seconds, some of the choicest stock coming from Arkansas.

J. J. Mead, president of the Mead & Speer Company, has much encouraging news to relate from the company's operation at Strange Creek, W. Va. Its mills there are cutting 40,000 feet a day each, poplar leading in the output as well as in the sales. The price of poplar, Mr. Mead says, has not only held its own all summer but has actually advanced a few points for the best stocks, as is cited by several companies recently which have made good sales. Basswood is one of the woods that is getting a good share of the company's attention just now owing to an influx of orders from the planing mill men of Pennsylvania and Ohio. In his opinion the hardwood market is in good shape in spite of the current summer dullness and he looks for a brisk trade in the leading woods in the fall, judging by present inquiries and the disposition of the large buyers.

Buffalo.

Some of the yards find that it is hard to get men whenever they want them. All sorts of work is so easy to find that a workman is not a permanent fixture any more.

The oak mills of Scatterd & Son are running strong in Memphis, with a good lot of logs ahead of them, so that the complaint of shortage in that direction ought not to last very long.

G. Elias & Bro. are not forgetting to keep an eye out for the Buffalo river improvement, though the people seem to favor it now quite as much as the authorities. The east-side lumbermen need the work as much as the residents.

Manager Janes of the Empire Lumber Company has put the lumber affairs of the company in such good shape in the southwest and south that he will not need to do much patrolling of the territory for some time. Stock moves well.

The Hugh McLean Lumber Company will stock up its new hardwood yard in Cincinnati as soon as possible, some of the mills in that direction having been run night and day to some extent of late.

J. F. Knox of Beyer, Knox & Co., from his mills in Pascola, Mo., is able to report that the water is out of the way and the business of turning trees into lumber is going on at a good rate. The new headquarters turns out oak mostly.

A good lot of oak is coming north for the Standard Hardwood Lumber Company, although the yard is pretty full of it, as usual. The mills of the company in the south are turning out a good supply of poplar, much of it five-quarter.

The yard of O. E. Yeager is furnishing quite an amount of good poplar cut to about a quarter inch for veneer backs. There was an inquiry for 250,000 feet of it in one lot, which was rather more than most dealers wanted to furnish.

A. Miller finds that basswood lumber is high these days, but he always has it, having stuck to it when others gave it up on account of the price, and he is laying in a good stock of it for the fall trade, which is sure to be good.

The dock yard of T. Sullivan & Co. is preparing to make a showing of the leading lake hardwoods, especially elm, birch and black ash, that will meet all demands for the fall and winter trade, which is sure to be good.

There is a long line of cars in the yard of the Buffalo Hardwood Lumber Company, unloading oak from the recent shipments up the Ohio, and this, with a good outward demand, keeps everybody very busy.

I. N. Stewart has been on a trip to his old home in Canada by automobile this month, but business in yard has gone on as usual, the report of sales of cherry being especially satisfactory.

F. W. Vetter finds that the demand for most hardwoods has improved lately and has a new lot of cypress in assorted widths coming in to help meet his trade.

Saginaw Valley.

A large quantity of hardwood timber is handled in the Saginaw Valley. Not only is the 60,000,000 feet manufactured here marketed, but interior mills and those along the line of the Mackinaw division of the Michigan Central and Detroit & Mackinac roads contribute as much more to the stock handled here. Local dealers buy lots of manufactured lumber at the mills and some of it comes to the valley and is handled by local dealers, while some of the mill firms handle and market their own stock. A good deal of the maple goes into flooring and a number of million feet this season and last has been converted into timber for structural work, bridges and harbor improvement work.

White Bros. of Boyne City have placed on the market about 30,000 acres of mixed timber, largely hardwoods, lying east of the Mackinaw division, and a number of Bay City firms are negotiating for it. White Bros. have recently closed a million dollar deal for Oregon timber and they intend transferring their attention largely to the Pacific coast. Their railroad will be extended no farther east than Gaylord, its present terminal, and they will not lumber the timber east of that point. The timber can be easily reached by rail and brought to the Saginaw river.

The Kneeland-Bigelow Company will shut down the mill a few days for overhauling and minor repairs and it will then resume operations day and night for another year. Mr. Bigelow says that general business is good. The stock cut by this mill was sold at the beginning of the year. The mill cuts maple, beech, birch and some elm and ash. The company is negotiating for a large block of timber north, although it has fifteen years' stock yet in sight, running day and night.

Valley parties are negotiating for a large block of the Ward timber on the 78,000 acres owned by the estate along the line of the Ward road, recently purchased by the Vanderbilts and is now operated by the Michigan Central. It is calculated that the greater portion of this will come to this river to be manufactured. An effort has been made to induce manufacturers to come to the Saginaw river and establish a charcoal iron furnace. Not in all the Northwest is such another vast supply of raw material accessible in the form of hard timber, while the facilities for moving the stock are unrivalled. Half a dozen wood alcohol and by-product plants could easily be taken care of in this district.

The Alpena excelsior plant burned Saturday, involving a loss of \$20,000, with only \$4,000 insurance.

The stave mill of the U. S. Cooperage Company at Hessel was also burned. The plant was totally destroyed as well as the building, an inexpensive structure, the machinery and what stock was in the mill.

The M. Garland Company has shipped the machinery outfit for the Keys & Warboys hardwood mill, being built at Tower. The mill will cut about 50,000 feet a day.

The Richardson Lumber Company's new mill plant at Bay City is progressing finely and the company expects to be ready to begin sawing in October.

S. G. M. Gates, fifty years engaged in lumbering at Bay City, and still operating a saw mill and cutting several million feet of hardwood annually, was stricken with paralysis a week ago and for a time his condition was critical, but he is now slightly improved.

The experiment of manufacturing maple lath undertaken by the Kneeland, Buell & Egelow Company a year ago, proved a success, and the company is putting out a large number of them. They are utilized largely for crating purposes and they make fine crates. The company has sold a number of million pieces this season.

W. D. Young & Co. are turning out a lot of hardwood lumber and flooring, and have kept their plant humming day and night. This firm has also been negotiating for another large body of timber up the line of the Mackinaw division.

Last week a large quantity of fine oak timber was shipped from Bay City to Kingston. The vessel took out 19,500 cubic feet, but picked up some of it at West Michigan points. That shipped from this river was mostly rock elm.

Grand Rapids.

The Manufacturers' Building Company, owners of the new furniture exhibition building, has increased its capital stock from \$70,000 to \$125,000. The new issue of stock will be used in the construction of an addition to the building, which will be carried through to Division street, practically doubling the floor space.

Grand Rapids was never in more prosperous condition as a furniture market than now. The owner of the Auditorium building, corner of Ionia and Fountain streets, will let the contract in a few days for remodeling and enlarging this structure, making it six stories, and fitting it up for furniture exhibition purposes. The Leonard buildings, Ottawa and Market streets, are also to be fitted up for furniture this fall, or as soon as the refrigerator plant can be removed to the new factory that is being built on Clyde Park avenue.

Furniture manufacturers have obtained very fair results during the sales this month. It has not been a big season because of late crops and rather full stocks in dealers' hands. The east has bought conservatively of the

high grade stuff, and the coast states, California, Oregon and Washington, have not sent many buyers to the market for the reason that the freight blockade has resulted in late arrivals of stock ordered many months ago, and they are now in shape to take on more goods. Liberal buying has been done by the south and the central states.

John W. McDonald, vice president of the Evans & Retting Lumber Company, was quietly married to Miss Elizabeth Hanniffin at Cincinnati July 5. The bride was formerly a telegraph operator at Duluth, Minn., and there seems to be a tinge of romance connected with the affair, since the news was a surprise at the offices of the company here. After the ceremony Mr. McDonald continued on his business trip south.

A recent report of the state factory inspector shows that about 2,000 people are employed in the thirty-two mills and factories at Cadillac, very few of whom are boys or women. In addition there are four large lumber camps within a few miles of the city, where three to four hundred men are employed the year round. Cadillac is also headquarters for a number of other firms whose mills are adjacent to the city, for which Cadillac is the outfitting point.

The Stow & Davis Furniture Company of this city has increased its capital stock from \$60,000 to \$150,000. The question of new buildings is to be decided at the next annual meeting.

The Federal Veneer Company, capital \$30,000, of this city and Cedar, Miss., has been incorporated, the chief stockholders being John F. Conant of Milwaukee and Walter Clark of the Michigan Trust building, Grand Rapids. Mr. Clark has merged his veneer and panel business in the new concern.

Thomas Friant of White & Friant, the well known lumber firm, has returned after a six months' tour of Europe. He was accompanied by Mrs. Friant.

The Ludington Woodenware Company of Ludington has secured a new supply of material for its pin mill, 130,000 feet of logs from near Bass lake, and the plant is again in operation.

A cement railroad tie has been invented at Jackson, Mich., that is attracting attention in railroad circles. It is an 8-foot tie, and by the use of cable loops in the center is made practically unbreakable. It will be shown next month in Chicago, at the convention of roadmasters.

Indianapolis.

With the organization of the Hickory Handle Company of Attica, it is announced that the concern will take over the plant and business of the handle factory in Attica, which has been operated by the South Bend Wood Turning Company. Articles of incorporation, showing \$15,000 capital stock, have been filed and the directors are William Calvert, Clement B. Isley, R. Ray Allen and Robert R. Lave.

H. H. Phillips, for many years in business at Hardinsburg, has been succeeded by the Brown, Martin & Phillips Lumber Company, which was recently organized. It is understood that there will be no change in the general management of the company.

Plans are being made by the Rockwell-Wabash Furniture Company to build and equip a large furniture factory at Michigan City. J. H. Orr is the resident agent of the company in Michigan City and has the plan for building and equipping the plant in charge.

Fire of unknown origin partially destroyed the yard and mill of the Wyatt-Smith Lumber Company at Camden on July 14. J. P. Smith, a wholesale lumber dealer with offices in this city, is interested in the company.

The loss was about \$800 and necessary repairs will be made immediately.

The Bosse Furniture Company at Evansville will build a two-story brick addition, 34x100 feet, at its plant. A fireproof vault will also be built in the new building. The company expects to largely increase the capacity of its plant.

Business of the Capital Lumber Company has grown so much in the last two years that the company is now operating four large yards in this city. The company does a large business in hardwood in addition to handling general lines.

Due to the similarity in names of the two corporations, Oran M. Pruitt, president of the Indiana Veneer and Lumber Company of this city, has discovered that he paid the taxes for the Indiana Lumber and Veneer Company, of which he is also an officer. As a result the county records show that the former company is delinquent and a penalty of \$125 has been added to its presumably unpaid taxes. The Indiana Lumber and Veneer Company is really little more than a name as the Indiana Veneer and Lumber Company bought its plant and other property at 1101 East Twenty-third street a few months ago.

The Evansville Coffin Company of Evansville has increased its capital stock from \$25,000 to \$35,000, and it is understood that extensive improvements are to be made at the plant.

The Indianapolis coliseum project is now a thing of the past, the courts having decided that it could not be built on the ground dedicated to the city for market house purposes. With the settlement of a bill of \$11,338 to the W. P. Jungclauss Company and a few other minor details, amounting in all to about \$30,000, the scheme has been closed.

According to the officers of the Interior Hardwood Company, that concern will undoubtedly do the largest business in its history this year. Orders have been large and the company has been able to make very satisfactory deliveries due to the excellent car service conditions that have prevailed. Little difficulty has been experienced in getting stock this season.

Herr Bros.' spoke factory at Tell City was seriously damaged by fire on July 18, the fire originating in the furnace room. The main building was gutted at a loss of about \$5,000, on which there was insurance amounting to \$1,500. Repairs will be made at once and the business will suffer little from the fire.

Bristol, Va.-Tenn.

W. L. Fletcher of Columbus, O., who is associated with H. A. McCowan & Co. of Salem, Ind., was buying lumber in this market last week. He reports business with his company brisk.

L. H. Goodwin of the Goodwin Lumber Company of Butler, Johnson county, Tennessee, was in the city on business this week and left Saturday for a business trip to the East.

T. H. Carrier, head of the Adventure Lumber Company of Johnson county, Tennessee, is in Philadelphia on important business.

The Patterson Lumber Company is installing a big band mill in Greene county, Tennessee. This company has about 40,000,000 feet of timber to cut and already has circular mills in operation. "We expect to be in shape to turn out probably 60,000 feet of stock a day regularly," said President Patterson of the company last week. "We will soon have our band mill complete and ready for operation."

The completion of the new branch of the Southern along the Little Tennessee river in Blount and Monroe counties, Tennessee, will witness the inception of extensive development of the timber resources in that section. The timber along the line of the new road is

now about all in the hands of concerns that propose to develop it as soon as the road is completed. The new line will probably be in operation late this fall.

Byrd M. Robinson of New York, who recently resigned the presidency of the Chicago & Gulf and Mobile, Jackson & Kansas City railways, will, it is said, head a syndicate that will carry on immense timber and mineral developments in middle Tennessee. Mr. Robinson and Chicago associates already own a large amount of timber and mineral lands in that section and have constructed the Tennessee railway, Harriman & Northeastern, and other lines traversing the boundary. Mr. Robinson formerly resided at Bristol and is a frequent visitor in this section.

The Babcock Lumber Company, of Ash-tola, Pa., which some time ago purchased a large boundary of timber in Monroe county, Tennessee, is taking steps looking to the manufacture of same on a large scale.

W. S. Whiting of the Whiting Manufacturing Company of Abingdon, Tenn., was in the city on business last week. Mr. Whiting reports business with his company brisk. The Whiting Manufacturing Company is one of the largest timber holders and lumber manufacturing concerns in this section.

George E. Davis, head of George E. Davis & Co., reports business unusually good with his company. Mr. Davis' concern is manufacturing hardwood stock for the eastern trade on a large scale.

The lumbermen of this section are gratified with their special exhibit at Jamestown. This exhibit is in the building of the Virginia Mineral and Timber Exhibits Association, and is in addition to the regular Virginia timber exhibit. M. N. Offutt of the Tug River Lumber Company and H. M. Hoskins of the H. M. Hoskins Lumber Company have charge of it.

The Ralston-Wilson Lumber Company of Bristol has five mills running on the Clinch river. The company has a big cross tie contract with the South & Western railway. E. E. Wilson, manager of the Bristol office, has just returned from a trip in Tennessee in the interests of his company.

The Hoo-Hoo annual at Atlantic City in September will be largely attended by the black cats from this section. T. W. Fugate, vicegerent of southwest Virginia at Richlands, already has the names of many of those who will attend.

H. M. Hill of Bristol has gone to Tamrosch, Giles county, Virginia, to accept a position with the East River Lumber Company.

Cincinnati.

After being idle for some weeks on account of the recent fire the sawmills of the Maley, Thompson & Moffett Company, at Eighth and Evans streets, have resumed cutting. Temporary sheds have been constructed over the saws and the other machinery. The mill has been running the past week sawing some fine walnut logs received from Lexington, Ky. Considerable quartered oak was also cut. There are enough logs at the plant to keep the mill running full time for some months, and by the time the new structure is finished the present stack of logs will be fairly well diminished. Another raft of logs was floated up the mill creek to within a short distance of the mill and this has saved the firm considerable money. The new structure is rapidly being completed, and if favorable weather continues will be finished within the next forty days. Thomas J. Moffett, president of the company, was slightly indisposed last week and was away from the office for three days. These are the first days Mr. Moffett has missed for some time and he was greatly missed.

Chester F. Korn, of the Farrin-Korn Lumber Company has gone on a week's trip to Louisville and points in Indiana. He expects to close up several business deals.

Ferd Bosken of the Cincinnati Hardwood Lumber Company, reports that his firm has been cutting and selling considerable chestnut during the past two weeks; prices on this wood, although it is in better request, have not been augmented.

C. W. Bill of the G. W. Jones Lumber Company of Appleton, Wis., was in town recently in quest of maple and birch. His wants were well supplied by various dealers. He said that in coming through the state of Indiana he found that the markets there were in fairly good shape, considering the time of year.

William E. Delaney, general manager of the Kentucky Lumber Company, has gone on a business trip to Williamsburg, Ky., where he will look after the company's mill. He will return within a week.

About 1,500 walnut logs from the farm of D. F. Grazeo at Lexington, Ky., were recently shipped by the Maley, Thompson & Moffett Company direct to European markets. There still remain about 1,000 logs, the majority of which have been shipped to Cincinnati and put into market condition. These are fancy walnut logs and high prices were received for them from European buyers.

The records of the Chamber of Commerce for the year ending December, 1906, show a handsome increase in the receipts of lumber. Furniture also scored a big increase, while vehicles were produced to about the same extent.

M. B. Farrin of the M. B. Farrin Lumber Company and the Farrin-Korn Lumber Company, has purchased a tract of land in Winton Place for \$10,000. The tract is used for storing lumber, but, if the present tenement house laws are revised, it may be used as the site of the proposed flats to be erected by Mr. Farrin for his employees.

Sam L. Moyer of the Lumkenheimer Company left last week to visit the headquarters of the company in the East. During his stay he will visit all the important cities along the Atlantic coast.

John W. McDonald, vice president of the Evans and Betting Lumber Company of Grand Rapids, Mich., and Miss Agnes Hannifin, of Duluth, Minn., were married here last week by Rev. Michael Mulvihill. The couple left the next day, but left no word as to where they were going.

E. E. Williamson, commissioner of the Receivers' & Shippers' Association and Thomas J. Moffett, president of the Maley, Thompson & Moffett Company, went to Indianapolis last week and held a conference with the railroad officials in regard to a new classification of lumber freight rates. No information as to what transpired has been given out.

The annual banquet of the Cincinnati Lumberman's Club, held recently at the Altamont hotel, was a very enjoyable occasion. A heavy storm during the afternoon in some way caused a congestion in the electric wires and the management of the hotel was forced to supply candles to illuminate the banquet table, about which were seated about 123 persons. The soft light of the candles gave a peculiarly beautiful effect to the scene, and the guests were sorry when the electric lights were restored. Professor Shields spoke on "Continuation Schools," advocating manual training instead of an academic course in the public schools. A. A. Andridge, in a brief talk, also approved of the continuation schools. The women present each received as a souvenir a beautiful silver flower holder. The club suspended meetings for the summer with the annual banquet. Meetings will be resumed the first Monday in September.

Chattanooga.

The Ramhurst Lumber Company, with a planing mill and two sawmill plants at Ramhurst, Ga., has been in operation about ten days. The concern is operated by S. H. Loomis and F. W. Blair, who was formerly in the lumber business in this city.

W. M. Fowler of the Case-Fowler Lumber Company of Birmingham, Ala., whose plant has been sold to the McLean Lumber Company, has gone to his home in Indiana and is spending his vacation automobiling. It is reported that he will return to this city and engage in the lumber business again in the fall.

The McLean Lumber Company, which has a plant in this city, has purchased several thousand acres of timber lands in Alabama, south of Birmingham, at a cost of about \$50,000. The Williams & Voris Lumber Company of this city sold the McLean people 2,500 acres of oak timber land in that section recently.

The Southern Car Manufacturing and Supply Company of Beaumont, Tex., is to remove its plant for the manufacture of engine pumps and other supplies to this city. James A. Wiggs, proprietor of the company, has already purchased a site in South Chattanooga at a cost of \$20,000 and will begin the erection of a new plant there at once. A machine shop 100x170 feet will be built and the whole plant will cost about \$100,000.

It is announced that a railroad bridge is to be erected across the Tennessee river, north of Chattanooga, and that a railroad will be built through the coal and timber belt of the Chattanooga Company, Ltd., and along the base of Walden's ridge to Daisy, Soddy, Retro and probably as far north as Rockwood in order to develop these timber and mineral centers. If the deal goes through—and Col. W. I. Young, the promoter, has announced that it is a certainty—the Grand View Coal and Timber Company, recently chartered with \$100,000 capital stock, will develop about 7,500 acres of land which that concern has purchased on Walden's ridge.

Capt. A. J. Gahagan, treasurer of the Loomis & Hart Manufacturing Company, is planning a very enjoyable vacation this year—he is to be married in September. The bride, Miss E. C. Telford was, until recently superintendent of Erlanger hospital, a public institution of this city. They will spend their honeymoon in the East. There is not a busier man in Chattanooga than Capt. Gahagan nor a more loyal citizen. He is chairman of the finance committee of the county court and takes a leading part in the deliberations of that body, representing the interests of the people of Chattanooga; he is an enthusiastic member of the Chamber of Commerce, the Chattanooga Manufacturers' Association and an officer in the Chattanooga Furniture Manufacturers' Association. He is also a director of the armory.

St. Louis.

George W. Stoneman of the Stoneman-Zearing Lumber Company, Devall Bluff, Ark., was a St. Louis visitor last week. Mr. Stoneman was en route home from a business trip and reported that hardwood trade conditions with him were very satisfactory.

George E. Watson of New Orleans, secretary of the Southern Cypress Manufacturers' Association, was recently in the city on business, which he cut as short as possible, telling his many friends that he found the climate of New Orleans far preferable at this time of year.

Lloyd G. Harris has gone to Pine Lake, Wis., to stay until September. Mr. Harris was accompanied by his wife and daughters.

N. W. McLeod of the Grayson-McLeod Lumber Company is in Minnesota for a vacation. Fish-

ing is the occupation to which he expects to devote his time until he fully recovers from the strain of a strenuous season.

Lewis Doster, secretary of the Hardwood Manufacturers' Association, Chicago, was calling upon the St. Louis trade the first of the month.

The new Lloyd G. Harris Hardwood Lumber Company has bought land in the block between Kosciusko, De Kalb, Lafayette and Lesperance streets, where it will establish a hardwood yard and office quarters, after sufficiently improving the property.

Thomas W. Fry of the Charles F. Luehrmann Hardwood Lumber Company recently made a trip to the leading hardwood markets of the South.

Tom Moore of the Moore Company has been taking a much-needed vacation in Michigan.

H. H. Lamping, who has been associated with various lumber companies in this city, has been made manager of the North St. Louis yard of the Moore Company.

The Plummer Lumber Company recently got in 150,000 feet of ash—that much sought-after commodity—from southwestern Georgia.

The Charles E. Thomas Land & Timber Company has been incorporated in Missouri, with a capital stock of \$25,000. The stockholders are the same as those of the Belzoni Hardwood Lumber Company of Mississippi. Since incorporating the company has acquired 9,000 acres of timber land opposite the Belzoni mill, which it is thought will cut about 6,000 feet of oak, gum, cypress and ash to the acre. The Belzoni company will manufacture the timber. Charles E. Thomas is president and treasurer and Edward W. Wiese is vice president and secretary.

Five or six hundred cabinet makers, millmen and woodworkers employed in St. Louis shops have struck because of employers' refusal to grant them an eight-hour day at 35 cents an hour in place of a nine-hour day at 30 cents. There is a chance that several thousand strikers and sympathizers may go out before the trouble is over.

The board of directors of the Lumbermen's Exchange held its monthly meeting at the rooms July 12, with the following in attendance: Franz Waldstein, president; W. W. Dings, vice president; E. H. Warner, R. F. Krebs, A. J. Lang, W. A. Bonsack, Paul J. Davidson, secretary.

The total appropriations for building for the six months ending with June were \$14,946,793 for 1906, and \$12,823,792 for the current year, a decrease of \$2,123,001.

The Little Lumber Company recently bought a tract of hardwood timber containing 3,000,000 feet in Mississippi county, Arkansas, near the company's Blytheville plant. Cutting will be commenced at once.

Theodore M. Plummer of the Plummer Lumber Company has gone to southern Texas to complete arrangements for taking up his residence on his new plantation there the first of the year. Mr. Plummer is very enthusiastic over changing his vocation from that of lumberman to ranchman. T. W. Powe, vice president of the Plummer Lumber Company is absent from St. Louis on a two weeks' vacation trip to the mountains of Virginia and the Jamestown Exposition.

E. A. Stilks, manager of the American Hardwood Lumber Company's Meridian, Miss., plant, was in the city last week. The company has filed a claim with the Interstate Commerce Commission for a rebate on shipments east of the Mississippi covering a period of four years.

E. W. Blumer, sales manager for the Lothman Cypress Company, is away on a selling trip.

E. W. Wiese of the Thomas & Proetz Lumber Company is taking a vacation in the East, visiting Buffalo, Washington and the exposition.

R. F. Krebs Lumber Company will soon remove its headquarters from 1318 Chemical building to North St. Louis, where it has leased a piece of land and will put in a new switch and office building, thus establishing another St. Louis grouping and distributing yard.

Nashville.

Secretary Lewis Doster of the Hardwood Manufacturers' Association of the United States, formally opened up his headquarters in Nashville on last Saturday. He has located on the tenth floor of the Stahlman building, one of the handsomest sky scrapers in the country, having rooms 1019, 1020 and 1021, and is rapidly getting his affairs in shape to begin business. Secretary Doster has assisting him N. L. Heaton, chief clerk; C. B. Watts, accountant; W. L. Jones, in charge of the Bureau of Grades, and other clerical help. From this office he will superintend the work of grading and routing his traveling inspectors. Secretary Doster has been cordially received in Nashville and is delighted with the hospitable welcome accorded him by the Nashville members of the association as well as lumbermen in general.

A serious fire was narrowly averted the other afternoon at the big plant of John B. Ransom & Co. on the tracks of the N. C. & St. L. railway in northwest Nashville. Some English sparrows had built a nest in the rafters supporting the big water-tank above the planing mill and a spark from a passing engine ignited the straw of the nest, setting fire to the tank. A general alarm was turned in and a great conflagration was anticipated at first, but the water from the big tank of several thousand gallons capacity, aided by the city hose, put out the flames. The loss was not serious.

The hardwood flooring business in Nashville is in a most satisfactory condition at present. The Prewitt Spurr Manufacturing Company has just put in one of the most complete plants of the kind in the country and has been very busy supplying the local market. The Nashville Hardwood Flooring Company is running full blast, supplying both the local and outside market. Inquiries are reported as plentiful and prices as very satisfactory.

T. M. Robinson of Shelbyville, president of the Robinson-McGill Manufacturing Company, manufacturers of carriages, buggies, etc., has sold out the bulk of his holdings and will move to Nashville in the near future to engage in business.

A bad fire was narrowly averted last week at the plant of the Standard Lumber & Box Company by the timely arrival of the Woodland street engine company. A lighted cigar ignited a pile of shavings. The blaze was easily extinguished, however, and slight damage resulted.

The Rialto Lumber Company of Tipton county has been granted a charter by Secretary of State John W. Morton. The capital stock is \$10,000 and the incorporators are W. S. Mayes, W. E. Hall, W. H. Lindsey, J. S. Malone and W. M. Simonton.

H. C. Horn, a guest at Hartman's hotel in this city, tells a good one on a crowd of sawmill hands near Rockport, Ky. "When they quit work to go to dinner," says Mr. Horn, "they were a badly surprised lot. A big brown bear was found busily engaged in ripping open the baskets and getting out what he liked. After a hard fight bruin was driven off and the hungry men devoured what few crumbs he had left."

The loss occasioned by the recent fire at the plant of the White Trunk Company has been adjusted. The full amount of the policies carried was paid—\$40,000.

A special from Decatur, Ala., states that the Nebraska Cedar Company has located a mill in that city and is putting in tracks and an elevator on the river front for handling timber brought in rafts. Most of the timber will be cut into blocks and piling and exported. A large timber contract has been secured for the Panama Canal. Cedar is selling now at \$2 per hundred pounds and some of it is being hauled from the mountain distances from seventy-five to 100 miles.

A number of prominent railroad officials and lumbermen met in Nashville recently and held a conference on the celebrated yellow pine case and the Georgia and Alabama lumber cases. These cases have annoyed the railroads interested for the past two years, as they have been called upon to refund 2 cents a hundred to the shippers and don't know to whom to pay the money. The conference was held at the office of Judge Ed. Baxter, counsel for the Associated Southern Railways. It was stated that the railroads intended raising the rates on the few grades of lumber that now move at a minimum charge but it is said this was advised against. Matters pending before the railroad commissions of Mississippi, Alabama and Georgia were discussed also. It is said the railroads are ready to pay the money necessary to be refunded, but that until the lumbermen decide among themselves who is to get the money they will be unable to pay any one. Each bill of lading and expense bill issued by the railroads for the past two years will have to be audited separately and this means that it will take a small army of men to do the work.

A special from McEwen, Tenn., announces that the Heath-Witbeck Company of Chicago will move its yards from that place to Clarksville, Tenn.

The Lesh Land & Timber Company of Madison county, capitalized at \$25,000, has been granted a charter. The incorporators are: J. C. Edenton, L. Taylor, P. H. Russell, H. H. Lesh, H. P. Tomlin, W. A. Caldwell and B. C. Edenton.

A special from Montgomery, Ala., announces a movement of lumbermen in that section to start little exchanges in the timber states to facilitate the handling of the output. It is said the smaller mills cannot keep up with the price fluctuations and lose much by taking less than their product is worth, and it is said their action in keeping prices down, through ignorance, results in some of the larger dealers taking advantage of the situation and making unusual cuts. Those promoting the organization of such exchanges insist that it would result in getting cars to the little fellows, among other benefits.

V. R. Harris has lost his stave and heading plant at Erin, Tenn., by fire. It was valued at \$4,000.

The Standard Furniture Company has about completed its big warehouse.

The N. C. & St. L. railway was recently compelled to cut down a large oak planted at Shelbyville, Tenn., in 1836 by President James K. Polk and Henry M. Watterson.

In a lawsuit at Hopkinsville, Ky., over timber rights to a 200-acre tract there are more than two dozen complainants. They seek to restrain certain defendants from passing over the property, claiming that damage results. The timber rights are alleged to be worth \$1,000.

Memphis.

No topic in hardwood lumber circles of late has created more active interest than the principle involved in the discussion regarding National inspection brought about by the experience of R. J. Darnell, to which reference was made in the last issue of the *HARDWOOD RECORD*. Local lumbermen are on both sides of the controversy, some holding that Mr. Darnell is right in refusing to allow a National inspector to take up lumber without having his own representative on the pile, while others maintain that President Russe is correct in his view that the inspector was right in refusing to allow any one to work on the pile with him. Two letters, one written by J. W. Thompson, who was for years chairman of the Inspection Bureau Committee of the National Association, and the other by J. W. McClure, have been furnished

the *HARDWOOD RECORD*, the former holding that the seller is entitled to representation on the pile when selling lumber, and the other taking the view that, if either the buyer, or seller is to have representation on the pile, there is no necessity for National inspection. These two letters, as giving the two views held here, are presented herewith:

"Referring to your circular letter of the 2d, I can only give my own opinion and practice as to the rights of a National inspector going on any firm's yard and helping himself. I would not, under any condition, allow an inspector, unless I knew him personally, to go on my yard and take up lumber unless I had a personal representative on the lumber with him.

"The inspection of lumber is largely a matter of judgment. I find the best inspectors that can be employed by the National Association, or any other organization, differ widely as to the application of the rules, and are governed very largely by their local environments.

"It is true, we have allowed a great deal of lumber to be shopped from our yard by both Mr. Gibson and Mr. Swift without our man going on the pile with them, but we know these two gentlemen personally and know them to be honest and fearless in their inspection; also we are acquainted with their ideas of lumber and their application of the rules of inspection. But, if a stranger were to come in, whom we did not know, and attempt to receive lumber as a National inspector, we would certainly put a man on the pile with him. We would do this, not to argue or influence him in his application of the rules of inspection, but in doing so we would reserve the right to call the deal off if we did not think he was applying the rules properly.

"I think the National Association is lame in not having uniform application of the rules in different sections of the country, but this is a very difficult thing to bring about.

"Now that hardwood lumber has become so valuable, I do not think it an unpardonable thing for any seller of lumber to insist on having a personal representative present in the inspection of his lumber. Yours very truly,
J. W. THOMPSON."

"We duly received a copy of your circular letter of the 1st inst., which in itself did not call for a reply, and we now have your letter of the 9th inst., asking for our views on the matter treated of in your letter.

"We cannot say that we agree with you on the stand that you have taken. The whole theory of National inspection rests on the foundation that the National inspector is a disinterested party acting for both buyer and seller under bond to give full justice to both and entirely free from the influence of either. We think that his theory is somewhat defective for the reason that inspection is largely a matter of judgment and an inspector's judgment is susceptible to variance caused by outside influence acting either consciously or unconsciously on the mind of the inspector.

"We believe, however, that the only way in which National inspection can be made at all satisfactory and serviceable to the members of the association is to have the inspectors as free as possible from any influences. Manifestly, this would not be possible if either the buyer or seller were permitted to put a representative on the lumber pile to keep check on the National inspector. The seller, if he chooses, has the same privilege as the buyer in checking up the National inspector's work; that is, the seller has the privilege of measuring and inspecting the lumber before the National inspector goes on it, just as the buyer has the privilege of measuring and inspecting it after the National inspector, but in our judgment it would not be fair to either to allow a representative of the other on the pile with the National inspector, and, if both buyer and seller were represented, naturally there would be no necessity for the services of a National inspector.

"We are, therefore, of the opinion, as already expressed, that the only method by which National inspection can be made practical and useful to the members of the Association is for the inspector to be kept free from all outside influence, which his bond indirectly requires him to do. Yours truly,

BELGRADE LUMBER COMPANY.

"By J. W. McClure."

President W. H. Russe states that this question of allowing any one to work on the pile with the National inspector, either representing the buyer or the seller, was thoroughly discussed by the directors of the association before being adopted in its present form. He asserts that opportunity was given to every one who had any complaint to register to do

so and that, having failed to take advantage of this opportunity, it comes with rather bad grace to register a kick against the rule. He further declares that the inspection rules must stand as adopted and that the association cannot afford to be dictated to by any individual or set of individuals in this matter.

Weather conditions throughout this section during the past fortnight have been well-nigh perfect and rapid progress has been made in putting lumber on sticks. No surplus of lumber has been accumulated but, with continued favorable conditions, the indications are that there will be plenty of lumber put on sticks to meet the requirements of the fall trade without difficulty. Some manufacturers are becoming so positive on this point that they are paying more attention to the manufacture of specialties than to the cutting of ordinary kinds of hardwood lumber.

The Bellgrade Lumber Company has completed its 50,000-foot hardwood mill at Belzona, Miss., and this is now in operation. The resaw has not yet been installed but this will be done without delay. The company has issued a circular setting forth that it has absorbed the old firm of Thompson & McClure. Under the new regime Mr. McClure is manager of the office and sales department, while Mr. Thompson is in charge of the lumber and shipping department. W. L. Crenshaw looks after the manufacturing end of the business, while F. P. Gearhart looks directly after milling operations. The company has offices in the Randolph building. Its yards are located in North Memphis, where a specialty will continue to be made of ash. The company has recently added considerably to its timber holdings near Belzona and will soon begin work on its railroad, which is to be built for the development of this property. The officers of the company are: W. L. Crenshaw, president; A. N. Thompson, vice president; T. M. Cathey, general manager; F. P. Gearhart, assistant manager, and J. W. McClure, secretary and treasurer.

The Neal-Dolph Lumber Company, which was recently formed here, has acquired the mill of the old Planters' Lumber Company at Greenville, Miss., and this will be put into operation in a short time. The company is making some necessary repairs and improvements in the plant. The company has offices and yards in Memphis. W. A. Dolph is secretary and general manager.

C. L. Willey, who has established a veneer plant in North Memphis, has struck oil in digging a well on his holdings. This was struck at a depth of 315 feet and it is believed that, if the well is sunk deep enough, there will be a sufficient flow of oil and gas to make it profitable to develop them.

The Western Tie & Timber Company, of St. Louis, has sold 27,000 acres of hardwood timber land near Harrisburg, Ark., to E. L. Real of Chicago, for a consideration of \$800,000. Mr. Real will erect a large plant at Harrisburg for the manufacture of this timber, as he has some very large engagements to fill in the near future. This is one of the largest timber land sales recorded in this section for some time.

The G. B. Lesh Manufacturing Company has sold its entire plant in new South Memphis to Dugger & Goshorn for \$28,700. The company came here from Warsaw, Ind., several years ago and established a plant for the manufacture of dimension stock to be shipped to its central plant at Warsaw to be manufactured into plow handles and other woodwork to be used in the making of agricultural implements.

J. S. Warren, S. M. Neely, Mayor James H. Malone and L. T. Kavanaugh have gone to St. Louis to co-operate with the officers of

the Deep Waterways Association in making preliminary arrangements for the big convention to be held in Memphis, October 4 and 5. It is expected that the convention will be the most important waterways meeting ever held. Much interest will be lent by the presence of President Roosevelt, who is a strong advocate of internal waterways improvements, because it will further his scheme of regulating the railroads. Committees have been appointed already by the Cotton Exchange, Merchants' Exchange and Business Men's Club to provide ways and means for holding the convention here, and committees will also be appointed by the Lumbermen's Club of Memphis and the Builders' Exchange.

The Lucas Land and Timber Company of Humphries county, has been incorporated under the laws of Tennessee. The capital stock is \$125,000. A. N. Lucas, W. B. Hillman and others are incorporators.

The Lone Mountain Coal and Timber Company has been incorporated in Roane county, Tennessee, with a capital stock of \$50,000. The incorporators are T. A. Wright, A. T. Daniels and others.

The Rialto Lumber Company has been incorporated in Tipton county, with a capital stock of \$10,000. W. S. Mayes, W. E. Hale, J. S. Malone and others are incorporators.

W. H. Greble of the Three States Lumber Company has gone to Chicago, where he will attend the convention of the yellow pine people.

W. B. Morgan, secretary and treasurer of the Anderson-Tully Company, has returned from a trip to Virginia and other eastern points.

There will be a concatenation of Hoo-Hoo at Brinkley, Ark., Saturday night, July 27. This call has been issued by James M. Gibson, vicegerent. W. R. Anderson, vicegerent for the district of west Tennessee, is making arrangements to get up a good crowd of Memphis Hoo-Hoo to participate in the festivities of the Brinkley concatenation.

New Orleans.

Sawmill men and timber holders in the state are beginning to sit up and take notice of matters pertaining to taxation of their lands, and a large number of representatives of all kinds of lumber and timber companies are flocking into Baton Rouge to get a line on the work now being undertaken by the State Board of Equalization of Texas. The board on examining the abstracts sent in by the various assessors has found the difference existing in the assessment of timber lands to be the most marked of any items coming under its consideration and it is going into the timber land question. There are few parishes in Louisiana where there is not some timber, and the result is that the taxes on these are in a measure a considerable part of the state's revenues. The increased value of the timber land nearly everywhere has started the Board of Equalization on a campaign that is causing the lumbermen a good deal of concern.

Advices from different parts of Louisiana show that there has been a noticeable increase in sales of hardwood timber land during the last few months. Several representatives of hardwood firms have been in this state recently looking at tracts, and a number of important deals are said to be under consideration. A telegram from Opelousas, La., states that a number of deals involving large sums of money have been consummated there in the last week or so, but no details are given. It is understood, however, that within a short time two or more important deals will be announced.

A new firm has just been organized here to deal in lumber and building supplies. It will make a specialty of hardwood interior finish. The firm is the Home Lumber and Supply Com-

pany, and the incorporators are W. H. Reed, W. B. Harbeson and Hugh T. O'Connor.

The Bates-Bussy Box Manufacturing Company has been incorporated here with an authorized capital of \$5,000. The company will manufacture boxes of all kinds and buy and sell timber land. Nicholas J. Bates, James J. Bussy and Fred Wahlig are the incorporators.

Otto Starcke of Hamburg, Germany, representing the lumber firm of Gossler Bros., lumber importers of Hamburg, was in New Orleans recently and in a short interview gave a comprehensive review of the export situation which shows that there has not been and will probably not be any break in the demand for lumber from that source. Though the high prices demanded by the American exporters are driving some of the European buyers to the Hungarian and Russian forests, Mr. Starcke said, there is little evidence that the American markets are being affected thereby. Mr. Starcke expressed the belief that it would be a blessing to America if forests should become available which would lessen the terrible drain on the American timber lands. He said he didn't believe this country could stand ten years more of such timber cutting as has been going on in the last five years. Mr. Starcke also commented on what he said was the sensational advance in the price of timber land in the South.

That the claims made by European lumber importers on shipments of American lumber may result in the formation of a Bureau of Inspection which will pass upon the lumber before it leaves American ports is said to be evident from the stand taken in this matter by the New Orleans Lumber Exporters' Association and the lumber exporters of the entire Gulf coast. It is said that hardly a shipment is made to a European buyer without being followed in due course of time by a reclamation based upon alleged failure of the goods to come up to the description. This claim is said to have developed into a confirmed habit and the Gulf coast exporters are now looking about for a remedy. The Bureau of Inspection is believed to be the only panacea.

Little Rock.

Little Rock shippers and mill men generally are elated over the recent action of the railroads in restoring the "rough lumber" rates. The practice of allowing a liberal shipping-in rate to the mill, upon the tacit condition that the same road should re-haul the finished product, had been in effect throughout the state as long as the lumber industry had been established. Accordingly, when the roads gave notice that the shipping-in rate would be put on a commercial rate basis a howl went up that finally resulted in an order from the railroad commission, sustaining the shippers.

Ozark is jubilant over the prospect of the location of a stove factory in that city. C. H. Kieger and D. W. Kieger, of Indianapolis, are backing the enterprise. They are to start with a pay roll of \$1,000 a week.

The Union Furniture Company has been incorporated at Union, Ark., with a capital of \$25,000. George W. Ritchie, R. A. Whitelaw and W. S. Beard are the incorporators.

The Williams Cooperage Company of Leslie has begun operating their plant, although some fifty carloads of machinery are yet to follow from Poplar Bluffs, Mo. This concern was attracted to Leslie by the extension of the Missouri & North Arkansas railroad, which is opening up a splendid timber belt.

The Hartzell Handle Company at Paragould is running a double shift of men in order to catch up with an overstock of timber.

William LeMay will put in a veneering plant at Alicia, Ark., where he has several million feet of gum to work up.

A. K. Goodnight will establish an excelsior plant at Batesville. The plant is to have a capacity of seven tons per day and will be

erected at a cost of \$6,000. A box factory will be added later.

The Ozark Mining Company will establish a sawmill on White river, near the mouth of Buffalo. The plant will have a capacity of 25,000 feet per day.

Jonesboro is experiencing a dearth of mill hands. At least a hundred men are needed at the hardwood mills there, and the operators have appealed to the business men's league for assistance in securing labor.

Additional lands, amounting to over 35,000 acres, have been withdrawn from entry, in Polk and Yell counties. The purpose is to devote the lands to forestry, as the tract adjoins the Arkansas national forest.

One thousand eight hundred feet of additional track has been laid at Van Buren by the Iron Mountain railway to accommodate the United Walnut Log Company, and will be held for the exclusive use of this concern. The company have several million feet of walnut logs anchored in the river at the foot of the spur, which are to be used in their mills at Fort Smith.

The business men of Ola have secured a stove factory for that place. The plant is to be installed by an Indiana company and will include an electric lighting plant for the city.

Wausau.

The J. W. Wells Company of Menominee, Mich., has purchased from the executors of the estate of the late William Chase of Oconto, Wis., 4,560 acres of land in Marinette county for \$122,560. Much of the land is heavily timbered with hardwood, which will be cut and hauled to the company's mills at Menominee and Dunbar.

The Noble Corwin Lumber Company of Milwaukee is one of the late incorporations of Wisconsin. It is capitalized at \$81,000 and the incorporators are George P. Noble, Grace M. Corwin and Edward T. Corwin.

The T. B. Scott Lumber Company of Merrill has donated to that city a park.

J. Sumner Lombard has purchased 4,206 acres of hardwood lands in Vilas county. The purchase was made through A. M. Riley & Son of Rhinelander.

Work upon the new addition to the Upham Manufacturing Company's furniture factory in Marshfield has begun. A two-story structure will be erected.

Guy Nash makes the statement in behalf of the Nash Lumber Company of Shanagolden that the company's mill, destroyed by fire some time ago, will be rebuilt at once.

G. W. Price of Crandon has gone into the wheel rim manufacturing business. He has for some time been manufacturing wooden pins for the Bell Telephone Company.

During an electrical storm recently the planing mill and carpenter shop of the Shearer & Jardine Lumber Company of Waupaca was destroyed by fire. The loss on machinery, etc., to the company was \$6,000 and on doors and other stock belonging to the Central Lumber Company about \$2,000. The plant will be rebuilt at once.

The sawmill built and owned by the Schroeder & Pondry Company, located on Post lake, was recently sold at sheriff's sale, the proceeds going to the creditors. The J. I. Case Company of Racine took part of the machinery and the rest of the mill went to the Janson Lumber Company of New London, which has handled the output for the past two years. The mill's capacity was from 12,000 to 15,000 feet per day.

A company has been organized to operate the Harrington Package Company's plant at Crandon, which manufactures elm can jackets, butter dishes, etc. The incorporators of the new concern are J. R. Harrington, Frances Harrington and E. O. Woodbury.

The Modern Manufacturing and Lumber Company is one of the late Grand Rapids companies to organize. It is capitalized at \$50,000 and the incorporators are James Hickey, Peter Mitch-

ell, T. A. Taylor and D. D. Conway. A twenty-three-acre tract of land owned by the Garrison estate, upon which the company has an option, will be purchased and an up-to-date plant will be built. The company proposes to take the rough stock from sawmills that part which can not be sold for lumber—short lengths, etc., and put the same in shape for manufacturing purposes.

The F. H. Johnson Lumber Company of Rhine-lander has sold to John H. Korzillious the mill property of the Woodruff & McGuire Lumber Company located near Three Lakes station. The property consisted of 103 acres of land, the plant, store building and about twenty cottages. The only thing reserved was the planing mill, which has since been sold to C. H. Miller of St. Ansgar, Ia.

The first annual business meeting since the organization of the Kaudy Manufacturing Company of Grand Rapids was held recently. It was decided to sell \$5,500 worth of treasury stock that the capacity of the plant might be increased, most of which was at once taken by stockholders. The old directors, F. J. Wood, J. A. Cohen, E. Oberbeck, George Halverson and G. J. Kaudy, were reelected and they in turn reelected the following officers: President and manager, G. J. Kaudy; secretary, George Halverson; treasurer, F. J. Wood. The company manufactures articles in furniture, novelties, etc.

Charleston.

A representative of W. H. Bailey & Co., Grafton, W. Va., has been on the road this week looking for ties to supply a large contract which that company recently booked.

The Charleston Lumber Company, Charleston, W. Va., lost its band mill by fire June 22. Total loss incurred was about \$8,000. The company will rebuild.

F. H. Rodman of Anderson, W. Va., has purchased a large tract of Virginia timber land which, it is announced, he will develop at once.

The Dixie Lumber Company has purchased a tract of timber on Coal River and will build a mill there immediately.

Minneapolis.

Lumbermen in this state are pleased over a proceeding just started by the railroad and warehouse commission. Under a new law it is having a test made of every railroad track scale in the state. A state employee is going out with a steel car carrying a full fifty-ton load of short steel rails, and with this weights will be made on all the scales. There has been much complaint of careless weighing and bad order scales.

F. J. Lang, who represents the Wisconsin Land and Lumber Company of Hermansville, Mich., has opened headquarters here at 716 Lumber Exchange, where he will remain a few weeks looking after sales of their maple flooring and other hardwood products.

F. W. Buswell of the Buswell Lumber and Manufacturing Company has gone to look after operations at their mill at Buswell, Wis., where they are manufacturing hemlock and hardwood lumber, and are on their second year of active business.

The total value of building permits issued in Minneapolis for the first six months of the present year was \$5,060,405, and St. Paul made a showing of \$3,416,015. Last year the record for the same period was \$4,153,550 for Minneapolis and \$3,431,607 for St. Paul. The heavy increase in Minneapolis has meant more work in hardwood for the millwork concerns and in this line business is rushing.

C. F. Osborne and D. F. Clark of Osborne & Clark, the local wholesalers of hardwood, have returned from a trip of inspection to several retail lumber yards they own along the Soo line, in the vicinity of Ladysmith, Wis.

J. C. Melville of the Melville Lumber Company is back from Camp Lakeview, where he was

in camp with Battery B, the local artillery organization, in which Mr. Melville is a sergeant.

A. F. Hein, the well known hardwood lumber and cooperage manufacturer of Tony, Wis., was a business visitor in Minneapolis this week.

Ashland.

Market conditions were never better than at present, and firms are all kept busy shipping. There was a small run of timber recently, but it was not put on the market, being owned by companies.

The railroad which is being built by the Yellow Poplar Lumber Company on Grassy creek is progressing rapidly, in charge of James Hatcher of Pikeville. They are working 200 men, and the road, which is a standard gauge, will come to the Big Sandy below the mouth of Grassy. It is reported upon good authority that the road will be extended to Elkhorn City, and a big band mill will be built there. The timber in that section is extra large and fine, one tree measuring 9 feet 8 inches in diameter and 90 feet to the first limb.

Among recent incorporations in this section is the Ashby Lumber Company of Oakland, Md.; the chief works will be in Barbour county, West Virginia. The incorporators are C. A. Ashby, Deer Park, Md.; Albert Ashby, John E. Legg, Milton Rodamer, Oakland, Md.; George Brown, Belington, W. Va., and A. G. Ashby of Bond, Md.

The Park City Lumber Company has been organized in this city, the incorporators being George Bartholomew of Bartholomew, Ed Kennedy and W. R. Vansant.

The Kenova Sawmill Company, recently incorporated under the laws of West Virginia, has held a meeting and elected the following officers: Dr. S. W. Patton, president; J. R. Scott, vice president, and J. C. Hearne secretary. The offices of the company will be maintained in Catlettsburg, though the plant is located on the banks of the Ohio just below the Norfolk & Western bridge at Kenova. The authorized capital of the concern is \$25,000; subscribed and paid, \$5,000. The mill will begin operations in a few days, and will be under the supervision of James Vanhorn, one of the most experienced men in this section. It has a capacity of 35,000 feet per day.

A sad death occurred here on July 13, when Miss Clotilde Ward, stenographer for the Giles-Wright Lumber Company of Catlettsburg, was struck and killed by a train on the O. & B. S. division of the C. & O. railroad. Miss Ward was on her way home in this city for dinner, and was waiting in front of the office for the street car, which runs parallel to the railroad. She was standing on the railroad track, and seeing a freight train approaching, stepped out of its way in front of the passenger, which struck her, throwing her a distance of fifteen feet. She was brought to the King's Daughters' Hospital in this city, where she died in a few hours.

The citizens of Big Ugly, in Lincoln county, West Virginia, are jubilant at the prospect of a railroad up that stream, upon which work has been commenced. They believe that the road, though a narrow gauge, will be the means of making that stream prominent in the prosperity of West Virginia, and that it will be extended over to the Coal River road and have connection on both sides, which can receive the immense quantity of coal and timber lying on its waters. Huntington, W. Va., capitalists are interested in the road and are very enthusiastic over the outlook.

Mrs. R. H. Vansant and children are at Waynesville, N. C., where they expect to spend the heated season, while Mr. Vansant will recuperate at the seashore, leaving for the East about the middle of August.

T. N. Fannin has returned from a trip to

Arizona and other points in the West, where he has extensive investments.

E. C. Means of Lowmoor, Va., president of the Yellow Poplar Lumber Company, was a recent visitor to this city, visiting relatives and looking over business affairs.

W. R. Vansant has purchased a large band mill from the Smith, Myers & Schnier Company of Cincinnati, manufacturers of "Climax" band sawmills, and is now in that city, superintending the shipping of same. The mill will be put up at once on the 2,000-acre tract recently purchased from the Ashland Iron and Mining Company, which abounds in high-grade oak and poplar. Mr. Vansant will remove his offices from this city to Rush, a small town on the Lexington division of the Chesapeake & Ohio, near which the land is located. The mill is expected to be ready for operation about the middle of September.

Toledo.

The Frank W. Mills Company has opened a factory at 200 West Mount street, Columbus, for the manufacture of office furniture, window and door screens and specialties in wood. Some delay has been caused by the inability to secure proper machinery, but the plant will be in full operation in about two weeks. Henry J. Sharp is president, Frank W. Mills vice president and superintendent, and Oscar W. Kallmerton secretary and treasurer of the company. One novelty to be manufactured by the company is a new porch screen, adjustable so that in winter the porch can be inclosed in glass and in summer changed to screen in a very short time.

At the annual meeting of the Columbus Coffin Company held in Columbus last week H. W. St. John was elected secretary and treasurer in place of C. M. Anderson, resigned.

The Curlieright Carriage Company, recently incorporated, is making preparations for the erection of one of the largest plants in Hamilton. The new building will be 181x128 and will have 100,000 square feet of floor space. The company figures that its yearly output will be about 15,000 vehicles. The Columbia Carriage Company will occupy part of this new building.

The business of the Harden, Winders Company, 1232 East Long street, Columbus, has increased so rapidly that the officers, Allen G. Harden and David T. Winders, are looking about for a suitable location for a new factory. The company is engaged in the manufacture of oak furniture and has been in operation only a short time. Extensive improvements have been made to the present plant, a lease of which was secured a short time ago.

In about a week the new freight rates on lumber will go into effect. So far there has been little indication of how this change of lumber from a commodity class into the higher class is going to affect the market. The matter has not yet been settled and certain roads have not definitely decided whether they will charge the new rates or continue the old ones. The majority of the roads will undoubtedly decide on the new rates, which will eventually increase prices.

Another railroad question of interest at this time is the 2 cent rate in the South. While no formal action is yet noted, there are several dealers in this market who have money coming by virtue of the 2-cent rate law, and they are speaking of forming a committee to start action to recover this money.

"Six months in the workhouse" was the sentence pronounced by Judge W. L. Morris against the twenty-one lumbermen of this city who were charged with violating the Valentine anti-trust law. Naturally this is creating quite a stir in local lumber circles, as it was thought that inasmuch as the offense

was only a technical one, the penalty could be no more than a heavy fine, and especially so since the lumbermen at once absolutely abandoned the objectionable organization and have since made every effort to abide by the court's construction of the Valentine law. For several months the court held the sentence in abeyance, but it was no sooner pronounced than the attorneys began a frantic struggle to save their clients from the ignominy of imprisonment. Motions were made for a stay of execution and for new trials, and upon the overruling of these motions the record was at once made up and the case carried to the circuit court. The circuit court has made an order suspending the sentences upon the showing that the lumbermen were entitled to a full hearing, new questions being involved. It is evident that no stone will be left unturned in the effort to annul this decision.

Charlotte, N. C.

North Carolina lumbermen are interested in a new company just across the Virginia line, the De Soto Naval Stores Company, whose principal offices will be at Lynchburg. The capital stock of the corporation will be \$500,000 and it will build, buy and operate flumes, canals, wagon roads and similar means of lumber transportation, manufacture all kinds of forest products and do a general business of this kind. The officers for the first year are: President, Charles E. Heard of Lynchburg; first vice president, Ernest Williams of Lynchburg; vice president and general manager, George Kerr of Lynchburg; secretary and treasurer, Frank F. Beard of Baltimore.

A new railroad being projected in Caswell and Rockingham counties means the opening up of large timber lands in North Carolina. Beginning at Yanceyville in Caswell county the line will touch the Norfolk & Western road at Stoneville, on the edge of Rockingham and Stokes counties. Another road that will put the timber lands to the front is the proposed Wilkesboro and Jefferson road through Wilkes and Ashe counties, two of the best lumber counties in the state. Negotiations are understood to be pending whereby the Southern will finance the deal and continue its present road, which terminates at Wilkesboro.

A charter has been issued to the Marion & Southern railroad from Marion to Bennettsville, S. C., the largest incorporator being the Marion County Lumber Company. The new road will be thirty miles in length and will pass through Marion and Marlboro counties.

The Queen Mab Lumber Company of Georgetown, S. C., has been incorporated with a capital of \$250,000. F. L. Wilcox is presi-

dent, L. W. McLemore secretary, and H. E. Davis treasurer. This is one of the larger lumber concerns of the state.

At a recent meeting of the stockholders of the Sanford Buggy Company it was decided to begin at once the building of a large plant. It will be three stories high and situated on the Seaboard Air Line railroad. The enlargement in facilities was made necessary on account of the increasing business of the company.

The Hall-Hughes Lumber Company of Parkton, N. C., has been chartered and will shortly begin business with a capital stock of \$30,000.

The Sylvia Lumber Company of Sylvia, N. C., has been granted a charter, with a capital of \$20,000. J. W. McKee is the leading stockholder. The company expects to begin operations within a few weeks.

Arthur Lyon of High Point, N. C., is working for the organization of a company to manufacture a patented roller cabinet for typewriters. One of the hardwood factories of High Point may undertake to manufacture the appliance, but if not a new company will be organized for the purpose.

The Alma Lumber Company, recently organized, will shortly begin the erection of a large plant at High Point. The capital stock of the concern is \$125,000. J. P. Redding is president, J. H. Petty secretary, and J. H. Redding treasurer and general manager.

The Avant Woodworking Company of this city has begun business with W. A. and L. A. Avant, C. A. Eastman and J. M. McLaughlin. The company will do designing, custom work, wood carving, make tables and chairs, hall fittings, mantels, tiles, etc., and handle rough and dressed lumber. The men behind the business are all experts.

The Winston Vehicle Company, recently organized, will begin business in about two weeks. The old plant belonging to J. O. White was torn down and a new building erected, four stories high. The authorized capital stock is \$25,000, and Mr. White is president. Mr. White has been in the business seventeen years and is recognized as one of the leading men of the state in this line of manufacture.

A recent census shows what progress North Carolina has made within the past few years in the lumber business. The value of timber products in 1850 amounted to \$1,383,310. In 1905 it was \$15,731,379. North Carolina and Pennsylvania led in the number of establishments engaged in the lumber industry. Each had a total of 1,212 in 1905, and the value of the product turned out amounted to \$15,731,379.

whitewood, although buyers compare their purchases to as near actual wants as possible. Many buyers look for a lower market for white wood. Cypress is moving in fair sized lots with prices well held. Black walnut is in excellent call. Beech in all grades attracts a good volume of business and chestnut sells well. A large business in veneers is being done. Maple is steady.

New York.

The usual summer dullness prevails here at the present time and things are generally quiet. There is no particular inquiry, although good stocks are moving off at good prices. Oak and poplar continue strong and bid fair to continue so for at least sixty to ninety days, and probably longer. There is some mountain oak being offered a little cheaper, but this is consigned stock, and the tendency to a lower price is obvious. The demand for ash continues strong, but perhaps if there were a good supply at the present moment the demand would be met and inquiries would not be so noticeable. Birch, beech and maple and the other woods are holding their own. Conditions point to no lower prices for two or three months, and to a good trade in the fall.

Philadelphia.

That there is a slight dullness in certain lines is indisputable, but in others there is continued activity, thus preserving a satisfactory equilibrium. The present status of things is regarded by no means an unhealthy one.

Although there has been some slacking up among the woodworking concerns in some of the eastern cities, the eastern Pennsylvania furniture manufacturers still keep busy. Among the veneer and panel men there has been no lagging, and the sash and door mills and flooring makers are evidently likewise prosperous. The building boom of the last few years in west Philadelphia has subsided somewhat, but in other sections of the city there has been sufficient stimulation in building to keep the suppliers of building lumber busy throughout the season. Car building (electrical) is very active and railroad extension work continues to employ considerable material.

The car service has been much more dependable of late, but it is feared it will prove troublesome again when the crops are ready for removal, consequently every effort is being made by the wise ones to so regulate their stocks that as far as possible the serious handicap of last winter may be avoided. That values will take a decided drop in the fall is still believed by some, but those who have made it a point to study the conditions in the mill district realize that the accumulation of stock at mill centers is out of the question at this time, on account of the severe rain storms which have deluged these sections. Reports coming from some of the southern mill districts also show that on account of the tendency to force trading by some, thereby forcing down values, a number of the sawmills will close down their plants for thirty days. Any weakening in prices may be traced to certain conditions, but nothing of an alarming nature in this respect is discoverable, and the fall will undoubtedly find hardwood values well up. Ash and poplar are probably the strongest in the hardwood line at this time. Chestnut, oak and basswood are running a little easier with prices fluctuating only slightly. Cherry and birch keep steady. Veneer and cigar box lumber hold old status.

Baltimore.

In a general way quiet may be said to characterize the lumber trade of this section. As a rule orders have been placed by consumers for the requirements of the season, and only as deficiencies develop are additional calls for

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

The local demand can be called simply fair, but is somewhat spotted. Yard men say that some days every team they have is employed in delivering lumber and the next day one or two could care for all the business offered. There is nothing abnormal or unusual in the situation at the present time of year. Furniture, interior finish and flooring factories are fairly busy and there is every prospect of a fair but not rushing demand further along in the season. The good end of poplar and oak are the two chief items called for, but values on hardwoods remain reasonably firm.

Boston.

The market for hardwood lumber has been fairly active during the past two weeks and prices have held firm. From all reports there is a scarcity of desirable lumber, while a fair

volume of business is coming forward. Many dealers state the call is not quite as active as it was, but no one appears willing to sacrifice profits for the sake of doing a larger business. The manufacturers of furniture are all busy and are consuming their full quota of stock. House finish is in very good call and manufacturers are busy. From some sections of the country reports of car shortage are heard, but as a whole there is less difficulty in getting supplies forward than for some time past.

The advance in all kinds of hardwood lumber has resulted in some instances in manufacturers delaying shipping of orders booked previous to the mark up. Several dealers say their experience with these unreliable shippers has been anything but satisfactory.

The demand for plain oak is fairly active. For 1-inch stock ruling quotations are \$56 to \$58. Quartered oak continues firmly held at unchanged prices. There is a fair demand for

stocks received. Office forces are reduced and an atmosphere of listlessness prevails. Nevertheless, a fair amount of business is reported in the hardwood trade. The offerings are more liberal, according to some reports, but they are mostly common stock, the better grades being none too plentiful and the mills being able to dispose of their output readily enough. Here and there an expression is heard that the trend of values is lower, but inquiry if any actual or appreciable decline has taken place is invariably followed by a negative reply. Hardwoods generally are in satisfactory shape, and the mills are doing all they can to turn out lumber. Poplar is lower than it was some months ago, the demand having let up somewhat, while the production increased rather than diminished. The southern mills in particular are enabled by the high water to run to the limit of their capacity, having gotten in a plentiful supply of logs. There are some indications at the present time, however, that the output of mountain poplar will be curtailed because of the heavy rains which have made the roads almost impassable. The forwardings abroad are fairly large, but actual congestion is being avoided. Such woods as walnut, chestnut, ash and others are in good shape, the demand being quite large and the offerings hardly in excess of the trade requirements.

Pittsburg.

High grade hardwoods are in good demand. In some sources they are reported as very scarce. Local wholesalers have been scouring the market pretty thoroughly the past week for good stocks of hickory, ash and maple with but small results. The firms which usually have these stocks on hand are sold under contract away ahead and can give present buyers little assurance of any relief before October. The building situation has improved this month, as better weather has enabled the contractors to go ahead with projects that required fine hardwood for finish. This, with the steady demand from carriage and wagon people and the orders from implement factories, has stimulated the trade in good hardwoods to quite an extent.

The market for the medium grades of hardwood is a little draggy. This is expected, considering the fact that it is the height of the vacation season and that half the dealers are away. The local yard trade is fair. Cars are plentiful, according to most reports, and at the mills lumber is being pushed out as rapidly as it can be dried. Few of the mills are slowing down any for the hot months and most of them have more business than they can well take care of. There is a strong call for ties and bridge timbers.

Buffalo.

The midsummer lull has made its appearance in lumber and trade is quiet. There is little complaint from any one, as the demand is good enough to keep all the yards busy, that is, if they are stocking up as much as they should be at this time of the year.

Some hardwood dealers say that this will be the best July they ever had, and though all will not agree to this some of the others are finding that the demand is better than it was early in the month. There is a good increase in stock everywhere and that is the main concern at present, as it always should be in midsummer, when the retailer and consumer do not care to buy very liberally. There is no doubt of a large general consumption of lumber.

There is rather a surplus supply of plain oak, but nobody minds it much, for though prices will be easy for awhile, it is impossible to get too much of it. The southwestern oak mills are so indifferent to the change of situation that they are asking stiff prices for their plain oak. The situation will, of course,

throw the mills to quarterming more oak so it will right itself.

There is all of the former scarcity of ash, poplar and chestnut, but this is not keeping the dealers from getting quite good lots here and there of all these woods. They will not be able to keep full assortments of them in yard any longer. Prices are strong except in case of low-grade and wormy chestnut, which is not so scarce as the higher grades.

Cypress, which a number of hardwood dealers handle along with their general stock, is much more plentiful than it was and prices are not maintained very well, though the complaint is mainly that the mills held their prices up too high for the jobber to get much out of it. The same high mill prices prevail with basswood and elm, though some is kept in stock.

Saginaw Valley.

It is about time now to begin to make contracts for stocks, and manufacturers take an optimistic view of the situation and the prospects for the fall and winter. It may not be quite as brisk as it has been during the last two years, but the men in the industry can see nothing in the future that warrants the idea that there is going to be any marked stagnation. The trade is healthy if a little quiet just now in some lines, but maple flooring manufacturers say the trade is seasonable and as the greater number of the plants are operating day and night the outlook for a healthy fall and winter business is fairly good.

There is not an excessive stock in manufacturers' hands at the present time. Maple is moving steadily, taking into account the time of year, and there is a fair market for basswood, ash and beech, the latter having advanced since early in the spring. The market is now somewhat dull, as is usually the case in midsummer, but manufacturers are going right along in the expectation of a good demand in the fall and winter.

Indianapolis.

Indiana hardwood dealers and manufacturers are particularly fortunate in being able to get stock promptly. While hardwoods are coming in promptly, other lumber dealers find it difficult to get supplies, especially from the Northwest.

Hardwoods are coming in from the South in satisfactory volume and there has been no advance in prices. Quartered oak continues scarce; other grades are fairly plentiful. Much interest is being manifested in the coming meeting of hardwood men, railroad officials and the State Railroad Commission to discuss the matter of adjusting hardwood freight rates.

Bristol, Va.-Tenn.

Notwithstanding the dullness of the lumber market during the past few weeks, the mills in this section will make a surprisingly good showing for July, and business is holding up well. There has been no reduction in the output of the mills and the effect of the falling off in demand is that the yards are now well stocked.

The country mills have been getting in good time this summer and as the roads are now in a passable condition, much stock is being hauled to the railroads and is now ready for shipment. The largest part of this, however, is already sold. Poplar leads, and oak is but a little less active. Prices remain firm.

The export market, according to local exporters, is in little better condition than the domestic market, though there has been a slight falling off in the volume of export shipments.

The lumbermen all entertain a roseate view of the future and the consensus of opinion is that the business will pick up and resume its normal proportions within the next few weeks.

Cincinnati.

There is no particular evidence of midsummer dullness in the local hardwood situation. While the demand is not as brisk as it was several weeks ago, there is still a fair volume of business being transacted. The hot weather continues, but it seems to have a slight strengthening effect on the market. As usual poplar is selling as the headliner in this market and its strongest competitor is oak. Both quartered and plain white are in excellent demand. Both these grades have shown a slight improvement in demand during the last two weeks, and prices are steady. Chestnut has picked up remarkably during the last fortnight, but not enough to cause dealers to increase the price. Furniture dealers continue to hesitate in purchasing hardwoods, which is probably due to the fact that they are still taking stock. The demand for cherry, maple and cypress continues satisfactory and the same may be said of hickory and mahogany. The amount of logs on hand will keep the mills going for some time to come. Most of the lumber being cut now is kept in stock, awaiting the fall trade, which is expected to start the latter part of August.

Chattanooga.

There is a splendid demand for all grades of lumber in this section. A few complaints are heard concerning demurrage matters but not a great deal of trouble is being experienced in getting cars.

The James skyscraper, of twelve stories, the Hotel Patten, of the same height, and other large buildings have brought about an active demand for lumber.

Poplar, ash and oak seem to be the strongest woods just now. Both plain and quartered oak are in great demand. All the logs which the river mills can hope to receive until December are now in hand, as there will probably be no more logging tides before that time. During the first six months of 1907 about 8,000,000 feet of lumber were received by the river mills, this being a somewhat larger amount than usual.

The lumber concerns of this city and section have done a big business so far this year. It is estimated that they have handled about \$5,000,000 worth of lumber. During 1906 about \$9,000,000 worth of lumber was handled in the same section, and the immense gain as represented by the first half of this year is pleasing to lumber dealers.

St. Louis.

The hardwood market cannot be called dull, although in a way there is very little "doing" just now. Yard operators are taking time to assort and complete their stocks in readiness for the prospective demand, and reports from milling districts are encouraging, since the weather has permitted the drying out of woods and manufacturers are once more getting in shape. Production should go forward rapidly during the next few weeks. Prices are holding firm from the fact that good car supply of late has facilitated the shipping out of all dry stocks at milling points, leaving nothing on hand unsold, and it is reasoned that undoubtedly before the next cut is ready to market another shortage and more bad weather will be forthcoming. Buyers who persist in waiting until late before ordering are deemed unwise and will probably be disappointed in many instances. Sap gum is down a little, but is selling readily; quartered oak is the strongest seller, with poplar, cottonwood, hickory and ash very firm.

Nashville.

The local market continues in a most satisfactory condition, with a slight upward tendency in prices. The local yards have a pretty fair stock of lumber on hand with the exception of poplar, which is very short; in fact, most of them are almost completely denuded of

dry stock. Chestnut is strengthening and bids fair to command a better price in the near future. Plain oak continues about the same. Ash appears a trifle erratic in tone and much variation is noted in the quotations made by the various Nashville dealers. Retailers report a heavy demand for all sorts and grades of lumber that could be used in building frame houses. Local box factories are also experiencing a fine business and the outlook is excellent. Prices in boxes have taken an upward trend in the last few days. Woodenware manufacturers are equally as brisk. The mills are busy stocking the yards as fast as they can get the stuff in here. The car situation shows considerable improvement, enabling the quick filling of orders. Practically all the Nashville mills are running and every business seems to be more than making good. The water is too low for rafting, but the loggers at the head of the river are reported to be very busy getting ready for the first fall tides. Much of the lumber consumed here and shipped from here comes from the upper river. The spring season was favorable as far as the tides were concerned and enabled the dealers to load up with raw material enough to last for a good while.

Memphis.

There has been some revival in the demand for hardwood lumber during the past few days and business is rather more active now than it has been the past few weeks. The volume of trade is greater than the average for this time of the year and indications point to a continuance of present satisfactory conditions. Weather is perfect for logging and milling operations and there are large quantities of hardwood lumber being placed on sticks. Prices are well maintained in some directions, but there are some items showing comparative easiness. The higher grades of gum, cottonwood and cypress perhaps reflect more weakness than anything else, and this is only by comparison with the stiff values prevailing thereon up to a short time ago. Prices even now are relatively high and furnish a good profit. The lower grades of cottonwood are in excellent demand at prices pretty close to the top for the season. Cypress has, to some extent, slackened, but there is more easiness in the higher than in the lower grades. Plain oak is a good seller and values are well maintained thereon. There is very little quarter-sawed red oak available, and there is demand enough to absorb all of this. Quarter-sawed white oak continues firm and there is no surplus available. Poplar is in good demand and ready sale is found for all of this in both the higher and lower grades. Offerings in this market are comparatively light. Ash is not in such urgent request as a short time ago, but there is not enough stock for sale here to cause any pressure to sell and there is no report of price shading in connection with this lumber in any grade. Crop prospects show improvement and the feeling here regarding the future is one of hopefulness and it is expected that there will be a satisfactory volume of business during the fall and winter months. Export demand does not show any improvement, but a revival in that outlet is expected in the near future. Meantime the domestic call is sufficiently large to keep manufacturers and wholesalers moderately busy.

Little Rock.

During the past few weeks conditions have been satisfactory in the hardwood business throughout this state. The weather conditions have been ideal and timbermen have been able to accomplish much in the woods. This is especially pleasing, as last season conditions were disastrous and many mills had to close down on account of the frequent and heavy rains. There is a rush of timber to the mills now, and

the only complaint heard is that good mill help can not be obtained, especially in the north-eastern part of the state.

Charleston.

This market does not seem to be as brisk as it was thirty days ago, but the majority of mills have booked orders ahead and are running full time. All look forward to a good fall business. Poplar is still in the lead and from the present outlook there is nothing to prevent a good fall trade. Plain oak is not moving as fast as some of the mills would like, but prices are holding firm at \$45 for ones and twos and \$31 for common, f. o. b. this city. Stocks are light. Basswood calls are heavy and but few mills have any stock to offer. Sound wormy chestnut is selling readily at \$17.50 for 1-inch, \$18.50 for 1 1/4-inch, \$19.50 for 2-inch, f. o. b. mill. Stocks are light. Low grade oak is the best moving stock on hand at present.

Car conditions are fairly good, but some mills still report shortage, not being able to secure sufficient cars to fill rush orders promptly.

Minneapolis.

It is mostly a waiting game in hardwood circles in the Northwest, both among dealers and consumers. The mills are holding at stiff figures that are not tempting to the middlemen, and most of them are inclined to hold off, but some contracting is still going on. Dealers are not offering any dry stock for sale because they have none to ship, dry lumber being only found in the yards in small and scattering quantities. The new lumber is at best no better than half dry, and hence can only be sold at premium prices that will cover the extra freight. The owners are naturally in no hurry to sell, as they expect better prices after a while. Buyers who have not already contracted are holding off because they expect to get better price quotations in the fall, when hardwoods are in good shipping condition and dealers feel more like moving it.

It is claimed that northern oak is either contracted by consumers or else has all passed into strong hands, and the same is true of ash. Basswood is still very firm and the general view is that a shortage is likely to develop again next winter. The mills are inclined to hold it at higher prices. Birch is firm and the new stock is too heavy yet to move to any extent. Considerable has been contracted, and low grade stuff is generally spoken for. The offerings of southern stock are not large and prices quoted are firm. Shipments on contracts are coming better than at any time this year. The country demand for hardwood is very quiet. Some flooring and a little wagon stock are being sold, but retail yards are not buying. Flooring is the most active item in the city trade.

Toledo.

The local hardwood market has been quiet during the past week, but there has been no falling off in prices. Stocks generally are in about the same condition as during the past few weeks with receipts a little lighter in most grades. The principal activity is shown in lower grades of hardwoods, which have been strong for some time.

There seems to be a feeling that the car situation will not continue as good as it has been for some time and this conclusion was arrived at largely because of the falling off of receipts without any apparent reason for it.

Plain red oak seems to be in stronger demand than any of the woods, with quartered white a close second. Only the fact that the demand is not great allows the supply to meet the call. Basswood is very scarce, in fact, it is almost needless to mention basswood as practically none can be obtained in this market.

The largest proportional receipts of the past two weeks have been Mississippi and Louisi-

ana gum. The cause of this seems to be the fact that this wood is growing in popularity with the furniture dealers.

Charlotte, N. C.

Local hardwood dealers are experiencing the regular summer dullness, although the market has held up wonderfully well. Fine weather has helped the trade along the line of manufacturing especially. Traffic conditions have improved and orders held up for some time are now being filled with rapidity. Manufacturers are receiving good prices for their products. In this part of the South the mills have all been scarce of reliable labor. Negroes are depended upon largely; so far foreign labor has not been given a chance in this section.

Liverpool.

Quite the best feature of the market just now is hickory, and as all the large buyers have been putting off buying we are likely to see a bit of a scramble. The market could take 2,000 or 3,000 logs quite comfortably and not feel an appreciable change. Another item which is badly wanted is large first growth ash logs, which will bring good prices. Mahogany is also one of the good things of this market and there will undoubtedly be quite a sensational rise, as before prophesied. After mentioning these items there is nothing else to report but mournful news of lower prices coming. Poplar and oak are going to be easier. No demand and increase of stock are gradually affecting the market and lower prices must come sooner or later. Ash planks still keep about as before, but the demand is low and should any quantity come forward prices would undoubtedly be lowered. The car building firms, the largest buyers here of this material, are all extremely quiet. The Socialist element, which is at present pushed rather to the fore in the government of this country, having rather put a stop to further orders being given owing to the money having been spent in Socialist legislation. There is no doubt that business is not as good here as it should be and there is an unsettled feeling all through the trade.

HARDWOOD RECORD

- ¶ Reaches more manufacturers, jobbers and consumers of Hardwood Lumber than all the remainder of the lumber trade press combined.
- ¶ Prints more hardwood news than all the remainder of the lumber trade press combined.
- ¶ Is not only the only hardwood paper, but the best lumber paper printed.

Who Buys Hardwoods?

DO YOU WANT TO KNOW?

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town
Name of concern
Name of buyer
Line manufactured
Kinds, grades and thicknesses of lumber
Kinds and sizes of dimension stock
Kinds and thicknesses of veneers
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

NEW JERSEY, CAMDEN: New York Shipbuilding Company; address purchasing agent; 150,000 feet, all thicknesses, principally firsts and seconds white ash; 100,000 feet principally 1", 1 1/4", 1 1/2" firsts and seconds basswood; 50,000 feet all thicknesses firsts and seconds cherry; 15,000 feet 1" and 1 1/2" firsts and seconds chestnut; 25,000 feet firsts and seconds elm; 150,000 feet all thicknesses firsts and seconds and some fine common mahogany; 150,000 feet all thicknesses firsts and seconds plain white oak; 200,000 feet all thicknesses principally firsts and seconds quartered white oak; 50,000 feet all thicknesses principally firsts and seconds sycamore; 50,000 feet 1" and 1 1/2" firsts and seconds poplar; some hickory and locust. Dimension stock: Teakwood, 500,000 feet all sizes, in logs and flitches.

Forced Draft

From time immemorial forced draft of various kinds has been employed to quicken combustion.

The housemaid on her knees before the kitchen stove, coaxing the newly kindled fire to "take hold" and the blacksmith at work at his bellows, are among the most familiar examples.

In the realm of the saw mill, the system of forced draft that is recognized as the most practical and efficient is that put in by the Gordon Hollow Blast Grate Co., of Greenville, Michigan.

The Gordon Hollow Blast Grate

This grate
1. GENERATES EVERY OUNCE OF POWER A BOILER IS CAPABLE OF DEVELOPING.

2. MAKES IT EASY TO BURN WET OR GREEN SAWDUST, SLABS, ETC., EVEN WHEN COVERED WITH SNOW AND ICE.

It greatly lightens the work of firing, and is many times as durable as the best draft bar.

It can be used in either furnaces or ovens, and in any number of them from one up.

No change in construction necessary.

There is no difficulty in firing up in the morning, and none in making steam when the blower is idle, as, for example, at night; neither is there any objection to maintaining a fire under the last-mentioned circumstances.

DON'T FORGET THAT

WE PAY THE FREIGHT.

WE TAKE THE RISK

The outfit being returnable AT OUR EXPENSE if unsatisfactory.

The Gordon Hollow Blast Grate Co.

SPECIALISTS IN
PLANERS, MOULDERS AND FLOORERS

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17½ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

Write for Full Description.

PICKING UP LOGS ALONG THE TRACK IS RAPID WORK FOR THE McGIFFERT LOG LOADER

- ☐ It can either move along the track with a car and pick up scattered logs, or it can stay in one spot and load a whole train, because it is self-propelling and independent under all conditions.
- ☐ It loads any kind of cars on any gauge track, and is a mighty good machine to pick up dollars for you, too.

A machine that declares saw mill dividends

AUTOMATIC SWING SAW GAUGE

¶ An inexpensive little device that *saves a dollar a day* and upwards.

¶ Stops one of the biggest profit leaks at the mill. Pays for itself several times over during a year.

¶ Isn't it worth investigating?

FRANCIS MARSHALL, - - Grand Rapids, Mich.

\$5340 Saved by a Dry Kiln

You can't afford to ignore a guaranteed and proven economy.
Let us tell you how we did it—how you can do it.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

Motor Drive for Saw Mills

INDUCTION MOTOR CONNECTED TO TRIMMER

With the system of individual motor drive each piece of saw mill machinery is connected direct with an electric motor of just the right size to do the work.

The greatest value of motor drive is the saving of power, because it does away with shafting, belting and loss of energy in transmission. You pay only for the power actually used. It is not necessary to start the entire plant to run one machine.

Economy in production interests every manufacturer. Motor drive guarantees a saving, better working facilities and increased production.

The story is better told in booklet No. 47 S—write for it.

General Market Conditions.

The general market is rather featureless. While perhaps the majority of manufacturers are hustling about the sawmill plants trying to catch up to an average output, the majority of the jobbers and a good many of the wholesale consumers are absent on vacations; in fact traveling salesmen report that fully half the people on whom they ordinarily call are away from home on pleasure trips. This is the usual situation at this time of year, and therefore is no surprising feature. However, the result in the hardwood trade is that business is comparatively quiet. Desirable stocks are selling with comparative freedom but there is no particular activity in the trade.

A good many veneer people complain of a lessening number of inquiries and corresponding decrease in orders. This situation is probably temporary and there is good indication of an excellent fall trade.

One of the features of the last few months is the increasing demand for dimension stock in nearly every variety of hardwoods. Where formerly there were ten buyers of dimension material there now seem to be a hundred. This division of the hardwood industry is certainly progressing. Buyers are willing to pay better prices for this material and a great many lumber manufacturers are now making its production an important adjunct of their business.

Business with the hardwood flooring factories is very fair and there is comparatively little accumulation of large orders, but there is a great bulk of small business, which keeps up the aggregate.

Prices all along the hardwood line are being well maintained, which is the natural consequence of the remarkably light stock in first hands. The report from the state of Michigan, put out within the last few days, shows the stock of unsold hardwoods in hands of seventy-one of the leading manufacturers of that state to be only 19,374,000 feet. This report covers more than eighty-five percent of the state's total, and is the lightest stock ever held in that district since the state became a leading hardwood producer. The estimated cut of the state for 1907 is only a little in excess of 400,000,000 feet. The situation is duplicated in Wisconsin where stocks are equally short.

While no statistics are at hand from the southern producing sections it is undeniably true that the same situation prevails there. While prices on some of the building woods seem to be considerably off, the shortage in hardwoods makes it a certainty that values will surely be maintained for the remainder of the year.

In brief the entire hardwood situation is bright and promising.

The Crop Situation.

As is well known, the crop situation has more bearing on the future demand of lumber than anything else. Pessimists who saw distress and financial ruin for not only the farmers but the general industrial trade of the country because of bad crop prospects, are now put to rout by the crop reports which have just been received.

The late spring with its accompanying cold weather furnished the crop prophets with dark visions for the season and the story of complete failure of all important farm products was handed about as an established fact for months. Now, however, there are only stories of prosperity for the American farmer and for the industrial trade of the land. Crops are all right and on an average, stand at normal for this time of year all over the country.

These good reports come from a multitude of sources. The wheat growers of Minnesota state that the prospects for that crop are specially encouraging. North and South Dakota report that conditions were never surpassed with the possible exception of the lowlands. The yield of oats, barley and flax will stand high in comparison with recent years. In Iowa the crops are better than they have been for years. Corn production will be above the average. The wheat output of Kansas will approximate 600,000,000 bushels. Nebraska has one of the largest corn crops that the state has ever known, and the yield of alfalfa is great. The corn crop of Missouri is only seven points behind last year, while the oat crop is the best in years, and wheat is about the average, and fully satisfactory. In Illinois the wheat situation is better than the average, and the timothy clover, hay, oat and rye product is fine. Corn is doing well. In Indiana the records of last year will be broken. Corn and oats are a little behind the average but other field crops are equal to previous years. The same story comes from Ohio, New York, Pennsylvania, Connecticut, Kentucky, Virginia, Tennessee, Montana, Colorado, the far northwestern states, New England and Canada. Even the cotton-growing states, in the face of persistent reports that the crop was a failure, state that while there will be no overproduction, the output will be fair. The planters of Louisiana state that rice, the principal crop, is in good shape, with all prospects pointing to a big yield.

Just now there is no room for calamity howlers. Another year of good business is practically assured.

The Handle Industry.

The manufacture of handles is an industry of considerably more importance than it appears on first consideration. Under this generic term the line of production is exceedingly broad, including as it does fork handles, hoe handles, shovel handles, rake handles, broom handles, mop sticks, axe handles, railroad pick handles, coal pick handles, sledge handles, maul handles, adze handles, drift pick handles, hammer and other small tool handles. In the aggregate the con-

sumption of hardwoods in this industry runs a long way into the millions of feet annually.

A portion of the handle product of this country is produced by an alliance of numerous factories under one general head—the so-called “handle trust”—but there are a large number of independent concerns. The prices of handles are largely controlled by this “monopoly,” and there are a good many people in this trade who contend that they are not at all in proportion to the price of lumber and of labor. They also contend that the rules for grading them should be radically changed, since they are the same today as they have been for the past quarter of a century, and when made were based on a better and more plentiful supply of timber than it is possible to obtain now.

For these reasons it is suggested by several manufacturers that it would be wise to organize a Handle Manufacturers' Association, with a view to securing a somewhat higher scale of prices, and also to reorganize the grading and inspection system of handles. It is suggested that a logical and just set of inspection rules could be formulated through conference between handle makers and handle buyers, the execution of these rules to be under the direct control of the proposed organization. The good results obtained in other lines of hardwood production by coöperative work are too well known to need extended comment. Hardwood lumbermen have their associations, veneer and panel people have theirs, wagon stock makers have theirs, and so it goes.

The HARDWOOD RECORD will be very glad to coöperate with the handle makers of the country in assisting them in the formation of an association, if the majority of manufacturers in the various lines involved deem it wise to form such an organization.

Status of the Veneer Business.

From some sources of veneer production it is alleged that the present demand is light and business quiet; that there is very little new business offered and quite a proportion of the regular trade seems to be loaded up with stock for some time to come. Veneer timber is high and scarce and the supply is growing less as time progresses. Logging is being done under increased difficulties and with advancing cost. Timber that can be bought today is not well located.

Under these conditions is it wise for veneer manufacturers to force stock upon their present customers or would it be wiser to curtail their output as much as they can and thus avoid a possible demoralization of market prices?

It certainly will not pay to cut up good logs at cost and replace the stock at higher prices, which will be the result if prices should go off to any appreciable extent, as it is a dead certainty that the cost of logs will constantly increase rather than diminish.

This matter should interest every member of the National Veneer & Panel Manufacturers' Association and it is a logical and just one for this organization to take up. Supply and demand regulate prices just as much in the veneer and panel business as in any other line of production and there is considerable evidence today that the veneer maker's output is fully up with, if not slightly in excess of the demand.

Michigan Hardwood Meeting.

The complete proceedings of the first annual meeting of the Michigan Hardwood Manufacturers' Association will be found in this issue of the RECORD. This meeting was one of special importance, not only to the hardwood interests of the Wolverine state, but to the industry the country over. It was marked by legislation of great importance and witnessed the delivery of several notable addresses. The minutes of the meeting are well worth perusal by everyone interested in the hardwood trade.

The most important legislation was the adoption of the new inspection rules of the National Hardwood Lumber Association adopted at its Atlantic City meeting, which will become effective December 1 next. Of special moment were the addresses and valuable suggestions given by retiring president Wm. H. White, and

the very competent secretary, Bruce Odell. From the inaugural address of President Diggins it can safely be presaged that the able head the Michigan hardwood people have selected to succeed Mr. White will conduct the new administration along equally vigorous and forceful lines, so that the organization will meet with continued prosperity.

Anyone interested in hardwood affairs cannot fail to congratulate this year-old association on the success it has already achieved. Primarily it recognized the necessity of a readjustment of hardwood inspection rules to correspond with present conditions and exigencies of the trade, and so ably and diplomatically did it present its claims to the trade at large that it succeeded in gaining the coöperation of both the Wisconsin and Indiana associations, and jointly, against powerful opposition, succeeded in inducing the National Hardwood Lumber Association to amend its rules to correspond with Michigan's ideas of just inspection measures. Hereafter the Michigan contingent may be considered as a dominant factor in national hardwood affairs.

“Is There a Lumber Trust?”

Under the above title Smith's Magazine for September, evidently taking its cue from the assailing of the lumber industry in the daily press, publishes an article by one S. C. Hutchins. The RECORD is in receipt of a letter from Street & Smith, publishers of this magazine, announcing that they have forwarded a copy of this issue, and giving permission to quote from the article but requesting that it be not printed in its entirety.

The Lord knows that no self-respecting lumber newspaper man would want to print the article in full! It is one of the most foolish and malicious slanders that has ever been promulgated on this subject by the newspaper or magazine press, and contains just enough truth to be particularly pernicious. Most of the statements, however, are absolutely without foundation—witness the following, which is one of the mildest of the paragraphs contained in it:

“Men who are in a position to speak by the book, and who have made a study of the situation for years, declare that a Lumber Trust exists, and that it dwarfs in magnitude and avarice all other similar combinations. They assert with some show of contempt for the obtuseness of the public, that during the past twenty-five years the lumber business of America, from the forest to the factory, has been under the control of a central organization, and in proof of both points demonstrate that in the course of five years, the prices of a material which to a much greater degree than any other enters into our domestic economy have been enormously increased without the average man becoming aware of the fact.”

Any man, be he even a neophyte in the lumber business cannot but realize how ridiculous are the statements promulgated above. As the writer warms to his subject, he declares:

“The influence of the mysterious central authority extends to all branches of the business. The wholesaler is no less subject to domination than the retail dealer. At different times one and another firm of wholesale lumbermen has become possessed of the idea that it could combat this control. In every such instance the rebellious concern has been promptly brought to book, and in short order reduced to submission or broken. The wholesaler who attempts to shake off the shackles finds himself crippled by a most effective boycott. His supplies are cut off and his customers forsake him. His credit is impaired by insidious rumors, and a hundred petty devices are employed to vex his soul. He soon sues for peace, and never again attempts to secure independence. A like condition prevails among the millmen. One and all bow to the will of the trust. They were the last to come under its control, but they are now as completely dominated by it as any of the other branches. There is now no competition among them.”

As a whole the article is the most vicious and mendacious attack on a great and legitimate American industry that has ever been published.

Pert, Pertinent and Impertinent.

Sad.

There once was a fellow named Macky
Who gave to his friend some tobacco;
The friend now is dead,
And the last words he said
Were: "Macky, your 'baccy is tacky."
—LIPPINCOTT'S.

Popularity.

Her name was plain Mary Jane Dekkles,
And her face was all spotted with freckles;
A la pug was her nose
Still she had lots of bosc
'Cause Mary was there with the shekkes!

Two Sides.

Hubby—"I'm going out with a few friends
tonight, my dear."
Wife—"Not without me."
Hubby—"I can't take you."
Wife—"Would you rather give it up, then?"
Hubby—"No, but my friends would."

Too Expensive.

Running for office
and running automobiles
are luxuries the
"common herd"
can't afford.

Theoretically.

we call him a finan-
cial genius; if he
loses, a plain chump!

Will Any?

That religion is not
the best, which will
not stand a business
test.

Takes a Long Time, Though.

When a man dis-
covers that other
folks are no bigger
fools than he is him-
self, he has learned
human nature pretty
well.

Sour Grapes.

Men don't think
much of heroes in
general when they
size up some of the
material out of which
women manufacture
them.

Natural.

You can't tell a woman
Her faults, no indeed!
She'll prove they are virtues—
Or turn a deaf ear;
But just let the neighbors'
Shortcomings arise,
And lo! lovely woman
Is anxious to hear!

Explained.

A youth at a dance one evening couldn't un-
derstand why a pretty woman who had been
inclined to be extremely flirtatious for a while
suddenly became cold and indifferent. He re-
marked about it to some one he found himself
in conversation with, who replied: "Maybe it's
because I came in; she's my wife!"

Frequently.

Trouble oft comes when days seem fair,
To a trusting man thru son and "fresh" heir.

Sing to Tune of "America."

Ah wha ta na Siam,
Ah wha ta na Siam,
Ah wha ta na Siam,
Ta na Siam.

THE TIME MUST NEEDS SOON COME.

UNCLE SAM: "Stop! You must not devastate here until you repair there!"

[NOTE.—The laws of several European countries provide that for every tree felled one shall be planted.]

Careful.

Follow the advice
of all your alleged
friends and it will be
a padded cell for
your'n.

Avoid Trouble.

Possibly.

The average
woman firmly be-
lieves all her hus-
band's bad habits
were acquired before
he met her, and that
his good qualities are
the natural result of
her influence.

AMERICAN FOREST TREES.

FIFTY-EIGHTH PAPER.

Rock Elm.

Ulmus racemosa—Thomas.

This variety of elm was first discovered or classified in the forests of western New York state by David Thomas. From the fact that it bears its flowers and fruit in racemes he called the species *racemosa*. However, some time later it was found that one of the European varieties of the elm family is so designated, whereupon Sargent rechristened the tree *Thomasi* after the botanist, so that it is now known to authorities by either or both names.

The range of growth of rock elm is from Quebec through Ontario, southward through northwestern New Hampshire to southern Vermont; westward through northern New York, southern Michigan and Wisconsin to northeastern Nebraska, southeastern Missouri and central Tennessee.

It is known as rock elm in Rhode Island, West Virginia, Kentucky, Missouri, Illinois, Wisconsin, Iowa, Michigan, Nebraska and Ontario; as cork elm in Vermont, Massachusetts, Rhode Island, New York, New Jersey, Arkansas, Kentucky, Missouri, Wisconsin, Michigan, Ohio and Iowa; as hickory elm in Missouri, Illinois, Indiana and Iowa; as white elm in Ontario; as Thomas elm in Tennessee; as northern cork-barked elm in Tennessee; as corkbark elm in New York; as northern cork elm in Vermont; as Wahoo in Ohio; as Cliff elm in Wisconsin; as corky white elm in several of the above localities.

The flowers of this tree grow on elongated slender pedicels, often half an inch long, the main stem lengthening out until the spray becomes a long, graceful raceme. They bloom in March or April. The fruit ripens when the leaves are about half matured, and consists of a round, flat seed in a dull yellow samara; the margins of its wings are fringed and are glabrous excepting over the kernel.

The leaves of rock elm are very similar to those of other species of this family, coarsely serrate, oblong-oval, and narrowing into short, broad points; they are thick and firm, smooth and dark above, paler and hairy below, particularly on the midrib and have numerous straight veins running toward the teeth. In autumn they turn bright yellow.

The bark of rock elm is three-quarters to an inch thick, gray slightly tinged with red, corky, velvety to the touch, and with wide, irregular fissures which divide it into broad, flat sections, broken into large, irregularly-shaped scales on the surface. The bark of

the mature tree approaches in roughness that of the shell-bark hickory.

The heart wood is light brown, having a reddish cast in many cases, while the sapwood is yellowish white, and the two are not particularly well defined. Its weight is about forty-five pounds to the cubic foot. It is heavy, hard, very strong, tough, difficult to split, and capable of taking a high polish,

eign boatbuilders, who have to a very large extent, exhausted the best growth of this wood in the chief producing sections. For years before general lumber operations penetrated into the northern portions of Michigan and Wisconsin, agents for English houses contracted for many million feet of rock elm on the stump, and by long and laborious processes cut the timber and hauled it out to lines of transportation and to the ports of the Great Lakes, where it was shipped to Quebec and from there to European markets.

In general appearance this species varies from other members of the genus *Ulmus* in having shaggy stout limbs like some members of the oak family, and less of the graceful but stately aspect of the species *americana* and *fulva*. It grows from seventy to ninety feet in height, and two to three in diameter, reaching its highest development in southern Ontario and Michigan. It will flourish either on low ground where there is a heavy clay soil, or on gravelly ridges and along high bluffs. It is a very slow-growing tree, and this combined with utter neglect in replanting is threatening it with extinction. In northern Michigan and Wisconsin and southern Ontario most of the large, typical specimens have been razed.

At the present time Michigan and Wisconsin are the chief sources of supply of rock elm, but the annual cut of these states is getting to be comparatively small. The recent report made by the Michigan Hardwood Manufacturers' Association shows that there was a total of less than 1,000,000 feet of the wood in the hands of manufacturers of that state on July 1 last, of which quantity 600,000 feet were sold. The stock on hand in Wisconsin is probably considerably less than the quantity in Michigan.

It is unfortunate that so valuable and useful a commercial wood as rock elm should reach a point so near exhaustion, and that no attempt is made to perpetuate it by replanting. The wood has never been of prolific growth, and is a very slow-growing type, but its characteristics are such as to warrant the time and expense of replanting.

Rock elm thrives best in a mixed forest and the finest specimens of the tree are found among soft elm, hemlock, maple and birch growth—never in a pure stand.

The large picture illustrating this article was made on one of the properties of Cumer, Diggins & Co., near Cadillac, Mich. It is not a large specimen of the tree, but is typical of its growth and characteristics.

TYPICAL FOREST GROWTH ROCK ELM,
NORTHERN MICHIGAN.

showing a handsome grain. It is very compact in structure and the name "rock" is peculiarly applicable. In fact, rock elm is considered the best timber of all its family, for its elasticity and toughness make it well adapted to heavy agricultural implement work, wheel-stocks, hames, railway ties, sills, bridge timbers and axe handles.

It is especially esteemed in shipbuilding, and its value is greatly appreciated by for-

DANIEL E. KLINE

LOUISVILLE, KY.

Builders of Veneer History.

NUMBER I.

Daniel Edward Kline.

(See Portrait Supplement.)

Not many years ago the demand for veneers and panels was so small compared to what it is today, and the business was conducted in such haphazard, hit-or-miss fashion, and with so little mutual understanding and uniformity of methods among manufacturers, that it could scarcely of itself be called an industry, forming as it did merely a small and unimportant phase of general lumber affairs. A few houses in various parts of the country, it is true, did devote themselves exclusively to the production of veneers, and while they succeeded in evolving a more or less satisfactory product, they regarded each other as positive antagonists—a spirit which plunged veneer operations into that unfortunate and most deleterious state of affairs—"unintelligent competition." As the call for this product began to increase and the uses to which thin lumber was put broadened out remarkably, some of the wiser ones in the trade, recognizing the value of association work, determined to put it to the test in veneer affairs. Several attempts to organize were made, only to be rendered futile by the jealousy and lack of fraternalism exhibited by the majority. Finally, however, the National Veneer & Panel Manufacturers' Association was successfully launched, and although it has existed less than two years, it has already accomplished wonders for the veneer and panel industry, which has so suddenly become one of the great ones of the country.

One of the men most instrumental in bringing order out of this chaos, and who was unanimously chosen for temporary chairman of the association, then elected its first president, and re-elected to that office at the last meeting—was Daniel E. Kline, of Louisville, Ky.

Mr. Kline was born in Cincinnati, O., May 23, 1850, of German-French ancestry, his paternal grandfather having been a native of Germany, while his mother was descended from an old Huguenot family—the Lefevres. Thus, in his personality are the thorough, methodical, often brusque ways of the German happily combined with the artistic, energetic, mercurial traits of the French.

After an excellent education in the public schools of Cincinnati, including a course in the Hughes High School, which at that time had almost a collegiate course, Mr. Kline gained some knowledge of business methods through one or two clerical positions. His first venture on his own account, however, was as one of the incorporators of the Albro Company of Cincinnati, which succeeded to the business of the Albro family, established in 1838. This house at that time practically controlled the entire veneer business of the country. Mr. Kline was its secretary and treasurer from August, 1877, to January, 1889, during a peculiarly successful period, so

that he is not only one of the pioneers in the industry, but one of the best-posted men in the country on the subject. The Albro house is now out of existence.

In 1889 Mr. Kline removed to Louisville

PRINT OF ROCK ELM LEAF.

and bought a plant which had been built two years previously by eastern people, who for some reason or other, had failed to make a success of veneer manufacture. He organized the Louisville Veneer Mills, of

which he has always been the head, and from time to time, as new appliances were put upon the market, and as the business increased, has added improvements and enlarged, keeping his plant thoroughly up-to-date in every respect.

Mr. Kline was married in 1871, and has two children. His daughter, Mrs. C. L. Pierce, Jr., is a resident of Chicago; his son, Harold E. Kline, is associated with him as superintendent and general manager of the mills. In national affairs Mr. Kline is a Republican, while locally, to quote his own words, he is "for the ticket putting up the best candidates." This spirit is characteristic of the man. Whatever he does, whether it be for his home city, for his own personal interests or for the great industry which he represents, he is invariably after results. No amount of energy, of money, or of time is too great for him to spend in the furtherance of measures which seem to him for the greatest good to the greatest number. Particularly has this been true in his work as head of the veneer association, to which he has given unstintingly a great deal of thought and hard work. In whatever he undertakes, Mr. Kline is characterized by a certain positiveness which at the time may seem almost too pronounced, but which when analyzed invariably reflects his keen foresight and integrity of purpose toward any subject with which he is conversant.

The HARDWOOD RECORD is pleased to present with this issue the portrait of a man who has not only made such a pronounced success in his calling, but who has devoted his energies so generously to bringing it up to its present high plane.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Steaming Hubs.

HIGH POINT, N. C., July 13.—Editor HARDWOOD RECORD: We would like to know the best way to steam hubs to prevent them from cracking whether to use dry steam or exhaust steam and how long they should be steamed. Any information you can give us will be appreciated. — & Co.

The best method of handling oak hubs to prevent them from checking is to put them in a reasonably tight steam box and turn the exhaust steam on them for from twenty-four to thirty-six hours. The same process can be used in handling birch hubs, but this is done not so much to prevent them from checking as to disintegrate and distribute the color and make the buyer think that the hub is all heart. You will find in the manufacture of oak hubs that, generally speaking, the butt cut of the tree is not suitable for the purpose, but should be cut into spokes. This is the tough part of the tree and is best adapted for spoke making. The higher cuts are softer

and better for the making of hubs. Even brash oak will make a hub, while it requires tough oak for spokes.—EDITOR.

The Gum Market.

FRUITDALE, ALA., July 31. Editor HARDWOOD RECORD: Where can I find a market for black gum and what is its market value? A reply through your columns will be very much appreciated. J. W.

It is possible that tupelo instead of black gum is referred to. Black gum is a comparatively new wood in the market and has not yet come into general recognition. Its highest value is in quarter-sawed stock, as it shows a very nice stripe and will eventually, in the writer's mind, command more money than either red gum or tupelo. When flat-sawed it is so nearly of the general character of tupelo that it should command about the same price. You can get a good idea of the current values of the latter by applying to the Louisiana Red Cypress Company of New Orleans. A concern which has manufactured and sold a considerable quantity of black gum is the Bennett Hardwood Lumber Company, of Memphis, which will undoubtedly give you some information relating to the value of the wood and where it can be marketed.—EDITOR.

Annual Michigan Hardwood Manufacturers' Ass'n.

The first annual meeting of the Michigan Hardwood Manufacturers' Association was held in the City Hall, at Cadillac, Mich., Wednesday, July 31. The attendance was larger than at any of the four previous ones held by this organization. Every section of the state was represented by delegates, and the proceedings were marked by absolute harmony and every manifestation of good fellowship. The business was conducted promptly and as the details of the deliberations printed herewith show, much business of importance to the hardwood industry of

The first feature was the reading of President White's address, involving a review of the history of the association and reflections covering the details of its success and suggestions for the future work of the organization. Following is the interesting and valuable paper in full:

Address of President.

Gentlemen of the Michigan Hardwood Manufacturers' Association: One year ago, or thereabouts, this association was organized to meet certain needs of the manufacturers of hardwood lumber in Michigan, prominent among which was the dissemination among manufacturers of all the information which could be obtained

manufacturer and the consumer, providing the products are to be manufactured and sold at a fair profit to the manufacturer and at an equitable price to the consumer. I therefore urge upon the association the importance of continuing active work upon this subject, and also continuing this association as a state organization for the interest and benefit of the manufacturers of Michigan, affiliating itself with a national association only for the purpose of having but one set of inspection rules on which to ship our lumber, which subject shall be discussed below.

CONCERNING MARKET VALUES.

Through the efficient work of our secretary, the membership has been kept informed of the market conditions, both as to the class and quality of material, also the market price of such material, with the result, I believe, that the manufacturer has been able to more nearly

GROUP OF PROMINENT LUMBERMEN AT THE FIRST ANNUAL MEETING OF MICHIGAN HARDWOOD MANUFACTURERS' ASSOCIATION, CADILLAC, JULY 31.

the state was enacted. The members of the association at Cadillac proved admirable hosts and everyone in attendance was given the best sort of a good time. The manifest improvement in the hardwood manufacturing and kindred industries in Cadillac was remarked by everyone. The city has become the most important one in central northern Michigan, and is a veritable hive of industry.

The meeting was called to order at 2 p. m. with President William H. White in the chair, and Secretary Bruce Odell recording,

concerning the process of manufacture, the market values of our product, and chief of all the adoption of improved rules of inspection.

I am gratified to report that the efforts of the association during the first year of its existence have been directed along these lines with what I believe to be some success.

THE PROCESS OF MANUFACTURE.

One of the primary elements of the manufacture of any product at a profit is to produce the manufactured article so as to meet the immediate requirements of the consumer, and to do this with the least possible waste of raw material. As the quantity of timber in Michigan is constantly decreasing, and on the other hand the price of stumpage increasing, this element of the work of this association will from year to year become more important, both to the

meet the demands of the trade than ever before, the trade in turn receiving our product at a more nearly uniform market value, which has been as low as the price of timber, labor, and articles of consumption generally would warrant and at a fair and uniform profit to the manufacturer. We have thus been able to enjoy throughout the entire year a run of values based entirely upon the actual supply and demand.

CONCERNING RULES OF INSPECTION.

The last of the stated objects of this association named in my text is most important of all. Every manufacturer of lumber in Michigan has many times in his experience felt that the rules for inspecting his product were not only incomplete, but such as to result in his selling much of his higher grade stock at lower grade prices.

It is true that much progress has been made in past years toward the development of standard rules of inspection, and much has been accomplished by the Rules Committee of this association during the past year, in having some amendments made while in conference with the committee from the National Association at Chicago and which were in part adopted by the National Association at its annual meeting in Atlantic City. But there was one important point left out, which I was sorry to note and that was, both sides of the board should be taken into consideration by the inspector when deciding on the higher grades, especially in the thick stock.

The ideal rules of inspection, when formulated and adopted, will be such rules as will secure to the manufacturer a grade for his product, based upon the quality of material and manufacture entering into the board. In the past the rules have been so general and so much has been left to the judgment of the individual inspector, that not only has there been a lack of uniformity in inspection, but the doubt when there has been doubt as to the inspection of any board or piece, has been against the manufacturer. In other words, no matter how slight the defect which operated to change the classification of any piece from a higher to a lower grade, the manufacturer has had to stand the loss, although from a consumer's standpoint, such pieces have been quite as valuable to him as though the technical defect did not exist.

I do not say that this is always true, but I do say that it is constantly happening with the result that for our higher priced lumber we have been getting less than its stumpage value on a great deal of it, bearing in mind of course that a large percentage of the hardwood lumber furnished the trade from Michigan is finished from one side.

Our Grading Committee, through its chairman, will be able in his report to show to this meeting what rules we will expect to use for the inspection of our lumber after December 1, the same to be known as the National Inspection Rules, and if his committee recommends the adoption of these rules, it will be the duty of this convention to accept them and to authorize their being put into effect as agreed upon with the National Association, as this committee was appointed with power to act.

I have worked on hardwood inspection rules for ten or twelve years and expect to continue this work. The argument used by a great many "Leave the rules where they are and raise the prices"—does not appeal to me; first, because concerted action from a price standpoint is impossible, even if the law of the land permitted such "restraint of trade"; and second, to stop work on the rules would mean to go back. The most adhesive brake would not hold us on the hill-side, and it is a hill-side up which we are driving our commercial wagon. Inspection in hardwoods must be always evolving to a higher plane. We want to keep as close an eye on inspection rules as we do on the prices, as our timber is becoming scarcer every day; the quality of logs lower and the price of stumpage higher.

Later on there will undoubtedly be articles manufactured which will require grades of lumber which we do not make today, and such grades will be worth as much to the manufacturer of this article as the grades of lumber we are producing today which cost more money. In other words, as the lumber becomes more scarce, trade will produce a poorer article and we will have to adjust ourselves to the demand; if not, we will not be getting the true value of our product. I, therefore, take the stand that the inspection rules will have to be watched just as closely as the manufacture and sale of the product. As years go by time and things change and we must keep pace with time and changes. How could you furnish lumber today on the rules that were in existence ten or twelve years ago? At the prices we are receiving, based on stumpage values, under the rules upon which we shipped twelve years ago we would not play even, and still the quality of lumber that we are furnishing now is just as well suited to the consumer's requirements as the grades furnished at that time.

LET NO MOVEMENT STOP.

I would urge our association to let no part of our work stop where it is, either in reference to the manufacture, the marketing of our lumber, or the inspection rules. Let us be strenuous and uncompromising for that which is right and let every member throughout the year give all the support he possibly can to the officers, the grading committee, the marketing committee, and to the secretary. It is necessary to do this in order to make the officers' work effective.

A PERMANENT SECRETARY.

I understand we have to secure a permanent secretary and we should if possible secure a man who understands traffic matters. This will be as much help to the different manufacturers as the lumber reports. He can assist in getting the proper rates from certain points to the central markets, instruct each member how to or-

F. A. DIGGINS, CADILLAC, PRESIDENT.

der cars and how to route them, and if any difficulty should arise between the railroads and the shipper, such traffic manager could certainly be of good service in helping to straighten the matter out. I would also suggest that at all times our secretary work in harmony with the railroads and not antagonize them in any way, and thus get the cooperation of the roads and with that cooperation the very best results. The secretary proposed, in order to do effective work, should reside in the same town as your president.

IN CONCLUSION.

In conclusion let me say, in laying down the honorable office of first president of this association, that I desire to thank the membership for the cooperation given me and to say to you now that no effective work can be done by the officers of the association without the intelligent cooperation of the membership. If you expect results from the association, you must not let all the enthusiasm, all the work, and all the suggestions come from your officers and from the members of your committees. Your interest must be an active one if you hope to realize the best results. An officer can only execute that which is framed for him by the membership.

I would suggest also that every member of this association become a committee of one on membership and in making suggestions to our secretary on any line of work which might tend to simplify and better the organization.

I will venture to say that our new officers will be grateful to any member who will give them an intelligent thought along any of these lines, for you must remember that they all have busi-

A. BIGELOW, BAY CITY, FIRST VICE PRESIDENT.

ness of their own and work of their own to attend to and it takes time to do this work. Remember, too, there are no salaried men but the secretary, and that every one of us is in duty bound to give a helping hand where it is needed.

I particularly commend the work of the chairman and the Committee on Rules for the interest taken and the results achieved in securing the adoption of the amendments to the rules by the National Association, and to the chairman and the Marketing Committee for the improvements accomplished, which I have attempted to outline in the way of better market conditions.

The membership at this time represents 90 per cent of the trade in Michigan and I predict for our association under the direction of its new officers a successful future.

Mr. White: One thing I have overlooked. We have received a great deal of help from our sister states in our work, and in forming rules for our guidance; viz, Wisconsin and Indiana. I would like to see this go on when the new officers are elected, working in harmony with those states, especially with Wisconsin, since their woods are so similar to ours; and then also with those fine fellows from Indiana. Secretary Odell will read the minutes of our last meeting, held at Grand Rapids.

After hearing the minutes read the association approved them by vote and they were ordered spread upon the records. Mr. Odell then presented the report of the secretary and a financial statement as follows:

Financial Report for Year Ending July 31, 1907.

Received for membership fees...	\$590.00
Received for assessment No. 1— 2 cents per M. ft. on shipments Jan. 1 to Apr. 1, 1907.	\$76.65
Received for advances from members over assessment....	233.39
Total amount received and paid to treasurer	\$1,700.04
EXPENDITURES.	
Salary of secretary July 13, '06, to June 13, '07.....	\$825.00
Paid Miss E. B. Spencer as stenographer, 36 weeks.....	360.00
Paid I. M. Shaw, stenographic and other work.....	40.00
Paid blank books, printing and stationery.....	155.19
Paid typewriter.....	88.20
Paid typewriter cabinet.....	20.00
Paid postage.....	88.00
Paid telephone and telegraph.....	5.94
Paid freight and express.....	3.49
Paid expense stenographer, Berlin, Wis., to Cadillac.....	7.83
Paid expense secretary to Mackinac Island meeting.....	12.00
Paid expense secretary to Traverse City meeting.....	5.62
Paid expense secretary to Grand Rapids meeting.....	12.72
Total expenditures per orders, 1 to 41 inclusive, and vouchers in hands of treasurer.....	1,623.99
Balance held by treasurer.....	76.05
	\$1,700.04

Secretary's Report.

As many of you know, the Michigan Hardwood Manufacturers' Association was organized at Ottawa Beach, Mich., July 13, 1906, by about twenty-five of the faithful, with the able assistance of representatives of the lumber journals and various officers and members of other hardwood lumber associations.

The objects of this association were declared to be as follows, viz:

First: To promote better acquaintance among hardwood lumber manufacturers of the state.

Second: To secure a better understanding of the conditions surrounding the lumber market in the territory covered by this association by means of stock reports showing the amount of lumber cut, amount held by the manufacturer, both sold and unsold, and such other information as would aid the manufacturer to intelligently market his product.

Third: To assist in securing, as near as may be, uniform rules for the measurement and inspection of hardwood lumber.

Fourth: To establish uniform customs and usages among manufacturers of hardwood lum-

ber, both as regards the manufacture of lumber and the sale of it.

How well these objects have been carried out is a subject upon which we may not all agree, but that we have made considerable progress and have achieved a degree of success I think all are willing to concede.

That there is a better acquaintance among the manufacturers of hardwood lumber in Michigan than there was before the organization of this association is a question about which there is no room for controversy. This acquaintance, however, could be greatly extended, to the general good of the industry.

That we have secured a better understanding of the conditions pertaining to the marketing of our product is a statement that I think no one will dispute who has studied the stock reports sent out by your secretary and the reports of the Market Conditions Committee. The matter of marketing their product, however, is one that is sadly neglected by most manufacturers of hardwood lumber. They will work overtime and lie awake nights studying plans to reduce the cost of logging, sawing or piling their lumber ten, fifteen or twenty cents per thousand feet, spend thousands of dollars on a device that promises a saving of a few cents per thousand in the cost of manufacture and then sacrifice from one to five dollars per thousand feet in the sale of their lumber for lack of more information in regard to market conditions, information that could be obtained with very little effort and practically no expense.

The indifference shown by the average manufacturer of hardwood lumber in the matter of making a study of conditions pertaining to the sale of the commodity in which he is most interested is really surprising. Our July and October stock reports were each considered of considerable value by the student of market conditions; not that they showed the total amount of hardwood lumber manufactured in Michigan, the total amount sold or the total amount to be marketed, but to the manufacturer, jobber or wholesaler who studied the reports carefully there was comparative information of considerable value. The stock report of January 2 was of still more value because of the more complete information it contained and the comparisons between the conditions shown in that report and the two earlier reports.

These stock reports of July, October and January have been of considerable value to the manufacturer and can be made still more valuable in the future. The degree of value, however, will depend largely upon how promptly and accurately you make your reports to the secretary. If you are unable to give promptly and accurately the report called for by the secretary, that of itself is sufficient evidence that you are not giving the necessary attention to the marketing of your stock for how can you sell your lumber intelligently if you do not know at least three times a year what you have to sell?

That we have made a considerable effort and have been of considerable assistance in securing as near as may be uniform rules for the measurement and inspection of hardwood lumber will be very conclusively shown by the report of our grading committee which will be submitted for your approval and adoption. This association has been particularly fortunate in the personnel of the Grading Rules Committee; especially so in the subcommittee that have under hand the matter of our future rules for the inspection and measurement of hardwood lumber. I have followed the work of this committee closely and with more than usual interest. I positively know that they have spent a great deal of valuable time and been to considerable expense in their efforts to obtain uniform grading rules. That they have been successful beyond what we had reason to expect will be shown by their report.

The members of this organization showed their confidence in the ability and integrity of this committee by appointing them with full power to act for the association, and it is earnestly hoped that their report will be adopted without a dissenting vote.

The fourth object for which this association was organized I do not know that it has been accomplished in nearly the degree that it might be. Our customs and usages could easily be made uniform. Now that we have practically uniform and definite rules for the grading and measurement of lumber we ought to adhere strictly to these rules. If we do this our customs and usages as regards measurement and inspection of lumber will be uniform. We should also at this meeting adopt a uniform rule in regard to the sale of our hardwood lumber. There is no good reason why sixty days' time and two per cent discount should be allowed on as staple an article as hardwood lumber.

A recapitulation of what has been accomplished during the past year briefly would be as follows: We have to a certain extent promoted a better acquaintance and a more neighborly feeling among the hardwood manufacturers of the state of Michigan. We have secured much better information in regard to

WILLIAM H. WHITE, BOYNE CITY, MEMBER EXECUTIVE BOARD.

stocks and supply and demand than we have had heretofore and we also have a better understanding of the general market conditions. We have made considerable progress toward securing uniform rules for the measurement and inspection of hardwood lumber. If nothing more has been or will be accomplished the time and expense of this association has been a profitable investment.

Just how much more we are to accomplish will depend very largely upon the following: How efficient and attentive the officers we elect today will be to the interests of the Hardwood Manufacturers' Association. A great deal will also depend upon the interest and assistance of each individual member. Please keep in mind that it matters not how efficient your officers may be nor how much money you are willing to spend upon an organization of this kind, the real success of the organization depends more largely upon the individual member than all else. Without his assistance and co-operation it will be impossible to make the association work a success.

Our first year has been somewhat of an experiment. Many have wanted to go slowly and incur as little expense as possible until it had been demonstrated what could be accomplished. Because of this the office of secretary has been a sort of a side issue, but if our association is to continue successfully the duties of a secretary have passed that stage, and you will find it absolutely necessary to employ a secretary who has considerable tact and ability and who can give his entire time and attention to association matters. Under an arrangement of this

W. W. MITCHELL, CADILLAC, MEMBER EXECUTIVE BOARD.

kind you can secure much more complete information as regards lumber statistics and market conditions generally. The secretary's office could be made a sort of clearinghouse for the sale of your stock, especially of any surplus stock that any members may have. If the information were given out generally that the secretary of this association was familiar with the amount, kind and condition of hardwood lumber that was held by the members of this association it would be but a short time until his office would be filled with inquiries and opportunities to dispose of stock to good advantage. I would recommend that this plan be adopted and that each of you keep the secretary advised freely as to the stock that you desire to move. It would not be necessary for the secretary to make the sale himself but if he had inquiries for certain kinds of stock and he supplied the prospective customer with the information as to who had the stock, the grade of it and the condition, it would enable many of you to make prompt sales of stock that you might otherwise be unable to sell to advantage.

There is another matter in connection with the secretary's office that I have given considerable study and think it could be made a very profitable addition and that is a traffic department. With the new railroad laws and frequent changes in rates, the numerous rulings of the Interstate Commerce Commission and various other changes in regard to rates and routing, the average sales department of a hardwood lumber manufacturer is nearly helpless in regard to rates and routing. Very few local railroad agents are able to give you any assistance and if you want a rate to a certain point, especially if it be to a Western point, the chances are that the local agent is unable to supply you with the information and will have to refer to the general freight agent to secure it, which means a delay of three to thirty days and the probability that you will be quoted the highest rate by the longest route. I think it would be possible to secure for the secretary of this association a man who is thoroughly conversant with the matter of freight rates and who has had sufficient lumber experience to handle the work of secretary with what assistance he would be able to obtain from the officers and members of the association.

Were an arrangement of this kind made my idea would be to apply to your traffic department for rates and routing instead of to the railroad company. A department of this kind could be supplied with all the tariffs, freight laws, rulings of the state and Interstate Commerce Commission and be just as well equipped to furnish information of this kind as any railroad company. I have discussed this matter very carefully with many of the traveling freight agents and the general freight agents of several lines of railroad and without exception they have looked upon an arrangement of this kind with favor, and advised that the railroad companies will not only be willing but will be glad to assist a traffic department in every way that they can.

Were an arrangement of this kind made all claims for damages, overweight and overcharges could be submitted to this department. Many of us sometimes feel that we have a claim against a railroad company when if we knew of the laws, rulings and customs pertaining to it we might, in fact, have no just claim. Were this the case, a traffic department would be able to advise as to the facts and the claim not go any further. On the other hand, if we had a just claim against a railroad company a traffic department would be able to handle the claim more effectively than any individual manufacturer. This department should be able to go before the railroad company and show good and sufficient reasons why the claim should be paid. Another advantage in this matter of claims is if the railroad company knew the department is handling the business of seventy-five to one hundred manufacturers they might give the matter more prompt and careful attention than they would individual claims.

The assessment of two cents per thousand on shipments will yield an amount sufficient to pay a competent man for his entire time, pay his traveling expenses, pay a stenographer, rent and all other expenses of the association. Unless you employ a competent man who will give all his attention to the association there will be more work for the president and executive board than they will be willing to do, as you probably will not be able to find any one who will be willing to accept the office of president and give the work as much of his time and attention as Mr. White has done during the past year. The president should not be burdened with the detail work of the association, and if he is not to be this work should be done by a competent secretary.

Your association has now reached a point where it must either go forward or go back rapidly. There is plenty of room for expansion and improvement but a very slight retrograde movement will be sufficient to disband your organization. Our membership is now around 70 to 75 and to get the best results it should be increased to 125 or 150. This can be done within

a year or two by efficient personal solicitation. You will find that individual members will take more interest in the association affairs if they get in touch with the work of the secretary's office, either by correspondence or by meeting the secretary personally. It is just this kind of interest that will prove the life of your association and this interest cannot be created by one who can give only part of his time to the work.

I wish to thank the members of this association for their loyal support during the past year and earnestly hope that you will decide to support my successor both in a financial way and by assisting him all you possibly can in the way of furnishing him all the information that you can that will further the association's interest, always keeping in mind the fact that whatever you do to further the interests of the association is just that much done to better your individual interests.

The report was adopted upon motion duly seconded and carried, after which President White called for the report of the Grading Committee, of which Charles A. Bigelow is chairman. It was read by Secretary Odell and is presented herewith:

Report of Grading Committee.

As directed by you, your committee held joint conferences with the grading committees of the Wisconsin, and Indiana Hardwood Manufacturers' Associations, and the Inspection Rules Committee of the National Hardwood Lumber Association, in Chicago, and attended the annual meeting of the National Hardwood Lumber Association at Atlantic City. Largely as a result of these meetings, the National Hardwood Lumber Association at its annual meeting at Atlantic City in May, rescinded the so-called "Buffalo Agreement," and revised its rules for the inspection and measurement of hardwood lumber, the new rules becoming effective December 1, 1907.

Many changes were made, and those of most interest to you are the following, pertaining to the inspection of northern hardwoods:

In General Instructions, Paragraph 3: Tapering lumber measured one-third the length of the piece from the narrow end instead of at the narrow end.

Paragraph 4: In measuring random widths lumber the division in measurement will be made on the half foot instead of on the three-quarter; all over one-half foot to go to the seller, all under to the buyer, and the half foot to be divided equally between buyer and seller.

Paragraph 5: A much more liberal rule for mis-sawed lumber has been adopted than the one now in vogue.

The heart rule is amended to read as follows: "In the grade of No. 1 Common, heart must not show more than one-half the length of the piece in the aggregate. In the grade of No. 2 Common, heart must not show more than three-fourths the length of the piece in the aggregate."

The standard lengths are 4 to 16 ft., with 15 per cent of odd lengths, commencing at 5 ft. to be admitted, instead of 6 to 16 ft., with no odd lengths permissible.

The standard thicknesses will be as follows: 1, 3/4, 1, 1 1/4, 1 1/2, 2, 2 1/2, 3, 3 1/2, 4, 4 1/2, 5, 5 1/2, and 6 inch.

In Explanations, a new paragraph has been inserted as follows: "The term Clear Face Cutting as used in these rules, reads 'One face clear, reverse side must be sound.'"

The rule for stain has been changed to read "Stain that will surface off in dressing to the standard thickness must not be considered a defect."

The new rule for wane is: "Wane in lumber 5/8" and 3/4" in thickness; not over 1/2" in width; 1" to 2" in thickness, not over 1/2" in width; 2 1/2" or over in thickness, not over 1" in width; not over one-fourth of the length of the piece and one-sixth of the thickness of the piece or its equivalent, must not be considered a defect. Wane of more than the above description is a defect and must be so considered by the inspector."

Standard grades remain as at present, though three new grades are permissible. 1st, Grade of Finish; 2d, Division of No. 3 Common into two grades, No. 3A and No. 3B. The Grade of Finish, as its name implies, is a one-face lumber, the reverse side to be sound, inspection to be from the best side. The dividing of the No. 3 Common has been made with the idea of putting the better portion into box lumber and a good grade of sheathing. In the firsts and seconds, the grade is determined by the surface measure in each piece, instead of by the width and length. The minimum length has been reduced to 8 ft. In No. 1 and No. 2 Common, the minimum length is 4 ft. In the grades of No. 1 and No. 2 Common, the cutting is to be clear face, instead of "clear." In elm the grade of No. 2 Common is changed to "sound cutting" instead of "clear cutting."

BRUCE ODELL, CADILLAC, SECRETARY.

By comparing the revised rules with the ones adopted by this association at its first meeting at Mackinac, you will find they are more liberal to the manufacturers than ours.

At the various meetings we have had with the Inspection Rules Committee of the National Hardwood Lumber Association, we have been treated with every courtesy possible, and their committee at the annual meeting at Atlantic City, if anything, did more to further the desired revision of the rules than your committee expected. We believe it to be to the interest of every manufacturer of hardwood lumber in this state to become a member of the National Hardwood Lumber Association, in order that they may use their influence to maintain the advantages in inspection that the new rules give them, and as conditions warrant further changes, to be in position to thoroughly protect their interests.

CHARLES A. BIGELOW, chairman.

Mr. Bigelow: We recommend that the rules be put into effect, and Mr. Odell has a resolution which he will offer on behalf of the committee.

Mr. Odell: The resolution Mr. Bigelow refers to is as follows:

WHEREAS the National Hardwood Lumber Association, at its annual meeting at Atlantic City in May, adopted new rules for the inspection and measurement of hardwood lumber that meet with our approval; therefore, be it

RESOLVED that this association herewith adopt as its rules for the inspection and measurement of hardwood lumber the revised rules of the National Hardwood Lumber Association, and that they become effective December 1, 1907.

HENRY BALLOU, CADILLAC, DIRECTOR.

That the resolution was received favorably by the association was evidenced by a prompt motion that it be adopted, which was seconded and carried unanimously.

Mr. White: I know a gentleman in this audience who is neither manufacturer, dealer nor consumer, but is an indirect member of the trade and this association, as he has some stock in companies that are members of this organization. He probably can tell us something about our association work or enable us to look at it as others see it. I refer to Mr. Harris of Boyne City.

Address of J. M. Harris.

Mr. President and Gentlemen—I regard it as a distinct privilege to be invited to address so prominent a body of Michigan men as this association represents. As I look upon you and associate with you I am impressed with this thought—that you are successful men. I find success written upon every countenance and in the manner of every individual, and any success in these strenuous times of ours, when men are striving for higher things, is an inspiration to every man. I have felt that inspiration while associating with you about the hotel and city since coming here last evening. I regard it as a privilege as I said before. When it comes to saying something to you, however, that will be of interest and profit, my situation is not so agreeable. In fact, I confess to some embarrassment. I find myself somewhat in the position of the Irish lady who alighted from the street car and said to the policeman: "Mr. Policeman, will I get a shock if I put my foot on this here rail?" "No, madam," said he, "not unless you put the other foot upon the trolley wire!" So in making an attempt to say something to you, it will perhaps be an effort to put my foot up on the trolley wire.

To an observer of the trend of conditions of the times for the past decade it seems that material matters, business relations, all of our pursuits, in fact all industries along all lines, are tending to carry out the old adage that the Puritans and colonists laid down in their attempt for freedom. You remember they had a motto which was represented by a serpent cut in pieces and they paraded it through the streets and under it they had inscribed, "United we stand, divided we fall." This thought is taking possession of the people not only of America but everywhere, and the tendency to get together is the result of it in all lines of activity—manufacture, mercantile pursuits, professions, etc. So this association is simply in line with the trend of the times. This has been carried as all activities are carried at times and by extremists—to extreme ends. Not only that, but this tendency at times has become the tool of unscrupulous men who have used organizations of one kind or another to accomplish unlawful ends, or legitimate ends in an unlawful manner. So we have had a lot of discussion of trusts and anti-trusts and combinations in restraint of trade, of one kind and another until I apprehend that this is true now—that there exists a little feeling, a little tremor on the part of men generally as to just how far they may safely and profitably go in the matter of a combination. There is no law either moral or statute that prohibits a combination such as I judge the Michigan Hardwood Manufacturers' Association to be from the remarks of your president and secretary which I have listened to. When they have gone too far the laws of the land have been applied to restrain that which has been unlawful, and to correct the evils that have grown out of it. The principle of getting together is right. There is success, strength and progress in getting together. People are beginning to believe not in dissension or in individual effort, but in unity and united effort. We are believing more and more in harmony and not in strife. I have observed the efforts of the hardwood manufacturers of Michigan to get together for a period of, it seems to me, twelve or fifteen years. I remember well discussing with the manufacturers the first organization I have in mind, that they attempted to make, and hearing at the time and afterwards of the futile efforts to accomplish anything substantial with the organization as formed at that time. I remember this particularly, that it was hard to keep individual members in line with certain rules adopted by the association, and while perhaps it is felt by some of the old members of that association and by the trade generally that it was not a success, yet out of it grew something stronger. I was more or less closely associated with the organization of the Michigan Maple Company with which most of you are familiar. It was not organized for the purpose for which you are, yet it accomplished very much along the lines you are working on here, and whatever weakness there was in the old organization I think you have successfully cured in your present one. However, whatever

faults this organization may have had, I am impressed with this: In 1901 or 1902 I know maple was seeking a market at \$5, \$10 and \$15 per thousand, and I remember that when the company made the proposition that they would pay \$6, \$11 and \$16, a great many of the manufacturers thought that could not be accomplished, that the company would be unable to market maple at a profit and buy it at \$6, \$11 and \$16. My information now is that the company not only did that, but took the maple off the hands of manufacturers at that price and sold it at an advance which made them a handsome profit. Today maple is king, not only a pine was king, but this is one of the forces that has made maple a profitable wood today in Michigan. It is subject, of course, to the law that as supply decreases, value increases, but maple within the last few years has been lifted out of the condition of which I speak, to a satisfactory market value today. I am gratified to see this as a citizen because it not only means success to you gentlemen who own stumpage and manufacture lumber, but it means a profitable industry for Michigan, and the improvements that you have made in manufacture not only place maple to more uses than it has had before but they have made it possible to use it to better advantage by the consumer, and maple is more satisfactory at the higher price than it

was at the lower price several years ago. I may not be technically right because I never saw a board of maple nor measured one in my life, but I have studied conditions somewhat. So that I say the consumer is better off today as far as maple is concerned than under the lower price condition. Then this is what has been accomplished in Michigan through your organization today. As I view this organization I find much more perfection in it than in other similar organizations. If you will bear with me just a moment longer, I want to make this point: I read at lunch today a report of your secretary for this month, of conditions of stock on hand, and that which has been sold. You are covering this one point of stock market so thoroughly that it cannot but be to any man, buyer or consumer, of great value not only as to how stock may be marketed but as to what you may cut in succeeding months, with these reports before you. You are now in position to manufacture more particularly that which the market is demanding, and that which stocks are low in. This is one of the important things you are doing. I gather also this thought from the secretary's report. You are as free as individuals to market a car of lumber as though you were not members of this association, and while free to market any quantity of your product, you are in position to know from the re-

ports whether or not you are getting the market value of it. You are all getting this information, I judge, and it seems to me another very successful accomplishment on the part of your organization. I congratulate you, gentlemen, on the success you have attained. I enjoy being here with you, and as I said before, regard it as a privilege to address you on this occasion.

Action was then taken on the report of the Grading Rules Committee, it being accepted and adopted.

Statistics of Stock on Hand.

Mr. Odell: I wish to present some statistics in lieu of a regular report from the Market Condition Committee. It would seem to me from the showing of stock that there is not a weak spot anywhere in the market conditions of today. No item is held in excess, and in fact the greater proportion of lumber in the hands of manufacturers today is covered by orders.

Note how much less lumber is in the hands of manufacturers today unsold than a year ago. As I said before, I cannot see a weak spot anywhere. There is going to be a demand for every foot of lumber we have with-in call, at good prices, possibly better.

Mr. Ballou: It is plain to be seen that this report of stock on hand is a very intelligent report, one which can be studied with a great deal of profit by every manufacturer, and the object I have in making these remarks is to urge upon members to be prompt in getting reports to the secretary at the time he asks for them, because he cannot make such a report unless he gets information promptly.

Both President White and Secretary Odell strongly urged members to support this recommendation of Mr. Ballou, and not to pigeon-hole requests for information but to attend to them immediately, thus enabling the secretary to compile a report which should be of the greatest possible value, representing as large a number of manufacturers as possible.

The report on market conditions was approved by action of the association.

W. L. Martin: I move that vote of thanks be given the Grading Committee which has so ably and successfully accomplished the work of a readjustment of hardwood grading rules in line with the necessities of the trade.

The motion was seconded by A. W. Newark, and carried by vote of the association.

Mr. Odell: The association will be in need of funds in the very near future. A number of expenses and small bills will require more than we now command. I would like to have the secretary to be authorized to call upon members for a second assessment of two cents per thousand feet for the quarter ending July 1.

A motion to this effect was made, seconded and carried, and the assessment will be levied in due course.

Mr. Bigelow: Referring to the work of the Grading Committee, of which you have a report, we have been very ably assisted, and without the assistance of the lumber press also I doubt if we would have accomplished half what we have done, so I wish to make a motion on behalf of the committee that I hope this association will adopt—to thank the members of the lumber press for the assistance they have rendered and the fairness with which they have treated the subject.

The motion was seconded and carried, whereupon J. E. Defebaugh was called upon to respond on behalf of the newspaper men.

Mr. Defebaugh: I certainly wish to comply with your request to say something on behalf of the press, and to tell you that I am sure we all feel it is our privilege to serve this association and all associations in the best way we know how. If we have been of any service to you by our publications in the matters referred to, we are very glad to have this kind of expression of approval from you. It is my personal wish to say that I attended the first meeting of this association and subsequent meetings, with one exception,

G. VON PLATEN, BOYNE CITY, DIRECTOR.

and I find it a great privilege to be here and note what progress you have made. The number of stock reports received by your secretary shows a great increase in interest among members—an interest which looks toward permanent benefit to all concerned. I am sure in the work of the association, in whatever you may undertake, you will have the cordial support of the lumber press.

President White, observing J. V. Stimson, the well-known hardwood operator of Huntingburg, Ind., in the audience, asked him to address the meeting.

Address of J. V. Stimson.

As far as Indiana is concerned, it is still on the map, and we are still making lumber down there. Your president is more generous than the president of a lumber association whose meeting I attended a short time ago. At the banquet he called on me and said I would now tell them how we made ten and up quartered oak over in Indiana, out of eighteen inch logs! Now I know you are not making much quartered oak in Michigan but you are making kindred woods, and we are neighbors. We are doing business along the same lines and through the same channels, and I am pleased to meet the gentlemen here today. I am glad to see how much you are accomplishing in the way of

D. H. DAY, GLEN HAVEN, DIRECTOR.

a state organization. There isn't any doubt in the world but that lumber legislation that is in existence today has been brought about through the association of lumbermen in a business and social way. The inspection rules of the associations have come from this, and the application of the rules has developed from these discussions. Lumbermen get close to each other and cease to fear one another. It is a system of education. Some one said that education has two uses—it teaches the wise man his limitations and inspires the fool with his own omniscience. We come in contact with that thought and appreciate it. The lumbermen of the country are the biggest-hearted set of fellows on earth, and they are capable, able business men in every channel, and I always feel well paid when I make a trip of a few hundred miles to attend a meeting where I can meet new men and renew acquaintances with old friends. The large number of gentlemen here are strangers to me personally, but I know your firms and know of you all. Mr. White and I, as well as others of you, have worked shoulder to shoulder in the past, and we have seen a great many things accomplished through lumber association work. And, gentlemen, there is a lot more to be dug up along these lines. Your secretary a few minutes ago referred to the matter of a traffic bureau. I am not surprised that you have a good field for service there, not at all. There has been a lot of public agitation along railroad matters: public sentiment is in a degree antagonizing the railroads. There has been considerable legislation and you know there is a sort of disorganization of the traffic business at this time. Lumber rates that were in existence a year ago are withdrawn we do not know when nor why. All we do know is that when we attempt to make shipments to this point or that we find the rate is perhaps a cent higher than it was before. I came in contact with that feature a short time ago on a shipment to Peoria, Ill. I formerly had Chicago rate, and made claim for the advance of one cent which appeared in the charges. Railroad men advised me that the twelve-cent rate had been withdrawn, and it was now thirteen cents. I asked why this was. I asked for restoration of the twelve-cent rate. I wanted to make quotations to Peoria, and the railroad traffic department advised me that I could only use such rates as were on file in their regular traffic schedule, a copy of which was in the hands of the Interstate Commerce Commission, etc. Now, gentlemen, that is the proposition you are up against when you want to make quotations. You are advised that there can't be any change made under thirty days' notice of change of tariff, and, of course, after thirty days have expired, it is most too late to quote that fellow over there on lumber. There is certainly a field here where information can be gathered and disseminated, I believe, to the advantage of every lumberman in the state and every lumberman in the United States. Along the line of your inspection report, I am very much pleased to see the unanimous action you have had here at this time. I believe we are fast getting toward general rules for the inspection of hardwood lumber. We must do the best thing at hand, and work out the proposition in order to accomplish the things that are most essential—the things that we need. The systems of applying rules of inspection are perhaps changing in a way, but all the time for their betterment—they are being strengthened. The system of National inspection and reinspection is much better and stronger than ever before. It perhaps has some weak features but they will all be remedied in time with the co-operative action which must come along the lines of work of the state associations and the larger bodies. There is no doubt, gentlemen, but what in a few years it will be possible for us to get united action and systematic service along these lines. It was suggested by your president that you did not get all you wanted in the change of rules adopted at Atlantic City, but you are wise enough, gentlemen, to take what you did get—and you got liberal concessions—and those members of your association who attended the Atlantic City meeting know the fight put up against the adoption of the rules at that time, and the effort put forth to accomplish this adoption. It seems to me that the future is bright along this line. Your stock report is certainly a comprehensive statement of lumber conditions as they exist here today and I cannot see any shadow for a pessimist there at all. He has no place to put even one foot. July, of course, is midsummer, usually termed the dull period of the year. A year ago, however, lumber moved as rapidly as any other manufactured product. There was a general car shortage over a great part of the country, and every man had orders to ship every car he could get hold of. Today there is not the quietness existing in July that there was two or three years ago in the summer period. I think you will all concede that statement to be a fact. It was true that late in the season or in the winter, when the car situation laid up

stock and it piled in on manufacturers, there seemed a little tendency to think that there was probably approaching a considerable lumber accumulation. This is not true, however, and there is no long line of lumber anywhere in the entire South. At my mills I have less lumber than the last of July for six or eight years, and I believe the large number of mills are about in the same position as I am. We have just as good business ahead of us as we have had in the past. Some of our fellows get a little misunderstanding of this at times, when perhaps for a few days their lumber does not move as rapidly as it should, and their banker's demands induce them to go to selling regardless of prices. It is a little like the case of the goat. Somebody asked its owner why he shivered so much. The owner replied, "Because he swallowed a string of sleighbells the other day; every time he moves they jingle and he thinks it's winter!" Now if we will get down to the actual condition of things I think we have as optimistic a period in the lumber business before us as we have had for years. That means solid business, under good, strong, steady conditions. I thank you, gentlemen.

Mr. Odell: I have a telegram here which I think will be of interest to you, and with your permission will read it:

OMENA, MICH., July 31.

Bruce Odell, Secretary Michigan Hardwood Manufacturers' Association, Cadillac, Mich.

Regret impossible to attend meeting today; much gratified by good feeling existing at present, and know that the meeting today will result in its further development.

EARL PALMER.

President White called upon Theodore Fathauer, the prominent Chicago lumberman, who was a visitor at the meeting, for a few words.

Theodore Fathauer Talks.

Mr. Chairman and Gentlemen: I can assure you as a member of the National Hardwood Lumber Association that it was gratifying to me to hear the resolution offered today and its unanimous adoption. The state of Michigan has always been loyal to the National association, and I believe in membership it ranks as high as any other. The Michigan manufacturers are certainly doing themselves a great deal of good by the compilation of stock lists such as you have printed and distributed today. This is not only an advantage to the manufacturer of hardwood but it is also a benefit to the dealer in hardwood lumber. I do not know what further to say, I am sure. My friend from Indiana has covered the ground fully, and as you know, Indiana is full of speakers, and especially inasmuch as there is soon to be an election—I mean United States—I think he is getting into practice and is traveling about the country for an opportunity to gain some experience in how to address different bodies. It would not surprise me in the least if he took an active part in Indiana politics in the near future. Indiana is full of politicians and has produced some of the greatest statesmen in the country. The lumbermen are always active in any work pertaining to municipal or state legislation. Not very long ago we elected a mayor of Chicago, and, gentlemen, the man who elected him and pushed him to the front was a hardwood lumberman—F. W. Upham. The lumbermen of this country in time will no doubt make themselves felt very strongly and forcefully in the way of forestry matters. This is not only of interest to lumbermen but to the life of the nation itself. We have had statistics presented to us at the Atlantic City meeting and previous meetings showing that the timber in this country will be cut down in from twenty-five to forty years, and I believe it is the duty of lumbermen to agitate and promote interest in the reforestation of this country. Gentlemen, I thank you.

President White announced that he was ready to proceed with election of officers, whereupon W. W. Mitchell moved that a committee of five be appointed to make nominations. The motion was seconded and carried, and the chair appointed as such committee, W. W. Mitchell, R. J. Clark, D. H. Day, G. von Platen and Bruce Odell.

Mr. White: While this committee is bringing in its report we want to work a little on membership. Is there any manufacturer in the house not a member of the National Hardwood Lumber Association?

A. F. ANDERSON, MEMBER GRADING COMMITTEE.

Mr. Fish: Our Executive Committee held a meeting last Thursday, and under instructions I have been checking Michigan memberships to find out how many were not with us. I find we have thirty-eight as members, and the list shows there are thirty of your members not identified with our work at present. Of course, we would be very glad indeed to have them co-operate with us. Our committee instructed me to spend enough time in Michigan to visit these people. Cadillac looks pretty good to me; I like the state, and I am going to visit with these people.

Mr. White: Before the Nominating Committee makes its report I would like to say that I hope to see a small Forestry Committee appointed for our state, if the new officers can conveniently do this.

Election of Officers.

The Nominating Committee presented its report, after which a motion was made, sec-

J. V. STIMSON, HUNTINGBURG, IND., A PROMINENT VISITOR.

onded and carried, that the report be accepted and adopted as a whole. The officers chosen are as follows:

President, F. A. Diggins.

First Vice President, C. A. Bigelow.

Second Vice President, R. W. Smith.

Treasurer, F. J. Cobbs.

Retiring President White then congratulated Mr. Diggins and escorted him to the chair.

Address of President Diggins.

Mr. White and Gentlemen: On behalf of the lumber manufacturers of Cadillac, I desire to express my sincere thanks for the compliment that you have paid them. I regard this as one more to the Cadillac manufacturers than to myself. I cannot refrain, however, from thanking you personally, for I consider it an honor to preside over the deliberations of a body of this nature. There are perhaps two or three things I want to touch upon shortly. I shall not take time to make a speech because this thing came to me at noon today and I assure you I appreciate it the more because of that. It is not necessary for me to say to you that neither Cadillac nor the chair sought this position and honor. On account of the extreme modesty of my friend Bigelow, who handed his report to the secretary to read, and for that reason was not able to make any remarks, I wish to express my appreciation of the treatment that we received at the hands of the Inspection Committee of the National Hardwood Lumber Association. As you know, I made two visits to Chicago with your committee, and on the occasion of the second, the National Committee was in session to formulate rules, and because of the absence of a Michigan member of that committee I was honored with the appointment by President Russe, as Michigan member of it, and served as such member. With all due respect, gentlemen, to your honesty, intelligence and experience, I want to say publicly that I could not select six men from this body in whom I would have more confidence, or who would treat you more fairly or consider your interests more thoroughly than did that committee. Mr. Fathauer is chairman of that committee, and I say to you, gentlemen, in plain English, that when you see Mr. Fathauer you see a square and honest man. He is not a manufacturer, but a jobber—so-called—but the manufacturers' interests are just as safe in his hands as they would be in the hands of any gentleman present. I wish to pay him that compliment. The other gentlemen on the committee are equally as courteous, as honest, and as capable. Your committee is not entitled to any credit, I think, in securing what they did at Atlantic City. This association is entitled to all the credit. It was because of its wisdom in sending a committee to what might be styled a "Hague conference," rather than fire at the first object which presented itself, that these results have been obtained. You have listened, gentlemen, to the reading of the very able reports of President White and Secretary Odell, and while it may not be necessary to reiterate what they have said, I do wish to repeat emphatically that I shall not only expect your hearty co-operation, but I shall insist upon it. I know my limitations and weaknesses better than any of you, and I know I am prone to sit still if other people sit still, and you know the success of this organization depends almost entirely upon united work. I had something else to say, but because this dignity was thrust upon me so suddenly, I think I have forgotten it. I thank you again, gentlemen, for this honor.

Mr. Day: I wish to have the pleasure of presenting the first motion to you, Mr. President, which is that a vote of thanks be tendered to our retiring president, Mr. White, who has so ably carried on this work, and to the other officers.

Mr. Ballou: I desire in behalf of Cadillac, to extend hearty thanks to Mr. White in particular for the untiring efforts he has put forth in putting this organization through from its infancy to the present time. We began operations one year ago. It looked rather dark at that time but through his efforts I believe we have been brought to our successful position today.

The motion made by Mr. Day, with Mr. Ballou's appreciative amendment, was heartily endorsed by the association, and carried by rising vote.

Mr. Diggins: I trust Mr. White and the other officers will feel that this association has been and is with them.

Mr. White: I thank you, gentlemen. I did not expect such a resolution as this for the little trifling things I have been able to do. I was glad to do anything I did in my weak and humble way, and I wish to say that if there is anything I can do in future, and am in reach, I am at your command.

Mr. Diggins: The chair is advised by the secretary that the by-laws are silent on the method of selecting a board of directors. It consists of sixteen gentlemen. For your guidance I will read the names of the present board. How will you proceed to the election?

Mr. White: I think the directors were appointed by the officers to represent different districts where they can best take care of the work they are needed in. I think everybody here would be very willing to trust it to you and your lieutenants to appoint them.

Board of Directors Selected.

After some discussion of the rules, the work of selecting a board of directors was entrusted to the Nominating Committee, with the understanding that the president, two vice presidents and treasurer be members of it. The following were selected and the secretary instructed to cast the ballot of the entire association for their election:

F. A. Diggins, C. A. Bigelow, R. W. Smith, F. J. Cobbs, Wm. H. White, W. W. Mitchell, R. Hanson, H. Ballou, G. von Platen, R. G. Peters, W. L. Martin, D. H. Day, H. A. Batchelor, R. J. Clark, E. Fitzgerald, H. M. Loud.

The visiting members and guests were then invited by the Cadillac contingent to be their guests the following morning in an auto tour of the points of interest and lumbering operations about the city. Those who remained until Thursday took advantage of the invitation and were taken through the various plants, and for a trip around the lakes which was thoroughly enjoyable.

Next Meeting Place.

C. A. Bigelow extended a cordial invitation to the association to hold its next session in Saginaw, at such time as the president and secretary should elect. The suggestion was agreeable to all concerned, and Saginaw was decided upon as the place where the next meeting shall be called.

Mr. Bigelow moved that the chair appoint a committee of three to take up the subject of forestry and report later, at their convenience, following out the suggestions of Mr. Fathauer.

The motion was seconded and carried.

Mr. Diggins: In regard to a secretary who shall give his entire time to the work of this association, I think it would be proper for you if you so desired, to leave this matter in

FRANK F. FISH, CHICAGO, SECRETARY N. H. L. A. ENTHUSIAST'S ASSOCIATION WORKER.

the hands of the Executive Committee, and let them employ any man whom they may see fit, and I as chairman of the Board of Directors, will endeavor to have a committee appointed in whom you will have confidence.

R. J. Clark: I move we grant the Executive Committee power to act in the appointment of a paid secretary.

On being seconded and put to vote the motion prevailed.

Executive Board Chosen.

Mr. Day: As some of the members of the Board of Directors may not be here tomorrow, I think it would be desirable to hold a meeting right after this one, and wind up its affairs.

Adjournment was then taken and Mr. Day's suggestion acted upon, with the result that the directors chose as an Executive Board F. A. Diggins, W. W. Mitchell and Wm. H. White.

THEODORE FATHAUER, CHICAGO, AN INTERESTED ATTENDANT.

Progress and Value of Tree Planting

In every region of the United States there is at least one forest tree, and generally there are several which can be planted with a complete assurance of commercial success if the plantation is properly established and given proper care. The government has made a very careful study of most of the forest plantations in the United States. Its publications on tree planting may be had free of charge upon application to the Forest Service at Washington. The studies on which they were based were made especially for the benefit of farmers and other land owners, and to prevent the waste of thousands of dollars annually lost by planting the wrong forest trees or by improper care of plantations.

In a recent brochure it is stated by government forestry authorities that reports from all parts of the country show that the past season has undoubtedly been characterized by a more extensive planting of forest trees than any previous year in the history of the United States. The work is progressing very favorably in every state in the Union.

The trees planted have been mainly hardwoods. Several large nurserymen, however, report greater sales of conifers for forest planting than they have ever made before. In the middle West catalpa, black locust, Osage orange and Russian mulberry were the favorite trees; in the North and Northeast preference was given to white pine, chestnut, larch and spruce; in the South the native conifers held the lead, and in California, where the immense annual planting area has been increased to at least five times its former size, eucalyptus had practically a monopoly.

A few figures readily show the value of forest planting from a commercial standpoint. In Pawnee county, Nebraska a 16-year-old catalpa plantation gave a net return of \$152.17 per acre at the time the plantation was cut. This meant an annual

profit of \$6.24 per acre. A 10-year-old plantation of the same species in Kansas showed a net value of \$197.55 per acre. Still another plantation, in Nebraska, gave a net income of \$170.50 per acre when fourteen years old, which amounts to an annual income of \$8.69 per acre. Several equally striking cases could be cited throughout the entire middle West, and it is known that where the catalpa will succeed no other tree will pay so well. Good soil and moisture conditions are, however, essential for success with this tree.

Osage orange has been known to produce as high as 2,640 first-class posts and 2,272 second-class posts per acre, and it is well understood that no posts are better than those of Osage orange. Land producing such a forest as this could hardly be put to a better use, since timber is the easiest of all crops to raise, and from now on will never go begging for a market.

Red cedar in plantations twenty-five years old has reached a value of \$200.54 per acre. European larch used for fence posts or telephone posts reaches an average value of \$200 to \$300. White pine plantations forty years old have exceeded a value of \$300 per acre and it is known that the eucalyptus, even when grown for fuel alone, can compete as to profits with oranges.

It does not take a lifetime to get results. Catalpa often reaches a post size in from eight to ten years, and will give service as a post for from fifteen to forty years. Eucalyptus makes a heavy yield of fuel in seven years, and the crop should nearly always be cut before ten years.

From the manner in which our natural timber has been cut it is clear that each region will have to be made as nearly self-supporting in timber growth as possible. The lesson of the past is that the right forest trees grown in the right way will bring a big profit.

It does not seem probable that, in the near future at any rate, there will be extensive planting in the West Indies of timber woods in uniform groves of one or two species, for the hard and heavy woods are usually of very slow growth and the lighter and quicker growing timbers could not be grown as cheaply as the pine or spruce of our own forests. If there is any tree planting to be done in the West Indies in the future it will probably be confined to trees which yield valuable products, such as rubber, logwood, balata and fustic.

Of the many useful woods that are found in Jamaica the most important are cedar, mahogany, logwood and fustic. Very little of the first two are now exported, though the value of the exports of dyewoods and logwood extract for the last ten years has averaged \$811,915. In this island there are many valuable woods, but the export is practically confined to cedar, which is shipped to Germany for use in the manufacture of cigar boxes. Formerly mora was also exported. The output of timber from Trinidad has shown considerable fluctuations. Last year the value of the exports reached \$69,374. The chief forest product of British Guiana is balata, the export of which amounted in 1906 to 517,335 pounds, valued at \$181,848. Greenheart and mora timbers were exported to the value of \$114,704. The other forest products exported consisted of ordinary lumber, firewood, shingles, hardwood posts, sleepers, etc. A large part of the country is covered with forests containing

In this island, where the forests are in charge of an experienced Indian forest officer, the government has realized the necessity of having a forest policy. This includes the reservation of certain areas of land from sale and their management as forests for the protection of the climate, the regulation of the water supply in the rivers, the prevention of landslips and floods and the production of timber and other forest products.

National Forests.

The Forest Service is out with a little annual entitled "The Use of the National Forests," which explains many points not clear in the minds of a great many people, who do not know the true purpose and use of the national reserves, much as they have heard about them on every side. The special interest of the manual lies in its showing that the policy of the government, both in principle and practice, is for the benefit of every citizen of the country. There is still a tendency to think of the "preserves" as closed to use, and to leave the public lands exposed to unregulated individual exploitation. Where these misapprehensions prevail this little book goes far to correct them. It was written by F. E. Olmsted, whose intimate knowledge of conditions in the West and the policy under which the national forests are managed especially fit him to deal with the subject.

Business Humming.

The Williamson Veneer Company, situated corner of East Baltimore and Eighth streets, Highlandtown, a suburb of Baltimore, was incorporated about seven years ago, though the business extends further back. This plant is one of the most complete of its kind in the country and is furnished with all the latest machinery requisite for a business so extensive.

Mr. Williamson reports business moving along in fine style, which assertion is verified by the steady buzz and hum of machinery and the noticeable activity of the large gang of men employed in transferring the immense logs from the nearby railroad tracks to their convenient positions close to the mill.

New Lumber Directory.

Polk's Lumber Directory of the United States, third revised edition, is now being distributed to subscribers. It is nearly fifty per cent larger than the second edition, and the information contained in it is as nearly accurate and up-to-date as it is possible to secure. The publishers do not claim that their directory is absolutely free from error, but that it is an extremely valuable work of reference. The book contains 1,614 pages and is devoted to miscellaneous information; national, state and local

News Miscellany.

Forestry in the West Indies.

In advising that the tropical forests of the West Indies contain many valuable woods, a few of which are already familiar to commerce, but many not yet known to our northern markets, Consul W. W. Handley writes from Trinidad that there are about forty species in the West Indies which commend themselves as wood of quality, which are likely to be heard of in the future. Yet few of the West Indian woods, other than mahogany, cedar, fustic and logwood, are now of much commercial importance in the United States. No large logging industry, such as exists in the United States and Canada, seems practicable in the West Indies. It is very expensive to haul timber from the forests to the coasts, and it is not possible to use river transport, because many of the timbers are too heavy to float. Another obstacle is to be found in the fact that the forests in the West Indies do not, with one or two possible exceptions, consist almost entirely of one or two useful species, such as is the case with forests in our northern states. As a rule the individuals of any one useful species generally exist in an

isolated state, closely surrounded by single trees of many other species, perhaps more or less useless.

Such conditions stand in the way of a steady supply of any particular timber, without which it is almost impossible to establish a market. This difficulty in finding a market for a new kind of wood is that the bulk of the timber trade is limited to a few kinds which every manufacturer keeps in stock. It is more to the interest of the trader to limit his purchases to a few kinds of wood which he can stock largely, and thus buy to a better advantage, than to use a large number of woods which must be purchased in small lots. Hence, fresh arrivals stand little chance of obtaining a footing unless they show peculiar merits. Any wood which resembles in some way the staple timber and will pass under the same name will be readily bought on trial and, if useful, probably adopted. Thus various similar looking woods are sold as cedars, mahoganies or ebonies, and their sole claim to their trade names is often their resemblance in color and grain to better known woods.

lumber associations and exchanges, with location and names of officers; inspection and grading rules of different organizations; laws affecting the lumber interests; list of lumber journals with location, name, dates of issue, subscription price, etc.; followed by classified lists of lumber manufacturers, giving power, kind of saw and lumber used, capacity, etc.; wholesale and retail dealers; planing mills; furniture manufacturers; loggers; logging railroads; implement manufacturers and allied industries; all arranged in a most methodical and handy way. It is compiled by R. L. Polk & Co. of Chicago, Baltimore and Detroit, and is a valuable addition to a lumber library.

Eucalyptus and Catalpa for Ties.

The Illinois Central has been planting hundreds of thousands of catalpa and other trees on its lower reaches down in Louisiana. Catalpa of the right variety is a quick-growing and symmetrical tree and answers remarkably well for railroad ties. Not all roads are as well equipped as the Illinois Central for growing timber on their own property, but land could be secured by others for that purpose, and under proper management would prove a source of great profit rather than of expense to the companies, besides helping the work of reforestry in large part and assisting to conserve the timber now standing.

E. O. Falkner will go to Australia in September for the Santa Fe, he being manager of its tie and timber department. He expects to remain there about two years for the purpose of studying the growth and habits of the eucalyptus or blue gum, with a view to its culture in this country as tie timber. Mr. Falkner has an established reputation as an authority on the subject of tie timber and has made his department of great value to the Santa Fe. He has superintended the construction of tie treating plants along the lines of his road, the one at Somerville, Tex., being the largest of the kind in the world.

Rights of the Seller.

The HARDWOOD RECORD has received from R. J. Darnell of Memphis the subjoined analysis of his position in connection with the rights of the seller in being represented when his lumber is being inspected and delivered and expressions of opinion on the subject that he has received from many prominent members of the trade. This is a subject well worth the consideration of hardwood lumbermen and therefore the document is published in full:

"I have read with a great deal of interest the several articles in the trade papers regarding the question of the seller's rights in the matter of inspection. The American Lumberman says:

"If the seller thinks that he has not received justice he can apply for reinspection and if his claim is sustained thereby he can collect direct from the association, which in turn can recover on the inspector's bond. Seller and buyer have identical rights, privileges and protection."

"In reference to the above I will point out that the seller would never know whether he had received the correct or proper inspection either in quantity or quality, if he has no representative present when the lumber is inspected; he would not have the right to make a complaint because he would be in absolute ignorance as to the inspection made. The buyer only has an opportunity to reinspect the lumber when it is received in his yard, and if it overruns in measurement or is a very high grade he is satisfied, but if it falls short either in grade or quantity he protects himself by having it reinspected by the National association. The seller has no such privilege, because he would never know the quantity or quality that had been shipped.

"The American Lumberman further states:

"The seller is supposed to know the grades of lumber in his yard, and in certain piles, and can inspect the particular lumber sold as often as he pleases before the official inspector goes upon it."

"It seems that the editor of the Lumberman is not familiar with the usual methods of handling hardwood lumber. There are few, if any, manu-

facturers of hardwood lumber who know exactly the quantity and grade in any one pile of lumber. He can tell perhaps within a certain per cent, but not exactly, because few of them ever measure their lumber as it goes in piles, depending upon the inspecting of the lumber when it is shipped, and if a pile of lumber was put up to be firsts and seconds and some of the lumber develops into lower grades, it must be laid out. If the seller knew exactly what was in his piles of lumber it would not be necessary to inspect it when shipping it, but that is the object of the inspection, a matter which the American Lumberman overlooked.

"The proper thing to do would be to correct some of the rules of the National association.

"The HARDWOOD RECORD in its issue of July 10 has the following to say:

"The HARDWOOD RECORD has invariably argued that it is a weakness on the part of any association to attempt to prescribe inspection rules in the interpretation of which all parties in interest do not have an equal part, i. e., a basis upon which the purchase and sale of lumber is conducted. It has repeatedly contended that buyers of lumber, whether they be jobbers or consumers, should be represented in the inspection system. The same arguments should certainly apply in favor of the sellers of lumber. They undoubtedly have the right to be represented when delivery of their lumber is being made, and it is doubtful if the National association can maintain the opposite stand in this particular."

"I have personally discussed this matter with a number of prominent lumbermen, and every one has agreed with me that the seller should be represented, and every one of them has declared that he would not allow an inspector, unless personally acquainted with him, to go on his lumber and make shipment without being represented.

"In discussing the matter over the phone with Mr. Russe he advised that at the late meeting at Atlantic City the matter was taken up, and there were about fifty present, and they all agreed with the association rules except J. W. Thompson, and I take it that Mr. Thompson was the only one out of the fifty that was correct, the balance, or forty-nine, being wrong.

"I will give a reply to one of my letters from the S. Burkholder Lumber Company, Crawfordsville, Ind.:

"Referring to your circular letter of the 2d regarding the right of the seller of a car of lumber to put one of his inspectors on the pile with the National inspector:

"We would not let any inspector on our lumber and not know what he was going to do to it, and no inspector should object to having another inspector on the pile with him. If any inspector could be influenced by our inspector he is not capable of being a National inspector. I do not think there is a man or a firm in the association that would keep an inspector that could be influenced by another inspector on the pile with him. They tell you that you are protected by his bond. How is the seller to know what kind of inspection has been given him when the lumber is in the car and gone? Everybody knows that the buyer with a National inspection certificate will not notify you that he has a better grade than he should have had. When we are buying lumber we always have the seller on the lumber with our inspector and we insist on having our inspector on the lumber with a National inspector."

"I wish to direct particular attention to the following lines in the above letter: 'How is the seller to know what kind of inspection has been given him when the lumber is in the car and gone? Everybody knows that the buyer with a National inspection certificate will not notify you that he has a better grade than he should have had.'

"Reply to letter written J. W. McClure, secretary of the Lumbermen's Club:

"We duly received copy of your circular letter of the 1st, which in itself did not call for a reply, and we now have your letter of the 9th inst. asking for our views on the matter treated of in your letter.

"We can not say that we agree with you on the stand that you have taken. The whole theory of National inspection rests on the foundation that the National inspector is a disinterested party, acting for both seller and buyer under bond to give full justice to both and entirely free from the influences of either. We think that this theory is somewhat defective for the reason that inspection is largely a matter of

judgment and an inspector's judgment is susceptible to variance caused by outside influence acting either consciously or unconsciously on the mind of the inspector.

"We believe, however, that the only way in which national inspection can be made at all satisfactory and serviceable to the members of the association is to have the inspectors as free as possible from any influence. Manifestly, this would not be possible if either the buyer or seller were permitted to put a representative on the lumber pile to keep check on the national inspector. The seller, if he chooses, has the same privilege as the buyer in checking up the national inspector's work, that is, the seller has the privilege of measuring and inspecting the lumber before the national inspector goes on it just as the buyer has the privilege of measuring and inspecting it after the national inspector, but in our judgment it would not be fair to either to allow a representative of the other on the pile with the national inspector, and, if both buyer and seller were represented, naturally there would be no necessity for the services of a national inspector.

"We are therefore of the opinion, as already expressed, that the only method by which national inspection can be made practical and useful to the members of the association is for the inspector to be kept free from all outside influence, which his bond indirectly requires him to do."

"If, as Mr. McClure states, the seller's representative would influence the inspector—if the national association has such inspectors they had best get rid of them. They should be above reproach and influence.

"Again Mr. McClure states that the seller has the same privilege of inspecting the lumber. This everyone knows would incur a useless expense of handling, which Mr. McClure should already know, and can be saved by the seller's representative being present while being first inspected. Mr. McClure states that the national inspector is disinterested and acting for both parties. This can not be true, for it is only the buyer who demands national inspection, and he inspects for the buyer, and we must not believe that national inspectors are to be influenced, but to be able to apply the rules regardless as to who is present.

"Among many others from whom I have received letters agreeing with me are the following:

"Garetson-Greaser Lumber Company, St. Louis; McLean Lumber Company, Memphis; Trimble-Tilman Lumber Company, Decatur, Ala.; Three States Lumber Company, (not members of the association); Anderson-Tully Company, Memphis; Green River Lumber Company, (not members of the association); J. W. Thompson Lumber Company, Memphis; Darnell-Taenzler Lumber Company, Memphis; Barney Hines, Memphis; Bennett & Witte, Memphis; Memphis Sawmill Company, Memphis; Gayoso Lumber Company, (not members of the association); Scatcherd & Sons, Memphis; Memphis Rim & Row Company, Memphis, besides a large number with whom I discussed the matter personally.

"I will say in conclusion that it is no reflection upon the inspector nor upon the rules of inspection that we have taken the stand that we have, but it has been a rule of ours for a long time to always be represented when shipping lumber to the customer, except in a few instances where we were personally acquainted with the inspector and were certain that he would do us justice.

"My opinion of these conditions when summarized down is that the first inspection of the lumber from a seller's yard is not an arbitration, but if the shipment is made by the seller, and the buyer finds any fault, and he brings in a national inspector, this is an arbitration and the national inspector, in this instance, is an arbitrator.

"We believe that the inspector himself should be better pleased with a representative being present than run any chance of dissatisfaction after shipment has been made. We maintain that we are right and will continue to do business in the same manner and will always require one of our representatives to be present when shipments are made by a national inspector or another."

R. J. DARNELL."

Building Operations for July.

The long prevailing prosperity in building operations continues with little abatement, practically none if Greater New York be eliminated from the calculations. Official reports from fifty-five leading building centers collected by the American Contractor, Chicago, and tabulated, shows a loss in twenty-six cities and a gain in twenty-nine as compared with July, 1906. The losses are comparatively light from a monetary standpoint, with the exception of New York city, which brings down the total decrease to 11 per cent. This decline must be chiefly ascribed to the enormous operations of recent years and the consequent supply of new buildings.

*Little Rock issued one permit July, 1906, for \$131,000.

**Louisville issued one permit July, 1906, for \$320,000.

A Progressive Concern.

The Steiner Mantel Company, located at corner Fairmount avenue and Eighth street, Highlandtown, a suburb of Baltimore, is one of the most progressive concerns in this section. The company, which is but four years old, manufactures wood mantels and special furniture. Under the able direction of Charles J. P. Steiner, the president and general manager, the growth of this concern has been rapid. In 1903 their floor space was 4,800 square feet, with a capacity of 100 mantels per week; in 1904, 23,400 square feet floor space and 500 mantels per week; in 1905, 55,000 square feet of space and 1,000 mantels per week, and in 1906 they

turned out 1,500 mantels per week, with a floor space increased to 88,000 square feet. This plant is equipped with all the latest machinery, including a number of their own patenting, and has all the facilities of a railroad, which passes close to the property.

Adjoining this plant is the Baltimore Veneer & Panel Company, manufacturers of veneered panels, veneered rolls, built-up tops, drawer fronts, etc. This company is owned and controlled by the officers of the Steiner Mantel Company, and although under a separate charter, obtained about two years ago, the business is under the same management as that of the older company. This concern has proved as successful as the other and has become a decided factor in the market. The two companies jointly are now consuming 10,000,000 feet of hardwoods per annum.

Atkins Ahead Again.

E. C. Atkins & Co., Inc., the famous saw makers of Indianapolis, have a display at the Jamestown Exposition which is extremely novel to say the least and which has attracted no ordinary amount of attention, even in that great assembling place of curiosities and wonders. The exhibit consists of scientific kites from which are suspended large banners, together with the figures of a man and a woman each hanging from

A UNIQUE DISPLAY.

a trapeze. While the accompanying picture gives some idea of the device, it does not convey a very true impression of the startling effect produced upon spectators. The large banners, 30x40 feet, are suspended an eighth of a mile in the air, and between them hover the figures, realistic enough to cause the citizens of Norfolk and visitors to the exposition stiff necks and extra heart-beats from gazing skyward.

Death of Prominent Philadelphian.

At White Face Inn, Lake Placid, N. Y., where he and his family have spent their summers for a number of years, Thomas B. Rice, head of the T. B. Rice & Sons Company, large manufacturers of boxes at Philadelphia, dropped dead of apoplexy on July 31. Mr. Rice was sixty years old and was widely known and universally admired.

The members of the Philadelphia Lumbermen's Exchange, of which organization he was at one time president, his son at present occupying that position, feel a personal loss in Mr. Rice's death, as he was greatly beloved by every one connected with the organization, for which

he had done so much. To his family this bereavement is particularly hard at this time, as it follows so closely upon the marriage of his son, William L. Rice, who was married July 24 to Miss Florence Robbins Keen.

Mr. Rice was twice married and leaves a widow and five children. He was a member of the Masonic order, the Manufacturers' Club and the Aronimink Golf Club.

New Michigan Corporation.

William H. White of Boyne City, Mich., and associates have recently organized the Yellow Fir Lumber Company of Portland, Ore., with a capital of \$1,600,000. Mr. White is at the head of the William H. White Company of Boyne City, an important railroad line and a dozen minor corporations in the north-central part of the state. In addition he has recently formed a large company in British Columbia, which will eventually engage in lumber manufacture. The Yellow Fir Lumber Company, just organized, has the following officers: Thomas White, president; James A. White, vice president; William H. White, secretary; W. L. Martin, assistant secretary; George M. Burr, treasurer. The board of directors consists of William H. White, James A. White, Thomas White, all of Boyne City; Amos Musselman of Grand Rapids; J. T. Wylie

An Amusing Letter.

The following enthusiastic and ingenuous letter was recently received from a student at the Biltmore Forest School, conducted by Dr. C. A. Schenck on the estate of George K. Vanderbilt in the Pisgah Forest of North Carolina. The young man decided to spend his summer vacation period in a manner which should provide both recreation and instruction, and that he is not being disappointed in either the letter will show:

PINK BEDS, PISGAH FOREST, N. C., July 10, '07.

My Dear Mother: Your letter came today and I was glad to get it. Have had a pretty hard day of it today and am tired. I wish that Dad was here to hear Dr. Schenck lecture on Forest Utilization. He would then get an idea

what forestry as a practical thing is not mere garden growing, like some people think it is. It seems so funny to me that the public have such strange ideas regarding forestry. They seem to think it is a kind of effeminate study like landscape gardening and the like. The forestry as taught here deals with practical money making in lumbering, and nothing else. Dr. Schenck said today that there is no such thing as conservative forestry. Conservatism means nothing to the real forester, but comparative forestry does. For instance, it would be foolish to practice conservatism in the forests of northern Minnesota. Nature will provide for the second growth of trees and it is not a forester's duty to sprinkle them with watering cans and the like. All the forester does in that line is to see that Nature is unmolested in providing for the second growth. We don't plant a tree where we cut one down. There is no money in forestry the way the government is now teaching it. They do not teach practicability along with professional forestry, but other college forestry schools are all doing government work. Doc Schenck operates this forest with the best money-making methods possible. He teaches us the art of lumbering, even how to pile lumber in cars so that the customer buys air besides wood! We have been learning lately such things as this—methods of sawing logs, different saws used, how logs warp, split, and check and remedies for splitting and checking. By checking logs I mean the splitting of a log after it has been cut, along with its grain as is seen in most Nos. 2 and 3 lumber. To remedy this there are various methods, viz., winter cutting, strips of bark left near the end of peeled logs, deadening, S shaped iron clamps driven into logs, boards nailed onto the ends, earth covering at the end, red lead painting for export logs. This is what our forestry teaches. Many logs are cut up for twos and threes, owing to defects like this, which if they had been treated properly could make first grade lumber.

I tell you forestry is a great thing and I am getting to like it more every day. I can't stand this geology, etc., that Doc is having us take to make forest life interesting, though. Geology, you know, deals with stones and rocks, and his idea is to acquaint a fellow with them enough so that when he goes through the forest he can distinguish rocks and their relation to the soil on which the trees are growing. If any of your educational club friends ask you if I am studying conservative forestry you tell them no, I am studying to be a lumberman. Smith says it's fierce the opinion people get of a forester. He says they look upon him as one of those fellows Roosevelt calls a molly-coddle. He is continually getting pamphlets, magazine articles, etc., from girls, containing articles written generally by some woman, upon the care and preservation of our trees, which are full of B. S. and do not relate to forestry at all. We don't read such things as that. The American Lumberman, New York Lumber Trade Journal and the HARDWOOD RECORD are the magazines we read in connection with our work. I guess I am doing a little "this will be me" talk along here, only being here two weeks, but I wanted to give you an idea of the work. The practical work is hard and is just as hard I know as I can get in Dad's lumber yard. I mean by practical work, field work which we do every afternoon.

I want you and Dad to be here the last week in August and I will take Dad up here in the mountains with me for a day or so and give him a few ideas. Would like to stay here and finish my course out now but guess I will wait and have a year or two of college life before I finish at Biltmore. I want to get my degree from here and am going to make up my mind before entering college that I will come back to Biltmore.

Well, Hon. Smith is hollering for me to put out the light and turn in as he wants to sleep. He is lying in his bunk smoking. Write to me

often. I have bought me a pair of leather putters for riding and tramping through the brush as my high shoes get wet every time and I have to dry them out on odd days. I love you lots.

CHARLES.

Change of Base.

D. S. Hutchinson, the premier hardwood flooring salesmen of the country, has resigned his position with the Nashville Hardwood Flooring Company of Nashville, Tenn., and has made an alliance with the Arthur Hardwood Flooring Company of Memphis, to which company he goes in the capacity of sales manager. Mr. Hutchinson is probably not only the best flooring salesman in the country, but he has an acquaintance that reaches from coast to coast and from the Great Lakes to the Gulf. To his friends he is familiarly known as "Hutch," and to the trade at large as an indefatigable business getter.

Mr. Hutchinson has had long experience in the flooring trade. He was associated with the T. Wilce Company of Chicago for nine years and for the past four has been with the Nashville Hardwood Flooring Company. During the time Mr. Hutchinson has been with the latter company the business of the house has increased tenfold, very largely through his salesmanship.

The Arthur Hardwood Flooring Company of Memphis, with which Mr. Hutchinson is now allied, has a plant that is two years old, with

D. S. HUTCHINSON, CRACK SALESMAN WITH ARTHUR HARDWOOD FLOORING CO., MEMPHIS.

about the same capacity as the Nashville institution, and this capacity is now being greatly increased. The product of the factory in the past has been exclusively oak flooring, manufactured from the superior quality of oak that is produced in the Memphis district. Hereafter it will take on the production of beech flooring, as well as hardwood moldings.

The company's superintendent is T. J. Humphreys, who has the reputation of being one of the most skilled mechanics and flooring manufacturers in the country. The lumber purchasing and handling end of the business is in charge of H. R. Hearst, a man thoroughly posted on this end of the business. L. P. Arthur, who organized this company something over two years ago, is to be congratulated on the selection of such a trio of talent as he has secured in Messrs. Hutchinson, Humphreys and Hearst. This fact combined with his excellent source of supply, fine plant and the splendid railroad service out of Memphis, which has no less than eighteen outlets by rail, should insure a great future for the Arthur Hardwood Flooring Company.

Miscellaneous Notes.

The West Virginia Veneer Company, Roncove, W. Va., has been organized to succeed to the business of Williamson & Co. of that place.

D. E. Lollar of Black's Ferry, Ky., has sold his farm at Marrowbone to C. W. Alexander, J. R. Keen, J. E. Coe and others of Burksville. The land comprises about 1,000 acres and the purchasers paid \$10,000 for it. It is said to be the finest body of timber in southern Kentucky, 900 acres of it being virgin land.

A newly imported wood, used for high-class cabinet work and handsome piano stock is the Tasmanian myrtle. It is a rich pink color, hard and close grained.

The Brazos Hardwood Lumber Company, Marlin, Tex., has been succeeded by the Brazos Lumber Company.

The new mill of John A. Reitz & Son at Evansville, Ind., which has only recently been completed, is one of the best mills in that section of the great hardwood state. It is equipped with the latest machinery throughout and has a capacity of 75,000 feet a day. It was erected to replace the one lost by the firm through fire last winter.

The W. E. Dillard Manufacturing Company of Petersburg, Va., has been organized to engage in the manufacture of saw handles and general woodwork. The president and general manager of the company is W. E. Dillard.

A sawmill with a capacity of 50,000 feet a day is being erected at Onalaska, Tex., by William Carlisle & Co. Hardwoods and yellow pine will be manufactured. William Carlisle, L. O. Jackson and William Pritchard are the principal owners of the concern.

L. B. Bristol and Isador Wallace of Statesville, N. C., and Sheriff McDowell of Morgantown recently purchased a tract of 1,000 acres of valuable timber land in McDowell county. The property contains a rich growth of oak, poplar and pine timber and is within easy reach of ample railroad transportation.

Fire at the operations of the Lanham Lumber Company at Lebanon, Ky., destroyed the entire plant with the exception of the office building and one warehouse. The company manufactured hardwood flooring and was one of the most successful concerns of the kind in the state. The loss sustained was about \$35,000, with only \$7,500 insurance. State Senator Harry Lancaster and his father, B. J. Lancaster, were the principal stockholders in the concern. It is probable that the plant will be rebuilt.

John Nagely, Sr., of New Philadelphia, O., died Saturday, August 2, from valvular disease of the heart. Mr. Nagely was born in Switzerland in 1832, and in 1861 came to this country. For forty-five years he was a resident of New Philadelphia. He was first employed by the Champion Planing Mills and in 1870 was admitted as partner. In 1880 he became identified with William H. Criswell, and on his death his sons were taken into the business, the firm being styled the John Nagely Lumber Company. Mr. Nagely leaves eight children to mourn his death, and a multitude of friends, numbering almost the entire population of his home town, where he was regarded as one of the most upright and honored citizens.

The Prindle tract of hardwood timber, near Livingston Manor, N. Y., has just been sold for \$12 an acre. There are 3,000 acres in the tract.

The Johns & Brown Company of Aurora, Ill., will soon begin the erection of a new warehouse. The company makes a specialty of sideboards, bookcases, mantels, showcases, store, office and bank fixtures, and carries a stock of the best grades of hardwood lumber.

The Illinois Hardwood Lumber Company of West Virginia has received a charter at Little

Rock, Ark. It is capitalized at \$20,000. G. O. Cooley of Texarkana is agent.

A few months ago the first cargo of Japanese lumber ever shipped to Australia was landed in Melbourne and met with such a ready market that a further shipment has just arrived and there seems every probability of a permanent business being established. The cargoes consist of pine, oak, ash and basswood, in logs of various sizes squared by the ax only, and it is said can be landed in Australia at a lower figure than other imported lumber.

Herman Kimmerow, Edward McGlade and Albert Ruthenberg are the incorporators of a new concern which will engage in the manufacture of woodwork for banks, offices and stores, furniture, sash, doors and all kinds of finish at Cedar Falls, Iowa. The company has leased large quarters in the Monarch Stack and Feeder building and has already commenced operations. A complete line of up-to-date machinery has been purchased, which will be increased as necessity requires.

Work on the large plant which the Thompson & Ford Lumber Company is erecting at Sour

Lake, Tex., is progressing nicely and the company expects soon to be able to begin operations in it. The mill will cut hardwood exclusively and a complete line of fine stock will be produced. The company also contemplates building 150 houses for its employees in the near future; there will be in the neighborhood of 600 of them.

The Premier Hardwood Company has been incorporated at St. Louis, Mo., with \$25,000 capital stock by Paul Brown, S. H. Wright and Walter Ball.

The Interstate Lumber Company has moved to main offices from Wichita, Kan., to Bennington, I. T., where it has extensive hardwood interests. This will facilitate the handling of business, as the offices will be nearer the milling operations.

The Standard Veneer Door Company has been incorporated to succeed to the business of John Frey at Archbold, O. Mr. Frey operated a large planing mill and manufactured sash, doors and interior finish on an extensive scale. The new company will engage in the manufacture of veneered doors exclusively.

ing of the board, showing the rapidity with which this organization is adding to its numbers.

Boston.

William E. Litchfield returned last week from a western trip. He left again the first of this week for New York and the South.

Charles C. Batchelder, treasurer of the Boston Lumber Company, is traveling through Switzerland. He will return home about the middle of September.

W. F. Conrey has succeeded Louis P. Collins as superintendent and general manager of the Derryfield Lumber Company, Manchester, N. H. Mr. Conrey comes from California, where he has had a wide experience in the lumber business. Mr. Collins, who was obliged to give up business on account of sickness, is still in very poor health.

Edward M. Eames of the Boston Lumber Company reports that they have some Oregon fir timbers en route from Oregon, which measure 36x36x70 feet. Mr. Eames reports the market for chestnut poles very firm, and states that Connecticut shippers are working farther from the railroads, which incurs extra expense, and prices are increasing. The market for native oak is demoralized at present, as the large purchasers are overstocked. Orders, where sizes are easy, could be placed today at about \$2 under prices ruling a year ago.

John C. Barker, Hartford, Conn., died at his home in that City July 21, at the age of 70 years. Mr. Barker for many years was engaged in the lumber business.

G. W. Appleby of the Appleby Lumber Company, Jamestown, N. Y., was a recent visitor in this market. This concern is a large dealer in hardwoods.

A. V. Bartholomew, Greenwich, Conn., has established a cabinet-making business in that place.

Among the recent imports from Calcutta and Colombo of interest to the lumber trade were massive logs of cocoa wood, measuring twenty-five feet in length and weighing fully two tons each.

The following circular has been issued by the Boston and Maine railroad, governing the storage of lumber in Boston:

"All cars of lumber not unloaded within ninety-six hours after they are placed upon the delivery tracks will be stored at the expense of the owner, unless orders are received, within ninety-six hours from time of arrival that track delivery is required, in which case such cars will be subject to the rules of the New England Car Service Association, from the date of arrival.

"Lumber, in carloads, will be stored by the Boston & Maine railroad, until its storage capacity is exhausted, at the following rates: Unloading, 20 cents per net ton; minimum charge, \$3 per car; storage, 50 cents per net ton per month or fraction thereof; minimum charge, \$7.50 per car.

"In case lumber is held in cars for the convenience of the railroad, the same storage charge will be made as applied to lumber stored in the lumber sheds. All lumber is held at owners' risk of fire."

The Farrar-Jones Lumber Company has been incorporated in Boston with a capital stock of \$70,000. The incorporators are: George M. Faulkner, Leonard A. Faulkner and Emma E. Mullen.

New York.

The big fire which visited Coney Island last Monday, entailing a property loss of \$1,500,000, destroyed a large number of frame structures, and it being at the height of the season, the rush to rebuild, which was begun immediately after the fire, is already providing a big volume of business to the yards of the district catering to that section. Coney Island is practically all built of frame structures and the large area

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

The Fullerton-Powell Hardwood Lumber Company of South Bend, Ind., is establishing a storage and distributing yard for southern hardwoods at Evansville, and a similar yard for northern hardwoods at Michigan City. Its general offices and yard will be continued in South Bend, however.

Bliss & Van Auken of Saginaw, Mich., are out with the August installment of their unique calendar advertisement. This time the Wolverine cables a catchy message from Japan.

Thomas W. Howlett, representing the Philadelphia Textile Machinery Company, the prominent manufacturers of veneer drying apparatus, was a caller at the Record office August 2.

Walter Müller of the well-known importing house of J. F. Müller & Sohn, 300 Verlängerstrasse, Hamburg, Germany, will visit this country in the near future and expects to arrive in Chicago the latter part of September.

A. W. Dunn of Singleton, Dunn & Co., 17 Union street, Glasgow, Scotland, was a pleasant caller on the Chicago trade August 1.

The Lumbermen's Credit Association, 77 Jackson boulevard, Chicago, and 116 Nassau street, New York, is out with its July reference book, which is even more complete and comprehensive in its scope than previous issues. A large number of names have been added and ratings carefully considered. The service which the association is able to render lumbermen through this medium is of inestimable value and few offices are without it.

The Chicago Car Lumber Company of the Pullman building, this city, is about to build a planing mill and woodworking plant at South Chicago, which it will operate in connection with a distributing hardwood and yellow pine yard.

D. S. Hutchinson, formerly of the Nashville Hardwood Flooring Company of that city and now with the Arthur Hardwood Flooring Company of Memphis, was a caller at the Record office the early part of the week. Mr. Hutchinson and his family spent several days in the city.

J. W. Thompson, the "tall white ash of Memphis," was a visitor to the Chicago trade the first of the week.

Edward E. Skeele of the Estabrooke-Skeele Lumber Company of this city returned last week from a two weeks' fishing trip at Lake Mills, Wis.

A. W. True of the True & True Company, large manufacturers of doors in this city, is

back in the harness again after an enjoyable month at Casco Bay, Me.

E. R. Van Buren has joined the forces of the McCauley-Saunders Lumber Company of this city to handle red cypress in the Chicago district. Mr. Van Buren has for many years been a member of the firm of Walter Shoemaker & Co. of Chicago and retired from that concern to take up the new work. He is well known in the local trade and will undoubtedly make good.

Henry Maley, pioneer hardwood manufacturer of Edinburg, Ind., was a Chicago visitor the latter part of last month. Mr. Maley expressed himself as well satisfied with conditions and said that his customers are calling for his famous oak and other lumber about as fast as it can be turned out.

Allen O. Hayward of M. A. Hayward & Sons of Columbus, O., was in Chicago recently for a few days on his way to Portland, Ore., where he will locate permanently. Mr. Hayward is the eldest son of Morris A. Hayward, head of the Columbus concern, and resigned his connection with his father's firm to seek improvement of his health on the coast. He intends to study Pacific coast timber thoroughly and to learn the business of handling these woods from the tree to the yard.

C. L. Willey of this city, who has recently established a large sawmill and veneer factory at Memphis, was surprised to hear that persons engaged in sinking an artesian well on the property there struck oil. This discovery led to more or less agitation among exploiters of such properties, and even the purchase of some adjacent land.

James M. Schultz of Schultz Brothers recently underwent an operation at the Michael Reese Hospital, from which he is recovering nicely. He has left for Mackinac, where he will rest for a couple of weeks.

A meeting of the Board of Directors of the National Hardwood Lumber Association was held in the association offices in the Rector building, this city, July 25. There were present: W. H. Russe, Memphis, president; O. O. Agler, Chicago, first vice president; Frank E. Fish, Chicago, secretary, and Earl Palmer, Paducah, Ky.; Charles H. Barnaby, Greencastle, Ind.; G. J. Landeck, Milwaukee, Wis.; J. W. Thompson, Memphis, and Theodore Fathauer, Chicago, directors. Nothing of especial importance was taken up at the meeting, the business being largely of a routine nature. Forty new members were admitted to the association, all of whom had applied for membership since the last meet-

burned will consume a great amount of lumber of all kinds in rebuilding.

An announcement of special interest to the hardwood trade comes from Albany, N. Y., that Governor Charles E. Hughes has appointed Maurice M. Wall of the Buffalo Hardwood Lumber Company, Buffalo, N. Y., to succeed Charles F. Howard, resigned, as a member of the State Board of Managers of Reformatories. Mr. Wall is widely known in this city and in western hardwood circles and his many friends will undoubtedly be pleased to learn of this honor which has been conferred upon him.

W. D. Magovern of Magovern & Bowen, hardwood flooring specialists of 29 Broadway, leaves August 10 for a three weeks' rest in the Adirondack mountains. Mr. Magovern reports the hardwood flooring trade very fair. His firm handles the product of the Thomas Forman Company of Detroit.

Manager C. O. Shepherd of the Emporium Lumber Company, 1 Madison avenue, will leave about the first of September for a brief vacation and home coming to his native heath, Hillsboro, O. He reports the general hardwood situation as quite satisfactory.

Paul W. Fleck of the Paul W. Fleck Lumber Company, hardwood manufacturers and dealers of Bristol, Tenn., spent several days in town this week on business, having come over from the Philadelphia office of his company.

W. W. Lockwood, manager of the local branch of the Rice & Lockwood Lumber Company, 1 Madison avenue, left on July 30 for a three weeks' vacation at Digby, N. S. From there he will make a tour of inspection of the property of the Anthony Lumber Company at South Maitland, which he and other members in his company recently acquired. A fine new mill has been installed during the year, which has just started operations, cutting for the eastern markets.

George M. Stevens, Jr., of the Stevens-Eaton Company, 1 Madison avenue, has just returned from a brief pleasure and business trip north. He is spending the week ends at Avon, N. J. The hardwood department of this company is enjoying a good trade under the management of T. S. Miller and matters in that department are reported as currently satisfactory.

Waldron Williams of I. T. Williams & Son, Twenty-fifth street and Eleventh avenue, is expected home from Europe August 7 after a three months' pleasure trip.

E. J. Marsh, secretary of the Sea Coast Lumber Company, cypress specialists, 1 Madison avenue, is sojourning for several weeks in Canadian pleasure resorts and on business in the Dominion. The cypress situation is reported as very satisfactory.

W. C. Thomson, Doyle, Thomson & Co., 16 Beaver street, is recovering from an operation recently undergone at the Flower hospital, Manhattan. In the meantime, F. H. Doyle is holding matters well in hand and reports a very fair volume of trade for this season of the year. This company has some good hardwood connections in the local trade and its trade is constantly increasing.

The local Hoo-Hoo under the leadership of Vicegerent Charles F. Fischer, hardwood retailer of 1916 Park avenue, are completing subscriptions toward the Atlantic City fund for the entertainment of the delegates and friends to the annual meeting of the order there in September. New York will be well represented financially as well as personally at the meeting and from the reports received from other cities every indication points to a royal time and welcome.

Mr. and Mrs. Lewis Bill of Baltimore and George F. Craig of G. F. Craig & Co., Philadelphia, arrived last week on the White Star Liner Celtic after a lengthy pleasure trip abroad. They were greeted at the dock by Mr. and Mrs. E. F. Perry and Allan Dill.

H. D. Billmeyer, Billmeyer Lumber Company,

Cumberland, Md., was a recent visitor in the interest of business. This company makes a specialty of ship oak and heavy oak timber and Mr. Billmeyer reports the situation as very satisfactory. The demand for this class of material is strong at the present time and the outlook is good. While here Mr. Billmeyer booked some very nice business.

The Marshall Lumber Company is the name of a new wholesale house just incorporated in Brooklyn, headquarters 26 Court street, by M. Marshall, who for twelve years past has been associated with the Brooklyn house of Louis Bossert & Son. The capital of the new company is \$10,000 and it will deal in hardwoods and pine. The officers are as follows: President, James Flynn; vice-president, M. E. Marshall, and secretary, A. J. Fogerty.

R. P. Baer of R. P. Baer & Co., Baltimore, spent several days in town during the fortnight in the interest of business and in collaboration with their local representative A. B. Wetmore. He reports general inquiries for hardwoods good and business fully up to the season.

The proposition of settlement promulgated by the Creditors' Committee of the Ross Lumber Company, Manhattan and Jamestown, N. Y., is being circulated among the creditors and according to general reports is being generally signed. Under its provisions the business of the company will be continued and it should terminate its embarrassment speedily.

Captain Lowell Talbot of Chase, Talbot & Co., 29 Broadway, and for many years the leading figure in the Metropolitan wholesale circles, died at his residence in Brooklyn, July 23, in the 68th year of his age.

The sash, door and blind plant of L. Bernstein of 1001 East One Hundred and Thirty-third street, Manhattan, was burned July 25, entailing a loss of \$8,000.

William Lake Rice, the popular Philadelphia lumberman, president of the Philadelphia Lumbermen's Exchange and principal in the firm of T. B. Rice & Son, that city, was united in marriage in this city at the North Baptist Church on July 24 to Miss Florence Robbins Keen, daughter of Mr. and Mrs. William Howard Keen of this city.

Adler Siegle & Co. have engaged in the sash, door and blind business at 340 Junius street, Brooklyn.

Charles Hill of the Northern Lumber Company, Flatiron building, accompanied by Mrs. Hill, sailed for Europe via Boston to be gone until September. The hardwood department of this company, which is in charge of Albert Steinbach, is enjoying a profitable trade.

J. E. Kelly of the Simonds Manufacturing Company, well-known saw manufacturers of Fitchburg, Mass., was at the local office of the company in this city last week prior to starting on a trip to the southeastern sawmill section.

F. R. Whiting, Janney-Whiting Lumber Company, Philadelphia, was in the city last week en route to Brewster, N. Y., where he will spend his vacation.

C. E. Lloyd, Jr., of the Boice Lumber Company, Philadelphia, accompanied by Mrs. Lloyd, passed through the city during the fortnight en route for a two weeks' outing in the Maine woods.

J. J. McKelvey, who is prominently associated with the underwriting management of the Lumber Insurance Company and the Adirondack Fire Insurance Company in New York, headquarters 84 William street, sailed for a business and pleasure trip to the cities of England and the continent on Thursday. He was accompanied by his wife and daughter. Both of the above insurance companies are enjoying a large volume of business among the lumber trade.

At a largely attended meeting of the lumber and building material interests at Newark, N. J., on July 24 at the headquarters of the New

Jersey Lumbermen's Protective Association, it was decided to organize a freight traffic bureau under which a test case could be made under the new demurrage and car service law just passed by the New Jersey legislature. The lumber and building material firms throughout the state are aroused to energetic action in a determination to enjoy their full rights under the new law and to relieve as far as possible the very unsatisfactory state of freight transportation.

Fire in the cabinet and trim plant of Bender & Brossman, 303 Canal street, did damage of \$1,500 August 2.

W. K. Knox of Lucas E. Moore & Co., 11 Broadway, will leave next week for a brief pleasure tour. He reports the hardwood lumber and stave trade as firm and looks for a good trade for the balance of the year.

Philadelphia.

A meeting of the Lumbermen's Exchange was held August 2, when a committee was appointed to draft resolutions of sympathy to be presented to the family of T. B. Rice of T. B. Rice & Sons Company, who died July 31 at Lake Placid, N. Y. The committee was also to select an appropriate floral piece to be sent to Mr. Rice's funeral.

The Retail Lumbermen's Association of Philadelphia held its regular monthly meeting at the Lumbermen's Exchange rooms August 1, Wm. C. MacBride, vice-president, in the chair. There was a very full attendance, but only routine business was transacted.

The Edwin F. Smith Company, manufacturers of veneer machinery, 479 North Fifth street, is being reorganized. More capital has been added and the business will be considerably extended. The concern has been joined by Royden Rothermel, formerly of the Coe Manufacturing Company, Painesville, O., who is thoroughly conversant with the veneer situation throughout the country and who will have charge of the sales department.

H. H. Maus & Co., Inc., report business moving along smoothly. Although not rushed as a few months ago trading for this time of year is satisfactory. Mr. Maus is spending some little time at their mill near Rockfish, Va.

The Kirby & Hawkins Company is adding a new line to its business. In connection with railroad ties they will now handle hardwoods and cypress. At this time they are placing on the market a hardwood fence paling which is said to be far more durable than that made of soft woods. They expect shortly to make some desirable connections and will employ thoroughly efficient men to look after the hardwood department.

The Holloway Lumber Company states that although trading is not so heavy as in the recent past their July business has turned out better than in former years.

The Hindle Lumber Company is marching steadily to the front. They have already outgrown their present quarters and will move soon to their new yard, Twenty-sixth street and Gray's Ferry road, where they will have a capacity for about 5,000,000 feet of lumber. A large shed will be erected for the protection of their best grades of material and they will have the benefit of two railroad sidings 250 feet long. When thoroughly established they will do a general lumber business, instead of, as heretofore, confining themselves to hardwoods alone. They report the month of July to have been eminently satisfactory and are looking forward to a good fall trading.

The J. S. Kent Company reports that although there is a little lull in trading at present they have no complaints to make over trade conditions. Their July business was better than that of July, 1906, and their total of sales this year is ahead of the same period of last year. They are anticipating fair trading for the fall. L. E. Walton and J. P. Walton of this concern are

spending their vacation at Lake George, N. Y. The company recently engaged Jos. G. Wells of Bloomsburg, Pa., as salesman to look after New York state and the coal regions in Pennsylvania.

The Owen M. Bruner Company reports business good. Mr. Bruner states that the June business has exceeded the same month of last year by \$14,000 and that of July also has surpassed same month of 1906. So far this year sales are ahead of 1906. Henry Whelpton, secretary and treasurer of the company, is making a visit to the mill districts, posting himself as to conditions there.

The Roanoke Railroad and Lumber Company's lumber mill at South Norfolk was visited by fire recently, but the machinery fortunately was not damaged. The loss is estimated at \$75,000.

The carriage factory and lumber yard of Rauch & Hendwerk, situated on the outskirts of Pleasant Corner, Pa., was destroyed by fire July 27. The loss is placed at about \$20,000.

Fire destroyed the sawmill of Gee & Perry at Trout Run, Pa., July 26; loss about \$7,000. Perry and his foreman, in their efforts to save property, are said to have been themselves severely burned.

Samuel U. Reinoehl, head of the Reinoehl Lumber Company at Lebanon, Pa., died on July 30, aged 68.

The Charles Bond Company, mill supplies, 518 and 520 Arch street, has increased its capital to \$125,000.

The Dimensions Stock Lumber Company, Williamsport, Pa., was incorporated under Delaware state laws July 30; capital stock \$50,000.

The Grimes Furniture Company, Carnegie, Pa., obtained a charter under Pennsylvania state laws July 27; capital \$5,000.

Carl Oesterreich, president of the Carl Oesterreich Company, cabinet makers, this city, died suddenly on July 25.

It is announced that T. R. Harter & Co., Lock Haven, Pa., have added two more West Branch timber tracts to their holdings. Recently they closed a deal for a tract of land in Chapman township, Clinton county, from which it is estimated they will be able to cut 5,000,000 feet of lumber. They have also purchased the Jacob Springer tract at Cammal, Lycoming county, which will yield 500,000 feet, and are said to be still negotiating for other tracts.

Williamsport sawmills, it is reported, are getting nearly as many logs by rail as by river drives, the logs being rolled from the cars into the ponds over docks. On July 19 a train of about twenty cars of logs arrived in the Pennsylvania Railroad yards, which it is said is the average daily number of cars coming in. A few times as high as thirty have arrived. It is estimated that a hundred or more carloads a week are now arriving. The logs come from the $\frac{1}{2}$ ix Run section, being hauled over the low-grade division of the Pennsylvania.

Correspondents of the Commercial Museum in many parts of the world are sending weekly reports to the institution, in nearly all of which attention is called to the enormous demand from foreign parts for American trolley cars. From the reports it is evident that several large foreign countries are virtually dependent upon American sources for their supplies of rolling stock. Not only do these inquiries come from all parts of Europe, but from the interior of Africa, Asia, Australia and all parts of South America as well. The Brill Company of this city, for instance, has just shipped to Buenos Ayres an order of seventy-five semi-convertible trolley cars and ten double-track cars having the same window system. This company is working now on orders for equipment which will take up the entire output of its plant for the next twelve months and has on hand contracts for the shipment of cars to Italy, Spain, the Congo region, the West Indies, Chile and other points. To what agency this increased demand for American street cars is to be attributed it is hard to say, but indications are that the constant activity of American builders

in the improvement of their cars and the embodying in them of new advantages of construction and equipment has had much to do with their popularity.

It will be interesting to all lumbermen to learn that the minimum amount of freight allowed in carload lots of lumber, which formerly was 30,000 pounds, will now be advanced to 34,000 pounds. This advance is to take effect on August 1 and will cover freight in Ohio east of the Mississippi river, the lower part of Michigan and the whole of New York and Pennsylvania.

Baltimore.

W. D. Floyd, chief inspector for John L. Alcock & Co., hardwood exporters of this city, died July 27 of cholera morbus after an illness of only a few days. Mr. Floyd had represented John L. Alcock & Co. in the West Virginia field for about ten years. Mr. Floyd was a Mason and also belonged to the Odd Fellows, Elks, Red Men and Hoo-Hoo, being at the time of his death vicegerent snark of the Northern District of West Virginia. He is survived by his wife and a son and daughter, the son, Oron L. Floyd, has succeeded to his position with John L. Alcock & Co.

The Chattanooga Lumber Company, which was organized last January with Baltimore interests predominant and has since purchased an extensive tract of timber near Madison, S. C., is erecting an eight foot band mill on the tract and expects to be ready for operation in about ninety days. The mill will be on the main line of the Southern Railway and will have a capacity of about 40,000 feet per day. A short end of track is to be built and when this is completed the work of putting up the machinery will be pushed as rapidly as possible. A planing mill is also to be erected, and will be run in connection with the sawmill. The company has a capital stock of \$100,000 and its officers are: John Lochrie, Windber, Pa., president and treasurer; D. T. Price, Baltimore, vice president, and Winfield S. Price, Baltimore, secretary. The Messrs. Price are members of the Price Hardwood Company of Baltimore, which concern will act as selling agents for the output of the plant. The latter is to be of the Allis-Chalmers pattern. About 40 per cent of the timber on the company's tract is of yellow pine, 10 per cent white pine and the balance poplar and hardwoods.

J. H. Baird, scrivener of the Supreme Nine of the Concatenated Order of Hoo-Hoo, was in Baltimore July 23 to confer with various members of the order relative to the forthcoming concatenation in Atlantic City. Sentiment here appears to be crystallizing in favor of John L. Alcock as the next supreme snark of the universe. Mr. Alcock is immensely popular, and has taken an active interest in the order ever since it found a foothold in Baltimore.

The Eisenhauer-MacLea Company is now fully settled in its new location at the northeast corner of Eastern and Central avenues. For the office force a comfortable two-story frame building has been erected. The interior of the first floor is finished in ash, while the second story, which is chiefly taken up by a big apartment, that can be used as a board room, is done in mahogany. The work is a good advertisement for two of the principal woods handled by the company. In the yard is a spacious shed with room for several million feet of lumber, and the company has storage room elsewhere.

Another concern which will have to vacate the wharf district included in the territory reserved by the city for its dock improvements will be Carter, Hughes & Co., dealers in hardwoods. This firm has discontinued its yard business and will in the future confine itself to the car lot trade, and it is the reported intention of the members to get offices up town. Nearly all the lumber at present in the yard

belongs to the Reliable Furniture Company. Mr. Hughes recently returned from a trip to Troutdale, Va., where the Iron Mountain Lumber Company, the manufacturing end of the firm, has several saw mills in operation under the personal supervision of David T. Carter, the senior member. Mr. Hughes paid his partner a visit to confer with him on various business matters, and also arranged to take the cuts of several mills. After a brief stay at Atlantic City he has taken up the routine of the home office once more.

William M. Burgan, president of the Baltimore Lumber Exchange and a widely known dealer in cypress, has returned from a trip of some weeks to Yellowstone Park and various other points of interest in the far West. He was accompanied by his wife and son.

E. A. Beckley of Crosby & Beckley, the well-known hardwood firm of New Haven, Conn., was in Baltimore last week.

Norman James about ten days ago visited the plant of the Pigeon River Lumber Company in western North Carolina, it being one of his regular inspection trips.

Mann & Parker of this city are at present working on the construction of their new mill at Robbins Neck, S. C., on the Atlantic Coast Line. The company expects to put the mill in operation early in September. The mill, which will be one of the most thoroughly equipped and up-to-date lumber mills in the state, will have a capacity of from 30,000 to 40,000 feet per day. Ash, red gum, oak, cottonwood, cypress, hickory and rosemary pine will be manufactured. The facilities for preserving the wood in the yards are of the very latest. The company will install a steam house, where the red gum will be steamed on leaving the saw before being taken to the yards, thus preventing stain. The yard foundations for piling lumber are such that ample room is given underneath for the circulation of air, and are especially arranged for convenience and rapidity of loading. Five miles of railroad track have already been constructed.

Pittsburg.

The McCabe Lumber Company of Warren, Pa., has been incorporated with a capital of \$140,000 by Thomas McCabe, C. W. Stone, R. G. Chapel, J. P. Jecerson and A. J. Hezelture, all of Warren. It will have a hardwood operation in northern Pennsylvania.

The Crescent Lumber Company announces a better call for white oak ties, 6x8x8, than for months. Its inquiry for mixed stock is not so flattering. The company has lately made quite a bit in this market with its stocks of cypress poles and ties and now has over 25,000 in stock.

The Windber Lumber Company of Windber, Pa., is building a plant to manufacture insulating pins for use on cross arms of telegraph and telephone poles. Ten men will be employed.

The Meredith-Miller Lumber Company of Davis, W. Va., with a capital of \$10,000, has just been incorporated by E. N. Miller of New Kensington, Pa.; H. F. Miller, J. J. Miller of Tarentum, Pa.; W. R. Meredith of Punxsutawney, Pa., and E. W. Meredith of Fuller, Pa.

A. Germain of the Germain Company is taking a two weeks' trip through the South. This company expects to bestir itself a little more this fall in the hardwood business.

William R. Cornelius, sales manager of J. C. Moorhead Lumber Company for the past four years, has resigned that position and expects to go into business for himself. The Moorhead Company is running three mills near Kittanning, Pa., and is getting its full share of the local hardwood trade since moving its general offices to Pittsburg.

The C. H. Knapp Lumber Company, capital \$50,000, is a new concern formed under Pennsylvania laws by C. H. Knapp, Lester B. Hartman and H. W. Pyles, all of Williamsport, Pa.

J. C. Hall of Eatons, W. Va., has bought 200

acres of oak and poplar timber land near Volcano Junction on the Baltimore & Ohio railroad in Ritchie County, West Virginia. It will be cut off at once.

Hamilton Bros., who have operated a large planing mill at Leetsdale very successfully for the past six years, are now fully established in the wholesale lumber business in the Fulton building on Sixth street. Both are thoroughly experienced lumbermen and they are driving into the local trade with a vim.

O. H. Rectanus of the A. M. Turner Lumber Company finds that the hardwood business is the most encouraging feature of the trade at present. He has lately taken a pretty thorough survey of West Virginia operations at close range. A. M. Turner is spending two weeks at the company's plants in the South.

The Henderson Lumber Company last week booked orders for 1,250,000 feet of hardwood.

Three former members of the West Virginia Lumber Company, Robert Jenkins Jr., Charles J. Kappler and George E. Bartlett, have united their efforts in the Vigilant Lumber Company, a new partnership. The company has taken temporary offices in the Keystone building on Fourth avenue and will make a specialty of hardwoods and white pine. It has established some excellent connections in the South. Its members are all experienced salesmen and have a wide acquaintance in the trade.

The Kenova Sawmill Company of Catlettsburg, Ky., has informed its Pittsburg patrons that it will build a plant with a capacity of about 30,000 feet a day. Its specialty is hardwood.

The plant of the Phoenix Column Company at Port Washington, Ohio, near Dennison, Ohio, was burned ten days ago. The total loss is estimated at about \$20,000.

Carney, Pendergast & Hughes of Hutton, W. Va., have secured valuable timber rights on 1,200 acres of land in Barbour County, West Virginia, on the Bellington branch of the Baltimore & Ohio railroad and will erect mills soon.

The Ruskauff Lumber Company of the East End is gradually working out of the hardwood business and has discontinued its mills. It has found its move out of the downtown district a very profitable one and has a fine suite of offices in the Lloyd building.

The Valley Railroad Company of West Virginia has been chartered by L. E. Shull of Mill Creek, Pa., and capitalists of Tyronne and vicinity for the purpose of extending a line into the heavy timber reserves on the mountain sides. The ultimate object is to get more pulp wood for the paper mills of Tyronne.

H. A. Douglass of the old firm of H. Douglass' Sons of Huntingdon, W. Va., has assigned his business, making the Union Trust & Deposit Company of Parkersburg, W. Va., assignee. Lindsay Merrill of Huntingdon was associated with him in the business, which was supposed to be in good shape financially.

John M. Hastings of the J. M. Hastings Lumber Company, is back from a long stay in Nova Scotia, where is located the big Davison Lumber Company, of which he is president. That concern is cutting 5,000,000 feet of lumber a month, a large part of which is exported. The balance is sold along the Atlantic coast. The company has probably better shipping facilities by water than any other lumber firm in Canada and can deliver stock in any market in the world at minimum of cost.

Buffalo.

The lumbermen went down the river, as arranged, July 26 and spent half a day at the Bedell House on Grand Island, where one of the most interesting ball games in the long list they have to their credit was played. J. B. Wall and M. M. Wall chose the nines, the white pine side of the game having now become so weak that it can not muster a battery even. The chief difficulty in choosing was that there

were too many players ready to take part. The choice took in all the old members of the exchange that would play and included M. S. Burns, I. N. Stewart, H. A. Stewart, H. S. Lee, A. W. Kreinheder, F. M. Sullivan, O. E. Yeager, W. F. Betts, A. J. Chestnut, A. G. Hauenstein, A. Miller and H. E. Haines. The M. M. Wall side won, 23 to 22.

A. Miller is carrying all of his former good stock and manages to make a specialty of elm and basswood to a great extent, in spite of the big prices that they bring at the sawmills.

All the members of the Hugh McLean Lumber Company were away last week. R. D. was in Atlantic City, Angus was in Canada slowly picking up the thread of business dropped when he was taken ill and Hugh was on an eastern sales trip.

O. E. Yeager not only looks on July as the biggest July he has ever had, but perhaps the biggest month, which is not saying much for dull times in the yards. He keeps up his plan of carrying an assortment of all hardwoods.

A. W. Kreinheder of the Standard Hardwood Lumber Company is preparing for a trip below the Ohio next month, but at present the receipts of oak, poplar and chestnut from that direction are good enough to keep him busy at home.

Scatcherd & Son do not report much addition to the stock of their home yard, but so long as the Memphis mills are running strong they are not anxious on that score. It is southwestern oak that their trade is most in need of.

J. F. Knox of Beyer, Knox & Co. has been a little indisposed, so that he was not able to attend the outing, but he is feeling better now and will soon be back to the firm's new mills in Missouri, no doubt, digging out oak.

Manager Janes of the Empire Lumber Company is taking his vacation with his family at Niagara-on-the-Lake, but manages to come to the office every day or two to keep the run of business, which seems to be quite satisfactory.

The plan of T. Sullivan & Co. is to get hold of all the Pacific coast lumber possible now and at the same time not forget that there is good elm and black ash waiting to come down the lakes to the river dock.

The business of G. Elias & Bro. stood still on Aug. 3 while the employees, a goodly army of them, took a day off for a change of scene and the usual games at Point Gratiot, beyond Dunkirk.

The Wall brothers were also all away at the beginning of the month. T. H. was at Atlantic City, M. M. had gone to the Jamestown Exposition and J. B. was off on an automobile trip to Pittsburg. Business went on just the same.

H. A. Stewart goes soon to West Virginia to ship a lot of cherry for I. N. Stewart & Bro., which has been sold to eastern customers. He, of course, will look for more, as well as the fine quality of oak he gets there, which is a ready seller.

The yard of F. W. Vetter is piled with all sorts of hardwood, some quartered oak looking especially fine in these days when it is scarce and high.

Saginaw Valley.

Samuel G. M. Gates of Bay City, one of the pioneer lumbermen of Michigan, died July 26 from a paralytic shock. He sustained one shock July 14 and another July 25, death ensuing the following day. Mr. Gates came to Bay City in 1863 and was continuously engaged in lumbering up to the time of his death. He was somewhat reserved in character and devoted his time to business rather than to cultivating social amenities. It is believed the mill will be operated by the estate, as he owned considerable timber in Ogemaw and Roscommon counties. Mr. Gates was 68 years old and is survived by a widow and six children.

Bliss & Van Auken are running their plant with a full crew and yet are not able to keep up with their trade in maple flooring. The firm

also has a large local trade aside from the wholesale end.

The heading this way of a large quantity of timber from Grayling, Gaylord and vicinity will require a large increase in transportation facilities by the Michigan Central and the company is preparing for it. Every sawmill on the river depends upon this source of supply of raw material. The company is now bringing down logs by rail for mill firms as follows: W. D. Young & Co., 20,000,000; Kern Manufacturing Company, 20,000,000; Bliss & Van Auken, 12,000,000; The Kneeland-Bigelow Company, 21,000,000; the Kneeland, Buell & Bigelow Company, 20,000,000; the Hargraves mill, 6,000,000, and a quantity for the Campbell Brown Lumber Company. For the Gates mill about 8,000,000 feet comes down over the line of the Detroit & Mackinac railway.

The Flood mill has not been operated this season, the owner having no stock of his own. The mill is expected to get a supply of logs and start later in the season.

Thomas Denton of Saginaw, the veteran square timber jobber, will get out a cargo or more of rock elm the coming fall and winter for the European market.

An unusual number of portable sawmills are being operated this season north of the Saginaw river. These are especially available because they can be removed from one locality to another at comparatively small cost. Little patches of timber ranging from 500,000 to 4,000,000 feet can be reached by these mills, and they are found in every county between Bay City and the Straits of Mackinac. In many instances they are located along the line of a railway or branch road and again they are so remote that it is necessary to haul the lumber to the cars by teams. These mills supplement the mills located at railway station points and in the aggregate put out a good many million feet in the course of a year.

Walter D. Young, head of the W. D. Young & Co. plant at Bay City, sailed from Quebec August 6 for Europe. He expects to spend two months abroad. The business of the firm is exceedingly prosperous, the plant being operated day and night.

The Kneeland, Buell & Bigelow Company has practically closed out all the hardwood stock it will cut this year. Early in the year all the maple that could be utilized in the manufacture of flooring that could be produced during the year was sold to the S. L. Eastman Flooring Company, and the remainder has been disposed of. Some maple and other hardwood timber has been sold to Eastern parties.

The company has also made a specialty of maple lath, which is used largely for crating purposes, and finds much favor for that use.

Holders of hardwood stumpage are asking \$5 to \$8 an acre for their property and some big deals are being negotiated. The last figure is the maximum, buyers not taking kindly to over \$5 and \$5.50 for average timber.

Shippers are already discussing the probable car shortage and it promises to be as acute as it was last season.

The Batchelor Timber Company at West Branch is making a very successful run. This company was organized last year and purchased the old Gale Lumber Company's plant, practically rebuilt it, and now has a fine factory. The mill has 75,000,000 feet of hardwood timber back of it, all the logs being hauled by rail to the mill.

Grand Rapids.

In the last issue of the HARDWOOD RECORD, in announcing the incorporation of the Federal Veneer Company of this city and Cedar, Miss., it was erroneously stated that Walter Clark, the prominent veneer man of the Michigan Trust building, had merged his business with that of the new concern. Although Mr. Clark and John F. Conant of Milwaukee are the sole owners of

the new company, it is a separate institution and has absolutely no connection with the Grand Rapids business, which has been carried on very successfully for a number of years. The Federal Veneer Company is capitalized at \$30,000 and will be engineered by expert veneer men so that success is assured. Milling operations will be started about the end of the month.

N. J. G. VanKeulen of the VanKeulen & Wilkinson Lumber Company, left this week with his family on a pleasure trip to Yellowstone Park.

Charles W. Garfield, president of the Michigan Forestry Commission, has supplemented his generous gift of a park to the city with the sum of \$500 to assist in building a pavilion there. The park is in the south end of the city and is known as "The Playgrounds."

The forestry board of inquiry authorized by the last legislature to make careful investigation of the state's land and forest policy, has organized by electing R. D. Graham as president and C. B. Blair as secretary. Both are Grand Rapids men and the first meeting was held in this city Aug. 6, when subcommittees were appointed as follows: Land laws and their administration, Carl E. Schmidt, Detroit, and Francis King, Alma; forest land conditions, physical, A. L. Palmer, Kalkaska, and D. B. Waldo, Kalamazoo; reforestation and protection, C. V. R. Townsend, Negaunee, and George B. Horton, Fruit Ridge; taxation, W. E. Osmun, Montague, and A. B. Cook, Owosso. Secretary Blair will have a desk in the land commissioner's office at Lansing.

The Michigan Forestry Commission met at Lansing last week with William B. Mershon of Saginaw, the new member, present. The commission reorganized by electing Charles W. Garfield as president, Land Commissioner Rose as secretary and Prof. Filibert Roth as forest warden for a term of four years.

A. V. Mann, who came to Muskegon just fifty years ago this week, when the town had barely 600 people, is probably the oldest living lumberman on the eastern shore of Lake Michigan.

The J. W. Wells Company of Menominee has bought of executors of the estate of William Chase, Oconto, Wis., 4,560 acres of timber land in Marinette County, Wisconsin, the consideration being \$122,560. Much of the land has a heavy growth of hardwood and the logs will be cut at the company's mills at Menominee and Dunbar.

Indianapolis.

Chair makers in the three furniture factories at Tell City have been on strike for several weeks, demanding recognition of their union. The state labor commissioner is attempting to adjust the differences between the men and their employers.

There was a noticeable decrease in local building permits last month as compared with those issued in July, 1906. However, the amount denotes more small buildings and residences than in July of a year ago, when two permits of more than \$100,000 were issued. There were 391 permits issued last month, amounting to \$485,909, compared with 378 permits in July, 1906, amounting to \$581,913.80.

A complete new yard and mill is to be established by the Henry Maley Lumber Company of Evansville. Some months ago the company's plant was badly damaged by fire and it has now decided to locate along the Illinois Central tracks, near the Tri-state fair grounds, where better shipping facilities will be available.

A safe in the office of the Claypool Lumber Company at Claypool was blown open a few days ago by burglars. Owing to the precaution of the cashier in depositing the money in the bank on the previous day, all the safe blowers obtained was two revolvers.

An increase in the capital stock of the Peerless Tank and Seat Works at Evansville has

been made, the increase being from \$100,000 to \$150,000, the additional capital to be used in extending the business of the concern.

Practically all the hardwood companies are closing their yards and mills Saturday afternoons, following the example set by the business concerns in the city. This gives their employees an opportunity to enjoy one afternoon's outing each week, and they are much better prepared for work on Monday morning in consequence.

Joseph R. Young, 613 State Life building, spent about ten days this month looking after his lumber interests in Ohio. Two or three cars that had gone astray and one car that had been cancelled after arriving in the city from which it had been ordered, occupied much of his attention.

The Bargserville Lumber Company was organized at Bargserville about ten days ago, the capitalization being \$10,000. At a meeting of stockholders L. E. Slack, John J. Ream, Charles B. Kerlin and Eugene O. Collins were elected directors.

Dealers at Newcastle, one of the best boom towns in the state, are experiencing none of the midsummer dullness. An automobile factory that will employ 1,500 men and bring about 5,000 more people to the town is being built and there is considerable activity in building houses enough to accommodate the new population before the factory is completed. George W. Ewing of Muncie has just undertaken a contract to build 500 new houses within the next eighteen months.

Following a hearing before the Indiana State Railroad Commission, the various railroads have granted lumbermen two very valuable concessions. One of these is that in future no higher rate will be charged for hauling walnut and cherry logs than for any other kind. The other is a decision to allow 500 pounds on each car of lumber for the stakes that hold it in place. Heretofore the railroads have charged regular freight rates for hauling the stakes. The hearing was held several days ago, the result of a complaint made by the North Vernon Lumber Company that the "milling in transit" plan of the railroads was working an injustice to lumbermen. The railroads have been hauling logs at a sixth class rate, then allowing a discount amounting to about 30 per cent, provided that the finished lumber was shipped back over the same road within six months from date. The lumbermen ask for a straight log rate, or in lieu of that a removal of the time limit restriction. A decision is expected from the Railroad Commission within a short time.

Bristol, Va.-Tenn.

The Patterson Lumber Company has purchased a 9,000-acre tract of timber land in Greene county. This company's timber holdings in that county are now about 20,000,000 feet and it is installing a big band mill. The daily output will be about 50,000 feet.

George A. McCrary has just returned from a visit to the mills of the Hassinger Lumber Company, in the White Mountains, twenty-five miles south of Abingdon. Mr. McCrary reports that the company has completed and has in operation at Azen one of the finest mills in this section.

The Hardwood Lumber Company, which operates in Blount county, Tennessee, has voted to increase its capital stock to \$20,000 and extend its operations in that section.

B. B. Burns of the Tug River Lumber Company returned this week from Linville, N. C., where he has been spending a two weeks' vacation.

H. E. Clark of Ben Campbell, Pa., is reported to have purchased a 15,000-acre tract of timber land lying in Washington and Grayson counties, Virginia, and Ashe county, North Carolina. This is known as the Thayer tract and it is said that Mr. Clark purchased it with a view to organizing a concern for its development.

G. L. Fletcher, representing the H. A. Mc

Cowan Company of Salem, Ind., was a visitor in Bristol last week.

L. W. Taylor is buying lumber in this section for the Ferd Brenner Lumber Company of Norfolk, Va.

E. L. Warren of the R. E. Wood Lumber Company and wife of Baltimore were in the city last week on business. Mr. Warren is well known in local lumber circles and was for a number of years manager of his company's offices at Johnson City and later at Bristol. He visited the operations in Carter county before returning to Baltimore.

E. C. Crow has returned from a trip in Virginia in the interest of J. A. Wilkinson and reports that bad roads are interfering with shipments from some of Mr. Wilkinson's country mills.

E. E. Wilson of the Ralston-Wilson Lumber Company has returned from a two weeks' vacation spent on the Great Lakes. He will shortly go to Clinch Valley to look after the starting of his company's new mills in that locality.

"The car shortage is bad in South Carolina," said J. H. Bryan of the Bryan Lumber Company, who has just returned from a visit to his company's mills in the Palmetto state. "The fruit and vegetable growers are using all of the cars to move their product. One day there were thirty-eight trains passed our mills, all loaded with perishable stuff. This illustrates the extent of this business and accounts for the car shortage."

Cincinnati.

William E. Delaney, general manager of the Kentucky Lumber Company, has gone to Williamsburg, Ky., on an inspection trip. He will also take in the other two mills of the company at Burnside, Ky., and Habersham, Miss. He will not return to the local offices for a couple of weeks.

L. F. Volett, export salesman of the Kentucky Lumber Company, is spending his vacation with his parents at Franklin, Ky.

Robert E. Becker, the well known lumberman, has been elected president of the West End Republican Club and has also been suggested as a candidate for council of the Twenty-first ward, where he resides. Should he be selected for council he will add interest to the recent movement of paving the streets of Cincinnati with wood blocks.

President McClure of the McClure Lumber Company of Detroit, Mich., was in town last week in quest of lumber. He visited several lumber firms here and his wants were well looked after.

E. J. Thoman, secretary of the Lumbermen's Club, entertained his brother last week, who represents the interests of Bennett & Witte at Greenville, Miss.

E. L. Edwards and wife left last week for an extended trip to Europe.

Benjamin Dulweber of John Dulweber & Co., who has been ill for several months, has improved enough to make a trip to the mountains. He expects to return within the month of August and get back in harness.

E. M. Schantz, who recently invented the recording dimension saw, is again at work improving his machine. His next step will reduce the cost of its operation greatly and will also increase its output. He will add an attachment that will print the size on each piece of dimension with crayon.

T. B. Stone of the T. B. Stone Lumber Company left August 1 for a pleasure trip to the eastern coast and will visit the principal cities in that locality. He will be away from the local offices for several weeks.

H. H. Lines of Junction City paid a week's visit to the Queen City and during his stay here purchased considerable lumber. He also saw Coney Island and Chester Park and was impressed immensely with the enjoyment places of the Queen City.

Harry Freiberg of the Freiberg Lumber Com-

pany has gone to Mexico to look after the shipment of sixty car loads of mahogany logs for his company. They will be shipped by water to New Orleans and then via the Queen & Crescent to the mills of the company here. The consignment is said to be of the best grade of mahogany. Last spring the company received a shipment of some forty car loads and the quality impressed the members of the firm to such an extent that they decided to reinvest.

President Thomas J. Moffett of the Cincinnati Terminal & Belt Line Company announces that Engineer Hansel of New York will soon begin the actual survey of the route and the other necessary preliminary engineering work. The company is empowered to do the preliminary work, including the obtaining of the franchises, and later its scope will be enlarged so that it may manage the actual construction and operation. J. H. Bleekman, the New York capitalist who is interested in the financing of the company, is expected to be in Cincinnati next week.

The lumber business for the month of July, as shown by the records of the Chamber of Commerce, while somewhat quiet was still ahead of that of last year. The total amount of cars received that month amounted to 7,746, while last year only 6,166 were received. The shipments also show a gain; this year 5,547 were shipped, last year 4,634.

J. W. Darling of the Darling Lumber Company has returned from a business and pleasure trip to the South.

M. B. Farrin of the M. B. Farrin Lumber Company has gone east on a pleasure trip accompanied by his wife. Chester F. Korn of the company has also gone away, but he was headed south on a business trip.

G. W. Goodner of Athens, Tenn., was in town last week in conference with the T. B. Stone Lumber Company, whose interests he looks after at Athens.

President Thomas J. Moffett of the Cincinnati Lumbermen's Club has announced the following standing committees: Law and Insurance—C. F. Korn, chairman; T. B. Stone, F. M. Mowbray, H. H. Freiberg, B. F. Dulweber. Arbitration—B. A. Kipp, chairman; L. G. Banning, M. Koesse, J. P. Hanna, E. E. Beck. River and Rail—W. A. Bennett, chairman; S. W. Richey, B. F. Dulweber, I. M. Asher, W. E. Delaney. Transportation—A. D. McLeod, chairman; C. F. Shiels, C. H. Pease, James Buckley, C. Duhmeier. Credit and Term—S. W. Richey, chairman; L. W. Radina, E. O. Robinson, R. McCracken, G. S. Stewart. Advertising—J. W. Darling, chairman; W. J. Erkman, W. S. Stewart. Membership—J. Watt Graham, chairman; C. F. Korn, J. W. Darling, L. H. Gage, A. V. Jackson. Entertainment—J. W. Littleford, chairman; C. F. Korn, J. Watt Graham, E. W. Robbins, S. W. Richey.

Chattanooga.

A petition in bankruptcy has been filed in the United States court here against James H. Cranwell, a lumber manufacturer of Pikeville, Tenn., by the Second National Bank of Mechanicsburg, Pa.; the First National Bank of Gettysburg, Pa.; the Bank of Landisburg, Pa., and the People's Bank of Pikeville. The complainants claim that Mr. Cranwell owes them the following amounts: The Pikeville bank, \$2,000; the First National Bank of Gettysburg, \$1,800; the Mechanicsburg bank, \$1,800. The petition was filed through J. A. Strite, of Chambersburg, Pa.

J. M. Card, president of the J. M. Card Lumber Company, has returned from a trip to southern Alabama.

W. O. Harter of the J. M. Card Lumber Company has returned from a trip to Mississippi. His wife, son and daughter will spend two years in Europe soon, for the purpose of educating the children.

The Zack Taylor Lumber Company has entered suit for damages against the Alabama

Great Southern railroad on the much-talked-of question of demurrage.

St. Louis.

N. A. Gladding of E. C. Atkins & Co., Inc., Indianapolis, was a visitor at this market week before last.

Tom Moore of the Moore Company has been spending his vacation in the vicinity of Benton Harbor, Mich., and made several business trips to Chicago and other northern cities while absent.

Geo. K. Smith, secretary of the National Lumber Manufacturers' Association, has gone east to finish out the summer season at his cottage opposite Old Point Comfort.

The Lothman Cypress Company is much pleased with its present large stock; with what is in their yards and en route to them, they have close to 30,000,000 feet.

E. W. Weise of the Thomas & Proetz Lumber Company is taking a much needed rest at Asbury Park, N. J., and threatens to remain there indefinitely, regardless of business or anything else. Mr. Thomas expects to take a lake trip, provided Mr. Wiese decides to return and take up the burden once more.

W. W. Dings, secretary of the Garetson-Greaser Lumber Company, had a disagreeable experience in being robbed of his pocketbook, money and valuable papers while asleep in his berth on a Pullman train. He has begun suit against the company. Another passenger was equally unfortunate, losing a watch and purse the same night.

H. A. Singer, New York representative of the American Hardwood Lumber Company, was in the city last week.

Dr. Herman von Schrenk has been chosen supervisor of timber preservation for the Frisco System. He will have direct charge of treatments given ties and other railroad timbers.

The R. F. Krebs Lumber Company will build an office on a site at Hall street and St. Louis avenue. It contains about 50,000 square feet along the Burlington track, and will permit the unloading of twenty-five cars or more, and piling of 1,000,000 feet of lumber. This will facilitate handling the company's rapidly increasing business.

The North Arkansas Land & Timber Company, capitalized at \$10,000, and the Premium Hardwood Company, capitalized at \$25,000, have been incorporated at St. Louis. P. Brown, W. Ball and S. H. Wright are the principals of the latter.

A conference was held July 30 at the office of the St. Louis East-bound Freight Committee between traffic officials of the eastern and southern lines and a committee representing the hardwood lumber interests. Traffic Commissioner Coyle of the Business Men's League was present, and the subject for discussion was transit arrangements at St. Louis similar to the transit regulations at Memphis on shipments east bound. The lumbermen presented their side of the case, and the railroad men said that the matter would receive favorable consideration. Another meeting will be held in the early future.

Memphis.

It would be difficult to imagine more favorable weather than has recently prevailed, at least from the standpoint of producers of hardwood lumber. Rapid progress is reported in getting out timber and in putting lumber on sticks. It is doubtful if there has been a fortnight within the past year during which so much lumber was sawn as during the one ending today. It is now regarded as practically certain that there will be no scarcity of hardwood lumber to meet the requirements of fall and winter.

The Interstate Coöperage Company, which is a subsidiary corporation of the Standard Oil Company, and which has a large coöperage plant in Memphis, is building a heading mill at Bel-

zoni, Miss. It recently acquired a large tract of timber land in that section at an approximate cost of \$150,000.

The Broughton Mantel Company is negotiating the sale of its plant and holdings in North Memphis to the newly organized Memphis Can Manufacturing Company. The mantel company did not complete its plant in North Memphis owing to the death of Mr. Broughton, who was president and general manager. This accounts for the sale of its property. There was very little machinery connected with the plant, as little of it had arrived before Mr. Broughton's death.

The Singer Manufacturing Company has purchased 5,000 acres of timber land in St. Francis County, Arkansas, and will take steps for its development. The consideration is understood to have been \$106,000. The Singer Manufacturing Company has made substantial additions to its timber land holdings in Arkansas during the past few months. Some of the timber on its last purchase is now being barged to Cairo, where the company is reported to be constructing a large mill.

The Rialto Lumber Company, which was recently organized at Covington, Tenn., has elected the following officers: W. S. Mayes, president; W. H. Lindsey, vice president and general manager; J. S. Malone, secretary, and W. E. Hall, treasurer. The capital stock is \$10,000.

The Poinsett Lumber Company has been organized at Harrisburg, Ark., with a capital stock of \$1,000,000. The officers are: E. L. Real, president; M. A. Satley, vice president; H. S. Cody, secretary, and H. T. Raymond, treasurer. It will be recalled that a short time ago Mr. Real purchased from the Western Tie & Timber Company of St. Louis 28,000 acres of timber land at an approximate cost of \$800,000. The new company is formed for the development of this property and it is understood that a large band mill will be erected without delay.

E. E. Goodlander, F. E. Gary and W. R. Barksdale have been named as a committee to make recommendations regarding the entertainment of the national convention of the Deep Waterways Association, which will be held in this city October 4-5.

President Roosevelt will be present at the convention and will talk on "Internal Waterways Improvement," of which he is a strong advocate. There is much enthusiasm over the subject of waterways improvement, and it is expected that the convention will further the cause considerably.

It is announced that J. W. Thompson, president of the J. W. Thompson Lumber Company, and vice president of the Brasfield-Thompson Lumber Company, will sail for Europe some time this month. He will be accompanied by Mrs. Thompson and by Mr. and Mrs. J. N. Penrod of Kansas City. C. J. Tully of the Anderson-Tully Company, and Rudolph Sondheimer of the E. Sondheimer Company are already abroad. F. Zupke of the Darnell-Taenzler Lumber Company is also on the continent looking after business for his firm. He has been gone several months.

F. S. Hendrickson of the F. S. Hendrickson Lumber Company, with headquarters in Chicago, has been visiting the local office of that company the past few days. This is in charge of his brother, C. D. Hendrickson, who has been quite prominently before the lumber public during the past few months as chairman of the river and rail committee of the Lumbermen's Club.

The Business Men's Club is now comfortably ensconced in its new home on Monroe avenue. Many prominent lumbermen of this city are members of that organization. W. R. Barksdale, president of the Barksdale-Kellogg Lumber Company, being president of it. The building committee which had charge of the plans for the new building has been discharged with thanks by the directors. Prominent on this committee

were S. B. Anderson, president of the Anderson-Tully Company, and W. H. Russe of Russe & Burgess.

Dispatches received here from Malvern, Ark., state that the sawmill, planer and about 200,000 feet of lumber belonging to J. T. Chamberlain were burned several nights ago. The loss is estimated at \$4,000; no insurance.

The Cannon-Wheat Lumber Company has filed articles of incorporation at Fort Smith, Ark. The capital stock is \$150,000. The company will engage in the lumber business and also in buying and selling timber and timber lands. L. S. Cannon and W. J. Wheat are among the incorporators. Sixty thousand dollars of common stock has already been subscribed.

The North Mississippi Lumber Company, of which E. B. Causey of Memphis is president, is installing a large sawmill, equipped with resaw, at Corinth, Miss., and this will be ready for operation about the middle of September. The daily capacity is to be 100,000 feet. The company controls about 200,000,000 feet of yellow pine, poplar and hardwood about thirty miles from Corinth on the new line being constructed by the Illinois Central between Corinth and Birmingham. It has options on about 400,000,000 feet more and these may be exercised in the near future. The company has headquarters in the Tennessee Trust building here. E. B. Causey is looking after the installation of the new plant. The other officers are J. W. Draughon, vice president, and J. H. Draughon, secretary and treasurer.

The new hardwood firm of Gibson & Whitaker, in New South Memphis, will receive its resaw equipment by the end of the current week and will have this ready for operation by Aug. 15. A veneer plant is to be installed also but machinery for this has not yet been selected.

W. R. Barksdale, president of the Barksdale-Kellogg Lumber Company, is visiting New York, Chicago, Boston, Philadelphia, Baltimore and other Northern and Eastern points. He is combining business and pleasure and will be gone for a couple of weeks.

Thomas W. Fry, secretary of the Charles F. Luehrmann Hardwood Lumber Company of St. Louis, was in Memphis a few days ago circulating among the lumber interests of this city.

Charles B. Stetson of the Standard Lumber Company has been visiting the Northern and Western markets recently.

The committee in charge of the entertainment of the national convention of the Deep Waterways Association, which holds its annual convention here October 4-5, gave an informal banquet at the Business Men's Club last evening. Covers were laid for about 100 and W. H. Russe, chairman of the general committee, presided. Prominent among the speakers was John A. Fox, special representative of the National Rivers and Hardwood Congress, who reviewed the deep waterways movement and who pleased his hearers with his enthusiastic declaration regarding the rapidity with which the plan of improving internal waterways is being accepted by the people in every part of the country. Other very interesting speeches were given and marked enthusiasm prevailed.

The impression at the close of the meeting was that while much work remained to be done, there would be no difficulty in securing the necessary money for the entertainment of 2,000 distinguished guests of the city at the coming convention.

Ross & Atley of Cincinnati, who have been operating a circular hardwood mill at Heth, Ark., are preparing to erect a large band mill at that point, which is one of the termini of the Crittenden railroad, running from Earl to Heth, of which F. E. Stonebraker is president and general manager.

The Heth Improvement Company has been formed, with headquarters at Heth, for the exploitation of property at that point. James R. Blair, Western manager for the L. H. Gage Lumber Company, is one of the incorporators.

The Gilchrist-Fordney Company, which some time ago acquired the plant of the Kingston Lumber Company at Laurel, Miss., and which bought large quantities of timber lands in that section, will handle some of the output of the mill through its offices at Memphis which are maintained in connection with those of the W. E. Smith Lumber Company and the Three States Lumber Company. W. H. Greble is in charge of the yellow pine end of the business.

New Orleans.

Theodore Kuntz, manufacturer of sewing machine tables, is looking for a desirable hardwood tract in Louisiana near which to establish a big branch of his already extensive operations. Mr. Kuntz's representatives have been in this territory for some time and have been negotiating for certain pieces of timber land. Up to now the prices have proven too fancy for them, however, and no sale has been announced. There is a great deal of land such as Mr. Kuntz desires in Louisiana and there is said to be a strong probability that he will not be long in coming down this way.

Agitation over the matter of equalizing the conditions under which the lumber exporters of the Gulf coast shall make foreign shipments of lumber has finally resulted in the organization of the Gulf Coast Lumber Exporters' Association, which was created at a meeting of exporters held at Mobile late in July. Robert Hunter of Hunter, Benn & Co. of Mobile was made the first president of the association and the other officers selected are: J. H. Hinton of Camp & Hinton, New Orleans, vice president, and J. T. McKean, treasurer. The rolls at the meeting of July 30 showed a total of thirty-six members. Of these twenty-one were added at the last meeting. They were distributed as follows: Gulfport, 10; Mobile, 3; New Orleans, 4, and Pensacola 4. Officers and directors for the various ports were named as follows: Pensacola, W. L. Wittich, vice president; Gus Eitzen, director. Mobile, E. C. Ganahl, vice president; K. Carter Jr., director. Gulfport, L. Thayer, vice president; W. W. Syfan, director. New Orleans, Hugo Forchheimer, vice president; E. R. Dumont, director. The object of this new association is to better protect the interests of the Gulf coast lumbermen. The matter of reclamation from abroad and a system of inspection for this side will be about the most important proposition to be considered by the new organization and there is said to be a strong probability that an inspection bureau will be created with a view to establishing the grading and condition of the lumber before it is shipped from this side. The object of this will be to stop the reclamation made by the European buyers. This inspection bureau, it is anticipated, will not be long in materializing. The general Gulf coast classification will govern all shipments made by members of the association. An effort will be made to get the Texas lumber exporters into the association, and with that in view the next meeting of the new association will be held in New Orleans August 15 at 2 p. m.

W. P. Stewart Jr., E. C. Rowan, W. B. Perry, Robert Arnold, J. W. Rowan and H. P. Ficken have incorporated the Bogalusa Lumber Company at Bogalusa, this state, and will manufacture flooring, ceiling, staves, etc.

The American Manufacturing Company, which operates a large woodworking plant here, is preparing to expend several thousand dollars in making additions to its plant and in installing new machinery.

The Caldwell-Logan Company, Ltd., has been organized at Robeline, La., with an authorized capital of \$50,000. J. L. Logan is president, J. E. Caldwell vice president, and T. J. Caldwell secretary-treasurer.

A new lumber company has been organized at Shreveport, in the hardwood district of this state. It is the N. A. Ayers Lumber Company,

capitalized at \$75,000, and its charter has just been filed. N. A. Ayers is president of the concern.

Minneapolis.

The proposed advance in eastbound lumber rates from the Pacific coast has stirred the hardwood men here again, and they are once more talking about the prohibitive westbound rate. While the roads are charging 40 cents a hundred for fir and 50 cents for cedar, eastbound, and proposing a ten-cent advance, they maintain a westbound rate from the Twin Cities of 85 cents, which practically shuts hardwood lumber from the Mississippi valley out of Coast territory. The special committee named to represent the different hardwood associations has labored with the transportation officials to no purpose, the matter being brought up at intervals for a number of years. The chairman of this committee is E. P. Arpin of Grand Rapids, Wis. The other members include O. O. Agler, Chicago; John Pritchard, Indianapolis; D. F. Clark, Minneapolis, and G. J. Landeck, Milwaukee. Mr. Clark says that with a 50-cent rate west, hardwood dealers could build up a trade on the west coast, where most of the hardwood now has to be imported from Japan and other countries. James J. Hill defends the advance in eastbound rates on the score that lumber business has developed beyond everything else, and that cars have to be hauled empty west in order to supply the demand. He figures that it costs \$280 on an average to haul a car for the round trip, and that 50,000 pounds of lumber at 40 cents only brings in \$200, a loss of \$80 on each car. The hardwood men point out that by granting a 50-cent rate westward the roads could load some of those empty cars and get a revenue of \$250 on each westward haul, which added to the \$200 coming east would mean \$450, a profit of \$170 for the trip, on Mr. Hill's figures. The committee will probably renew its efforts, urging that a reduction in rates would develop a profitable line of westbound freight.

E. Payson Smith of the Payson Smith Lumber Company is just back from Milwaukee, where he went to meet his new White Steamer, and made the run back to Minneapolis in the machine, as a trial trip. He was laid up at Elroy for a while with a puncture. A. S. Bliss of the same company returned a few days ago from a vacation trip. He went down on one of the Anchor Line boats from Duluth to Buffalo and Cleveland, stopping two days in the latter city, where he was formerly located with the Advance Lumber Company. He also stopped at Detroit on his return. George S. Agnew, traveling representative of the company, is now on a fishing trip, which is his idea of a good vacation.

F. H. Lewis, the well-known hardwood wholesaler, is enjoying a vacation trip down in Maine. Mr. Lewis was considerably upset by the untimely death of his efficient salesman, Max Littman.

P. R. Hamilton of the Minneapolis Lumber Company is back from an extended business trip among the Wisconsin mills.

G. W. Everts of the G. W. Everts Lumber Company, a well known hardwood wholesale concern of this city, is one of the incorporators of the Works-Everts Lumber Company, just organized here with \$50,000 capital. It will engage first in the wholesale business in northern Minnesota lumber, and later in manufacturing. Mr. Everts' associates are S. D. Works, a well known lumberman and land dealer of Mankato, Minn., and F. E. Tallant, a prominent merchant of Minneapolis.

The R. L. Frome Veneer & Cheesebox Company, of Howard's Grove, Wis., has established a branch plant at Rice Lake, Wis., where it will turn out hardwood lumber and veneer as well as cheese boxes. The branch is in operation

and is laying in a good supply of elm, basswood and birch logs.

Ashland.

Dr. Vickers and W. B. Fowler of Pikeville have bought 6,000 acres of timber from the Brushy Creek Timber Company and are preparing to develop the property. The timber is located in Pike county, on John's Creek.

The Ward Lumber Company on Grassy Creek in Pike County, W. B. Sutton manager, will complete a three years' cut in September and remove their mills to other operations.

Jack Bush of Argillite, Ky., had his leg taken off at the Deaconess' hospital recently in Iron-ton as the result of having his foot caught in a sawmill near Argillite about a month ago, at which time the limb was badly lacerated.

Work is being pushed on the narrow gauge road being built on Big Ugly Creek, in Lincoln County, West Virginia. A number of Hunting, W. Va., people are interested and they hope to soon be hauling timber and ties to the Guyan Valley road at Gill.

Thurman Scott, one of the best-known lumbermen in this section, and superintendent of the Ashland Lumber Company's sawmill, while riding the carriage at the mill was struck on the shoulder by a lever, breaking his collar bone.

J. A. Meridith of the Ashland Lumber Company intends to spend two weeks in the East, taking in the exposition among other sights. He will be accompanied by his wife.

W. H. Dawkins of the W. H. Dawkins Lumber Company is recuperating at West Baden Springs, Ind.

O. L. Wade of W. M. West & Co., Boston, was in the city this week.

H. F. Pullen was a recent visitor, representing the C. L. Monger Company of Elkhardt, Ind.

The work recently begun by the government forest assistants in co-operation with the state of Kentucky is now well under way. The greater part of the field work in Pike county will be completed this week. Hearty co-operation has been given by the mill owners and is much appreciated by the men in charge of the work.

The Yellow Poplar Lumber Company has orders from all parts of the country, the saw and planing mill departments are in full operation and the prospects are for a long steady run.

The offices of the W. R. Vansant Lumber Company have been removed from this city to Rush, Boyd County, Kentucky, which is the nearest railroad point to the 2,000-acre tract recently purchased. Mr. Vansant has also removed his family to Rush.

Little Rock, Ark.

The demand for railroad ties is one of the important features in the hardwood industry of this state at present. This is due, of course, to the fact that this section is drawn on largely for ties for the entire Missouri Pacific system. There is now under construction the Missouri & North Arkansas Railway, crossing the state from northwest to southeast; the Burdon & Fort Smith line, running in a parallel direction, but south of the Arkansas river; improvements for the Rock Island in the southern part of the state, and many short lines under construction. The Missouri & North Arkansas is penetrating a splendid timber belt, much of which is virgin hardwood forest, and is of course supplying its needs along the way.

This city suffered a serious loss in the recent fire which totally destroyed the Buddenberg furniture factory and the Arkansas boat oar plant. The Buddenberg factory will perhaps rebuild, but the owners of the oar factory announce that they will not replace their plant.

W. H. Langford, Fred Fox and S. C. Alexander, Jr., of the Citizen's Bank of Pine Bluff consummated a deal in this city recently whereby they secured control of the Pine Bluff Lumber & Veneer Company's plant. This plant went bankrupt several months ago, the Citizens' bank holding heavy claims against it. The price, ad-

judged by the referee in bankruptcy, was \$20,000. The former owners were C. D. Voorheis and L. D. Hill of Profitville, Ind. An effort will be made to secure capable men and put the plant into commission again.

The option taken some weeks ago on the holdings of the Henderson Hardwood Company at Nashville, Ark., by the Nashville Lumber Company has been declared off, the prospective purchasers not finding the amount of timber expected. The Henderson Hardwood Company controls a very fine tract of hardwood, comprising 7,000 acres, along the Saline and Little rivers.

A new concern has been organized at Fort Smith, Ark., under most favorable auspices, the American Veneer Company. Twenty-five men will be employed at the start and the pay roll will be about \$300 dollars a week. The company is capitalized at \$25,000 and Joseph Strand is president and C. B. Hughes secretary and treasurer. At the beginning of operations only gum veneers will be manufactured but later oak and all kinds of stock will be cut. Three acres of ground have been purchased for a plant and work on the erection of three large buildings has already begun. The members of the company hope to have the plant completed ready for operation about the end of September.

The above company is the third woodworking concern secured by Fort Smith this year and the second the past month. The others were the Dow-Eads Chair Company, capitalized at \$100,000, and the Fort Smith Handle Company, both large concerns. The incorporators of the new handle factory are R. Bittle, J. H. Holloway, Frank S. Bittle, Allie Bittle and M. J. Ford, with R. Bittle president.

The McHue handle factory at McHue, Ark., took a rest last week on account of lack of water. New wells will be drilled at once.

One of the largest hardwood timber deals in the history of northeast Arkansas has just been closed whereby E. L. Reed of Chicago becomes the owner of the former holdings of the Southwestern Tie & Timber Company of St. Louis, in Poinsett county. The tract contains 27,000 acres and the consideration was \$810,000.

C. W. Muirhead and M. W. Muirhead have closed deals for extensive belts of cypress timber along White river and on Bear lake. Mills will be put in to work up the products.

J. R. Bowles of Ashdown is now in St. Louis purchasing an outfit to replace the plant of the Bowles & Bridewell Lumber Company, which was recently lost by fire.

Negotiations are in progress for a lease for a site on which to establish a spoke factory at Hot Springs.

The Grant Manufacturing Company of Batesville has begun the operation of its handle factory. It reports paying fancy prices for handle timber.

The Veedersburg Handle Company of Veedersburg, Ind., is making arrangements to remove its two Indiana handle factories to Newport, Ark.

The Hartzell Handle Company of Memphis has purchased the Paragould plant of the Turner, Day & Woolworth Handle Company.

C. S. Jackson, manager of the Eldorado Hardwood Manufacturing Company's plant, was among the visitors in the city the past week. He reports a fine run of business for his plant.

President J. C. Ong of the Ong Chair Company came up from Malvern last week. Mr. Ong states that he is installing five new machines

and will turn out several additional patterns of high grade work.

J. E. Poston of Topeka, Kan., made a visit to Marshall, in Searcy county, last week looking over the cedar timber of that section.

Charlotte, N. C.

A fine boundary of timber land in North Buncombe, known as the Coleman, Walker and Peach Orchard tract, has been sold to Northern capitalists after negotiations which have extended over a period of several months. There are 15,000 acres in the tract. General interest is felt in the purchase in the western section of the state on account of the belief that a railroad will be constructed from Craggy, a little distance from Asheville, through the Ivy section on toward Waynesville. In fact, a survey has been made already of the greater part of the distance.

The land sold for \$8 per acre, the low price being due to the inaccessibility of the property. Oak, cherry and poplar abound on the tract, the oak, it is said, being of especially high quality.

As evidence of the rapid increase in the value of timber properties in North Carolina, a real estate firm of Asheville has just negotiated the sale of a timber boundary in Transylvania county for \$5,500 which was purchased a year ago for \$1,500. The purchaser of the property is W. D. Pendleton of West Virginia, who will at once establish a sawmill and begin cutting. The tract contains 1,080 acres and is said to be abundant in hardwoods.

General interest is felt among the lumbermen of the state in the action of the state authorities on freight rates which follows one of the most sensational fights between the federal and state authorities on the rate question ever known. Governor Glenn has taken up the matter of freight rates and declares that the last legislature gave him \$4,000 to spend, in an effort to ascertain why North Carolina shippers are discriminated against, and the authorities have taken hold of the situation with determination.

Articles of incorporation have been filed with the secretary of state by the Stevens-Kirkland Company of Asheville to do a general lumber business. The capital stock is \$10,000. The incorporators are J. H. Stevens, J. C. Adams and W. L. Kirkland.

By its many manufacturing industries, High Point, N. C., is coming to be known as "The Grand Rapids of the South," and if the record of the last few years is continued, it will lead the country in the number of its woodworking industries. There is a prospect of several new factories being established here within the next twelve months.

The New South Art Company is the latest addition to the manufacturing fraternity of Lexington. It will manufacture mirror and picture frames and mouldings. J. W. Crowell is one of the organizers of the company. Suitable buildings will be erected at once and new machinery purchased.

Sills & Klutts of Concord are establishing yards in North Charlotte. This makes the fifth yard under their management in this section, the others being at Concord, Salisbury, Gold Hill and High Point. They will carry a large stock of lumber here and will ultimately establish a furniture and woodworking factory. C. Frank Klutts will have charge of the local yards.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

While there is a fair trade in hardwood distribution, there is no particular vim in the market. As invariably happens at this time of

year, there is a dragging of demand. Prices are being well maintained and just as soon as summer vacations are over there is every prospect that there will be a strong and active call, which will make the fall trade equal to that of last

year. The local trade in mahogany and veneers is very good, with the promise of largely increasing demand as the season progresses.

Boston.

The local market for hardwood lumber shows but little improvement over the business of two weeks ago. Prices are firmly held. As a rule manufacturing consumers are doing a fair business, but are only buying lumber in a hand to mouth way. Several dealers are urging their customers to place orders now so as to avoid disappointment later, when stock is needed. These dealers anticipate that considerable trouble will be experienced with the railroads in moving lumber, but state that it is hard to convince buyers of this fact. Some buyers are holding out of the market, believing prices will be lower. The export call for hardwood lumber is moderate only.

A very good call for quartered oak is reported and it is difficult to get suitable supplies. A prominent dealer states that he has found nothing that he can afford to sell under \$85 and in most cases \$87 is being asked. Higher prices still are predicted. Plain oak is in moderate call at \$55 to \$57, although some mills will not sell at these figures. Brown and white ash are in fair call. Chestnut poles are in smaller offering, with prices quite a little higher than a year ago. Large buyers of native oak are well filled up and are not willing to anticipate their wants at present to any extent. Buyers of this wood are largely the railroads. Whitewood, so far as shipments are concerned, is a little easier, but prices are still high. Cypress is quoted at about the same prices. Some of the smaller mills report a scarcity of stock, although the big Gulf mills are carrying a good supply.

New York.

The general situation in the hardwood market of the Metropolitan district is very fair, with every indication pointing to a good volume of trade during the fall season. Prices continue firm and there is no immediate danger of any break in the present situation. There is not much good hardwood lumber available for current wants, local yards are not carrying heavy stocks and furniture and the general manufacturing trades are sailing close to the wind in regard to supplies so that an active demand with the approach of the fall season is certain. Inquiry at the present time for stock in consuming channels is about the same as it was last month. There have of late been some offerings of mixed oak which have sold at prices considerably less than more desirable grades of white and red oak, but it has been absorbed without creating any break in the special grades.

There is a fair demand for pretty much all kinds of hardwoods with perhaps poplar, oak and ash in first class, but the market is featureless as regards any special activity in any particular stock.

The mahogany and cedar trade continues in fair shape, although by reason of heavy receipts during the past thirty to forty days, prices of foreign cedar have eased off one to two cents per foot and are now ruling about eight to ten cents, according to quality. Mahogany receipts have not been as heavy and that market is in a little better shape. There is a very fair current demand and prices are holding up well.

Philadelphia.

The hardwood market has borne up remarkably well during the usually dull summer period. July has in many instances surpassed in amount of sales the business of July, 1906. There is a notable increase also in the total amount of business done since January 1 compared with

the same period of a year ago. But, notwithstanding the more than a few cases of unusual prosperity, it must be admitted, however reluctantly, that there has been a slight falling off in business. There has been some weakening in hardwood values, not because of an oversupply of stock but simply on account of the anxious desire of some to get orders in spite of the usual summer apathy in business. It is said that the large consumers are holding off buying only because they do not care to overload their stock just now, and it is predicted that when the fall opens up these people will be heavy buyers, while those who are so anxious to dispose of their stock at this time will not figure in the transactions. There is also the probability of a car famine which must be considered, in which case the prompt delivery of goods will be very materially interfered with.

The building boom in this city, which seemed for a time to have subsided, has taken, apparently, a new lease of life, as permits are being taken out for the northern and southern sections of the city for work sufficient to furnish activity in that line for months to come. The wood-working industries are still busy and as yet there is no sign that they will have the usual lull at this time, in which they have been in the habit of looking after repairs in machinery, etc. Railroad extension has fallen off for a time and the companies seem overloaded with the stock. However, there are plans on the boards which purport an expenditure of millions of dollars in improvements in the near future. Electric car building is in the height of its prosperity, with prospects of activity for months.

Among the hardwoods ash, poplar and chestnut hold the lead as to scarcity and high prices, yet a considerable weakening in these values has been noticed in the last fortnight; in fact the same can be said of most hardwoods. However, it is believed a reaction will take place for the better in the near future. All flooring material is running well.

Baltimore.

The hardwood trade continues in good shape. Stocks are moving in liberal quantities and prices are firm. Some of the plants state that they have more inquiries than they can well take care of. It is noticed, however, that the offerings are more liberal and that stocks are easier to get. It is pointed out that much rain has fallen, especially in the mountain sections, and unfavorable climatic conditions have interfered greatly with the operation of mills, cutting down production, so that the available stocks of lumber now are no larger than usual, notwithstanding that railroads and other big consumers are deferring purchases. Nevertheless, there is a feeling in the trade that the future presents some elements of uncertainty, and this tends to restrict the placing of contracts to immediate requirements. The foreign buyers especially are disposed to hold off in the hope that lumber may be offered at somewhat lower figures, and the export trade is uneventful as a consequence. Liberal supplies have gone forward on consignment and there is no scarcity of lumber in the foreign markets; neither can it be said that congestion prevails. The conditions are in the main favorable for the manufacturers and dealers to profit by any quickening of the demand, which applies to nearly all woods. Poplar is offered in fairly large quantities, but the consumption keeps up well and the trade is in good shape. No further easing off in values has taken place, and stocks are being moved at very acceptable figures. The foreign markets are adequately supplied, and in the interest of firmness some reduction in the volume of lumber available is desired by the trade.

Pittsburg.

Trade is dull, generally speaking. Building is extremely slow, which keeps the yard busi-

ness at a low mark. In fact, the local yards are buying only such lumber as is needed to fill in their stocks for immediate use and seem to manifest no interest in providing any considerable quantity for winter consumption. The bulk of the business being done is with manufacturers, although railroads are furnishing more requisitions than a month ago. It is a sort of "steady dullness" that pervades the Pittsburg market and just how soon it is to be dissipated is a question that is bothering wholesalers not a little.

The hardwood trade has suffered surprisingly little in comparison with that in the pines and hemlock. Most of the hardwoods are in good shape, which means a fair to good demand and prices very close to list. A few advances have been reported, but they are spasmodic and for particular stocks. Poplar, chestnut and the better grades of oak are selling well and at profitable prices. The lower grades of oak are off a trifle. Hickory, ash, maple, cherry and birch could be sold in this market in much larger quantities if the lumber were available.

Dealers in mine material report a good trade. Some excellent orders have recently been booked along this line and present inquiries go to show that the mine and river interests will be steady buyers this fall. Standard ties for railroads are in good demand, but traction ties and poles go slow.

Buffalo.

The hardwood lumber trade can not be called very slow when many dealers are speaking of the big July they have had and few, if any, are complaining of poor business. There is some uneasiness over the high sawmill prices in the Southwest, but so many dealers have mills of their own in that district that they are able to regulate the cost of lumber to a great extent.

There is plenty of oak, especially plain, so that the minor woods are readily taken care of so long as there is no need of special time in the leading hardwood. As a rule all the yards are filling up with lumber, even the scarcer poplar, ash and chestnut making a better showing than was thought to be possible last spring, when there was such a wail from the Southwest on account of wet weather. But the dealers found what they wanted elsewhere, both by purchase and by increasing the running of their own mills, till they are now in position to resist too high mill prices if they are made.

Even now, with poplar so scarce, there are remarks that if it is pushed up so arbitrarily in price as it was several years ago there will be a disposition to let it wait awhile, as it seems to be the idea that there are other woods that can be put in its place readily enough. Elm and basswood are already in the list of "too highs" and will not be bought very heavily hereafter, except where the mill price can be shaded so that there is something in it for the jobber. Some of the yards are making a very good showing of chestnut and ash, considering the great scarcity of both lately, but the demand is heavy and the prices good. The sale of maple and birch is always large and stock plenty.

Saginaw Valley.

Stocks in the hands of manufacturers are about one-third what they were a year ago, which is a very satisfactory condition, in view of the fact that all of the mills are in operation. A number of the firms in the valley are cutting on contracts made at the beginning of the year which takes the entire yearly output of all but some certain grades, and this places the local market in good form. Prices rule steady. The demand has been fair up to the beginning of the midsummer quietude, and it is confidently expected that when the fall trade opens stocks will move freely again. Basswood, ash and oak are particularly firm. Maple has done much better this year than it did a year

ago, both as to price and volume of trade. There is not likely to be any pressure to force stocks on the trade because of the small stocks on hand and hence conditions inspire confidence as to the future.

A large quantity of special bill timber is being cut this season for bridge, structural and harbor improvement work at points on Lake Erie and Lake Superior, and is sold at special prices. In fact, everything is being worked off to advantage.

Indianapolis.

While there is a touch of the usual midsummer dullness in market conditions at present, hardwood men have sufficient business to keep them busy and to keep them from complaining. Prospects are for a steady business throughout the year, something that has not often been enjoyed here.

Prices remain steady and no changes are noted in quotations of the last several weeks. A stiffening in the market is predicted when the fall season opens. Car service is good and no difficulty is being experienced in getting practically all grades of hardwoods.

Bristol, Va. Tenn.

There are unmistakable evidences of improvement in trade conditions in this section, but just now the car situation is demanding the attention of the lumbermen. The famine set in two weeks ago. The present situation is largely attributable to the demand for cars in handling the wheat and grain crops in the middle west, and the heavy fruit crop in the south.

The lumber business has picked up a great deal within the past fortnight and is expected to soon resume its normal condition. Oak is still slightly off both in the domestic and export market. Poplar leads with good prices and heavy demand.

Cincinnati.

The market during the last fortnight has developed little change. Quartered and plain white oak have fallen off slightly in demand, but not enough to cause dealers to make concessions in prices. The best item on the hardwood list is poplar, and it is receiving a good call, and prices are steady. Cottonwood has in the last two weeks received added impulse; prices, however, were not augmented. Red gum is another item that has been doing stunts in the line of demand, but in the price line sustaining previous quotations. Mahogany and cypress are about the same in both demand and prices. The slight dullness that has prevailed over this section the last few weeks, it is expected, will give way to a big boom within the next month. The spring trade reduced stocks to such an extent that the dullness was really appreciated, as it has allowed lumber dealers to replenish their stocks and get ready for the fall demand, which they predict will be a heavy one.

Chattanooga.

The usual dull summer season is on here, but lumbermen are not complaining about anything except the insufficiency of dry stock. It is said that there has not been so great a scarcity in this line in twenty years. One reason for such a state of affairs is the fact that there have been few logging tides and the wet spring prevented timbermen from getting out the usual amount of logs.

There is an excellent call for everything handled by local lumbermen. The demand for walnut and chestnut is remarkable and mills and yards have a very meager supply of these hardwoods. Oak and poplar are holding their own. There is a slight lull in building operations at present, but sufficient orders are in sight to insure lively business in the fall and winter.

St. Louis.

Although trade conditions with regard to hardwoods are somewhat quiet at this time, the outlook seems to be very favorable for the fall season. Mills are now operating under much improved conditions, but there is practically no dry stock in the hands of manufacturers, so it is not at all probable that the new cut will have any deleterious effect upon the condition of the market. Good weather is necessary to enable manufacturers to get some accumulations of stock for prospective trade.

Memphis.

There is not much doing in hardwood just now. Most houses are shipping out stock on orders booked some time ago, and while there is not much business just now, there are liberal inquiries which suggest the probability of a good demand for the early fall and winter. Export business is very quiet. Weather conditions continue quite favorable and much progress is reported in putting lumber on sticks. There is no suggestion of a surplus of dry stock and it is noted in this connection that mill interests are rather firm in their views of value, maintaining a more stolid front than was expected, in view of the rather rapidly increasing output.

There is demand enough to absorb all the ash offered at prevailing figures, but there is no urgency about the request for this lumber such as characterized the situation some time ago. Plain oak, both red and white, is in satisfactory request. Some thick stock is being shipped and very good figures have been obtained thereon. There is only a moderate call for quarter-sawn oak, but there does not appear to be very much of this for sale. Poplar is offering in only a limited way and holders are therefore not inclined to shade prices, although the demand just now is not large. There is a moderate call for cottonwood in firsts and seconds, while there is a good demand for the lower grades, which continue scarce and which are selling at close to the best figures of the season. There are not many cottonwood box boards for sale and they, too, are commanding good prices. Red gum is not particularly active in the better grades. Clear sap gum sells moderately, while there is a very satisfactory call for the lower grades used in box manufacture. Cypress is not offering in large quantities. The market for this wood, however, is rather heavy at the moment and concessions are reported in some directions beyond those more recently obtainable.

Minneapolis.

The contract season for northern hardwoods is about over. It has ended unusually early. The jobbers and the large consumers got into the game back in the spring, and with a few exceptions they have prepared themselves for the season with about all the stock they will need. The stock remaining in mill ownership is held at fancy figures that no middleman or consumer feels willing to pay at this time, and judging from the comment of the trade it is not likely that there will be much doing in the way of sales for some time. Whatever is sold is going now at fancy prices. The factories are having a successful season and a good outlook, and they will have use for all the lumber they have bought and a good deal more in some cases. They are prepared now to pay higher prices than last year for anything they want.

There is nothing that looks like weakness in the market for northern hardwood, and as for southern stock, there is not enough offered now to cut much figure. Dealers here find when they go to bidding in the southern market that the prices are almost prohibitive for shipment to northern points, and the southern dealers seem to have all the trade they want at home. Oak is more plentiful than it has been, but shows no weakness in price at any point. There is a good supply of birch, but no overproduction

as in the past, and prices are firm at a marked advance over last year. The low grades are well sold out already, and this is also true of basswood. Ash is hard to find now in any quantity, and the maple stocks are already well concentrated in strong hands. The yard trade has been quiet, but is showing some improvement, and flooring is moving actively in all parts of the Northwest.

London.

Business is quiet here, buyers finding that they can supply most of their wants from goods on the quay at docks, of which the arrivals have been ample, although mostly of inferior grades. However, in most cases the quality has fitted the prices which buyers can afford to pay, manufacturers not being able to get such advance on their products as will enable them to pay the advance in prices, and they are therefore substituting as far as possible lower grades of stock.

In whitewood there is a very good demand for prime grades in planks and dressed boards, but the stocks on hand are very light. No. 1 common is in good demand at good prices. Culls are wanted and are in good demand owing to the high price of the lower quality of Canadian pine, in place of which this lower grade of whitewood is used. Oak planks are in request and command a ready sale; boards in all grades are difficult to dispose of and the stocks are ample. There is a much better demand for quartered boards and planks and moulding strips are scarce and would find a ready sale at good prices. The walnut demand is much better than it has been for some time past. Satin walnut is in better favor, but the inquiries are mostly confined to the lower grades. Mahogany is very firm, with higher prices ruling, and whilst these high prices rule for logs buyers are looking with more favor on the American cut boards and planks.

Wanted and For Sale -SECTION-

Advertisements will be inserted in this section at the following rates:

For one insertion 20 cents a line
For two insertions 35 cents a line
For three insertions 50 cents a line
For four insertions 60 cents a line

Eight words of ordinary length make one line.
Headings counts as two lines.
No display except the headings can be admitted.

Remittances to accompany the order. No extra charges for copies of paper containing the advertisement.

EMPLOYES WANTED.

LUMBER EXPERIENCE DESIRED.

C-623, hardwood bookkeeper, \$2,000; C-3902, hardwood buyer for South, \$1,800 and expenses; C-3903, sash and door salesman, \$1,200; C-2032, general office clerk, \$1,000; C-3738, bookkeeper, \$1,200; C-3878, salesman (western grade), \$1,800.

In reply mention number. Other lumber positions open. Call or write "HAPGOODS," Suite 1012 Hartford Bldg., Chicago. (Offices in twelve cities.)

EXPERIENCED LUMBERMAN.

Wanted One capable of looking after portable mills and buying and selling hardwood lumber. Location, Eastern Tennessee. Good position for right man. Address with references, stating experience and salary desired. "BOX 112," care HARDWOOD RECORD.

WANTED.

A practical and experienced veneer man for southeast Missouri. Mill is located in a town of 500 inhabitants, on line of two railroads, good telegraph and telephone service. In applying state age, experience and wages expected. A good position for a good man. FREDERICK H. BEACH, Batavia, Ill.

MANAGER WANTED.

A man familiar with the lumber business, capable of taking charge of an office, to keep books and conduct correspondence. Address "BOX 101," care HARDWOOD RECORD.

WANTED.

A first class man who understands manufacturing Hardwood Flooring in all branches. Permanent position, with good salary, to the right party. Address

BOX 57, HARDWOOD RECORD.

EMPLOYMENT WANTED

WANTED.

Position as Manager or Superintendent. Qualified to take entire charge of office, correspondence, buying and selling. Eighteen years' experience in the hardwood trade. Thoroughly acquainted with the domestic as well as with the European trade. Is now in business of his own, but wishes to make a change. Also in position to bring with him a modern office outfit. Parties inquiring for a cheap man do not need to reply. Prefers position in a large city. Address BOX 97, care HARDWOOD RECORD.

LUMBER WANTED

WHITE OAK STRIPS.

Wanted—10 carloads 2 to 4 inches wide, one inch thick. Address, stating lowest price, THE GOSHEN VENEER COMPANY, Goshen, Ind.

WANTED.

Hickory dimension stock. H. G. SHEPARD & SONS, New Haven, Conn.

GREEN LUMBER CUT TO ORDER

Wanted. We will furnish bills for green oak, ash, elm, basswood, hickory, cut to order. Would also buy timber located in Ohio, Indiana or Michigan and contract the sawing. For further particulars write THE SICKLESTEEL LUMBER COMPANY, 1028 Majestic Bldg., Detroit, Mich.

BASSWOOD WANTED.

Two cars each 1½ and 2" C. & B. Terms cash. THE BRADLEY COMPANY, Hamilton, Ont., Can.

DIMENSION STOCK

Wanted. Beech, Birch and Maple Dimension stock. One inch thick. Address "T. U. CO.," care HARDWOOD RECORD.

WANTED.

4/4" and 6/4" Sound Wormy Chestnut, Louisville delivery.

4/4" Log Run Buckeye, mill culls out, Allegheny delivery.

Address LUMBER DEPARTMENT, NATIONAL CASKET CO., Hoboken, N. J.

WANTED—DRY CYPRESS.

2x5" and wider, 8 or 16', 1sts and 2nds, selects or sound common. AMER. LBR. & MFG. CO., Pittsburg, Pa.

OAK.

We are in the market for plain sawed oak, all grades and thicknesses. P. G. DODGE & CO., 2116 Lumber St., Chicago.

WANTED—HARDWOOD LOGS.

200,000 ft. 28" and up White Oak logs.
200,000 ft. 12" and up Walnut logs.
50,000 ft. 12" and up Cherry logs.
C. L. WILLEY, 1235 S. Robey St., Chicago.

OAK WANTED.

3 and 4 inch White Oak; also Mixed Oak; also 12x12 Timbers and Piling of all kinds. CONTINENTAL LUMBER CO., 1213 Monadnock Bldg., Chicago, Ill.

YELLOW PINE POLE STOCK

Wanted—From reliable mills who understand how to manufacture No. 1 Pole stock, clear and straight grain quality, free from all defects excepting sap. AMER. LBR. & MFG. CO., Pittsburg, Pa.

LUMBER FOR SALE.

TIMBER FOR SALE.

Will supply your mill with timber if it can be bought. Address "TIMBER," care HARDWOOD RECORD.

CHAIR STOCK FOR SALE.

1 car Oak Chair Stock.
½ car 1¼"x2"x36", Dry chair stock.
½ car 1"x1"x48", Dry chair stock.
E. DUNSTAN, Winona, Miss.

TIMBER LANDS FOR SALE

FOR SALE.

Nine hundred acres of long-bodied virgin timber located on a trunk line railroad in the state of Arkansas with one mile of side track on the land. 40% White Oak, 10% Red Oak and Ash, 50% Gum; will cut 7,000 to 10,000 feet per acre. I have clients that must sell at once and now have a man there on the grounds ready to show timber to prospective purchasers. Write or address JAMES R. DUFFIN, Attorney-at-Law, Louisville, Ky.

TENNESSEE TIMBER.

Write to the undersigned if you want bargains in timber lands. He has very attractive hardwood properties in tracts ranging from 360 to 11,800 acres. He is looking for actual buyers who mean business and want good bargains in timber. Address

C. E. BILES, Sharon, Tenn.

FOR SALE.

Saw and planing mill, 25,000 capacity, now running; pumps, kilns, trams, sheds, etc.; 4 good mules, 1 log wagon, contract teams; also 300,000 feet pine on yard, 3,000,000 feet standing oak, gum, cypress, hickory and beech. Can buy rough lumber from small mills in vicinity. Can buy 4,000,000 feet hardwood and 2,000,000 feet pine. On Iron Mountain in Union county, Ark. Address "BOX 412," Camden, Ark.

INDIANA TIMBER FOR SALE.

Choice Oak trees for quartering or veneer. Beech, Hickory, Walnut, Sugar Sycamore, etc. O. L. VAN DEMAN, 1507 Pleasant St., Indianapolis, Ind.

SAWMILL FOR SALE

At half cost. Almost new 40 H. P. sawmill. Now running; plenty of cheap timber to last for years. On good rafting stream. Will accept sawing or lumber as part payment, if desired. Great bargain. J. A. BOYD, Ullin, Ill.

MACHINERY FOR SALE

BOILERS FOR SALE.

New 40 H. P. Nagle fire box boiler, 44" diameter, 46 3" tubes; also practically new 20 H. P. Nagle fire box boiler, 36" diameter, 36 3" tubes. Address "BOX 99," care HARDWOOD RECORD.

STEEL RAILS, ETC.

We sell new and relaying steel rails and have almost all sections in stock for immediate shipment. We also buy all sections of relayers and all grades of scrap, including old logging equipment. Your correspondence solicited. L. K. HIRSCH COMPANY, Frick Bldg., Pittsburg, Pa.

FOR SALE—ENGINES AND BOILERS.

Boilers.

4-72x18 Horizontal Tubular, High Pressure.
1-84x18 Horizontal Tubular, Standard.
1-78x16 Horizontal Tubular, Standard.
1-72x16 Horizontal Tubular, Standard.
5-72x16 Horizontal Tubular, Standard.
1-66x16 Horizontal Tubular, High Pressure.
1-60x18, 6" Riveted Flue, Standard.
3-60x16 Horizontal Tubular, Standard.
Sixty others, all styles and sizes.

Engines.

16x32 Buckeye. 20x48 Wheelock.
16x20 Brownell. 18x26 H. S. & G.
14x20 Atlas. 18x42 Hamilton.
14x14 Vertical. 18x36 Wright.
Forty others, all sizes and styles. Also Pumps, Heaters, Tanks, Saw Mills and General Machinery. Send us specifications of your wants. THE RANDLE MACHINERY CO., 1759 Powers St., Cincinnati, O.

MACHINERY WANTED

PONY GANG

Wanted. Second-hand. Size about 8"x26". Must be good make, in good condition and at reasonable price.

THE M. B. FARRIN LUMBER CO., Cincinnati, O.

AT ONCE.

If you are in need of machinery—new or second hand—a few lines in this column will place your wants before those who have such goods for sale. For particulars address

HARDWOOD RECORD

- Reaches more manufacturers, jobbers and consumers of Hardwood Lumber than all the remainder of the lumber trade press combined.
- Prints more hardwood news than all the remainder of the lumber trade press combined.
- Is not only the only hardwood paper, but the best lumber paper printed.

This Truck—The Gillette Truck—with its Roller Bearing Axle—Unbreakable Malleable Iron Caster-Fork, Improved Stake Pockets and general Superiority of Construction is the Easiest Running Truck made. Strongest where other trucks are weakest. Best Truck to buy. Cheapest Truck to use. Invest money in these trucks. Do not waste it on others.

GILLETTE ROLLER BEARING COMPANY
Grand Rapids, Michigan

READ THIS LETTER

GRAND RAPIDS VENEER WORKS.

Grand Rapids, Mich.

Gentlemen: It is now two months since we remodeled our kilns and added your patent process, and we want to say to you that we are glad we made the change. We can now dry our lumber in about half the time it formerly took, and the saving in time is but a small part of the advantage, as the lumber dried under the new process comes out in much finer condition. It is entirely freed of all sap and none of it is warped or checked.

We can cheerfully recommend your system to parties needing an up-to-date system. Yours truly,
SCHILLER PIANO COMPANY.

NO. 105-A, EXTRA HEAVY 12-INCH MOULDER

IT HAS been our purpose during the last half century to develop a line of wood working machines containing the best workmanship and material that American skill and wisdom can afford. This fact we are proud to say is well established in the minds of our many patrons. We have, however, now exceeded ourselves by the development of a remarkable Moulder, the excellence of which is due to our obtaining written suggestions from more than a thousand operators throughout America. This machine stands alone as being the composite idea of the thinking operators of this country. One year's test of its work has convinced us that it is impossible for you to compete successfully against the Smith Moulder with any other machine. Can't we send you prices and literature?

THE ONLY SANDER

capable of producing Perfect Work—the COLUMBIA. Built 30 inches to 84 inches wide. Eight feed-rolls. One, two or three drums. Perfect sanding can only be accomplished by keeping the paper on the drums at an even tension at all points and at all times.  The COLUMBIA is the only sander made provided with mechanism for automatically tightening the paper while the machine is in operation. Investigate!

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock $17\frac{1}{2}$ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

PICKING UP LOGS ALONG THE TRACK IS RAPID WORK FOR THE McGIFFERT LOG LOADER

- ☐ It can either move along the track with a car and pick up scattered logs, or it can stay in one spot and load a whole train, because it is self-propelling and independent under all conditions.
- ☐ It loads any kind of cars on any gauge track, and is a mighty good machine to pick up dollars for you, too.

Lidgerwood Combination Hardwood Logger

(Patented)

Especially Designed to Log the Hardwood Flats Bordering on the Mississippi River. A Machine that Can be Used Twelve Months in the year.

RIGGED AS A CABLEWAY SKIDDER.

To be used in sloughs, swampy places and during the wet season, especially where the timber runs high to the acre per thousand feet, or where the timber is thick and small with lots of underbrush.

RIGGED AS A SNAKER.

Should be used when flats are dry enough for a horse to return tongs into the woods, especially where the timber is large and scattering.

RIGGED AS A SLACK ROPE MACHINE.

To be used only when impossible to operate either the snaking or cableway system, or when the railroad is so located that a slough or low swampy place must be crossed, thus preventing the return of line by horse.

Loafing Boilers

Have You Any About Your Mill?

If so, every machine in it is doing less work than it should, and so is every man on your payroll. Your boilers are the source and fountain head of the energy that runs your plant. They set the pace for everything else. If they are not making enough steam, your output suffers, and, consequently, your profits.

The Gordon Hollow Blast Grate

MAKES EVERY OUNCE OF STEAM A BOILER IS CAPABLE OF GENERATING

It is to a saw mill what the bellows are to a blacksmith, and what the cupola is to a foundryman. **TRY before you BUY.** We sell on approval giving you thirty days' trial. If the grate is unsatisfactory—you to be the sole judge—return it at our expense.

**WE PAY THE FREIGHT
WE TAKE THE RISK**

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

General Electric Company

CQ MOTORS

of Merit with Automatic
Belt Tighteners for Con-
stant **SPEED SERVICE**

The Standard CQ Motor is improved for certain operating conditions by this attachment because:

The employment of a sliding base for belt tightening is obviated by its use.

It permits short distances between driving and driven shafts.

It allows the use of driving pulleys of small diameter.

It gives greater arc of belt contact on driving pulley, thus reducing belt slip without extra belt tension.

It permits driving a large slow speed machine with a small high-speed motor.

Fully described in Catalog 486-F, sent at request of those interested.

MEETING OF HANDLE MANUFACTURERS.

Agreeable to the request of several leading handle manufacturers of the United States, and in accord with the approval of upward of a hundred other manufacturers, a meeting of these interests, including all the various lines of handle production, is hereby called, to convene at 10 a. m., Tuesday, October 8, at the Great Northern Hotel, Chicago. The purposes of this meeting are fully outlined in an editorial on this page.

HENRY H. GIBSON,
Editor Hardwood Record.

General Market Conditions.

With the waning of summer the hardwood trade seems to be strengthening in all the manufacturing and commercial centers of the country. The slight lull of midsummer was not nearly so pronounced as is usual at that time of year, and there is every prospect now that trading in hardwood stocks will go forward with great activity.

The south country reports that there are not as many large orders being booked at the present time as was expected, but that the bulk of small orders is so great that all available dry stock is closely sold. The weather has been very favorable for the production of lumber for some weeks, and mills generally have been turning out a fair amount of stock. However, there is no accumulation of any variety.

In the north there never has been such a dearth of dry lumber as at the present time and the demand is excellent. Poplar, oak, ash and hickory are still the strongest sellers, but as noted there is no accumulation anywhere of any variety of American hardwoods.

Buying seems to be starting earlier than usual, as the car shortage lesson of the last few years has taught wholesale consumers that they must provide for their fall and winter requirements in advance of the actual time when they will need stock, otherwise they will wait a long time before being able to get it transported. With the bountiful crops in sight another severe car shortage is imminent and buyers are showing good judgment in placing orders early.

The export trade is not in good shape on the whole. Desirable orders from the other side are scarce and with few exceptions there is no urgent call for any particular line of stock. This situation is just as well, because the home market will take care of every foot of hardwood that can be produced during the remainder of the year at as good or better prices than can be achieved in Great Britain or on the Continent.

The veneer and panel business seems to be improving. Orders are reasonably plentiful and prices have strengthened to a point where manufacturers are getting a little profit out of the business. Undeniably values are still low and will enhance materially as time goes on.

The hardwood flooring plants are still very busy. While there are not as many large orders offered as a few months ago, there is a growing multitude of small requisitions which promise to keep plants busily employed for a long time to come. The demand for mahogany and other fancy woods is strong, and the general supply throughout the country is short.

The splendid crops in sight throughout the agricultural regions make assurance doubly sure that there is another good year's business in store for every branch of the hardwood industry.

To Handle Manufacturers.

On another page of this issue of the HARDWOOD RECORD is reproduced an editorial printed in the last issue, covering suggestions for the formation of a handle association, with copy of the letter sent to several hundred manufacturers and a score or more replies to it. These replies with few exceptions are decidedly favorable to the proposed organization, hence it is that the editor takes the liberty of issuing a call for a meeting in this relation, as will be noted on this page. This meeting will be held October 8, in Chicago. From the interest manifested in this movement it is believed that the conference will be attended by from two to three hundred handle manufacturers.

While the editor of the HARDWOOD RECORD is familiar with general association work, and various lines of lumber production, and has in the past launched several associations that have proven eminently successful and of vast benefit to several lines of the hardwood industry, he must confess to a very limited knowledge of the handle business. Therefore, if this initial meeting matures into a successful handle association, covering in its divisions, as it should, the various lines of handle production—it must be by the enthusiasm and hearty coöperation of the individuals who are engaged in handle making.

The HARDWOOD RECORD is spending a considerable sum of money in this attempt, and has absolutely no interest in the proposition aside from the betterment of this important branch of the hardwood industry, and the slight profit accruing from a possible enhancement of its subscription list. It will do everything within its power toward the success of the undertaking, but must insist upon the attendance and coöperation of all parties in interest to carry the issue to a successful termination.

The history of association work along all lines—manufacturing, jobbing and retailing, in hardwoods and building woods, dimension

stock, hardwood flooring, veneers and panels, whether through national, state or local organizations, has shown wisdom and great results. As is well known, there are stringent laws against any organization which attempts to boost and control values. To introduce this feature of organization is in no wise meditated, and there is no occasion for even a suspicion of "trust" manipulation being attached to this movement. The whole idea is for the mutual acquaintance of people interested in the handle industry, thorough threshing out of the problems which encompass the trade, reorganization of the inspection system, and analysis of cost, based on present timber values, labor and manufacturing expenses. There are scores of things that this association may do which will tend to the betterment of every division of this great industry.

It is to be hoped that manufacturers of every variety of handles will be present at the meeting, and will undertake to form specific divisions covering the various lines of production, as well as a general association to cover the totality of the handle manufacturing industry. The editor invites from every manufacturer of handles, no matter in what line he may be interested, letters of suggestion that may be presented to the conference at Chicago, October 8.

It is self-evident that this movement is a desirable one, and one which will redound to the benefit of every individual in the industry if representatives will only come to the conference without prejudice, without jealousy and without selfishness, remembering only that whatever benefits the industry at large invariably benefits the individual engaged therein.

The slogan of this meeting should be "Get Together and Do Something!"

The Duty of the States.

The wonderful development in both knowledge and appreciation of reforestry that has come to the people of this country within the last few years involves a good many legal problems for the various states of the Union to consider. Under existing laws there is no logical and profitable way in which the individual may engage in reforestry pursuits. Taxation and the paucity or even entire lack of protection from fire and depredation makes it such a hazardous and expensive proposition for the individual that few dare enter upon it. Today there is no assurance that an area of land set apart and devoted to the reproduction of trees may not be taxed out of commercial existence, destroyed by fire, or otherwise damaged.

There are hundreds of lumbermen in this country who have vast areas of cutover lands which are not suitable for agricultural purposes, but which are particularly adapted to reforestry. Many such owners would be glad to attempt the experiment of regrowing the forest area if they had reasonable encouragement to enter upon it. It has been suggested that the several states should exempt from taxation for a long period of years such areas as individuals might wish to devote to this purpose; but inasmuch as anyone entering upon this venture would naturally demand of the state stringent laws prohibiting the setting of fires, require the employment of forest rangers to guard against depredation, etc., it would seem that there should be a reasonable tax assessed against such property for this purpose.

Very few lumbermen have any desire to avoid their just proportion of taxation. Therefore if the several states should enact laws establishing a modest value on lands devoted to reforestry purposes there is no owner who would find any fault. The government and the several states originally sold millions of acres of forest lands at \$1.25 an acre. If today these same states should place that value on stump lands and guarantee taxation on that basis until such time as a crop of timber was matured, it is safe to say that hundreds of stump land owners would be very glad to engage in reforestry.

The farmer is taxed on his lands and on his improvements, not on his growing crops. Hence it would be equally just to thus tax land devoted to the regrowing of trees. The national government is doing its full share through its Forest Service in protecting existing forests owned by the nation, and in assisting the regrowing of

denuded areas and the protection of properties from timber thieves and fire devastation. A few of the states are also engaged in forest planting in a limited way, but what the country needs is to interest individuals, and notably lumber manufacturers, in rehabilitating devastated areas that are unsuitable for agricultural purposes, of which there exist millions of acres throughout this country.

The Sales End of the Business.

The secretary of the Michigan Hardwood Manufacturers' Association, at its recent meeting, made the following observations:

That we have secured a better understanding of the conditions pertaining to the marketing of our product is a statement that I think no one will dispute who has studied the stock reports sent out by your secretary and the reports of the Market Conditions Committee. The matter of marketing their product, however, is one that is sadly neglected by most manufacturers of hardwood lumber. They will work overtime and lie awake nights studying plans to reduce the cost of logging, sawing or piling their lumber ten, fifteen or twenty cents per thousand feet, spend thousands of dollars on a device that promises a saving of a few cents per thousand in the cost of manufacture and then sacrifice from one to five dollars per thousand feet in the sale of their lumber for lack of more information in regard to market conditions, information that could be obtained with very little effort and practically no expense.

The observations above quoted are particularly timely and pertinent. The average sawmill operator devotes the greater portion of his brains, money and energy to securing timber and to the economical manufacture and preparation of lumber for market. When it comes to the details and finesse of the sales end he is lamentably weak. This weakness of the manufacturer is the very strength of the jobbing element of the trade. The jobber makes a study of the specific requirements of his customer and is therefore able to supply his wants to a nicety. He studies particular lines of manufactured product, and makes specific grades that will suit these requirements exactly. If a customer is making interior finish he furnishes him with stock that will rip to the best advantage. If he is making furniture that requires short cuts he will select cross-cutting boards for him. By these means he disposes of all the varieties contained in mill-run lumber to his own advantage, and to the manifest advantage of his customer, for he gives him lumber that suits his requirements, at a minimum cost, grade by grade.

A study of these requirements by every one—manufacturer or jobber—interested in lumber production and sale is well worth while, for by it he can realize the highest possible price from a given mill-run product. The distribution of hardwoods of various types is another study that is neglected by a great many manufacturers and jobbers. The best trade for any lumberman is that which lies nearest at hand, but no one doing a large or small business can in safety depend entirely upon local trade, but must needs make distributions of considerable breadth, so that if his trade, for local reasons, falls off in one section he has calls from more remote districts to depend upon.

Today there is a development in supplementing the work of traveling salesmen through selling lumber by mail, and many manufacturers and jobbers are enjoying a large trade that is handled exclusively through the general sales office. A man does not properly support his salesmen who does not keep the mail loaded with letters to every customer and prospective patron as well. It is the constant, kindly letter that makes friends for any house, and the operator who neglects to learn the specific requirements of his trade and keep it posted on what he has to offer is neglecting an important and low-priced way of disposing of his lumber output.

It is this very system of sales manipulation to which the HARDWOOD RECORD is contributing so largely, since it has been engaged for nearly eighteen months in collating a list of the wholesale hardwood consumers of the entire country, with their annual requirements of lumber by kind, grade and thickness. With this information at hand the hardwood man can solicit his trade within the proper geographical limits and contribute materially to the economical and advantageous disposition of his stock.

Pert, Pertinent and Impertinent.

Lost!

There was a young lady from Lynn
Who was so exceedingly thin
That when she essayed
To drink lemonade
She slipped through the straw and fell in!

They're Plentiful!

There was a young lady named Maud,
Who many folks said was a fraud;
In the light, we are told
She was proper and cold.
But on the dark porch—O, my G—d!

Jealous!

There was a young lady named Enos,
Who went to a ball dressed as Venus,
Said the hostess, "How rude
To come here so nude!
Shall I get you some leaves from the green-us?"

If He Asks Her.

When a man's
business affairs go
wrong, his wife
thinks forever after
that it was because
he didn't follow her
advice.

Diplomacy.

If a man occasion-
ally tells a woman
how pretty she looks,
he can usually get
her to forgive most
of the other lies he
tells her.

Not Much!

Years may come
and years may go,
but the time will
never arrive when a
man will sit up and
patch his wife's
clothes after she is
abed.

Delusions.

A maiden thinks
she is necessary to
man's happiness; a
widow thinks man is
necessary to her hap-
piness; and man—
well, he hasn't much
to say about it!

'Specially Old Ones.

When a man falls
in love, he gives his
brain a vacation.

Changes His Mind.

The more some
handsome women
talk to a man, the less
inclined he is to sit
up and take notice.

A Woman's Way.

Her lovers adored her, they asked and im-
plored her

To give them a look or a smile;
Like little dogs trotted to tasks she allotted.
And begging for notice the while,
They fetched and they carried, they dodged
and they parried

When snubs for reward did she give;
They took it all meekly, give in to her weakly.
Just asking permission to live,
Their worship she scouted, their love lightly
flouted.

And treated them all with disdain;
She met vows with laughing, hearts' anguish
with chaffing.

And took as just tribute their pain.

GOOD CROPS FROM COAST TO COAST

Prosperous farmers mean continued prosperity for the Hardwood Trade.

Double Function.

Love makes the
world go round—and
men go broke.

Rebounds.

Many a successful
man is like a rubber
ball—the harder he
is thrown down, the
higher he rises.

Far Cry.

Do not mistake no-
toriety for fame!
Anybody can get his
picture into a yellow
journal.

O, Joy!

The advantage of
being fancy free is
that you're free to
fancy what (or
whom) you please.

Crushed.

People keep truth
mighty busy strug-
gling to rise!

Specifics.

To cure insomnia
pay your bills. To
get rid of weeds—
marry again. To re-
move paint when it
is fresh back up
against it.

Suggestion.

Women entering a
theater should check
their hats—men,
their thirst.

Never.

It isn't fair to judge
a woman's aims by
what she hits!

The Forest Ranger's Job.

The Denver Field and Farm alleges that over
one-fourth of Colorado is now included in forest
reserves. It is fearful that eventually there
will be no place to bury the Colorado dead ex-
cept in forest reserves, and this is its excuse for
breaking into rhyme over the situation:

Oh, bury me not in the woods,
In a musty hole in the ground,
Where the discordant tree toads sing,
And straddle-bugs tumble around.
Bury me not on the range,
Where the taxed cattle are roaming,
And the mangy coyotes yelp and bark,
And the wind in the pines is moaning.
On the reserve please bury me not,
For I never would then be free;
A forest ranger would dig me up
In order to collect his fee.

That they did adore her, the more seemed to
bore her.

She said they were idiots all;
So little she prized them that she soon de-
spised them

For being slaves of her thrall
At last came a wooer who scorned to pursue
her;

He ordered her just at his will,
Asserted his power, said he would "allow"
her

His need of affection to fill.
They stared in amazement to see her abase-
ment,

For meekly she gave him his way,
Just followed the faster when he would be
master,

And promised with joy to "obey."

AMERICAN FOREST TREES.

FIFTY-NINTH PAPER.

White Cedar or Arborvitæ.

Thuja occidentalis—Linn.

The range of growth of white cedar or arborvitæ, which is perhaps the commoner name, is from New Brunswick to Lake Winipeg and south to central Minnesota and Michigan; through northern Illinois; along the mountains of the eastern United States to North Carolina and westward into eastern Tennessee.

It is called arborvitæ in Maine, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Virginia, West Virginia, Indiana, Illinois, Wisconsin, Michigan, Minnesota, Ohio and Ontario. White cedar is a name often used in Maine, New Hampshire, Vermont, Rhode Island, Massachusetts, New York, New Jersey, Virginia, North Carolina, Wisconsin, Michigan, Minnesota and Ontario. In Maine, Vermont and New York it is called cedar. In New York, and where cultivated in England, American arborvitæ is the name applied to it. The Indians were wont to call it "feather-leaf"—in their language oo-soo-ha-tah. In Delaware it is called vitæ, and in western literature, Atlantic red cedar. It is unfortunate that the name white cedar is so commonly applied to the tree—confusing it with species of the genus *Chamæcyparis*, to which it should belong exclusively.

Two distinct species of the genus *Thuja* are known to botanists, of which two are native to China and Japan. The Chinese species *orientalis*, which is exceedingly popular and decorative, is used extensively in the South. No less than forty-five varieties of *Thuja occidentalis* are distinguished in cultivation, and the trees are particularly adapted for use in formal gardens and for hedges.

This tree belongs to the pine family. Its leaves are simple and opposite; very blunt and scale-like, growing closely together and overlapping upon the flat branchlets. They are a bright green and aromatic—more so when bruised. The flowers bloom in May; they are monœcious, the staminate forming a globose cluster of stamens, and the pistillate a red cone of from eight to a dozen scales, with ovules on the lower ones only. The cones are small and of a yellowish-brown color; in shape they are oval, and when ripe open to the base. The seeds have thin, broad wings.

The bark of arborvitæ is light brown, tinged with red on the branchlets; it is thin, and cracks into ridges with stringy, rough

edges; the branchlets are very smooth.

In general appearance the tree is conical and compact, with short branches; it attains a height of from twenty-five to seventy feet, and a diameter of from one to three feet. It thrives best in low, swampy land, along the borders of streams.

The wood of arborvitæ is soft, brittle, light and weak; it is very inflammable. The fact

thin and nearly white; it has rather a fine grain and compact structure.

Lounsberry says: "This very formal and prim-appearing tree has for a long time been extensively planted. In fact it was probably the first North American tree to be known in Europe and has been cultivated in Paris since before the middle of the sixteenth century. It forms an excellent hedge. When

under the gardener's care it is very prone to vary and produce new varieties, but it can hardly be said to become more beautiful than when in its wild state. The extremes of climate affect it very little. In America it becomes smaller and grows less abundantly as it reaches the limits of its southern range. Northward it covers large areas of swamp land, and the forests that it forms are almost impenetrable. As of all coniferous trees, its fruit is interesting. The tiny cones remain on the branches over the winter to greet the new growth in the spring-time. This is an act of pure courtesy on their part, as during the preceding autumn they have finished their own work and ripened and scattered their seeds. The Indians had many uses for the fragrant, yellowish-brown wood of the tree. They separated its thick layer of sapwood, as they could do with ease, and with it strengthened their canoes. They also used parts of it in the making of their baskets. Fluids of medicinal value are yielded by the tree, and they have some local popularity for the curing of warts. The fresh young branches are used to make brooms."

The most prolific growth of white cedar is in the swampy sections of northern Wisconsin, northern Minnesota, the upper peninsula of Michigan, the northern portion of the lower peninsula of Michigan, and eastward across the Dominion of Canada.

In value cedar stumpage ranks as high as any of the northern woods. The hundreds of thousands of telegraph, telephone and street railway poles in use in the West and middle West are very largely the product of the cedar swamps of the North.

Cedar constitutes a very large proportion of the fence posts of the entire region of the country west of Buffalo and Pittsburg to the mountain regions of the West. The same swamps are also the source of supply of thousands of the railway ties used in northern roads, and the product of white cedar shingles is second only to that of the red cedar shingles of the Pacific coast.

The halftone engraving with which this

TYPICAL FOREST GROWTH WHITE CEDAR, MISSAUK-EE COUNTY, MICHIGAN.

that it is durable, even in contact with the soil, permits its use for railway ties, telegraph poles, posts, fencing, shingles and boats. However, the trunk is so shaped that it is seldom sawed for lumber, but oftener for poles and posts, the lower section being flattened into ties. A cubic foot of the seasoned wood weighs approximately nineteen pounds. The heartwood is light brown, becoming darker with exposure; the sapwood is

MEMPHIS, TENN.

article is illustrated is from a photograph recently made by the editor of the *HARDWOOD RECORD* on the lands of Mitchell Brothers Company of Cadillac, in a small swamp in

their Missaukee county timber holdings. The twin trees represented are typical only of certain characteristics of cedar growth; many trees grow to a much larger size.

Builders of Lumber History.

NUMBER L.

William A. Gilchrist.

(See portrait supplement.)

It requires no excuse to publish the portrait of William A. Gilchrist of Memphis, Tenn., as supplement to this issue of the *HARDWOOD RECORD*, nor does he require a very specific introduction to the lumber fraternity. Mr. Gilchrist has fairly "won his spurs" as one of the foremost lumber operators of the country; by sheer force and forcefulness he has demonstrated his ability in the handling of large lumber affairs. He is vice president and general manager of the Three States Lumber Company of Memphis, one of the largest cottonwood producers of the country; is identified in a managerial capacity with the new Gilchrist-Fordney Lumber Company, an important yellow pine concern; and in connection with his father, F. W. Gilchrist of Alpena, Mich., is interested

in numerous other timber and lumber enterprises.

At the last meeting of the Hardwood Manufacturers' Association of the United States Mr. Gilchrist was chosen first vice president, a position to which his prominence in lumber affairs and his interest and enthusiasm in association work justly entitle him. "Will" Gilchrist, as he is familiarly known to all his associates, is that rare type of "good fellow" who can be such without making an ass of himself. He is deservedly popular in all branches of the trade, and is justly entitled to the friendship and confidence accorded him.

The portrait from which this supplement was made was obtained surreptitiously, and notwithstanding the fact that its publication will likely offend the modesty of its owner, is presented at the specific request of a number of his admiring friends.

stand in the yard from three to six months. mills have furnished fairly straight, clear boards, and the extra care has advanced prices materially.

Gum boards are also successfully dried in the kiln, but pieces over two inches thick are apt to case harden, and consequently to season on the outside only. The sapwood should be kiln-dried rather than air-dried, as it is more liable to stain if put in the yard. On account of tendency to stain if piled when green and the difficulty of kiln-drying thick pieces, it is usually advisable to saw green sapwood into boards only.—EDITOR.

Some Differences of Opinion.

LIVERPOOL, ENGLAND, Aug. 8.—Editor *HARDWOOD RECORD*: I notice in your issue of July 25, just received, a little criticism of the articles I have written to you of the Liverpool market. Before proceeding to answer these remarks I may tell both you and your readers that I was approached some few weeks ago by a prominent Liverpool broker who asked me to place certain

FOLIAGE AND FRUIT WHITE CEDAR.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the *HARDWOOD RECORD* clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Wants Rotary Cut Pine.

DRESDEN, GERMANY, Aug. 7.—Editor *HARDWOOD RECORD*: Your address was given me by a lumberman when I was in your country, and I take the liberty to write you and ask a favor. I am interested in rotary cut pine veneers; I buy this stock from a party in the South, but as he can only fill a small percentage of my orders which I can place in pine veneers, you would much oblige me by giving me a list of reliable manufacturers of rotary cut pine veneers.

A. S.

We have supplied this correspondent with one or two names, but others who do or can furnish this stock will confer a favor by writing this office.—EDITOR.

How to Cut Gum.

DICKSON, TENN., Aug. 18.—Editor *HARDWOOD RECORD*: Please send us the *RECORD* for a year, check enclosed. We have recently bought a large tract of timber in western Tennessee, of which about one-half is gum, and as we have never handled any gum lumber would appreciate your advising us what thicknesses and widths it would be best to cut this stock; if you are unable to furnish us with this information, will you kindly turn this letter over to some of your advertisers who buy gum lumber and who could so favor us? Thanking you in advance for this favor, yours truly,

—COMPANY.

There is a good trade in gum in all thicknesses from $\frac{5}{8}$ inch to thick stock, of which the largest quantity is cut one inch. In *HARDWOOD RECORD* of Sept. 25, 1905, a very comprehensive article was published on the

subject of red gum—methods of manufacture, piling, seasoning, etc. The article was based on specific information from leading producers of the wood, and contained the following paragraphs:

Practically 60 per cent of the stock coming from the tree is common or sap grade and is largely used for boxes. The export trade requires clear heart, six inches wide and over and of all thicknesses from three-eighths of an inch up to two inches. About 75 per cent of this lumber is exported to England, France and Germany for use in the manufacture of furniture, interior finish, stairs, etc. Export timber is usually dried before shipment from sixty to ninety days, and upon its receipt abroad is given a further air drying of from six to eight months, or is kiln dried.

In this country a constantly increasing quantity of red gum is used in the manufacture of furniture. The commoner grades are made into drawers, frames and backing for desks, tables, etc. Considerable clear heart is used for surface work, solid or veneer.

A large amount of red gum is cut into wagon box boards. Owing to the size, straightness of grain and few knots, a larger percentage of such boards can be cut from red gum than from any competing species.

Red gum boards should be piled in the yard with plenty of space between the tiers and half a foot beneath them, so as to permit a free circulation of air under and through the pile. In the first ten or fifteen layers the boards should be laid from six to eight inches apart, and the remainder from two to three inches. The piles should not be over six feet wide and should have a pitch of fully twenty inches to sixteen feet lengths. The strips should be placed from one and a half to two feet apart. To prevent straining, which often occurs when the stickers are laid, they must be thoroughly dry, and preferably of oak or the heartwood of gum. Staining is much more apt to occur in the sapwood than in the heartwood. By using these methods of piling, and allowing the lumber to

deceptive remarks before the readers of the *HARDWOOD RECORD*. His object, of course, was to benefit his own pocket, and I absolutely declined to allow myself to be made the tool of such disgraceful tactics. With regard to the letter, I may say that I quite agree with your reader that hickory this year has been extremely weak and poplar very strong. But if your correspondent will kindly read my report again he will see that I said: First, that hickory was "stronger," and second, that poplar was "somewhat easier." Now, I repeat that at the time I wrote my report hickory was stronger than it has been all year and that poplar was slightly weaker. There were at that time on the quay about ten to twelve cars of poplar which were shipped on consignment and sold at from $\frac{1}{8}$ d to

and lower than market values. I flatter myself that my article stopped those shippers from shipping further lots on consignment at the advice of brokers whose only interest is their own pocket. I shall at all times be glad to hear of friendly criticism, but I strongly object to petty spite. Yours truly,

LIVERPOOL, ENGLAND, Aug. 9. Editor HARDWOOD RECORD: Your Liverpool correspondent of July 25 has evidently allowed his political prejudice to overbalance his judgment. In business reports it is much wiser to state facts than to offer opinions.

Because in some few recent elections, owing to the fact that three candidates have been nominated for one seat, the Socialists have stolen the representation, it does not at all follow that their principles are being pushed to the fore in the government of this country. The fact is, the Socialists are as much opposed to the present government as they are to the party which sits on the other side of the House, and on every possible opportunity run candidates against the government nominees.

Instead of money which ought to have been spent on "further orders" being spent in "Socialist legislation" (what your erratic correspondent means by this phrase is rather a conundrum) the fact is, that the trade of Great Britain is in a stronger condition at the present moment than at any previous time in its history. The Board of Trade returns prove this beyond question. The returns for July were issued yesterday afternoon. In comparing these with last year it must be remembered that 1906 was itself a record year. The imports for July totaled £52,213,304, compared with £48,607,799 for the corresponding period last year. The value of the exports amounted to £40,452,331, as against £33,442,962 in July last year. The imports for the month thus show an increase of £3,605,505; whilst the exports were £7,009,369 in excess of last year.

That this improvement is general and not confined to one or two trades is evident from the fact that the principal increases in exports last month were, iron and steel and manufactures thereof, £830,315; other metals and manufactures thereof, £164,944; machinery, £688,527; cotton, £1,976,339; wool, £514,885; other yarns and textile fabrics, £220,380; apparel, £113,277; chemicals, drugs, dyes and colors, £170,566; and miscellaneous, £469,572.

It is a recognized fact that the lumber trade is generally the last to feel any improvement in the trade of the country, as it is also nearly always the last to suffer from depression. The lumber trade is very largely dependent on the building industries and as long as other investments offer better returns than bricks and mortar, so long is money spent, not in "Socialist legislation," but in other things than real estate and lumber. It is only when general trade begins to decline that these latter begin to prosper. Similar conditions influence the price of consols and other gilt-edged securities. Consols are low because trade is good.

Exception may also be taken to your correspondent's prophecy respecting the alarming increase in the prices of mahogany mentioned in the previous issue of HARDWOOD RECORD. Again the facts are against him. The July auctions certainly did not mark any approach to higher prices; indeed, in the opinion of some who bought largely at these sales, there was a chance to buy below valuations based on results of May and June auctions. Already there are large parcels in the yards for the August sales, and in the judgment of the writer, which is backed by possibly the best authority in the trade, it may be said that whilst prices may not to any marked degree recede from recent results, they most certainly will not advance in the manner suggested by your alarmist and alarmed correspondent. The auctions during the next three or four months will in all probability afford opportunities to purchase at what may be con-

sidered ruling prices. The present healthy condition of the mahogany market here is certain to attract shipments in sufficient quantities to steady the advance, whilst the strong demand from America will prevent a decline.

Yours truly,

Who Cuts Willow?

MEMPHIS, TENN., Aug. 20.—Editor HARDWOOD RECORD: I will appreciate it if you will give me the names of some mills cutting willow, as I have inquiry for export stock.—G. F.

Anyone manufacturing this stock and who cares to communicate with this correspondent may have his address on application to this office.—EDITOR.

About Hickory.

ASBURY PARK, N. J., Aug. 12.—Editor HARDWOOD RECORD: Can you tell us if hickory grown in some sections of the country is stiffer than that grown in others? If so, in which parts would the stiffest wood grow? Also, can you tell us what treatment is necessary to keep this wood from twisting out of straight after it is turned for whip handles, golf sticks, etc.? Any information you can give us along this line will be greatly appreciated.

I do not know that there is any particular difference in the stiffness of second-growth hickory attributable to the particular section in which it grows. Arkansas second-growth has the reputation of being as good as any, and today that is the real center of hickory production. If the wood is thoroughly and properly seasoned in the squares very little of it should twist out of straight after it is turned. The directions for properly piling oak dimension stock which you will find in an article on page 21 of the HARDWOOD RECORD of July 25 should apply to the piling of hickory. However, this inquiry is run in the mail bag to see if some reader will give some further information on the subject.

EDITOR.

From the Editor of Arboriculture.

CONNERSVILLE, IND., Aug. 7. Editor HARDWOOD RECORD: I have your paper of July 25 and have extracted from it your article on "Railway Ties, for September Arboriculture." Yesterday I received a copy of the Journal of Commerce, published in Rio Janeiro, containing a column article on my book, "Journal and Work," concluding with an extract from the HARDWOOD RECORD, endorsing the subject. The world is surely learning that arboriculture is an important subject and that the catalpa is a valuable tree. JOHN P. BROWN.

Sapodilla.

FORT SCOTT, KAN., July 29. Editor HARDWOOD RECORD: I am as much interested in the search for a substitute for hickory or the hoop-pole, as some people are for the north pole.

I notice in your journal of July 10, the article entitled "Woods in the Vehicle Industry," and I am very much interested in it, so far as it relates to a substitute for hickory in the manufacture of gear and wheel material for light vehicles. I have given this branch of the wood business considerable time and attention for two or three years. I have examined several species of timber on the Pacific coast, particularly, eucalyptus, which is receiving considerable attention just now and mentioned by Mr. Holroyd as a possible substitute. The forest of this wood which I have specially in mind, was first brought from Australia in very small seedlings, about fifty years ago, and planted on the hill sides near the Golden Gate by Rudolph Suro. They have grown

and flourished on the rugged mountain slopes around the city of San Francisco, in close proximity to the sea, and farther south along the coast, where the atmospheric conditions are right and frost unknown. Eucalyptus does not thrive so well, however, in other localities or higher altitudes. In fact, the conditions are so rare and the area so limited in which it flourishes that it can never cut much of a figure as a substitute for hickory, although some authorities on timber matters have thought that it might, but I wish to discourage the idea as being unreasonable. It is a quick growth hardwood but is much inclined to be limby, as it does not lose its branches early or while a sapling, as is the case with hickory. For this reason all the tree, except possibly, the very butt log, would so develop knots by sawing, as to render it worthless as a material from which to manufacture this one particular item of hardwood lumber, namely, light vehicle stock, and it is only in this connection that I am speaking. The forest of eucalyptus on the Suro estate, is doubtless the largest body of this kind of timber and contains the best specimens of it to be found in this country, and yet it is not being utilized for any commercial purpose except cord wood for fuel, and according to my judgment, the nature of the timber will bar it from ever being a practical substitute for hickory. I do not wish to be understood as condemning it, however, for it has its many good qualities and is a splendid tree and a very valuable part of the forests of the United States. The men who brought it from the far off land of its nativity and planted it on our shores deserve great credit. It is being tested, studied and experimented with quite extensively at present and is found to possess many desirable commercial qualities. The only fact to be regretted in regard to it, as mentioned above, is that the total area of country here in the states where it will grow is so small that it will not admit of it ever becoming a factor in supplying material for the vehicle industry even if there were no other obstacles in the way. With the new wood sapodilla, the conditions are radically different. We have it in almost unlimited quantities in all the tropical and semi-tropical forests in the countries surrounding the Caribbean Sea and the Gulf of Mexico, where it has grown for centuries untouched, still standing at our very door as it were, and within easy reach of our southern ports. Sapodilla or zapote is the tree from the juice or sap of which chicle, the basis of chewing gum, is extracted, and it is this tree that I think from its own peculiar merits, will finally be adopted and become generally used as a substitute for hickory. It is similar to it in every particular except color, being of a reddish tinge, as are most all other tropical woods, and in introducing it, it will so completely fill the bill that there will be no prejudice on the part of the consumer to be removed, and substitution will be easy when the manufacturer hits upon the right material. The natives of Honduras, Guatemala, and other Central American states invariably use it in making axe handles and other implements and they just as naturally look to it for these purposes as we use the hickory, and they tell me that it has been recognized by them for centuries, as being the most suitable wood for such purposes. I have examined the handles of axes used by the natives in hewing mahogany and chopping out logging roads and they are equal, if not superior, to hickory. Most all the logging camps use it for making ox bows, and I was told by one of the foremen of the George D. Emery Company that it was the best timber that could be gotten for that purpose, as it was springy, could be shayed down to a neat size and become smooth and polished by wear, still being strong enough to stand the pulling and jerking of the logging cattle for years, and it looks reasonable that wood with these qualities would be quite suitable for bending or manufacturing wheels and felloes.

There are locations where thousands of these trees stand in the forests in close proximity to water transportation, and generally speaking, they are superior in size and more symmetrical in proportions than American hickory. One of the principal features common to sapodilla, which would greatly decrease the cost of massing or accumulating the logs in large lots, is the fact that it grows in communities or tracts where a whole section of the forest is almost all sapodilla. It does not grow scattering with only an isolated tree here and there as is the case with mahogany, and for this reason the expensive item of road building in the jungle would be greatly reduced and short hauls would bring large quantities of logs to the river or lagoon

from where they could be floated down to the bar. On account of the weight, however, of this timber it would be impossible to raft it without some kind of floaters, but this difficulty can be overcome in various ways. Where the water is deep enough the natives bring down non-floating woods, such as logwood or lignumvitæ, by building cribs or pens of the cabbage palm logs from 12 to 20 feet long and 10 to 16 inches in diameter; the bottom of the crib being made of the same material. These palm logs after they have been cut for some time become dry and are hollow or full of air-tight compartments and are buoyant as an empty cask on account of their pithy nature. The whole craft is bound together with the vine in a wonderfully substantial man-

ner and the crib is then corded full of the short billets of the heavy woods and floated down to the bar or sea shore. They also bring down heavy woods in dories or canoes, made by hollowing out large mahogany logs. The sapodilla can be handled in this way and the only expense to the entire process would be the native labor, which is cheap and it is surprising what they can accomplish by their own crude methods, in fact, they generally do more work when allowed to use their own implements and ways than they do when required to adopt the tools and methods of the white man. The cost or royalty for the stumpage would be small, as there has as yet been no market for sapodilla.

—J. V. HAMILTON.

Proposed Handle Manufacturers' Association.

At the instance of several prominent handle manufacturers the following editorial was printed in the last issue of the **HARDWOOD RECORD**:

The Handle Industry.

The manufacture of handles is an industry of considerably more importance than it appears on first consideration. Under this generic term the line of production is exceedingly broad, including as it does fork handles, hoe handles, shovel handles, rake handles, broom handles, mop sticks, axe handles, railroad pick handles, coal pick handles, sledge handles, maul handles, adze handles, drift pick handles, hammer and other small tool handles. In the aggregate the consumption of hardwoods in this industry runs a long way into the millions of feet annually.

A portion of the handle product of this country is produced by an alliance of numerous factories under one general head—the so-called “handle trust”—but there are a large number of independent concerns. The prices of handles are largely controlled by this “monopoly,” and there are a good many people in this trade who contend that they are not at all in proportion to the price of lumber and of labor. They also contend that the rules for grading them should be radically changed, since they are the same today as they have been for the past quarter of a century, and when made were based on a better and more plentiful supply of timber than it is possible to obtain now.

For these reasons it is suggested by several manufacturers that it would be wise to organize a Handle Manufacturers' Association, with a view to securing a somewhat higher scale of prices, and also to reorganize the grading and inspection system of handles. It is suggested that a logical and just set of inspection rules could be formulated through conference between handle makers and handle buyers, the execution of these rules to be under the direct control of the proposed organization. The good results obtained in other lines of hardwood production by coöperative work are too well known to need extended comment. Hardwood lumbermen have their associations, veneer and panel people have theirs, wagon stock makers have theirs, and so it goes.

The **HARDWOOD RECORD** will be very glad to coöperate with the handle makers of the country in assisting them in the formation of an association, if the majority of manufacturers in the various lines involved deem it wise to form such an organization.

On Aug. 13 a reprint of this editorial and the following letter were mailed to nearly 800 manufacturers of all varieties throughout the United States:

Dear Sirs: We enclose you herewith reprint of an editorial from the **HARDWOOD**

RECORD of Aug. 10 which is self-explanatory. We have been solicited to assist in the formation of an association to take up the affairs of the handle industry of the country, and if it is the wish of the majority of manufacturers that this be done the editor of this paper will take pleasure in calling a meeting at Chicago during the latter part of September to perfect the plan and to assist in the work.

Will you freely express to me at your earliest convenience your ideas of the possibilities of good resulting from this movement and make suggestions concerning the conduct of the enterprise? If this proposed association receives sufficient support the **HARDWOOD RECORD** will make an active campaign, analyzing the present conditions of the trade, and attempt to interest every handle manufacturer to assist in the betterment of the industry.

Kindly give this matter the attention its importance deserves and reply promptly and fully. If you are not engaged in this line of trade do us the courtesy to so advise.

Thinking possibly you may not know the character of this publication we are sending you under separate cover a specimen number. Sincerely yours,

HARDWOOD RECORD.

HENRY H. GIBSON, Editor.

As will be noted by a perusal of the following replies to this letter, which are still coming into this office by every mail, the majority of the handle makers seem to be enthusiastic over the prospect of the formation of a handle association. Therefore, it is that in the editorial columns of this issue of the **RECORD**, the editor makes a call for a meeting for this purpose, to be held at the Great Northern Hotel, Chicago, at 10 a. m., Tuesday, Oct. 8.

FAYETTEVILLE, ARK., Aug. 20. —Editor **HARDWOOD RECORD**: We have your favor of recent date and note with pleasure what you have to say in your editorial in reference to the handle business. The time is ripe for a handle manufacturers' association not controlled by a trust. There should be a change made in the grading rules, also in prices, and there should be gotten out each year a uniform price list. While we make handles that will bring top prices in any market, yet we are in favor of an association if it can be organized and carried on in the right way, and should you call a meeting of the handle manufacturers soon for the purpose of organizing, advise us and the writer will try to attend. In the meantime each handle manufacturer should make up a set of grading rules as they think handles ought to be graded, and submit same to the committee on grades. Thanking you for the interest you are taking and trusting that your efforts will prove a lasting benefit to the handle manufacturers and yourself, we beg to remain, yours truly,

WILLIAM CHARLES GRIFFIN HANDLE COMPANY.

JONESBORO, ARK., Aug. 20. Editor **HARDWOOD RECORD**: Yours of recent date received enclosing reprint of editorial from **HARDWOOD RECORD**

of August 10. This is the most practical and businesslike editorial written on the handle situation that we have seen. The laws of Arkansas do not permit us to belong to an association, but we would heartily coöperate with you for the adoption of a set of new modern uniform rules for grading. This is almost a necessity and will save, besides, a tremendous waste—millions of feet—in our forests. The last grading list was adopted September 10, 1904, by the Handle Manufacturers' Association, but the largest manufacturer utterly disregarded the list adopted by it and others. Yours truly,

AMERICAN HANDLE COMPANY.

BIRMINGHAM, MICH., Aug. 20.—Editor **HARDWOOD RECORD**: Yours of a few days ago regarding association for handle manufacturers received. Think it is the only way the business will ever be made what it should be, and I have talked with some of our Michigan manufacturers and they are of the same mind. If I can do anything to help you make this success let me know. Very truly yours,

BIRMINGHAM HANDLE COMPANY.

NORWAY, ME., Aug. 19.—Editor **HARDWOOD RECORD**: Your circular letter regarding the formation of a handle manufacturers' association received. No doubt such a move would be a good thing for rake, hoe and long handle manufacturers, as the industry is mostly confined to the West, but do not think it beneficial to eastern makers. In this section it is mainly everybody for himself and no regard to competitors, particularly so with small manufacturers like ourselves; each must upbuild his own industry to the best of his ability, jealousy being the great drawback to unity in this line, there being no confidence in one another. We would like the views of other manufacturers in this section in this specific line, if you receive them. Yours truly,

NOVELTY TURNING COMPANY.

SEQUATCHIE, TENN., Aug. 19.—Editor **HARDWOOD RECORD**: Answering your circular letter with reference to formation of handle association, we have been identified with handle associations in the past and received much benefit. We will be glad to give any assistance possible in the formation of a new one, and wish you much success in the undertaking. Yours truly,

SEQUATCHIE HANDLE WORKS.

WHEELERVILLE, PA., Aug. 19.—Editor **HARDWOOD RECORD**: Your favor at hand. I am in the handle business, making a variety of round handles, such as broom, hoe, pruning shears, etc., any kind and shape, but only make broom handles to order, as the price is too low for profit. If a factory only made broom handles one could not get enough out of the handles to pay for the lumber; but we make our waste or short pieces into short handles, such as for wash brushes, feather dusters, pails and a variety of other articles. I would be willing to do all in my power to advance the price of handles, but the handle business is the same as all others. For instance, I was supplying one factory 15,000 per week at \$11.50, \$15.50 and \$18.50 per thousand, and some party sold the same company two carloads at \$8.50, \$11.50 and \$17. Now if there was an association that would keep such men in line it would greatly help the trade. Hoping you will succeed in adding much to the advancement of the handle business. Respectfully yours,

B. P. RAUB.

MEMPHIS, MO., Aug. 17.—Editor **HARDWOOD RECORD**: There is no such thing as a handle trust in the country, though a few years ago the handle makers did combine for the betterment of the business, but it soon went to pieces, and everyone now is for himself, with prices very little better. Recently, however, we understand that several of the larger concerns have advanced the prices of handles and have issued

a new price list which is about 42½ per cent higher than the 1904 list. If there is any combination or agreement we have not been advised. We think the advance is caused by the scarcity of timber and the scramble to get it between the handle makers, the rim men, the spoke men, the wagon makers, the sucker rod men and others. It might be a good plan to reorganize the grading of handles, but it should be done by the handle makers themselves, as they know what constitutes good timber, while the buyer does not, as a general thing. They will frequently take an all white handle for first quality and reject a really good piece of timber on account of a little red wood. Another thing the maker knows is the proportion of good handles he can get out of timber, and he is the best judge of the cost and therefore should be the grader and price maker. There are other considerations besides quality of timber that go to make values on handles, such as shape, size, style of finish, etc. If you can organize an association such as other branches of the industry have, it might be a good thing, but if you organize one like the one that has gone through the mill and come out \$29,000,000 behind, you would break all the handles and the makers, too.

Yours truly,

REES BROS. MANUFACTURING COMPANY.

CHICAGO HEIGHTS, ILL., Aug. 17.—Editor HARDWOOD RECORD: Your circular letter with copy of editorial received. With reference to starting a movement for a handle association, will say that we would not be interested in this, as prior to a year or so we were members of an association, and the results were far from satisfactory to us. However, we should be very glad to have you send us any information on this line that you may have, and would also like to have a copy of your paper. Very truly yours,

HARTWELL BROTHERS.

GREENFIELD, MASS., Aug. 17.—Editor HARDWOOD RECORD: Yours at hand. We believe in the association and meeting together of manufacturers in the same line and think the movement you suggest would be helpful to the trade.

Yours truly,

RUGG MANUFACTURING COMPANY.

MALDEN, MO., Aug. 17.—Editor HARDWOOD RECORD: Your circular letter received, and we think the step should be taken in regard to perfecting a handle manufacturers' association. Hope the meeting will be called some time in September. We will endeavor to have a representative present, and think the movement a good one; also that all the handle people will think the same except those that the "trust" own. Please find enclosed \$2 for a year's subscription to the RECORD. Thanking you for the active part you are taking, we remain,

Yours respectfully,

UNITED STATES COOPERAGE AND HANDLE COMPANY.

GALLEN, MICH., Aug. 16.—Editor HARDWOOD RECORD: In relation to the formation of a handle makers' association, we are pleased to endorse the movement and will endeavor to attend a meeting in Chicago for that purpose if advised of the date. Yours truly,

WOLVERINE HANDLE FACTORY.

FARMLAND, IND., Aug. 16.—Editor HARDWOOD RECORD: In my opinion the handle manufacturers should be in closer touch than at present. The grading of handles in our line is very peculiar and hard to get on a basis of equality, as hardly any two men see the same lot of handles alike. Considering the difficulty in buying timber and the wages paid, we should have a better price to be able to compete with other manufacturers using ash timber. Yours truly,

ASH & MILLS.

WARREN, ARK., Aug. 17.—Editor HARDWOOD RECORD: Noting your editorial in the HARDWOOD RECORD of August 10, in regard to the handle industry, wish to put ourselves on record as being in favor of your suggestions. We believe there should be a uniform system of grading and inspection. A system put into effect twenty-five years or more ago is not applicable to present conditions. If a reform in grading can be made we feel sure the question of price will soon be solved. We hope you will keep these questions before your readers until such time as the handle manufacturers "wake up" and organize. You may count on our support.

Yours truly,

WARREN VEHICLE STOCK COMPANY.

COOKEVILLE, TENN., Aug. 19.—Editor HARDWOOD RECORD: We are in receipt of your letter of recent date, also of reprint of editorial which meets with our views on this subject, and we extend our hearty cooperation in bringing about an organization of this kind. If every manufacturer of handles, especially hickory handles, could be made to realize the importance of such an association—which we think no doubt they will—there would be no trouble in getting them together in this matter, as no

business industry without organization can succeed. But unless all the manufacturers, both large and small, will endorse and cooperate in this movement, we are of the opinion that it will do no good. Under existing circumstances there are several radical changes that are necessary to be made in this business, which cannot be done by one or half a dozen manufacturers, but all must come together in one association, where we can discuss and exchange views on these matters and agree upon something definite to meet present conditions. Times change and circumstances change with the times; what suited in this business twenty-five years ago, or even ten years ago, does not suit conditions of today, yet we are hanging fire and dragging along in the old paths because of no power to change. We think all the manufacturers now see this and the time is ripe to meet and bring about the necessary changes to meet existing circumstances. The writer has been engaged in the manufacture of hickory handles for twenty-seven years and has seen it in all its ups and downs, but thinks this is the greatest down he has ever struck. While the demand is good the price is not in touch with the increased price in timber and labor, the cost of production is too high for the prices obtained for handles. I think all will agree on this—hickory timber is fast disappearing and growing scarce owing to the heavy demand for this class of timber, and the great draw on it by the handle, spoke, rim, wagon stock and other hickory users; the price has more than doubled in the last few years. We deem it foolish and unbusinesslike to be working up this timber with little or no profit to the manufacturer when a fair profit could be realized by an honest organized effort on the part of all the manufacturers. We see no other way this can be brought about except by a friendly association and understanding of all the manufacturers in this line. We do not believe in trusts and would not belong to one, yet we do believe in hearty cooperation, friendly feeling, association and proper understanding with all manufacturers in the same line of business. As requested, this expresses our views in the matter, and if we can be of further service to you along this line, command us. Hoping you will meet with success, we remain,

Yours very truly,

GREGORY-MAXWELL HANDLE COMPANY.

MEMPHIS, TENN., Aug. 19.—Editor HARDWOOD RECORD: Your circular letter of August 10 at hand, re handle industry. We note same carefully and would like to ask you what handle manufacturing company is making the effort to organize a handle association, that brought about this matter with you. The reason we would like to know is that the hickory handle manufacturers had an association for some three or four years, but it finally dwindled away to nothing, and one of the greatest reasons that it did not hold out was the fact that the members of it would not carry out their obligations, and one of the principal ones was the grading of the handles according to uniform grade, that was established by the association. We would be very glad indeed to have a representative at the meeting that you speak of and assist in bringing about the conditions that are so essential today to our welfare. You are correct when you say that the price of handles today is not in keeping with the price of lumber, and that the same rule for grading today has been in use for twenty years. This point of grading or classifying handles is a very important matter, and it is one that the writer has been hammering at for a long time. It is also the way that our largest competitors cut prices, selling handles according to the uniform list and discount, but brand handles as No. 2 and invoice them that, but furnish No. 1 goods. Of course the broom handles, shovel handles and some others would not interest us, as we are engaged in the manufacture of hickory handles exclusively. We would be very glad to hear from you again, and if you will keep us posted as to the progress made, would give some assistance in this line.

Yours truly,

CONSOLIDATED HANDLE COMPANY.

KALEYVILLE, ALA., Aug. 17. Editor HARDWOOD RECORD: Replying to your circular letter in reference to a handle manufacturers' association, we are satisfied that it would be an advantage. We are only running a small plant, but should you take any further steps in the matter we would like to be kept informed, and if the expense is not too heavy would probably be willing to take part in it. We suppose we have a fairly good run of timber here, but it is getting hard to get good timber at reasonable prices. Wages have nearly doubled and farmers want more for their hauling, so that the cost of production has gone up. Any further information will be appreciated, and we will try to reciprocate it. Thanking you, Very truly,

LAKEMAN MANUFACTURING COMPANY.

BLUFFTON, O., Aug. 20. Editor HARDWOOD RECORD: Replying to your circular letter in reference to organizing a handle manufacturers' association, beg to say that in our opinion such an organization would be a benefit to the makers.

The present prices paid by the "handle trust," which practically controls the industry, are below the prices of lumber, not considering the amount of extra work attached to making the handles. There are, however, many handle factories that are not equipped to saw lumber, and the result is that they will manufacture logs into handles that would net much more money were they made into lumber. I note that you expect to call a meeting in Chicago some time during September. Now we are not going to dictate to you where to hold it, but it seems that a place more centrally located in the handle manufacturing field would bring a better attendance to the meeting—Cincinnati, Indianapolis or Fort Wayne, as most of the handle factories are in Ohio, Indiana and Kentucky, with quite a number in Arkansas and Missouri.

Very truly yours,

THE BLUFFTON HARDWOOD COMPANY.

PUNICO, MO., Aug. 19.—Editor HARDWOOD RECORD: We are in receipt of your favor of recent date and note contents. The present condition of the handle industry is very unsatisfactory, and is almost the only industry of any magnitude that is without some kind of organization. As a consequence it is a scramble for timber at high prices, and a scramble for the market. Prices are cut so low that in many cases coming under the writer's personal knowledge handles have been sold for less than the cost of production. Another matter of vital importance to the industry is the matter of grading. We believe the present grading rules are bad and do not meet the conditions that prevail today. The writer will surely be glad to see the business placed on a better basis than exists today, and hope you may be able to accomplish something in the way you suggest, and at the same time not infringe in any way upon the laws. Will be pleased to have further information on the subject as you may have it to give out.

Yours very truly,

FULKERSON BROTHERS HANDLE COMPANY.

MILFORD, N. H., Aug. 20.—Editor HARDWOOD RECORD: Would be glad to know more of the subject under consideration and also to receive sample copy of the RECORD. Yours truly

W. E. PEIRCE & Co.

TIMPSON, TEX., Aug. 20.—Editor HARDWOOD RECORD: Referring to yours attached, we think that this is the thing that should be done, and would like to see steps taken to that end.

Yours truly, TIMPSON HANDLE COMPANY.

CHARLESTON, MO., Aug. 17.—Editor HARDWOOD RECORD: In reply to your favor of recent date, will say that we will be glad to assist in any way we can in the formation of an association which would better the interests of the handle manufacturers, all parties alike, as far as practicable. We realize the fact that handle manufacturers are not getting the benefit of prices, as other industries are, and we trust that there may be an alliance formed that will bring the manufacturers of handles closer together. We will gladly furnish you all the information and assistance we can. Trusting that you may succeed in the undertaking, we are,

Respectfully yours,

J. W. PUTNAM MANUFACTURING COMPANY.

SOMERSET, KY., Aug. 21.—Editor HARDWOOD RECORD: Your favor at hand and noted. We are not now in the handle business and have not been in it for the past two or three years, as we found ash in this section of Kentucky too scattering and brach for farming tool handles. Our experience in the handle business, however, leads us to think that it would be rather hard to form a combination that would stick. There is no doubt it would be a good thing for the manufacturers of handles to do so, as they could then get the grading rules where they should be, and also hold the price of the handles at a point where there would be a fair margin of profit all the time. The great trouble, however, is that the amount of capital necessary to go into the handle business is so small (\$3,000) that wherever a man starts there are others outside who see so much money in the business that they will get into it, which then makes a lot of poorly turned stock for the market which has to be sold at a sacrifice; it also makes an unnecessarily high price for the timber by the competition in buying. We have found all these things to be facts in twenty years' experience in the business.

Respectfully,

I. R. LONGWORTH COMPANY.

ADA, O., Aug. 17. Editor HARDWOOD RECORD: We have your very kind favor and have noted same with much interest, and are quite sure that your decision to line up the handle manufacturers is a step in the right direction, and one which we are quite certain will prove to be of mutual advantage. We are quite willing to help you in any manner we can. Prices of handles are not at all in proportion to prices of timber and timber supply. The rules of grading should be radically changed, as they are now the same as for the last twenty-five years, and

were at the time based on better and more plentiful supply of timber than we are possibly able to obtain now. This would be one suggestion we would make; another would be to have an independent inspector for both buyer and maker and under the direct authority of the association to be formed. Other suggestions, no doubt, would be offered by others, so that if the handle

manufacturers could only be gotten together in an organization, there would be no end of good accomplished for them. Please feel at liberty to ask us any questions you may wish to and will be pleased to answer them to the best of our ability. Thanking you for your interest.

Yours truly,
GEORGE H. KEMPHART & SON.

News Miscellany.

The Hoo-Hoo Meeting.

All is now in readiness for the Great Hoo-Hoo annual, which is to be held at Atlantic City Sept. 9, 10 and 11, and the general and subcommittees can rest from their arduous labors with the certainty that their plans will materialize to a nicety, and that they have done all in their power to make both the business and entertainment features a "howling success."

The attendance promises to be larger than ever, and accommodations will be plenty and as good as the most fastidious can desire, since Atlantic City is famous the world over for its fine hotels. The business sessions promise to be of particular interest, while an abundance of special entertainment has been provided, although one does not have to search for amusement on even the most ordinary occasion, in Atlantic City.

The program is announced as follows, subject to change, however:

SUNDAY, SEPT. 8.

10 a. m. Annual assembly of Osirian Cloister.
3 p. m. Initiatory ceremonies of Osirian Cloister.

MONDAY, SEPT. 9.

9:09 a. m. Annual meeting called to order on the Steel Pier by Snark A. C. Ramsey of St. Louis, Mo. Address of welcome by Mayor Franklin P. Stoy and response by W. E. Barnes of St. Louis, Mo. Welcome on behalf of Eastern Hoo-Hoo by Supreme Arcanoper John L. Alcock of Baltimore, Md., and response by Supreme Junior Hoo-Hoo Wallace W. Everett of San Francisco, Cal. Snark's annual address, Scrivenor's annual report and appointment of committees.

3 p. m. Surf party on beach near Steel Pier.
7 p. m. Annual concatenation in assembly room of the Hotel Islesworth.
10 p. m. Smoker and high-class vaudeville show.

TUESDAY, SEPT. 10.

10 a. m. Business session on the Steel Pier.
2 p. m. Trolley ride to Ocean City on Shore Line.
8 p. m. Banquet of Osirian Cloister members and ladies.
8 p. m. Theater party on Steel Pier.

WEDNESDAY, SEPT. 11.

10 a. m. Business session on Steel Pier.
2 p. m. Election of officers. (Special order of business.)
3:30 p. m. Special trip to the fishing banks on the auxiliary steam yacht Mermaid.
8 p. m. Ceremony of embalming the Snark.

The headquarters for officers will be at the Hotel Islesworth, which has set apart a fine hall for the concatenation and smoker. Monday evening the ladies accompanying visitors to the meeting will be entertained with a musicale at the Hotel Chalfonte.

Scrivenor Baird announces that the Trunk Line Association has turned down the application for one-fare rate, the best they will consent to do being one and one-third fare on the certificate plan. This, Mr. Baird condemns, on the ground that people will not bother with certificates when there are such low rates to the extent at Jamestown. He strongly advises that all take care of themselves with these exposition tickets or buy mileage, saying he believes every man who goes to Atlantic City on a certificate ticket will be disappointed, as they

are a snare and a delusion, and the requirements of the roads, regarding numbers using them, etc., are so complicated.

Atlanta and Little Rock are strongly urging to be selected as the next meeting place for Hoo-Hoo. A handsome souvenir booklet is being made ready, to serve as a reminder of the royal good time which will surely come to every member who attends the concatenation.

A Modern Dutch Oven Furnace.

Many operators will be interested in knowing that, according to a leading manufacturer, "Dutch oven troubles are a thing of the past." Quinn & Co. of Cincinnati, O., are manufacturing a flat-top Dutch oven furnace for saw and planing mills which they believe has no equal for burning sawdust, shavings and refuse. With this contrivance there is no archwork to fall in, no high-priced brick masons to pay and no danger of a plant being closed down for repairs, as it is absolutely impossible for the flat top to fall in.

Two or more boilers can be placed in one battery without a division wall between the boilers or in the fire, and the efficiency of boilers may be increased ten to thirty per cent. All this means saving of brickwork, fuel, time and expensive labor, as any mechanic can erect the apparatus. The furnace insures equal combustion and an even flow of heat units, as none of the combustion room is taken up with the circle, as in archwork. Each row of special hanger tile is supported independently and can be repaired without interfering with the abutting rows. Quinn's flat-top Dutch oven furnace will last for years without repairs, and when they are necessary they can be made while the boiler is being cleaned. The first furnaces of this type built were operated day and night for over four years without repairs, so that they pay for themselves in more ways than one, and in a very short time.

In order to become more fully posted on what this furnace will do anyone interested need only send number and size of boilers, with pencil sketch, to Quinn & Co., at Cincinnati, and they will be glad to give further particulars and to make prices.

Dyewood Industry of Jamaica.

A number of American manufacturers have requested the United States consul at Kingston, Jamaica, to make a report and furnish some statistics in relation to the logwood and fustic industry of the island, and he accordingly writes that the Jamaican output of logwood represents about one-fifth of the world's supply.

The tree belongs to the natural order *Leguminosae*, and attains an average height of 20 to 30 feet, the trunk having a diameter of about 12 inches. The usual age when felled is ten years. The logs are prepared for the market by cutting to suitable lengths for convenient stowage, and by more or less completely removing the bark and inner layer of whitewood, which usually runs about half an inch in thickness. The roots of previously felled trees now also form an important article of export. The wood itself, when freshly cut, is of a handsome reddish-brown color, but the color produced from the wood in dyeing is a deep blue-black.

Formerly logwood was principally used for dyeing raw wool and woolen goods, but since the introduction of aniline colors, many of which have replaced logwood for blacks and allied

shades, causing a falling off in the demand for the wood, it is in great demand in the leather industry, for which it seems peculiarly adapted. There are also a number of uses for it in textile dyeing, for which aniline colors have not proved their superiority.

For very many years logwood was exported from Jamaica only in its crude state, but within the past few, factories were established there for the purpose of extracting the coloring matter from the wood and exporting it in casks to the United States, Great Britain and Germany, where it meets with ready sale.

On the island are two concerns devoted exclusively to this industry, one of which began operations about a year and a half ago, upon local capital. For the year ending June 30, 1906, the company exported to the United States \$205,293 worth of logwood extract, and in addition it made large shipments to Great Britain and Germany. The other dyewood extract factory is located at Lacovia, another important logwood center. It is controlled by English capital. Since its establishment the consumption of logwood has materially increased, as have prices. The total quantities exported from the island for the years 1902, 1903, 1904, 1905, and 1906, were respectively 36,875, 42,184, 30,005, 29,511 and 17,512 tons.

Another dyewood known to botanists as *Morus tinctoria*, commonly called fustic, is grown in Jamaica and is the source of a bright yellow dye. It is used very largely in producing the kaki shades upon cotton and wool. The exports of this wood run into the thousands of tons annually.

Notwithstanding the continued advances made in coal-tar colors and the persistent attempts to produce dyes that would replace the natural colors, the shipment of the above-mentioned woods forms an important and increasing factor in the trade of Jamaica.

A Common but Undesirable Condition.

Many mills with ample machinery and an engine and boilers of ample size have to shut down occasionally because steam gets low. In some cases this happens so often as to materially reduce the capacity of the plant; and it is always expensive and demoralizing. The remedy is to introduce a forced draft.

There is manufactured by a well-known Michigan house, a blast grate that, according to the testimony of users, adds twenty-five to fifty per cent to the capacity of a boiler, and therefore puts an end to this condition of affairs. This grate is sold with the written understanding that the user may have thirty days in which to thoroughly test it. If he concludes it is not a profitable investment—being himself the sole and undisputed judge—he notifies the company that the outfit is subject to its order, and the transaction ends, the company paying the freight both ways. Thus the purchaser takes no risk whatever.

The Gordon grate has been on the market for sixteen years, and there are 5,000 sets in daily use. It can be applied to any number of boilers, from one up, and is adapted for either plain furnaces or ovens. No change in the construction of a furnace is necessary; except to make an opening through the wall or walls for the pipe, not a brick need be disturbed. There is no difficulty in starting up a fire when the blower is idle, and no objection to so doing. The grate saves labor in firing, and is exceedingly durable.

It would certainly appear that operators who have trouble from lack of steam would do well to take the matter up with the Gordon Hollow Blast Grate Company of Greenville, Mich.

The New Forestry Policy Bearing Fruit.

The fact that the government's work to preserve what remains of America's great forests is bearing fruit is strikingly shown in the report brought back to the University of California

at Berkeley by one of the college men who has been working in the Shasta region this year. The territory was so carefully watched and obedience to the regulations so strongly demanded this year that only one fire was started in it. This did little damage.

Such a report as this is in decided contrast to those which it has been the misfortune of the country to bear in past years. An interesting example of the safeguards which are now being thrown around the forests is the forest telephone service, which covers mile after mile of the timber lands, allowing a few inspectors to do a great deal of work in a short time and still do it thoroughly. The government deserves every bit of support that the nation can give it in this great task, and it may be said to the great credit of the state of California that her people have stood decisively for the new administration of forestry affairs.

What Is Doing.

The HARDWOOD RECORD is in receipt of a very neat little booklet bearing the above title, setting forth a number of reports of general interest, on various kinds of timber land, prepared by C. A. Schenck & Co., consulting forest engineers of Biltmore, N. C. For clearness and conciseness these reports are remarkable, and anyone who knows the reputation of the house by which they were prepared can vouch for their thoroughness and accuracy.

In an original and effective little preface, Dr. Schenck writes: "We claim to command unparalleled experience in practical woodcraft. Your knowledge plus our knowledge is double knowledge. Why not obtain double knowledge? Our knowledge is yours for the asking. We have studied diligently, and having worked faithfully for many a year, we dare say that we know the forest; that we know the methods of valuation, exploitation, development, surveying, engineering, cruising. Many of these methods have been devised by us. We promise to supply all that we can, and we can supply all that we promise. We assist you as expert advisers and not as commission brokers. Stop right here! You need not read any further if you know what is coming: We cannot be bribed! We want to be paid by you for our actual service as cruisers, engineers, surveyors, experts, foresters, estimators. It is wise to be good when you must, and it is good to be good when you mustn't!"

The little book is full of these and other trite sentences, together with a comprehensive report on certain longleaf pine lands, dilating on the possibility of agricultural use, turpentine, ranching, stand of timber, quality of timber; also a report on hardwood lands, answering the following questions, put by the owner: What is the stumpage on my land? What is the topography and its accessibility? What is the expense of lumbering, and what is the value of my timber? What damage (which I may recover from the . . . railroad responsible) has a certain fire done to my property? What is the aggregate value of it? A report on hardwood bottoms subject to overflow deals with the logging proposition and with the stumpage separated by kinds; one on yellow pine, cypress and hardwood lands gives the total stand of timber on a tract of 78,840 acres; in each case the charge for the service is given. A copy of the booklet will be forwarded on application, and should be of interest to all stumpage owners.

Sale of Michigan Timber Land.

Bay City papers announce the sale of 2,600 acres of hardwood timber land in Montmorency county, Michigan, by the W. H. White Company of Boyne City to the Kneeland-Bigelow Company of Bay City. This is a tract remote from the main holdings of the former concern and lies east of the Mackinac division of the Michigan Central. The principal holdings of the White company are west of this division. The company

originally intended to tap this timber with its Boyne City & Eastern Railroad by building a line through Alpena, but has abandoned the project for the present, and has made the terminal of its road its junction with the Michigan Central. The Kneeland-Bigelow Company will log this timber over the Michigan Central and transport it to Bay City for manufacture in its mills there.

The W. H. White Company has well toward 45,000 acres of uncut timber land between Boyne City and the line of the Michigan Central which will supply its big and varied manufacturing and remanufacturing plants at Boyne City with stock for many years to come. It is estimated that the timber sold to the Kneeland-Bigelow Company will cut upwards of 25,000,000 feet. One particular feature of the transaction is noted—that it was a cash sale, the entire amount of money involved being paid over in a lump sum.

Miscellaneous Notes.

It is claimed that a comparatively new source of tannin has been developed in the palmetto, whose leaves contain the foundation principle in a form easily extracted. It is further asserted by experts that the employment of these leaves will be found more economical than oak and hemlock bark.

The steamer Montauk left Vera Cruz, Mex., August 19, after unloading the biggest cargo of railroad ties that ever came to that port in one vessel. The consignment consisted of 72,000 cedar ties from Canada for the Mexican Southern Railroad.

J. W. Henney, of the Henney Buggy Company, and O. P. Wright, both of Freeport, Ill., will form a company there and build a new vehicle plant.

The Wilkinson Lumber Company has been incorporated at Cary, N. C., with \$25,000 capital stock, to establish a lumber plant at Cary and operate a planing mill at Dunn. F. E. Grey is president and T. F. Wilkinson manager.

The McCormack Development Company has been incorporated at Carthage, N. C., with \$100,000 capital stock, to develop timber lands.

The Montezuma Lumber Company, incorporated at Montezuma, N. C., last month with \$25,000 capital stock, owns about 10,000,000 to 15,000,000 feet of hardwood, white pine and hemlock, and expects to contract all its work to portable mills. J. L. Lowe of Montezuma is treasurer and G. H. Mell of Kane, Pa., president.

In the construction of the North German Lloyd steamship, the Kronprinzessin Cecilie, the newest and finest of the floating palaces on the Atlantic, 42,000 cubic feet of teakwood, 70,500 cubic feet of Oregon and pitch pine and 19,426 feet of pine were used.

E. E. Carrier, secretary and treasurer of the Niquies-Lenoire Company of New Orleans, exporters of hardwood, is arranging to extend the company's operations in that territory. The company has purchased many hundred acres of hardwood along the Colorado Southern and has several stave making camps in operation.

Chicago capitalists have been in Mount Pleasant, Tex., recently and have purchased several thousand acres of fine timber lands near there; they expect to build a large veneer factory.

The Cadillac Veneer Company is sending out some very choice freight. One day's shipment recently was three carloads, one of handsome bird's-eye maple stock.

It is expected that the new Knight-McLean veneer factory at New Albany, Ind., will be completed and put in operation this year, giving employment to a hundred or more skilled operators.

The various saw mills at work in and around Stillwell, I. T., are shipping many carloads of hardwood timber to all parts of the country.

The American Veneering Company of Indianapolis has purchased three acres of ground near the Union tracks north of Fort Smith, Ark.,

on which to establish a plant. The company is capitalized at \$25,000 and will employ from twenty-five to thirty men. The company has a force of men cutting a quantity of gum timber recently purchased north of the city.

R. L. Dennison of Cherryvale, Kan., says that the Forestry Bureau has recommended that everybody in his region get busy planting Osage orange trees in order that there may never be "a famine in fence posts." He claims that this is never likely to occur, since he has invented a process for making posts out of shale, which will last a thousand years.

The Leonard Brush and Woodenware Company has been incorporated at Louisville, Ky., with a capital of \$9,000.

A. P. Huson, the new state deputy fire warden for King county, Washington, is touring that county and posting notices warning all persons from leaving lighted fires or consuming slashings without permits. Loggers will be required to have spark arresters on engines to avoid starting a fire from flying sparks.

A woods cruiser after inspecting a tract of timber forty miles north of Escanaba, Mich., estimates that one-half of the standing hemlock on 500 acres of land has been killed by porcupines. The district is overrun with the little animals, which in the early spring months of each year have clipped off the budding foliage, killing the trees, until now there is more dead than live timber on the tract.

An English contemporary says that the demand for Japanese hardwoods continues brisk and that the parcels already received appear to be giving general satisfaction. Much is being done there to improve the facilities both for transport and manufacture and the forests of Japan in spite of reports to the contrary are sufficient to last for many years. The average oak timber does not run to the dimensions of that grown in Europe and America, but it is very tough and well suited for heavy work. Some of the wood also is very beautifully marked and adapted for the best cabinet work.

The Edinburg Spoke and Bending Company has been incorporated at Edinburg, Va., to manufacture spokes, rims, felloes, etc. J. M. Solomon is president.

H. E. Clark and associates of Ben Campbell, Pa., have just purchased a tract of 15,000 acres of timber lying in Grayson and Smyth counties, Virginia, and Mitchell county, North Carolina. The syndicate headed by Mr. Clark also owns extensive timber interests in Johnson county, Tennessee, and Ashe county, North Carolina, and will, it is said, at once begin the development of the property on a big scale. This will mean the installation of a large number of band mills and the employment of an army of men. Several mills will be located in East Tennessee.

The way the timber supply of the United States is going can be realized from one item which is hardly thought of, and that is the manufacture of paper. There are, all told, 1,100 paper mills in the United States, producing \$200,000,000 worth of paper a year. They burn up 3,000,000 tons of coal yearly and shred 2,000,500 cords of wood into pulp. About 12,000,500 trees averaging nine inches in diameter are cut down to feed these paper mills.

All the forestry in Great Britain that amounts to much is done by the owners or managers of the great estates. There is no recognized school of forestry, which seems remarkable for a country which raises \$15,000,000 worth of merchantable timber and imports \$150,000,000 worth.

Forest fires have been blazing on all sides of Toulon, France, the past week and two forts were threatened. Troops made desperate efforts to control the fire, but at last report had secured little result owing to high wind.

Prominent New York financial interests have incorporated the Parker-Thompson-Veeder Company with a capital stock of \$100,000 and a surplus of \$25,000 to develop a 9,000-acre tract of timber land recently acquired in Burke county,

North Carolina. The company is incorporated under the laws of New York state, but headquarters will be at Morganton, N. C. Three mills will be set up on the property to cut the timber, which is principally white pine and poplar, and operations will commence about September 15. The company is composed of J. A. Parker of the banking house of J. A. Parker & Co. and H. E. Thompson of J. K. Farrington & Co., both of New York City, and J. B. Veeder of Valhalla, N. Y., who has been manufacturing lumber at that place for a number of years and who will have active charge of the company's operations.

The White Oak Lumber Company of Syracuse, N. Y., has been organized with \$25,000 capital stock to manufacture white pine, making a specialty of this lumber. The incorporators are J. K. Bramer, A. M. Mitchell, George Stanton, Lewis Bramer and F. L. Burdick.

The Western Tie and Timber Company of St. Louis, Mo., has sold 27,000 acres of hardwood timber lands near Harrisburg, Ark., to E. L. Real of Chicago, for \$800,000. The purchaser will establish a large hardwood manufacturing plant at Harrisburg immediately.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

Fred W. Black of the Fred W. Black Lumber Company is at Nashville, Tenn., superintending the work of getting the company's new veneer plant at that city in shape for operation. He states that things are in readiness, including the installation of engines and boilers, but that there has been difficulty in getting a sufficient water supply by boring, and it may be necessary to pipe it from a stream at a considerable distance away.

E. F. Dodge, head of the P. G. Dodge Lumber Company of this city, has purchased the shed property of the bankrupt J. C. Smith Lumber Company at Nashville, Tenn. The building is 170 feet long by 77 feet wide. It will be used as a storage plant for the company's southern stock and as a distributing point for the east and north. This will fill a need long felt by the company and will be a great benefit in enabling it to supply its customers' wants promptly.

W. N. Kelley, president of the Kelley Lumber and Shingle Company, Traverse City, Mich., was in Chicago last week on business and was a welcome caller at the RECORD office.

The HARDWOOD RECORD was favored last week with a call from S. Spittle, timber merchant of New Southgate, N. London. Mr. Spittle accompanied the editor to Jennings, Mich., and spent two days reviewing the timber, lumber and flooring operations of the Mitchell Brothers' Company at that place. Mr. Spittle was accompanied to this country by his wife, who spent some time in London, Can. They sailed for home on the Celtic, August 22. A picture of the English gentleman will be found in connection with the white cedar article in this issue; he is shown standing beside the twin trees.

Lewis Doster, secretary of the Hardwood Manufacturers' Association, which recently moved its general offices to Nashville, spent last week among friends in this city.

Maisey & Dion, Loomis and Twenty-second streets, are sending out a unique little ad in the way of a card with bell attached, saying "We are ringing you up to tell you we are well equipped to take care of your hardwood wants in air dried or kiln dried stock; we have three thoroughly up-to-date sheds covering a space of 30,000 square feet, also dockage and private switch; both members of the firm take an active part in the business, all orders being filled under their direct supervision."

The Timber Trades Journal of London publishes under date of August 3 an interview with E. C. Mershon, of William B. Mershon & Co., the

Reichard & Bealer of Allentown, Pa., will set up an additional sawmill outfit in Lower Milford, where they have bought two tracts of land of twenty-four and thirty acres respectively. They have their mill near Big Rocks in operation and are sawing up oak, chestnut and hickory trees for railroad building and wheelwright's lumber. The members of the firm are George Reichard and Harrison K. Bealer.

E. C. Ingram of Jefferson, S. C., and others will establish a plant at Cheraw, S. C., for the manufacture of coffins and caskets for the wholesale trade.

It is reported that Robert Vestal and J. F. Schultz of the Vestal Lumber Company, Knoxville, Tenn., are planning the development of timber land in that vicinity, and will build sawmills.

J. M. Cartwright of Fort Wayne, Ind., and Frank Brewer of Angola, Ind., have purchased a tract of hardwood timber land near Lexington, Ky., which they will cut.

Dunbar & Welch have purchased oak and poplar timber lands at Parkersburg, W. Va., and will erect sawmills to develop same.

well-known band sawing machinery makers of Saginaw, Mich., who is taking a trip abroad for his health—business being incidental to it. Mr. Mershon spent some time in London, and intended visiting Brittany, Manchester and Glasgow on the way home. In the course of conversation he said that from impressions gained in England he believed that if that country ever lost her commercial supremacy it would be principally on account of jealousy between competitors. For instance, if a big manufacturer in England buys a new machine which is capable of turning out a larger amount of work than its predecessor, he keeps the information to himself for fear that, should his neighbor hear of his success, he would purchase one and again become a keen competitor. This method is bad for the machine trade generally. But in America there is a greater exchange of ideas, and though it may bring greater competition, it is of vast benefit to a nation, which, by the means of this exchange, speedily finds where the best is to be obtained and what it is wise to discard.

A Chicago real estate broker was surprised the other day to receive a call from "Indian Joe" Schwartz, whom he had befriended when the latter was a stable boy, years ago, and given \$20 to reach his native West, forgetting the incident as soon as it was closed. But the Indian boy returned, a lumber magnate, redolent with diamonds and fat "wads" to pay the debt, with interest. Mr. Schwartz now owns 10,000 acres of choice hardwood and mahogany forest land in Santo Domingo.

Ed F. Dodge of the P. G. Dodge Lumber Company, well known hardwood lumber operators of this city, is spending the summer vacation period at Green Lake, Wis.

While the big lumber schooner, A. N. Luckey, carrying a cargo from the Escanaba Lumber Company at Masonville, Mich., to the Estabrook-Skeele Lumber Company of this city, was being towed through the Chicago river last week, the line parted and the schooner swung into the shore. About 200 people were standing on the abutment but made their escape from the jib boom in time, though it crashed up through the rock and dirt and to the sidewalk, where it broke off. The schooner, thus released, was captured before it drifted into the bridge, and further trouble was averted.

Charles Miller of Miller Bros., wholesalers and manufacturers of this city, has returned from a business trip to the company's southern operations at Macon, Miss.

W. E. Trainer of the Trainer Brothers Lum-

ber Company has returned from a visit to the Memphis market.

J. M. Schultz of Schultz Bros. & Cowen is spending several weeks at Mullet Lake, Mich., with his family. A. J. Schultz will remain with them for a couple of weeks. Meanwhile H. V. Richards, their Indiana representative, is assisting to care for the business.

Thomas E. Wilce of the T. Wilce Company, manufacturers of hardwood flooring, is spending his vacation near Empire, Mich., from which place E. Harvey Wilce has just returned, after a month's rest.

T. S. Estabrook of the Estabrook-Skeele Lumber Company has been visiting a plant at Gould, Ark., in which he is interested—the Newhouse Mill & Lumber Company.

R. H. Fenn of the Fenn Brothers Company, Memphis, spent a couple of days in the city last week.

H. S. Hayden, the well known lumberman of the Railway Exchange, received a five-foot alligator the first of the month, shipped him by a friend in Alabama. Inasmuch as the building has no zoo connected with it, Mr. Hayden turned the "critter" over to the Lincoln Park institution.

M. F. Rittenhouse, president of the Rittenhouse & Embree Company, left the city August 14 for Detroit, where he boarded his handsome yacht "Onward" with a party of friends, who will cruise with him through Lake Huron to Mackinac Island and down the shore of Lake Michigan. This latter part of the voyage will be taken with Mr. Rittenhouse himself at the wheel. The yacht is 70 feet long and a powerful boat as well as an exceedingly handsome one; it is beautifully finished in mahogany, with white enameled bathroom, complete electric light plant, and all the necessities as well as most of the luxuries to be had in modern travel. E. J. Ostrander of the same concern has been spending his vacation at Hamlin Lake, near Ludington, Mich., with his family.

G. M. Flynn, buyer of hardwood and pine lumber, located at Macon, Miss., made the RECORD a pleasant call the first of the week.

M. A. Hayward of M. A. Hayward & Sons, Columbus, Ohio, was a visitor to the Chicago market during the early part of last week.

C. W. Burt of Burt & Brabb, Ford, Ky., called on Chicago friends several days recently.

A. B. Ransom, manager of John B. Ransom & Co. of Nashville, Tenn., was a welcome caller on Tuesday last.

Frank K. Fee, the well-known white oak expert of the Fee-Crayton Hardwood Lumber Company, Newport, Ark., spent several days among his Chicago friends recently.

Sam Burkholder, still the youngest veteran lumber operator in Indiana, came up from Crawfordsville for a few days this week and paid the RECORD a call. Mr. Burkholder reports light stocks and business booming.

E. W. Benjamin of the Cadillac Veneer Company, Cadillac, Mich., called at the HARDWOOD RECORD office August 23.

The Cherry River Boom & Lumber Company, large manufacturers of hardwoods, spruce and hemlock, at Scranton, Pa., announces that it has secured the services of F. L. Cheney of Pittsfield, Mass., to represent it in the Pittsburgh district. Mr. Cheney is thoroughly familiar with spruce as well as with hardwoods, and the company is very much pleased at this new addition to its selling force.

Boston.

The George D. Emery Company has recently received a cargo of 869 cedar logs and 11,894 mahogany logs by the steamer Chelston. This steamer sailed from Cartagena and touched several ports on its way north.

All the tenants in the building located at 141 Milk street have been obliged to seek new quarters, as the firm of Stone & Webster have taken the entire building. This affected several lum-

ler concerns, who had their headquarters in this building. The following companies have been obliged to move: The William H. Gray Lumber Company, which will hereafter be found in room 504, 88 Broad street; W. D. Noyes at 33 Broad street; John Butler in the Postoffice Square building; John W. Drake at room 902, Oliver building, and the Perry & Whitney Company, 33 Broad street.

William Curtis of William Curtis' Sons Company, Roxbury, Mass., is making a trip to the Pacific coast, accompanied by his wife. His first stop will be Vancouver. Mr. Curtis is not combining business with this trip.

Charles Holyoke, who for some time past had an office at 141 Milk street, Boston, has removed to the Oliver building. Mr. Holyoke reports prices on hardwood firm, and states that he looks for a much larger demand for the fall trade.

Dudley D. Johnson of Holyoke, Mass., died July 30, at the age of 63 years. Mr. Johnson has been in the lumber business for the past 40 years, and up to three years ago, when he was obliged to retire because of poor health, he had conducted a business under his own name for 20 years. He leaves a widow and eight children.

The counsel for the California Sash, Door and Lumber Company of Fitchburg, Mass., has petitioned the Superior court for a dissolution of the corporation. This step was necessary as subscribers of stock failed to come forward with their money when it was demanded.

The New Hampshire Lumbermen's Association will hold a meeting in Manchester, N. H., in September, at which time definite action will be taken relative to alleged overcharges of freight rates by the Boston and Maine Railroad Company.

A new lumber company has been organized in Providence, R. I., with a capital stock of \$51,000 to carry on a wholesale and retail lumber business. This company will be known as the Frank F. Carpenter Company. The incorporators are: Frank F. Carpenter, George Fuller and Clifford S. Tower.

James A. Hurd of the James A. Hurd Lumber Company has been obliged to stay away from business owing to sickness.

The Massachusetts Wholesale Lumber Dealers' Association will hold its outing Aug. 21, weather permitting. The party will leave Lewis Wharf, Boston at 1:30 p. m., for the Corinthian Yacht Club, Marblehead.

J. J. Mead of the Mead & Spear Company, Pittsburg, Pa., dealers in hardwoods, was in Boston last week.

J. B. Buffum and E. B. Shaw, formerly located at 141 Milk street, have taken a new office at 88 Broad street.

W. C. B. Robbins, manager of the Suncook Valley Lumber Company has closed his office at 88 Broad street. Mr. Robbins, it is understood, will take up business in an entirely new field.

George Cade of the George D. Emery Company has been spending his vacation on the coast of Maine.

F. B. Witherbee of the H. M. Bickford Lumber Company, Boston, has been spending his vacation at the Annapolis Basin, N. S.

New York.

The usual movement of crops together with special demands for cars being made in various lumber shipping sections has resulted in a car shortage being already felt by local shippers, who from advices at hand, look for a very serious car shortage during the fall and early winter. To that end buyers are being urged to get in their orders for fall wants immediately.

W. L. Sykes, head of the Emporium Lumber Company, Keating Summit, Pa., with branch offices at 1 Madison avenue, Manhattan, was a recent New York visitor. He reported business of very satisfactory volume and the several big plants of the company running full time.

S. F. Minter, the hardwood man of 1 Broadway, accompanied by Mrs. Minter, has just re-

turned from a visit to his old home in Matthews county, Virginia. Mr. Minter makes a specialty of glued-up hardwood stocks and reports business as very satisfactory.

R. W. Higbie, head of the R. W. Higbie Company, 45 Broadway, has just returned with his family from a brief vacation at Lake Cayuga, N. Y. While North he visited his new hardwood plant at New Bridge in the Adirondacks, and states that operations are proceeding along very satisfactory lines. The company now has on stock at its mill, a very choice run of maple, beech and birch.

Frederick W. Cole, 29 Broadway, is summering with his family at Seagate, L. I. He enjoys the close proximity of this point to New York and in view of his active business during the summer season, he is enabled to visit his office daily.

J. C. Turner, head of the J. C. Turner Lumber Company, 1123 Broadway, is on a trip with his family to Yellowstone Park and Pacific Coast points. His trip is purely one of pleasure.

F. L. Peck of the Lackawanna Lumber Company, Scranton, Pa., passed through the city on an extended auto trip.

R. L. Gilliam, who has just assumed charge of the new Philadelphia office of the W. M. Ritter Lumber Company, 1402 Land Title building, was a recent visitor in town looking over the market. His office will cater to the wants of the trade in the eastern markets and he will be assisted therein by a corps of seven competent salesmen. This company is manufacturing on an average of 100,000,000 feet of hardwoods and white pine this year at their various plants in the South.

The New York Lumber, Storage and Constructing Company was organized last week with a capital of \$25,000, to succeed to the business of the New York Lumber and Storage Company at 57th street and 11th avenue, Manhattan, recently liquidated. The lease of the old property and good will, etc., have been taken over by the new company, who, in addition to a continuation of the old line of operation, will make a specialty of lumber trucking in the local district.

Among the recent departures for Europe was that of H. S. Taft of the Owl Bayou Cypress Company, Cincinnati, O.

W. A. Ropps, who for some time past has been representing the Pennsylvania Door and Sash Company, Pittsburg and Philadelphia, Pa., in the local market, has resigned, effective Aug. 15. Mr. Ropps left immediately for a business and pleasure trip West and on his return will enter the wholesale sash and door business on his own account.

The wholesale hardwood lumber business of Herbert Mead, Jr., 20 East 42nd street, Manhattan, has just been incorporated by Mr. Mead under the style of the Mead Lumber Company, with a capital of \$25,000. The business will be conducted along the same lines as heretofore. The directors are Herbert Mead, Jr., and Clara C. Mead of Peekskill, and F. A. Camp of New York.

E. D. Dunlop of the Bay Ridge Lumber Company, Brooklyn, has returned from an extended pleasure tour of Nova Scotia, Canadian and Adirondack points. This company has just purchased a new yard site at 28th to 29th streets on 3rd avenue, Brooklyn, which will be utilized as a branch of their present yard at Fifth avenue and 65th street. A fine new concrete lumber shed has been constructed, which marks a new departure in that character of building in the local lumber trade.

Charles F. Fischer, C. F. Fischer Lumber Company and treasurer of the New York Lumber Trade Association, left last week for a week's stay with N. H. Walcott of the L. H. Gage Lumber Company, Providence, R. I., at Mr. Walcott's summer home at Quonochontaug Park, R. I.

F. A. Kirby, sales manager for the Cherry River Boom and Lumber Company was a recent visitor in the interest of business, going over

matters with Manager W. W. Welch at the local office, 1 Madison avenue. He reports trade as very satisfactory. The big mills of his company are running full time on a good volume of spruce and hardwood business.

A. A. Lydecker of the underwriting department of the Lumber Underwriters, 66 Broadway, is taking his summer rest in camp in the northern part of the state.

John J. Rumbarger of the Rumbarger Lumber Company, Philadelphia, Pa., was a recent visitor at the local office of the company, 1 Madison avenue, Manhattan. Mr. Rumbarger is one of the leading figures in the work of preparation for the entertainment of the Hoo-Hoo at Atlantic City next month, and stated that from the general wind-up of the plans in the hands of the various committees every indication pointed to a royal time.

Secretary E. F. Perry, National Wholesale Lumber Dealers' Association, is taking his summer vacation cruising on the northern waters of the Hudson river in his handsome motor boat with his family and a party of friends. Mr. Perry resides at Nyack, N. Y., right on the Hudson river.

The New York Parquet Flooring Company has been incorporated, with headquarters at 70 Manhattan street, Manhattan, to manufacture parquet flooring. The incorporators are L. G. Greer, M. W. Welch and L. L. Tompkins.

The Edwards Export and Lumber Company was launched at Jersey City last week, with a capital of \$125,000, to conduct a general export lumber business. The incorporators are J. J. Rodriguez, E. I. Burt and Theodore Rurode.

George H. Mell, wholesaler and manufacturer of Kane, Pa., was a recent visitor in the interest of business. His new operations under the style of the Montezuma Lumber Company in the vicinity of Bristol, Tenn., and the Mitchell Lumber Company of Swanannoo, N. C., are both running full time on hardwoods, spruce and hemlock products, which are marketed through the office of Mr. Mell at Kane, Pa. He has some choice oak on hand now and looks for a very fair volume of trade for the balance of the year.

Peter L. Wilber, for many years a prominent sash and trim manufacturer of West 42nd street, Manhattan, died at his residence last week at Fairhaven, N. J., in the 90th year of his age.

The Parker-Thompson-Veeder Company has been incorporated by well-known local financial interests, together with J. B. Veeder, who for many years has been manufacturing hardwoods at Valhalla, N. Y. The capital of the new company is \$100,000, with a surplus of \$35,000. It has just acquired a 9,000 acre tract of hardwoods and white pine in Burke county, North Carolina, which it will develop immediately. The parties in interest are: J. A. Parker of the banking house of J. A. Parker & Co., 37 Wall street; H. E. Thomson of J. K. Farrington & Co., bankers of the same address, and Mr. Veeder. The latter will be general manager of the company and in charge of the southern operation. Three mills will be immediately installed on the property and eighteen miles of railroad built from Morganton, N. C., which will be the southern headquarters, to Ravenscroft Falls, tapping the timber holdings of the company as well as a wealth of other available timber in that section.

E. L. Edwards, the prominent hardwood man of Dayton, O., accompanied by Mrs. Edwards and daughter, sailed on the Augusta Victoria for a tour of England and the continent. They will return the latter part of October.

The Crosby and Beckley Company, large wholesalers of hardwood lumber, with headquarters at New Haven, Conn., has closed its New York office at 1 Madison avenue. The company enjoys an extensive trade in hardwoods and has western offices at Columbus, O. Its principals are the controlling interests in the Holly Lumber Company of Pickens, W. Va., and the Douglas and Walkley Company of Drew, Miss., large manufacturing corporations.

Philadelphia.

On September 12 the Lumbermen's Exchange will resume its regular monthly meetings. Arrangements are about complete for the Autumnal excursion to the Gettysburg battlefield, Pa., and the Blue Mountain House, Md., on September 24, 25 and 26; from present indications there will be an appreciable turnout. Among the recent visitors to the Exchange rooms were: W. W. Brice, Pittston, Pa., and Eugene B. Nettleton, Marysville, Calhoun county, Florida.

Schofield Bros. report good business right along, consequently they are too busy to bother about trade conditions. R. W. Schofield is making a selling trip through the state and J. H. Schofield has just returned from an extensive trip through the western mill centers, where he has made some desirable contracts. They are pushing the work of installing machinery in the Saltkeatchie Lumber Company's mill at Ulmers, S. C., as rapidly as possible, and will soon have things in good running order.

Soble Bros. are among the hustlers, consequently, share in the general prosperity. John J. Soble is making an extensive tour of New York state and Harry I. Soble is visiting their mills and at the same time is on a general stock hunt through the South.

J. R. Williams reports that business has been a little off, but that August trading has brightened up considerably. Mr. Williams is gradually increasing his field and has just engaged W. D. Martin, formerly of Johnson City, Tenn., as salesman, to look after the New York state territory. Mr. Williams reports his hardwood department doing well.

The Philadelphia Hardwood Lumber Company states that business has been moving along steadily and that it regards the outlook as very satisfactory. H. N. Pattison of this concern is traveling through the mill sections of West Virginia looking for desirable stocks of hardwoods.

John W. Coles is satisfied with the improvement in trading of late and anticipates a good fall business. He recently engaged Gartley W. Wright as salesman, to look after the northern New Jersey field. Mr. Wright is well known in trade circles, as he was formerly with the Pennsylvania Door and Sash Company.

Henry H. Sheip Manufacturing Company is about to replace the old burned building at the northeast corner of Columbia avenue and sixth street with an absolutely fireproof structure of reinforced concrete and brick. It will be three stories high, with a basement, and will be equipped with a 30,000 gallon sprinkler tank. The cost will be \$75,000.

Joseph P. Dunwoody & Co. are not troubled over the lumber situation at this time. They report good inquiries coming in, and consider the outlook promising. Mr. Dunwoody states that the plant of Norva Land and Lumber Company of Wallacetown, Va., is rapidly getting into working order and they have turned out considerable stuff already. The steamship Chester, which for years plied between Philadelphia and Chester, having undergone extensive repairs recently, will now be operated in the coastwise trade by the Norva Land and Lumber Company.

Samuel H. Shearer & Son report trade conditions such as might be expected for the time of year; they look for brisker trading as the fall opens. William P. Shearer is making a business trip through New York. After which he will take a short vacation. Samuel H. Shearer leaves for the South on September 4, in which trip he will combine business and pleasure.

William M. McCormick of the Little River Lumber Company, Clearfield Lumber Company, Inc., and the Morehead and North Fork Railroad Company, is making an extended tour of the far Northwest. At the office they report business moving along smoothly and conditions satisfactory.

George Hartzell, aged 84 years, a retired manufacturer of furniture, died Aug. 12.

J. Gibson McIlvain & Co. report with the majority, good business for the season; they are

sanguine as to good fall trading. Hugh McIlvain is spending a month in the northern part of Maine.

Benjamin H. Brown, for many years of Brown & Woelper, lumber dealers, died recently in his 66th year. He was city treasurer of Philadelphia in 1857, and at one time was the owner of the United States hotel at Atlantic City, N. J.

William L. Torbert died at his home at Girard Manor, Pa., on Aug. 10, in his 79th year. Mr. Torbert for many years was extensively engaged in lumber operations at Girard Manor.

The Scranton Lumber Company, Scranton, Pa., object to acquire timber lands, erect, maintain and operate sawmills, etc., was incorporated under Delaware State Laws on August 13. Capitalization \$1,000,000. The incorporators are: John T. Porter, C. Sumner Woolworth, Arthur D. Deane, Charles P. Davidson and Fenwick L. Peck all of Scranton.

The Vermont Lumber Company was incorporated under Delaware state law on Aug. 14, capitalization \$1,000,000. The incorporators are G. Norris Heckscheer of Huntington, N. Y.; Fred A. Berthold of New York city and William L. Missimer of Wilmington, Del.

On Aug. 8 the Hechinger Bros. & Co.'s large chair factory in Baltimore, Md., was visited by fire causing a loss estimated at \$70,000.

The Dempsey Shipbuilding Company is building wharves and installing a large plant at the foot of Twenty-ninth street, East Camden, N. J. It is said to have several large contracts on hand.

Considerable American lumber of all kinds is more used in Spain, according to Consul L. J. Rosenberg of Seville, it being preferred to other foreign lumber marketed there. The market could probably be further extended he says, by using catalogues printed in Spanish, with prices in Spanish currency and measure in the metric system.

On Aug. 16, W. W. Nuss was appointed receiver for the Hawes-Laanna Company, toy and wooden novelty manufacturers, operating in Towanda and Laanna, Pa., with branch office in the machinery department of the Bourse building, this city, recently by Judge Staake. Mr. Nuss is president and treasurer of the concern. The application was made by a majority of the stockholders and merchant creditors to obtain an amicable adjustment of the corporation's affairs and to prevent the factories from being attached on three executions now in the hands of the sheriff. The business will be continued by the receiver. The liabilities were given as \$75,000, the assets, \$150,000. This concern is the successor to the James Hawes Manufacturing Company, Towanda, Pa., the Laanna Manufacturing Company, Laanna, Pa., and the Charles Northrop Company, Monroton, Pa. They have a sales office at 107 Liberty street, New York City.

The Burlington Chair Company of Burlington, N. J., capitalized at \$25,000, was incorporated under New Jersey laws on Aug. 19. The incorporators are Olop L. Peterson and Ray A. Peterson of Burlington and Pusey W. Jackson of Philadelphia.

The Cranmer Sawmill and Land Improvement Company of Bordertown, N. J., was chartered under New Jersey laws Aug. 19. Authorized capital \$1,500. Incorporators are: Jacob Holzbaun of Bordertown, Walter A. Cranmer and Howard J. Cranmer of Whiting.

The Pe Dee River Lumber Company of South Carolina obtained a charter under Delaware laws on Aug. 19; capitalization, \$50,000.

Baltimore.

The hardwood firm of Price & Heald, which has maintained a branch office at Memphis, Tenn., is about to abandon that field and expects to close its connection there at the end of the present month. The firm sent Gustave A. Farber, at that time a member of the house, to Memphis several years ago and he opened an office. An interest was also required in the J. W. Dixon Lumber Company, which conducted sawmill oper-

ations there. Mr. Farber withdrew some time ago to engage in business on his own account and in the absence of a suitable representative, the firm resolved to close the branch. Mr. Dixon will retain the sawmill as his share and will continue to run it.

Edward M. Terry, secretary of the National Lumber Exporters' Association is on a southern trip. He left Baltimore last week for a tour of southern cities, including Norfolk, Va., Bristol, Knoxville, Chattanooga and Memphis, Tenn., calling on members of the association and conferring with them on the car service problem, Liverpool measurement and similar matters. From Memphis Mr. Terry will go to New Orleans to consult representatives of the local association of exporters relative to matters on which co-operation is desired. He will be away about three weeks.

George M. Spiegle of Philadelphia, who is chairman of the special Liverpool measurement committee of the National Lumber Exporters' Association, has returned from a trip abroad. It was his intention to call a meeting of the committee in the near future, but in the absence of the secretary a postponement is likely.

Sentiment in Liverpool seems to be favorable toward meeting at least, in part, the demands of the American shippers, and it is thought that a satisfactory settlement of the difficulty can be reached without much trouble, though the somewhat aggressive attitude of a few of the exporters here has rather sharpened the temper of the brokers on the other side of the Atlantic.

E. Stringer Boggess of Clarksburg, W. Va., one of the supreme nine of the Concatenated Order of Hoo-Hoo, was in Baltimore a few days ago on the way home from a southern tour and while here he conferred with local members about the coming annual at Atlantic City. Mr. Boggess is prominently mentioned as a candidate for the office of snark of the universe, and he had selected John L. Alcock of Baltimore as his campaign manager. The many friends of Mr. Alcock think he should be the next snark and are booming him energetically for the place. This boom, while not authorized by Mr. Alcock and for a time discountenanced, put him in a peculiar position, and though not seeking the honor, he feels that he must discontinue to act as Mr. Boggess' campaign manager. The Baltimore delegation to Atlantic City is prepared to work hard for the election of Mr. Alcock and will go to the concatenation with that purpose in view. The delegation will include forty to fifty men.

The Croft Lumber Company has been organized at Cumberland, Md., with a capital stock of \$100,000. It will develop a tract of timber near Pickens, W. Va., estimated to contain about 60,000,000 feet, largely hardwoods, and mills are to be erected on the tract. The officers of the company are: President, J. H. Henderson, Pittsburg, Pa.; vice president, George D. Browning, Friendsville, Md.; secretary, P. Clarence Barnes, Cumberland, Md.; treasurer, U. N. Bond, Bond, Md.; attorney, Albert A. Doub, Cumberland. In addition to these the board of directors includes Dr. Robert A. Ravenscroft, surveyor of the port of Baltimore; S. A. Kendall and J. L. Kendall of Pittsburg.

D. Price of the Price Hardwood Company and interested in the newly organized Chattanooga Lumber Company, which has acquired a tract of timber near Madison, S. C., on the main line of the Southern railway and is erecting a mill there, has gone down to the place to look after the work of construction and attend to other details. The plant is to be in working order about the middle of September, and will have a capacity of about 35,000 feet per day.

William M. Burgan, president of the Baltimore Lumber Exchange and a large operator in cypress, has returned from a vacation of several weeks spent at Ocean Grove, N. J. He first went to Yellowstone Park and other points of interest in the West and concluded his holidays at the seashore. He was much benefited by his outing.

E. E. Price, an exporter of hardwoods, with offices in the Continental Trust building, is

spending a vacation of two weeks or so at Atlantic City, taking advantage of the quiet in the export trade to absent himself from the office.

Daniel MacLea of the Eisenhower-MacLea Company has bought a large lot on Charles Street avenue and will erect a fine suburban residence for his own use thereon.

Pittsburg.

E. B. Hamilton of Hamilton Bros. has been down in West Virginia looking up stocks at the mills. He reports a good trade, with manufacturers and looks for a steady demand for hardwoods this fall.

The Pittsburg Hardwood Door Company, which handles the famous "Korelock" door of the Paine Lumber Company, Ltd., is doing a rushing summer business. Secretary J. C. Scofield says the company now has a stock of \$75,000 and that it is building up a splendid trade in the big manufacturing towns of western Pennsylvania and Ohio.

The Croft Lumber Company, recently formed at Cumberland, Md., has enlisted the cash and energies of several Pittsburgers. J. H. Henderson, secretary of the Kendall Lumber Company, is president of the new concern and J. L. and S. A. Kendall are on the board of directors. The other incorporators are R. A. Ravenscroft of Oakland, Md.; G. D. Browning of Friendsville, Md.; A. A. Doub and P. C. Barnes of Cumberland. The company has a capital of \$100,000 and will establish a big mill near Pickens, W. Va., which will probably be in operation by Oct. 1.

Two other new West Virginia corporations are the Atlas Lumber Company of Minneapolis, Minn., and the Laurel Creek Lumber Company of Weston, W. Va. The former is capitalized at \$250,000 and has these incorporators: M. C. Van Dusen, C. M. Harrington, Frank M. Mann, Gustav F. Ewe and A. G. Moritz, all of Minneapolis. The latter concern has a capital of \$25,000 and will operate in Webster county, West Virginia. It is backed by Lloyd Rinchart, W. W. Brannon, Lloyd Beighley, C. W. Pinchart of Weston and E. A. Rinehart of Belington, W. Va.

The Crescent Lumber Company has had much difficulty in getting enough locust posts to meet its demands lately, because of the harvest season and the scarcity of good labor at the mills. It is on the lookout constantly for desirable small tracts of hardwood timber and has been cutting off some choice oak in eastern Ohio.

The Auglaize Coopers Company of Minster, Ohio, is a new concern with a capital of \$10,000. Its members are W. E. Mack, D. C. Dunn, H. M. Wilhelm, William H. O'Connor and L. Hess.

The Mead & Speer Company made a cut of over 1,000,000 feet of lumber in July at its plant at Strange Creek, W. Va. Its correspondence indicates a better state of feeling among large buyers and foreshadows a steady resumption of buying in the fall.

The Webster-Keasey Lumber Company is cutting about 27,000 feet a day at its plants in Indiana county, Pennsylvania. A good part of this is piling and railroad stock. Recently the company secured a large order for ties 3x5x5, which are especially for use in the coal mines of western Pennsylvania.

The Buckhannon Lumber Company of Wenchton, W. Va., will have big mills in Upshur county, West Virginia. Its capital is \$30,000 and its members are Edward R. Buckhannon, A. A. Donaldson and G. A. Kesels of Lorain, Ohio; U. G. Young of Buckhannon, W. Va., and H. B. Young of Arlington, W. Va.

The Union Lumber Company has been organized at Donora, Pa., with a capital of \$10,000. George M. Seaman of Allegheny, Pa.; Edward B. Hamilton of Hamilton Bros. of Pittsburg and Leetsdale, Pa.; William Herbert, Jr., of Pittsburg; Charles S. McCloskey of Charleroi, Pa., and Erastus E. Bralnerd of Wilkinsburg, Pa., are the promoters.

The Markel Timber and Land Company of Chicago has been chartered in West Virginia with a capital of \$100,000, of which \$25,000 has been paid in. The incorporators are C. T. Cornfield, G. W. Smart, H. B. Meeks and L. L. Fowler of Chicago.

W. A. Clay of the Clay-Schoppe Lumber Company was quite badly injured last week by his horse taking fright at an automobile and tramping him. The company is putting on a larger crew at Ligonier, Pa., and is preparing to do a big business this fall in hardwood and piling. Over twenty cars of the latter have already been sold this month.

J. S. McNaughton of the L. L. Satler Lumber Company is back from quite an extended stay at the company's big operation at Blackstone, Va. It is cutting 1,250,000 feet of lumber a month. This comes to Ohio and Pennsylvania points mostly, freight rate there giving the company a decided advantage over the eastern market. This concern is an exception to the general rule this summer, for it has been three months behind with its orders most of the time.

President W. D. Johnston and General Manager J. N. Woollett of the American Lumber and Manufacturing Company are both out of the city, combining pleasure and business. Its hardwood force is as well organized as any in the city and is making a big record in sales of southwestern stocks this month.

Things look encouraging to the J. C. Moorhead Lumber Company, whose operations in western Pennsylvania keep it pretty busy in spite of the midsummer season. Mr. Moorhead is getting his force thoroughly organized for the fall campaign and has made some notable advances in his field of operations since moving his general offices to the Farmers' Bank building in Pittsburg.

The Acorn Lumber Company is getting rooted in a way that leads one to believe it will develop in keeping with its hardy name. H. F. Dombhoff is president of the concern, which has offices at 519 Park building, in the midst of the "bunch" in Pittsburg. Mr. Dombhoff is no amateur in the lumber business, although he can not show any gray hairs. He served a long apprenticeship with the American Lumber and Manufacturing Company and then went to the old Nicola Bros. Company, now the Nicola Lumber Company, where he was assistant purchasing agent for two years. The past three years he was in the employ of the Cheat River Lumber Company and there gained a thorough knowledge of the "road." He will represent in Pittsburg the Brooks-Scanlon Company of Kentwood, La., and he has also lined up some splendid hardwood connections.

Buffalo.

The death on Aug. 9 of James W. Drynan, purchasing agent for the Hugh McLean Lumber Company and at one time correspondent for the HARDWOOD RECORD, was a shock to his friends and family. Mr. Drynan had dropped his duties at the office to take a short rest and was preparing to spend a little time on his farm in the southern part of the county and was cut off in the midst of his activities. He was a hard worker and was an authority on hardwood lumber, having had a long experience in this line. For eleven years he had been with the McLean's and previous to that time had been in the employ of John M. Scatterd & Son for a long term of years. Mr. Drynan was 55 years old and leaves a wife and daughter. His position as purchasing agent for the McLean Lumber Company has been temporarily taken by Mark Cummings of the office force of the concern.

As the mill which the Buffalo Maple Flooring Company has been building to replace the one recently destroyed by fire is about completed the offices of the company will be removed from the location with Montgomery Bros. on Elk street back to the mill. The mill has been operated in part right along, but it will be in condition to run at full capacity very soon.

A. Miller is finding a good field for basswood and brown ash in Canada and is filling up his yard from that and other sources as fast as possible, always carrying everything in the hardwood line.

The working force of Beyer, Knox & Co. has been lessened a good deal of late by the illness of J. F. Knox, with ague. He is much better now and the wheels go round again with full vigor.

H. S. Janes is staying out of the south country this summer and breathing the air of Lake Ontario. It is reported that it is awfully hot in the Mississippi valley this summer, but the mills of the Empire Company down there are active.

The new table factory of the Standard Hardwood Lumber Company is already so nearly swamped with orders that an addition is being put on to increase its capacity. It was started this season.

Scatherd & Son are doing pretty good work turning out oak lumber at the Memphis mills, but Manager Hopkins always speaks of the supply as much short of the demand.

T. Sullivan & Co. have moved their offices from 50 Arthur street to Niagara and Arthur streets. Business was not interrupted by the moving.

G. Elias & Bro. have quite a number of contracts for supplying timber, mostly oak, to the builders of the Erie barge canal, and generally find the season's business, yard as well as mill and box factory, very good.

O. E. Yeager has gone to Atlantic City to look over the ground before the Hoo-Hoo annual there next month. His yard is always well stocked, as Mr. Yeager has a knack of finding enough of all hardwoods to keep up a full assortment.

J. B. Wall is back from his automobile trip to Pittsburg. The journey was a fine one, though, he says, it seems that the Pennsylvania hills always go up and never go down. The yard of the Buffalo Hardwood Lumber Company is well stocked.

The Hugh McLean Lumber Company is inclined to complain of a shortage of oak in yard, though quite the usual amount has been sold this season. All the oak mills of the company are doing good work.

I. N. Stewart & Bro. are getting hold of some good walnut as well as cherry and oak and are always a trifle long on chestnut these days, which does not always mean an assortment, but a fair showing. Chestnut is hard to get and it goes fast.

F. W. Vetter reports a big trade in ash. He has always been pretty close to the supply of that lumber and buying means selling in that wood these days.

The Buffalo lumbermen may be trusted to choose a fine day whenever they go out a-pleasuring, whether as an exchange or a Hoo-Hoo party, but there were two excursions badly disappointed on the 20th by a bad shower that came up shortly after noon. The White Pine Association struck it at the Country Club and the Hoo-Hoos were driven off the field at Eagle Park on the regulation trip around Grand Island. Two attempts were made by the Hoo-Hoo to play the game, but three half innings, with a run in each half, ended all but indoor sport. The day was made good so far as completing the trip was concerned, but it was a great disappointment, for everybody was ripe for a scrimmage on the diamond. Usually the Hoo-Hoos play two games on their round and they felt like an heir cheated of his inheritance, but they danced, sang and bowled just as if they had never heard of baseball or a sunny day for the annual trip. O. E. Yeager and M. M. Wall, who are regular attendants, were occupied at their offices, while others in their employ took in the outing, and the songs went a trifle lame because M. S. Burns was not there. Still it was a good outing to enable J. B. Wall at the second meal to inquire in his usual tone of voice: "Are we down-hearted?"

Incidentally it was learned that the members who will attend the Hoo-Hoo annual at Atlantic City are likely to be Vicegerent Blumenstein, J. B. Wall, M. M. Wall, A. W. Kreinheder, I. N. Stewart, J. J. Mossman, F. M. Sullivan and possibly A. Stewart and F. C. Beyer.

Saginaw Valley.

The sawmill of the Kneeland-Bigelow Company, which has been operated without intermission day and night for the past year, will shut down the last day of the month for ten days for an overhauling and such repairs as may be found necessary, when it will resume operations for another year. This company brings down a train load of saw logs every day from Montmorency county, where it has extensive timber holdings, and these have been strengthened by the purchase of 2,600 acres of land from the W. H. White Company of Boyne City, estimated to contain nearly 30,000,000 feet of timber, located contiguous to the company's other holdings. It was a cash deal. The company will operate four lumber camps this winter.

Frank Buell is running eight camps with a steam loader and crews aggregating 600 men who receive from \$28 to \$40 a month and chuck thrown in. He is now loading 100 cars with logs every day. He is putting in logs for several firms, including the Kneeland, Buell & Bigelow Company at Bay City, Bliss & Van Auken at Saginaw and a number of others.

S. L. Eastman reports that the flooring business is doing well with a fair movement and that prices are satisfactory. He is a little short of men at his plant, but is well satisfied with conditions. Mr. Eastman is one of the most extensive dealers in hardwood lumber and flooring in this section of the state. He usually carries several million feet at his plant and this season is carrying 8,000,000 feet at Bay City.

Walter D. Young, his wife and brother and the latter's wife landed at Liverpool last Friday morning. They wire a pleasant voyage and anticipate an enjoyable trip abroad. Mr. Young has given business very close attention of late and needs a rest. The party expects to be absent two months. Meantime the plant at Bay City is being operated day and night and reports business prosperous. The firm will manufacture 20,000,000 feet of hardwood this year, a good portion of which goes into flooring.

The Strable Manufacturing Company's new flooring plant at Saginaw is doing a nice business and working up a fine trade. H. A. Batchelor and his son Henry, and son-in-law, J. T. Wylie, are heavy stockholders in this company, and they are also the members of the Batchelor Timber Company, operating a sawmill at West Branch, cutting about 12,000,000 feet of hardwood annually. Just now the mill is sawing chiefly beech and maple. The mill was purchased a year ago from the Gale Lumber Company, was almost entirely rebuilt, many improvements made, including an electric lighting plant and dry kilns. When the company bought the mill it had 70,000,000 feet of standing timber to stock the mill and it has since added to its timber resources by purchase. The logs reach the mill over the Mackinaw division of the Michigan Central. West Branch is only a little over fifty miles from Bay City and the company has very satisfactory arrangements for transportation of both logs and the manufactured product.

Bliss & Van Auken report a steady and satisfactory business in flooring and hardwood lumber. Their plant has been operated with a full crew all season. The firm does a large retail trade in the valley and adjacent territory aside from the car trade outside.

The Mershon-Bacon Company at Bay City is cutting up a large quantity of beech and other hardwood culls into box material.

Handy Bros., also at Bay City, are cutting up some millions of feet of hardwood into box material.

The Bousefield Woodenware Works Company is using a number of million feet of basswood, ash and elm timber, but has been somewhat handicapped by reason of scarcity of labor.

The M. Garland Company at Bay City is furnishing the machinery for the new Richardson Lumber Company's mill being erected at Bay City, and which will begin sawing in October; also the machinery for the new mill of Keys & Warboys at Tower, Mich.

The new factory of the Saginaw Table Company of Saginaw is completed. It is 62x220 feet and is two stories high, with basement. It is built of white sandstone brick and cut sandstone trimmings. The company has orders enough on hand to keep the factory running at full capacity for six months.

Grand Rapids.

A. L. Dennis of Dennis Bros. has returned with his family from a fortnight's visit with friends at Ann Arbor and Chelsea.

Memories of the past were stirred recently at Grand Haven by the arrival of the schooner Forest, a three-master, with a cargo of 300,000 feet of lumber for the Challenge Refrigerator Company from the Georgian bay region. Formerly the harbor was filled with crafts of this description.

The Alaska Refrigerator Company of Muskegon has bought the factory and property of the Square Clothes Pin Company of Muskegon Heights, the consideration being \$10,200. The Alaska Company has turned out 50,000 refrigerators so far this year.

John Watkins has contracted to furnish the Advance Thresher Company of Battle Creek with 2,000,000 feet of lumber, mostly oak, with some elm and basswood. Mr. Watkins owns 5,000,000 feet of standing timber within twenty miles of Battle Creek and has also made large contracts to furnish railroad ties at 80 cents a piece. He will put in a small mill at Bellevue and another near Honor.

The new flooring plant of the W. E. Williams Company at Traverse City has been completed. Brick buildings now replace the frame structures destroyed by fire on March 9 last.

The Goshen Veneer Company of Goshen, Ind., has bought the saw timber in Getty's grove, north of Shelby, Oceana county, and it is being cut this summer.

Fred Olin and Joseph Willey have leased the mill site and water power at South Boardman formerly owned by S. A. Wellman & Co., and they are erecting a plant for the manufacture of lumbering tools, to be operated by water power.

Indianapolis.

A notable addition to hardwood circles of Indiana was made a few days ago when the Maley Hardwood Lumber Company was organized at Edinburg with a capital stock of \$50,000. The men interested in the concern, and who are mostly practical hardwood men, are Henry Maley, William Compton, James S. Grant, Fred E. Fansler and Milas Drake. A yard and mill will be established at once and all grades of hardwoods will be manufactured and sold.

Kingan & Co., local meat packers, are building a box factory that will cost \$20,000. It will be three stories high, of concrete and brick. Boxes for the company's own use will be manufactured.

The Southern Lumber Company of this city is building 22 houses on Tecumseh street that will cost \$26,400. About fifty houses will be built by the company this season. All of the houses now under construction are to be cottages costing about \$1,200 each, but later in the season several double houses, to cost from \$3,500 to \$5,000 each, will be built.

John W. Pumphrey, probably one of the best known lumbermen in the state, has organized a new company with a total capitaliza-

tion of \$109,500. He is associated in the companies with men who live in the towns where the various companies will be located. Yards will be located at Greenwood, Lebanon, Franklin, Colfax, Rushville, Danville and two yards at Shelbyville.

The Indiana Moulding and Frame Company filed articles of incorporation in this city Aug. 13 and will locate a plant at Laporte, where mouldings, cottage rods, curtain poles and picture frames will be manufactured. John B. Shick, Robert Pelan, Joseph S. Profant, Antone and Peter Fara have invested \$25,000 in the company.

John P. Brown, editor of Arboriculture and timber expert of Connersville, recently delivered an address in Richmond before the Horticultural Society of that city, in which he endeavored to interest farmers in forestry. He said the rapid disappearance of lumber for manufacturing purposes made it imperative that steps be taken at once to replenish the supply. He said farmers would find it as profitable to grow trees for cross ties, telegraph poles and furniture lumber as to grow grain.

The strike of chairmakers at Tell City reached such a stage a few days ago that two companies of state militia were ordered to that place. There were no unusual demonstrations, however, and the soldiers were ordered away the next day. The chairmakers in the three local factories, all of which are under the control of one company, have been out for several weeks.

Plans are under consideration by the H. T. Conde Implement Company of this city for building a plant for manufacturing delivery wagons, buggies and surreys. Work will start within a short time, if it is finally decided to build.

The Long-Knight Lumber Company is doing a large business, despite the usual summer dullness, and is offering on its August stock list 100,000 feet of 2-inch common and better plain red and white oak, 75,000 feet of 1-inch plain red oak, besides a large quantity of 5/4 common and better plain oak and 6/4 common and better plain red oak.

One of the busiest concerns in the city is the Perrine-Armstrong Company, which has a large mill on Yandes street, besides large mills at Fort Wayne and Lafayette.

Bristol, Va.-Tenn.

Col. Robert F. Middleton of the Cumberland Valley Railway, an important branch of the Pennsylvania system, was in Bristol during the latter part of the week and gave it out that his road had just agreed to supply the Norfolk & Western with about twenty-five empty cars a day for several weeks. This, it is believed, will contribute materially toward the relief of the situation. Colonel Middleton is a commercial solicitor for the Pennsylvania and is looking after the purchase of a large amount of oak stock for his company in this section.

Lewis C. Stone, commercial agent of the Cincinnati, Hamilton & Dayton Railway, was an other railroad official who called on local manufacturers and wholesalers last week and discussed the car shortage. Mr. Stone reports that the famine is affecting the middle west, but he hopes to see a better supply of this class of railroad equipment in the early fall.

The Hoo-Hoo concatenation which was to have been held in Bristol will be held at Mountain City Wednesday, August 21. George A. McCrary of this city has just received the appointment from Supreme Scrivenor J. H. Baird of Nashville as temporary vicegerent and will hold the concatenation at Mountain City. Mr. McCrary is an enthusiastic member of the order and it is generally conceded that the appointment was a wise one. He will serve instead of Irving Whaley, the regular vicegerent of East Tennessee, who is at Talmage, Va. Indications are that the concatenation will be very well attended.

and a big list of kittens has been guaranteed. A banquet will follow the ceremony. A large number of Bristol lumbermen will attend.

Victor C. Noebeck and bride, nee Curtis, who were married at Butler, Tenn., about three weeks ago, returned this week from their honeymoon, spent in New York, Atlantic City and as the guest of Mr. Noebeck's parents at Bay City, Mich. They will reside at Butler. Mr. Noebeck is prominently connected with the lumber business with E. L. Edwards, the well known Dayton (O.), manufacturer and wholesaler.

Charles F. Ryburn, a well known lumberman of Glade Springs, Va., came to the city on business last week.

Franklin I. Pishion of the Tug River Lumber Company has moved in the pretty cottage at No. 80 Highland avenue.

M. N. Offutt of the Tug River Lumber Company returned last week from an important business trip in the interest of his company.

The lumbermen in this section are interested in the efforts of the railroads looking toward the maximum loading of railway equipment as a means to increase the number of available cars. It is a well known fact that many cars with 60,000 to 80,000 pounds capacity are loaded with 24,000 to 40,000 pounds, whereas by heavy loading the contents of two small loads could almost be loaded into one of the larger cars and save much valuable transportation space.

H. L. Miller of Knoxville, general freight agent of the Southern, has taken up the matter with the shippers in an effort to have them co-operate with the railroads in the present emergency.

C. E. Howard of the Howard Milling Company of Kingsport, Tenn., was looking after business interests in the local market last week.

H. Fugate, head of the H. Fugate Company, well known hardwood manufacturers of Richlands, Va., was here on business last week.

G. B. Fletcher, representing the H. A. McCowan Lumber Company of Salem, Ind., is taking up some fine stock on the V. & S. W. near Bristol.

C. B. Gordon of the Monger Lumber Company of Asheville, N. C., spent several days in the local market last week on his way to the East, carefully reviewing the situation.

The Williams-Adams Lumber Company was organized at Flat Gap, Va., last week by G. E. Williams, B. E. Williams, George Adams, Jr., and others, with a capital stock of \$20,000. The company owns a tract of timber which it will develop.

Judge A. J. Tyler and W. B. McNabb of this city, and J. Frank Tonney of Unicoi county, Tennessee, have purchased a tract of about 3,000 acres of timber land near Erwin, Tenn. The land contains probably 20,000,000 feet of timber and will be developed at once.

Wells Bros. have just purchased a tract of 4,200 acres of timber and coal lands in Wise county, near Eserville, at a consideration of \$96,000, and announce that they will develop the mineral and timber resources of the property. The Crane's Nest Coal and Coke Company will lease a part of the coal lands.

Dunn & Campbell will rebuild their mill which was recently destroyed by fire at Inna, Va. The new mill will have a daily capacity of 20,000 feet.

The Lebanon Lumber Company has been incorporated at Lebanon, Tenn., with a capital stock of \$50,000 and will do a general manufacturing and wholesale business.

Burke & Greer have purchased a tract of timber at Pound Gap, Wise county, Va., for \$18,000 and will develop same with small circular mills.

W. O. Came of the Bristol Door and Lumber Company and B. B. Burns of the Tug River Lumber Company both yesterday for Lynchburg, N. C.

Cincinnati.

A meeting of subscribers to the new Cin-

cinnati Belt Railway and Terminal Company was held at the Business Men's Club recently to discuss ways and means of completing the financial organization of the company. The preliminary capital is \$100,000 and this has not yet all been taken. It is desired to have this fund fully subscribed before active work is commenced, now that arrangements are in process of completion for the financing of the construction work. It is stated that the amount will be fully subscribed within a short time.

A. W. Dunn, a prominent lumber dealer of Glasgow, Scotland, came direct to Cincinnati from his faraway home to visit the Kentucky Lumber Company and purchase lumber. Mr. Dunn usually transacts his business through the mails and by telegraph, but this year thought he would spend his vacation on this side of the ocean in a combined business and pleasure trip. With Richard McCracken, sales manager of the Kentucky Lumber Company, he visited their three mills at Williamsburg and Burnside, Ky., and Habersham, Miss. The trip was well appreciated by Mr. Dunn and incidentally he was put wise to a few new wrinkles in the veneer business. On this tour Mr. McCracken managed to unload additional lumber on the man from Glasgow. Mr. Dunn is on the market for almost every item of hardwoods and also for yellow pine. He left Cincinnati for New Orleans to invest in yellow pine. He expects to stay at New Orleans two months and then will start on his homeward voyage.

The telegraphers' strike is not having a serious effect on the lumber trade, as most of it is conducted through the mails and telephone. The only effect felt, is the extra expense in using the phone.

William A. Bennett, receiver of the Pease Company, announced that he will pay a dividend of 10 per cent to the creditors the latter part of August. The company at present is doing a good business, and if present conditions keep up the company will be able to pay all indebtedness and will again be returned to good standing.

Warder C. Victor of Bennett & Witte at Memphis, Tenn., is spending a few weeks with his parents at Cynthia, Ky. During his stay there he called upon the Cincinnati office. Mr. Victor stated that business in the South is brisk and from his point of view, the midsummer dullness did not have as serious an effect as was first thought.

Chester F. Korn of the Farrin and Korn Lumber Company has returned from a business trip to the South, where he visited the mills of the company. He says that everything in the South is thoroughly satisfactory and the mills are working full time.

William E. Delaney, general manager of the Kentucky Lumber Company is spending a few days at Chicago. He expects to return to the local offices the latter part of the week.

President Thomas J. Moffett of the Cincinnati Lumbermen's Club has not as yet announced the next monthly meeting of the club, but it is presumed it will be held the first Monday in September.

Robert Hille of the Samuel H. Taft Lumber Company is having some difficulty in convincing his friends that he is still a single man. One of the local newspapers printed a story to the effect that he and Miss Bertha Fisher were married at Hamilton and since then he has been in trouble.

Commissioner E. E. Williamson of the Receivers' and Shippers' Association has gone to New York, where he will present to the Manufacturers' and Distributors' Association arguments against the proposed increase of the minimum car weights from 30,000 to 36,000 pounds.

The Clearfield Lumber Company of Clearfield, Pa., has just closed a deal for 30,000 acres of walnut, oak and poplar timber lands in Morgan county near Mt. Sterling, Ky., for \$100,000. The company will extend a line of railroad eighteen miles up Rich branch and will spend \$1,000,000 in development.

Samuel H. Taft, president of the Samuel H. Taft Lumber Company, returned last week from an extended European trip. Since his arrival he has been busy in numerous business transactions. He gave a long interview recently on the decision of the Interstate Commerce Commission against the Southern railway, which one of the local papers printed, and in which he pointed out that the shippers in Cincinnati should derive the rebate instead of those in the South.

Thomas J. Moffett and family have gone into camp in Indiana, where they expect to stay for several weeks. Mr. Moffett needs a good rest, from the past good work he has done for both his company and for the people of Cincinnati. During his absence from the local offices, Mr. Robbins assumes charge.

St. Louis.

The largest bulk of the personal news to be gathered in any of the great lumber markets at this season of year, consists of statements that this or that well-known lumberman is enjoying, or is just about to take a much-needed vacation. The St. Louis contingent is always just as busy as the others in enjoying itself during the so-called "dull" period, although in the minds of some this vacation business is more a sort of duty or custom than anything else; as one lumberman puts it—"It's a question whether it pays to work twice as hard as usual for a week getting things in shape to go away, and then come back to work twice as hard again to let the other fellow have a chance."

G. H. Barnes of the G. H. Barnes Lumber Company left Aug. 14 for a vacation among the northern lakes. He will visit St. Paul and go by boat to Sault Ste. Marie, where he will stop several days.

Walter E. Keown, manager of the International Hardwood Lumber Company, is back from a week's stay at Colorado Springs.

Thos. E. Powe, vice president of the Plummer Lumber Company, spent his vacation in Virginia, and on his return immediately started out on a trip to northern hardwood consuming districts.

A. J. Lang is spending the summer season at Put-in-Bay with his family, where they own a fine cottage.

W. W. Dings, secretary of the Garetson-Grease Lumber Company, will spend a large part of his vacation on the Atlantic Ocean. He will sail from New York on one of the slow liners, remain in London a few days, or until the ship is ready to make the homeward voyage, and then return with it, thus getting the benefit of a long full breath of sea air obtainable in no other way.

Jos. A. Hafner, manager of the lumber department of the Hafner Manufacturing Company, is spending his vacation near Charlevoix, Mich., and will return home the latter part of the month.

Wm. H. Steele of Steele & Hibbard Lumber Company spent some time at Deer Park, Md., and later at Fortress Monroe.

Tom Moore of the Moore Company spends a good many of his holidays in the North, notably at Benton Harbor, where his wife and a number of friends are summering.

Richard J. O'Reilly of the O'Reilly Lumber Company is planning to spend the month near Gloucester, Mass.

Thos. W. Fry of the Chas. F. Luehrmann Hardwood Lumber Company has been making a southern trip in the interests of his house.

H. A. Singer, manager of the New York branch of the American Hardwood Lumber Company; John M. Smith, manager at Dickson and Nashville, Tenn.; and J. S. Gaunt, manager at Benton, Ark., all visited the home office the first of the month.

Alfred Taenzler of the Southwestern Timber & Lumber Company, Rogers, Ark., was in the city recently looking over the hardwood market.

R. F. Krebs' new office at his hardwood yard in North St. Louis is nearly completed. He is located between the offices of the Moore Company

and the Bonsack Lumber Company. His assortment of lumber is coming very fast and he expects to be in shape to take care of the fall trade satisfactorily.

F. W. Blumer, sales manager for the Lothman Cypress Company, is south on a tour of the company's operations there. Wm. Lothman hopes to spend his vacation in Yellowstone Park.

George Cottrill of the American Hardwood Lumber Company is making a selling trip through Ohio.

George Hibbard of Steele & Hibbard Lumber Company will spend some time in fishing at Lake Minnetonka, Minn., in the near future.

The Himmelberger-Harrison Lumber Company, the foremost red gum manufacturing concern in the country, has just completed a fine office structure at Cape Girardeau, Mo. It is five stories high and of reinforced concrete and has accommodations for a bank and a large number of offices. These lumbermen say that this type of construction calls for the use of more lumber than other forms of modern building and therefore feel that it is no enemy to their business.

Nashville.

Several of Nashville's young lumbermen have landed a piece of property which they claim will make a million dollars for them in time. One of the largest owners in the Nashville Hardwood Flooring Company is Richard Wilson, who married a daughter of John B. Ransom, the hardwood king of this section. Young Wilson has just closed a deal whereby he and his brother Morris, and their father, Captain B. F. Wilson, acquire a tract of timber and mineral lands near Petros, Tenn., aggregating some 5,000 acres. Although near a railroad leading to the state mines, the tract is covered with a virgin growth of giant hardwood timber. The purchase price was \$100,000. Two big sawmills will be erected at once. After the timber has been cut it is the intention of the owners to develop the rich coal and mineral veins on the land. Sam Ransom and Charlie Kyle will superintend the cutting, sawing and getting out the timber. A stock company has been formed to develop the land, with a capital stock of \$250,000.

Secretary Lewis Doster of the Hardwood Manufacturers' Association has returned from a business trip to Chicago and other points North and East. Here's the way he says he found conditions: "The larger shippers are not in the market just now, but the man that is there is the small dealer who needs the proceeds of his stocks. I notice confidence everywhere in the outlook for fall trade. The action of the southern mills in shutting down and ceasing to cut more pine at present has met with favor in the pine sections of the North. I found the heads of all the leading houses off on their vacations."

"Shall we trade with wholesalers who sell to consumers?" This will cause a lively discussion before the Retail Lumber Dealers' Association of Alabama, Tennessee and Georgia at the meeting to be held next week at Atlanta. Delegations from Nashville, Birmingham, Chattanooga, Knoxville, Decatur, LaGrange and other important lumber points will be present.

Nashville and Memphis lumbermen are to meet on the diamond in the near future. The Nashville boys issued the challenge to the Bluff City fellows and the latter straightway accepted. Saturday, Sept. 21, at Memphis, has been decided upon as the time and place for the first game; the second will be played in Nashville. John B. Ransom will umpire for Nashville and W. H. Ruse of Memphis for that bunch. J. W. Thompson has been elected captain of the Memphis team.

John W. Love of Love, Boyd & Co. is spending his annual vacation at his summer hotel at Markland, Nova Scotia. He will return about Sept. 1.

W. B. Davidson of the Davidson-Benedict Company is back from a three weeks' trip to

Denver, where he visited his oldest son. His wife and a younger son accompanied him and a most pleasant time was had. Mr. Davidson is sanguine over the outlook for fall business.

W. J. Cude of the Cude Land and Lumber Company is back from a visit to his Tennessee mills. He reports gathering up considerable stock for fall business and says he will be in shape to handle all that comes his way.

J. W. Bishop, manager of the Columbia mill and yards for Harris Cole Brothers of Cedar Rapids, Ia., has been a recent visitor to Nashville. He reports that his company expects to erect a large mill in the near future at Sulligent, Ala., with a capacity of 40,000 feet a day.

A special from Kentucky announces that the Clearfield Lumber Company of Clearfield, Pa., has bought some 30,000 acres of valuable coal and timber lands in Morgan county. The price paid was \$300,000.

The Lucas Land and Lumber Company has succeeded the firm of Lucas & Co. at Waverly, Tenn. The company has acquired valuable timber lands and will erect several sawmills in the near future.

John E. Isbell, the expert yard man of the firm of Love, Boyd & Co., has announced himself as a candidate for the city council from the 17th ward. He is running to fill the vacancy caused by the recent resignation of John H. Baskette of the Prewitt, Spurr Manufacturing Company. Mr. Baskette has since removed to Helena, Ark., where he is conducting a large woodenware factory. Mr. Baskette was a recent visitor to the city and reports a fine business in his new home. He says Helena is rapidly becoming one of the distinctive lumber centers of the Mississippi valley.

Fred Duling, an old Nashville boy, now with the Graham Lumber Company of Cincinnati, was a visitor in the city the past week, visiting relatives. Fred has learned the lumber business from the woods to the factory and is highly esteemed by his firm.

Harry Roy of the Louisiana Red Cypress Company of New Orleans, with headquarters at Louisville, was in Nashville during the past week. He made a round of the lumber concerns here and reports that more cypress is being handled in this market than he had thought. Mr. Roy bought liberally while here.

The members of the firm of Love, Boyd & Co. have gone "crazy" about automobiles. John W. Boyd got one first, then he got a bigger one, a flying roadster. Hamilton Love got one, then another, and now John Love has followed suit. Five of the horseless carriages now belong to the three members of the firm.

J. H. McFall, who is connected with the Hickman county operations of the McLean Lumber Company of this city, was in Nashville last week on business.

Charles Cohn of the firm of Cohn & Goldberg is making an active fight to win out as councilman for Nashville for the Seventh ward. He has lively opposition and a hot fight is being waged in his ward. Mr. Cohn is the able president of the council.

The P. D. Dodge Lumber Company of Chicago will establish a yard in West Nashville in the near future. William F. Dodge, president of the company, has been in the city for a few days concluding arrangements for the yard. The yard has formerly been located at Dickson, Tenn., but owing to the difficulty experienced in getting cars it was decided to move it to Nashville.

The White Trunk and Bag Company, which was recently destroyed by fire, will be rebuilt at once. In fact, ground has already been broken for a new factory that will be bigger, better and more commodious than its predecessor. It will cost \$50,000. The company intends to get back in business by November 1. While the factory is being built John B. Ransom & Co. have generously allowed the company the use of two of their buildings, even moving out stock

to make room for the trunk people. It is proposed to have the new factory thoroughly protected from fire by a water plant of its own.

The Robertson-McGill Carriage Company, which recently moved from Shelbyville to Nashville, will build a factory here at the corner of Wedgewood avenue and South Cherry. The plant at Shelbyville was recently destroyed by fire.

Memphis.

One of the liveliest topics of discussion among the lumber interests of this city is the proposed series of three ball games between the lumbermen of Memphis and Nashville, the first of which is to be played Sept. 21 at Memphis. There was a special meeting of the Lumbermen's Club on Aug. 13 to consider the challenge made by the lumbermen of Nashville. The challenge was accepted and J. W. Thompson, president of the J. W. Thompson Lumber Company, was elected captain of the Memphis team. Efforts have been made for a number of years to decide which is the greatest hardwood center, Memphis or Nashville, and it has been finally decided to leave the settlement of this question of the superiority of the one city over the other to the matter of baseball ability. It is expected that Memphis will draw her material from the lumbermen of this city, with possibly some help from out-of-town players chosen from the ranks of lumbermen operating in the Memphis territory. It is intimated that Nashville may pick up everything possible between that point and the Bluff City. Captain Thompson, who will probably do the twirling for the Memphis team, is expected to do exceptionally good work, as his arms are so long that he will have to throw the ball only a few steps. He declares he will have for a catcher some one whom he can kill if he feels like doing so. The general lineup has not been decided upon, but preliminary practice will begin immediately. Some of the fat ones, including J. W. Dickson and W. R. Barksdale, will probably be put on a special diet in order to get their size down to proper batting and fielding proportions.

Weather conditions in this section continue favorable for the production of hardwood lumber and large quantities are being placed on sticks. There is no surplus of dry stock in any direction, but the excellent work being done by the mills is assuring a good prospective supply for the fall trade. There is scarcely a mill in this territory that is not operating and some of them are working double shifts.

George James, president of the James & Graham Wagon Company of Memphis, has succeeded in launching the National Wagon Stock Company, with headquarters at Little Rock. With him a number of other Tennesseans, as well as several Chicago capitalists, are interested. The company has begun operation of its saw mill and will manufacture much of the stock used by the local wagon factory and by other factories in which the directors and stockholders of the National Wagon Stock Company are interested. Mr. James has been working on this proposition for a number of months.

The Dardanelle Hardwood Manufacturing Company is erecting a \$25,000 plant at Dardanelle, Ark. It will have a daily capacity of 30,000 feet and will devote itself entirely to the manufacture of hardwood lumber. It has 1,000,000 feet of logs on the right-of-way that will be delivered as soon as the railroad reaches Dardanelle, which will be about the first of September.

The citizens of Searcy, Ark., are considering the establishment of a plow factory at that point for the manufacture of a special style of plow recently patented by a prominent citizen of White county. It is regarded as probable that this will be done, thus calling for considerable hardwood stock in that section.

The American Land, Timber and Stave Com-

pany, which has its headquarters in the Tennessee Trust building here, has decided to rebuild its plant at Dermott, Ark., which was burned some time ago. The insurance loss has been adjusted and it is expected that work will begin at once. The company is engaged in the manufacture of staves for export. H. Katz is manager of the interests of the company in this section.

Max Sondheimer, president of the E. Sondheimer Company, sails from New York early this week for an extended European trip. Rudolph Sondheimer, secretary of the same company, has just returned to Memphis from his wedding tour through Europe, much of which was made in an automobile. Mr. Sondheimer is looking remarkably well after his delightful trip.

The Brasfield-Thompson Lumber Company has completed repairs at its hardwood mill at Biscoe, Ark., and this is now in operation. Mr. Brasfield, president and general manager, has just returned from Biscoe and reports that good progress is being made in getting out oak, ash, gum and other hardwoods.

James L. Hale of Hale & Keiser has just returned from an extended trip to New York, Washington, Buffalo, Jamestown exposition and other eastern points. Mr. Hale reports that he has an excellent stock of hardwood lumber on hand and that his mills are making exceptionally good progress. He operates plants in Arkansas and Louisiana.

Lee Fitzgerald, resident manager of the E. Sondheimer Company at Cairo, Ill., is in Memphis.

Warder C. Victor, traffic manager for the lumber firm of Bennett & Witte, has returned from his summer vacation, which was spent at his home in Cincinnati.

O. P. Hurd of O. P. Hurd, Jr., & Co. of Cairo, Ill., has been circulating among lumber interests of Memphis here this week.

R. H. Fenn of the Fenn Brothers Company, manufacturer of hardwood flooring, has just returned from a trip to Chicago and other northern points. His company is getting out a splendid line of flooring and is gradually extending its northern trade.

S. B. Anderson, president of the Anderson-Tully Company, had a very narrow escape from serious injury several days ago. He was driving his big touring car to his office in North Memphis. He took his hand off the lever for a moment and the machine swerved and ran down a steep embankment. Mr. Anderson did not leave the machine, but was very badly shaken up.

C. R. Ransom of the Gayoso Lumber Company has gone to Jamestown, New York and other eastern points.

The Bellgrade Lumber Company has begun work on its railroad, which is being constructed for the development of its timber interests near Belzoni. The company had some difficulty in securing the right of way and this held up the building of its road for a time. Secretary McClure states that work will be pushed as rapidly as possible and suggests that the road, which is to be three and a half miles long, will be completed within thirty days. All rails have been delivered and the engine has also been turned over to the company at Belzoni. The equipment will consist of one engine and fourteen cars.

The Interstate Cooperaage Company, which bought a large tract of timber land adjoining that of the Bellgrade Lumber Company near Belzoni, as announced in a recent issue of the *Hardwood Record*, has decided to build a tram road from its timber holdings to Belzoni, where a plant will be established. This concern is a branch of the Standard Oil Company and will manufacture much of the raw material at the Belzoni plant used in the finishing plant located at Memphis.

The Ford Hardwood Lumber Company, capitalized at \$30,000, has made application for a

charter under the laws of this state. The domicile will be at Memphis. The company will operate saw mills, planing mills and other plants necessary to the handling of lumber in both the rough and finished state. The incorporators are E. M. Ford, L. W. Ford, E. M. Ford, Jr., W. C. Fowlkes and C. H. Trimble.

New Orleans.

The Gulf Coast Lumber Exporters' Association, recently organized, held a meeting in this city on Aug. 15. Vice-President J. H. Hinton presided, while Secretary Thurley of the Mobile Chamber of Commerce, acted as secretary. The following applied for membership:

C. W. Robinson Lumber Company, Florib Janovich & Co., New Orleans; Horace Turner & Co., McDonald Land and Lumber Company, Mobile; J. C. Pierson Company, Lumberton, Miss.; J. J. Newman Lumber Company, Hattiesburg, Miss.; Turner & Baxter Lumber Company, Gulfport, Miss.; Hand Lumber Company, Bay Minette, Ala.; Scotch Lumber Company, Fulton, Ala.; Wilmer Lumber Company, Wilmer, Ala.; Vinegar Bend Lumber Company, Vinegar Bend, Ala.; Joseph A. Kelly, Jasper, Tex.; R. P. Vincent Lumber Company, Mobile.

The salaries of the permanent secretary and chief of the grading and inspection bureau, both of whom are yet to be selected, were discussed, and it was decided to place the maximum at \$3,000. The question of the association's permanent headquarters was brought up and J. H. Gomilla proposed a change in the constitution making New Orleans the domicile of the organization. This will be acted upon at the next meeting.

In the discussion of membership dues some differences of opinion were developed. The grading and inspection bureau which is to be established will have to do with pitch pine lumber exclusively, so that the pitch pine exporters will reap the greatest benefits from the association work. The hardwood people stated that they were perfectly contented with the present hardwood classification and inspection methods and would not ask the association to establish a hardwood bureau. They were willing to pay such dues as the association might deem reasonable, on account of the benefits they would reap from other features of the association work, but it was suggested that their dues be scaled down in accordance with the limited advantages to be reaped. The matter was referred to the executive board for settlement.

At a session of the executive board, held immediately after adjournment, the secretary's salary was fixed at \$2,500 per year, of the grading and inspection chief at \$2,400 and it was decided to employ a European representative at from \$4,000 to \$5,000 annually. Pensacola was named as the next meeting place and the date was fixed for Sept. 14.

The Farrin-Korn Lumber Company of Cincinnati has purchased the plant of the Hoyt & Woodin Manufacturing Company at Glendora, Miss., and will convert it from a circular into a band mill, with a capacity of 35,000 feet of hardwood lumber daily.

The Paradis Truck Farm Land Company of Paradis, La., will, it is announced, establish a saw mill and box factory. The company controls about 15,000,000 feet of gum, cypress and ash timber, which it proposes to manufacture.

The Miles Planting and Manufacturing Company, which owns extensive plantation interests in Ascension and St. James parishes, has sold to a company headed by James Vernon Hoyt of New York all the standing timber on its property, amounting to more than 200,000,000 feet of cypress and hardwood. The purchasers have organized the Vacherie Lumber Company and will establish a large mill at Vacherie, La., to manufacture the timber. The purchase price has not been made public.

H. D. Turton of Belize, Central America, was in the city last week. Mr. Turton is a mahogany dealer and tells a gloomy story of the de-

pletion of Central American mahogany forests. The industry has flourished in that territory for years, but he states that it is only a question of a few years now until the mahogany in that immediate field will be entirely exhausted and the mahogany industry will become a thing of the past.

S. E. Redfern, New Orleans representative of the Panama Canal Commission, has issued proposals for a large quantity of hardwood lumber for canal work, in addition to about 10,000,000 feet of yellow pine. Bids will be opened at Washington Sept. 3. This is, it is said, the largest requisition for lumber issued at any one time by the canal commission.

According to the Louisiana State Board of Equalization, there are 2,139,076 acres of Louisiana lands that escaped the tax assessors this year. The board has been making a careful study of the various assessment rolls and on casting up the aggregate acreage returned by the assessors found that it amounted to 23,479,524, while the state's acreage, according to the official map, totals 25,618,000 acres. An attempt is being made to locate the fortunate acres that have escaped taxation. The equalization board is still hammering away on the question of equalizing timber land assessments and a definite decision is expected within the next few days.

Minneapolis.

The regular monthly dinner of the Northwestern Hardwood Lumbermen's Association at the Minneapolis Commercial Club last week brought out a good attendance. The situation was discussed in a general way and it was shown by the universal testimony that wholesalers all have light stocks to go into the fall trade with. A stiff maintenance of present prices, or some further increase was generally predicted.

E. Payson Smith of the Payson-Smith Lumber Company returned this week from Annandale, a well-known fishing resort west of Minneapolis, where he spent a "week end" with his family, making the round trip in his new motor car. A. S. Bliss, office manager of the company, is giving a trial to phonographs for the dictation of letters, and is inclined to think that the machines will pay for their keep in the time they save. He says business is a trifle slower this month, but they feel quite certain of a good fall trade.

F. H. Lewis returned this week from an extended pleasure trip in the East. Mr. Lewis spent most of his time on the Maine coast, and was gone about five weeks. He returned much rested and refreshed by the experience.

C. F. Osborne of Osborne & Clark, one of the veterans among twin city hardwood men, and one of the best liked men in the business, has gone through a severe attack of nervous prostration, which confined him in the hospital for over a week. He has improved sufficiently to leave the hospital and has gone down to Erie, Ill., where he has a farm. There he is resting and gaining strength, and the quiet of the farm is just the thing for him. He said that the flowers sent to the hospital by the other hardwood men were one of the big factors in his rapid improvement.

The City Sash and Door Company of Minneapolis has started work on a fine concrete warehouse on Fifth street, to take the place of the old plant on Fourth street and Third avenue S. It will be used to carry its main stock of hardwood finish, doors and mill work and building paper. It will be a three-story building with basement and will cost \$40,000. It is expected to occupy the new structure by Jan. 1. The old warehouse on the eastside will be kept in operation, also the branch houses at Sioux City, Ia., and Minot, N. D.

S. H. Davis of the S. H. Davis Lumber Company is back from an extended business trip to the Pacific coast, where he made arrangements to handle the stocks of several Inland Empire mills. Mr. Davis will not release any of his hardwood connections, however.

W. H. Sill of the Minneapolis Lumber Company has returned from a business trip lasting over a week.

Morehead, Ky.

The Licking River Lumber Company, Farmers, have sold their mills, lumber, etc., to the R. G. Page Lumber Company of Ashland. The new company takes possession at once. The consideration is said to be \$150,000. This company owns considerable timber on Licking River and has been doing a fair business. The R. G. Page Lumber Company was formerly of South Bend, Ind.

S. M. Bradley is complaining considerably of car shortage. He claims he is not receiving more than one-fourth enough cars to take care of his shipments. He says there is a better demand for lumber this week.

E. B. Camp has sold his interest in the Salt Lick Lumber Company and has bought a tract of timber in Wolfe county, where he will commence operations at once. T. B. Staggs will be general manager of the Salt Lick Lumber Company. They have recently installed an up-to-date flooring plant and will make a specialty of beech flooring.

A number of prominent lumbermen spent last Sunday at Olympia Springs. Among the number were S. M. Bradley of Morehead, W. J. Fell, E. B. Camp and E. H. Camp of Salt Lick, Jay G. Briley of Chicago, R. M. Scobee of Winchester, N. H. Trimble of Mount Sterling and Mr. McCausey of Grand Rapids, Mich.

The directors of the Clearfield Lumber Company held a meeting here this week and decided to extend their road on through Morgan county, a distance of eighteen miles. This will make their road thirty-two miles long and will extend into an immense lot of timber and coal land. Their large band mill at this place is running steadily and they are already commencing shipments of lumber. They are building a concrete dry house and a large planing mill, which will be in operation soon.

George Fassold, representing the Indiana Lumbermen's Mutual Insurance Company of Indianapolis, was here this week calling on lumbermen.

P. D. Gordon of Mason, Gordon & Co., Montreal, Can., was here this week in the interest of his firm.

McGlone Bros. of this place are hauling in a nice lot of oil barrel staves and are complaining about cars for these shipments.

Charlotte, N. C.

The plant of Asbury & Fingar in this city, which was recently burned, has been remodeled and the firm has started operations again, somewhat crippled, but with prospects of picking up all their former business.

Lumbermen generally are interested in a new railroad which will be constructed by Henry Lichford of Raleigh, D. E. McIver and C. L. Chisholm of Sanford and William Moncre. The road will be known as the Bladen & Northern railway and will extend from Stedman on the Atlantic Coast line to White Oak in Bladen county, a distance of twenty miles. It will reach what is perhaps the finest tract of timber lands in the entire state. The road will be in operation in about three months.

The lumbermen of Lenoir are building a sawmill plant in the mountains about eighteen miles north of Wilkesboro, where they have a fine lot of timber. The Bernhardtts, Harfus and Gwinns of Caldwell are interested in the project.

The weather has been favorable to logging in the mountains for the past two or three weeks and reports are to the effect that a great deal of work has been done. The labor problem is troubling lumbermen, as it is every other industry. Negro help is the only help available and that is not to be depended on for steady work.

It is of interest to note that John M. Daley, an expert accountant of Chicago, Ill., in his testimony before Judge Montgomery in New

York on the passenger rate subject made the statement that of all the shipping done in North Carolina 70 per cent was by the lumbermen.

The woodworking establishment of John A. Shute & Sons at Monroe was recently burned, entailing a loss to the owners of about \$10,000. There was no insurance.

Toledo.

If the present depression continues until the close of the season the value of building operations in this city will be more than a million dollars below those of last year. Already the records in the office of the building inspector show permits issued for buildings valued at about half a million dollars less than those issued for the same period last year. Last year showed an increase over the year previous of more than a million dollars. It will therefore be seen that, considering this as a legitimate growth for a city of this size, Toledo building operations will fall more than two million dollars short of what they should have been this year.

The depression seemed to follow the action of the grand jury last April, when nearly a hundred building material men were indicted for conspiracy in restraint of trade. These cases are still pending in the courts. As there is no other apparent cause for the depression in the building business, and as prosperous conditions are found on all sides outside of Toledo, it is claimed by those in best position to know that the attitude of the local officials will cost the city handsomely in the sum total of its building improvements.

Just now the local lumber dealers are trying to solve the freight rate and car service problems that are confronting them. Thus far twenty-one railways have announced their intention of abiding by the new rules adopted by the State Railway Commission, governing car service and demurrage charges. On the other hand, nineteen railways have decided to ignore the new rules, upon the theory that the state board has no authority to assume jurisdiction over interstate business, and that the rules of interstate commerce apply to all commodities until they are delivered into the hands of the consignee. The Ohio Shippers' Association, consisting of 4,000 members, has taken the matter up with the Railway Commission and the Attorney General, and that official, as a result, will institute proceedings in court against one of the offending railways for the purpose of securing a decision defining the scope of the powers of the commission.

In the meantime the railways do not seem to be obedient to the orders of the Interstate Commission, either. Although the two-cent raise in freight rates from Southern points was declared to be unreasonable and illegal, car loads of lumber have been received within the past few days still bearing the burden of the thirty-cent rate. Other cars have been received at the twenty-eight-cent rate. From this it would seem that the railways have no definite or fixed conclusion in the matter themselves. Local wholesale lumbermen have mailed statements to the railways for the two-cent overcharge, but as yet there have been no remittances received.

Ashland.

A tragedy which resulted in two deaths and the probable fatal injury to two other men occurred at the Hatcher-Davis Lumber Company's plant, which is located at a point where Pike county, Kentucky, and Dickinson county, Virginia, join. The timbermen were in the camp enjoying themselves when Mid Thacker, a desperate man of that locality, and a number of his followers appeared on the scene. Soon a quarrel was started, in which guns and knives were put to work, and within ten minutes Dick and Harry Wilson, aged 21 and 23 years, sons of William Wilson, of Pikeville, were dead, and

two of the Thacker followers were so badly wounded that there is little or no hope for their recovery.

John Davis Bentley of the Elkhorn Valley Lumber Company, Jewell, Ky., who has been operating a mill and doing a profitable business in West Virginia for two years, will soon remove his mill to Jewell, where he has several years' sawing.

T. W. Keeveny, a wholesale lumber dealer of Cincinnati, O., was a recent visitor here and bought some big orders from local dealers. He reports business excellent with his firm, and especially so for this season of the year.

It is probable that a bent wood factory will soon be located in Huntington, W. Va., as the representatives of a factory in northern Ohio, which contemplates removing to another city, have been in Huntington, and seem greatly pleased with the location and outlook.

The affairs of the bankrupt Winton Lumber Company are now in the hands of Referee Reuben Gudgeon of Owingsville, before whom the case had a final hearing a few days ago in Morehead, Rowan county, and it is thought he will pass judgment within the next few days. This company went into bankruptcy several years ago, and the main question at issue now is that of priority of liens. The liabilities are said to be \$90,000, with \$24,000 assets.

Booth & Talbert have finished their sawing near Dingess, W. Va., and will move their mill farther up the creek.

The Guyandotte Timber Company has made a settlement for damage done by their logs to the bridge across the Guyandotte river, at Huntington, W. Va., several weeks ago, at which time the pontoon bridge and nearly completed bridge were swept away. The sum paid was \$15,000.

While hauling logs on Greasy creek, in Morgan county, Ben Faulkner was caught between two logs, sustaining injuries from which he died a few hours later.

Harrison Arnett of Salyersville, Ky., has a contract for sawing 25,000 ties for the Cincinnati Southern railroad. The work lies along the Licking river.

Mrs. Brodie Duke has recently purchased a tract of land in Morgan and Rowan counties which is said to be unusually rich in coal and timber. The deal was made through Pride & Day, attorneys of Lexington, and the price paid was \$280,000, or \$5 per acre. The land is on the Licking river.

The W. G. Ward Lumber Company of Ironton has filed suit against the Norfolk & Western Railroad Company for \$135, the price of a car of lumber which the railroad company took from the yard of the lumber company. The suit will be watched with much interest by the lumber dealers, as it will test the question as to whether the Ohio commission has jurisdiction over interstate business or not. The commission has ruled that a shipper can have four days in which to unload his car, while the railroads claim that only two days are allowed.

J. A. Meredith of the Ashland Lumber Company is in the east on a two weeks' pleasure trip, accompanied by his wife. They will visit Jamestown, going from there to New York, Washington, Baltimore and Philadelphia.

Lewis Doster was a recent visitor here from Nashville.

R. H. Vansant has returned from a visit of several weeks at Waynesville, N. C.

The W. H. Dawkins Lumber Company will at once begin the erection of an eight-foot band mill in Ironton, O., with a capacity of 67,000 feet per day.

The Clearfield Lumber Company of Clearfield, Pa., has a new sawmill running near Morehead, Rowan county, Ky., which gives employment to 300 men. This company has completed a line of railroad from Morehead to Paragon, Morgan county. The survey for a line of railroad eighteen miles long, extending from Paragon up the north fork of Licking river to Rush

Branch, has been begun. This section is the center of the rich coal and timber region of Morgan county. The company will build a large sawmill on the new railroad.

Little Rock.

Commissioner Tucker of the department of agriculture is in receipt of a communication from S. T. Boisen of the United States Forest Service notifying him that he desires to come to this state to make a detailed study of its hickory supply and requesting Commissioner Tucker's aid in the work. Arkansas is the largest producer of commercial hickory in the union. Commissioner Tucker has notified Mr. Boisen of his willingness to lend all possible assistance.

The boats installed by the Reuter Hub Company and the Mount Olive Stave Company at Batesville have given quite an impetus to river freight traffic. The boats were installed primarily for factory use, but have built up quite a line of freight traffic in addition and promise to revive traffic along White river.

The withdrawal of the Ozark National Forest Reserve, including over 800,000 acres, will remove from commercial purposes a vast amount of hardwood timber. Eight counties in the Ozark region are affected. There are 129 varieties of timber in the section and an average of 8,000 feet of timber to the acre has been calculated for the entire belt.

Great interest in the timber industry is being aroused by the building of the new line of railroad from Mena, in the western portion of the state, to Hot Springs. The towns of Womble and Caddo Cove are among the most flourishing and already boast a planing mill, sash and door factory and a stave mill. The Paddox Sawmill Company is a new concern at Caddo Cove.

The Union Blacksmith Company at Fordyce will soon install a plant at that point for the manufacture of wagons. The plant will be within easy reach of a fine supply of excellent wagon timber. The members of the company are E. R. Thomas, Ed Tolefree and A. H. Bradley, the last being the manager.

The Williams Cooperage Company of Marshall is installing some additional heavy machinery at its factory. Two engines, one 250 horsepower and the other 550 horsepower, are being added, with proportionate boiler facilities. Mr. Williams is on the ground looking after the installation of the new machinery.

The excelsior plant at Batesville is among the most active factories in that section. Over 100 cords of cottonwood are kept regularly on hand to supply the mill.

The Cannon Wheat Lumber Company is the name of a new concern at Fort Smith. The capital stock is \$100,000, with \$85,000 subscribed. The incorporators are L. S. Cannon, president; A. D. Shrewsbury, vice president; W. J. Wheat, secretary and treasurer.

The Standard Fruit Package Company of St. Joseph, Mo., has located a branch factory for the manufacture of barrels at Gravette, Ark., with H. E. Hull as manager. The plant will have a capacity of from 1,000 to 3,000 barrels per day.

The Cypress Lumber Company has been incorporated at Cornerstone, with the following stockholders: J. W. Rowland, R. S. Finney, J. W. Webster and W. A. Murray.

The Rich, Miss., hoop, stave and heading factory has been removed from that city to Helena, Ark., where a larger plant is to be established.

Willford, Ark., claims to ship more hardwood than any other town of similar size in the state. Often as high as forty wagons are unloading timber at the same time near the station.

The A. R. Curtis Manufacturing Company, a woodworking concern at Champlain, Ill., will move its plant at once to Jonesboro, Ark.

Realizing the value of the hardwood factories as an element in the commercial life of the city, the city council of Batesville, Ark.,

has voted an appropriation to extend the water mains of the city to the stave and handle factories, thus giving them fire protection.

Articles of incorporation have been filed by the Prescott Table and Furniture Company, with capital stock of \$10,000. Jacob Genrich is president, V. O. Buch vice-president and Harvey Genrich secretary and treasurer. The company will manufacture furniture.

The new mill at Mountain View made its initial run last week, cutting buggy timber.

The Nashville Lumber Company, Nashville, Ark., report that within two weeks they will have their box factory in full operation. All

machinery is on the ground and the construction of the plant will be rushed.

James W. Butler, the well known timber man of Batesville, declares that far more timber is being shipped out of the state now than at any time in its history.

H. C. Schooler, a lumber dealer of Peoria, Ill., spent much time in the hardwood district of Perry county last week, looking after the timber prospects. He is especially interested in hickory and oak. Incidentally, the hardwood industry in that section is experiencing something of a boom, particularly in regard to stave and handle material.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

For the last six weeks the local hardwood trade has been somewhat depressed, but during the last few days there is quite a revival in demand and every prospect that the trade will be equal or better than that of last fall. There is a diminution in large building operations but there is still a multitude of flat buildings being erected in Chicago which require a large quantity of hardwood interior finish and flooring. The furniture trade, of which this is the largest center in the United States, is enjoying a very good business and will be steady buyers during the coming season. In all lines of hardwood consumption there is promise of an excellent fall.

Boston.

The general demand for hardwoods in Boston is not heavy. Taking the market as a whole there has been no noticeable increase in the volume of business transacted. In fact, some report the call as smaller than earlier in the month. Although the business is not active, it is the consensus of opinion that the fall demand will be large. Dealers who handle railroad ties state that at present the demand is quiet. The roads have a good supply on hand. One road has contracted for about twice as much stock as customarily and will be out of the market for some time. Manufacturing consumers of hardwoods have been very conservative buyers for the past three months or more. As a result their reserve stocks are not large. Few yards in this section have normal stocks. When fall trade starts these buyers must replenish. The car question has not become a serious problem as yet, but trouble is anticipated. Whether the shortage will be as serious as a year ago remains to be seen. Dealers are complaining of slow shipments. One stated that only two shipments had been made up to August 16, when many more than this should have been reported. The scarcity of desirable stock has forced dealers to seek new shippers about whom they knew nothing. In some instances these new connections have proved very satisfactory, but with others the results have been, to say the least, annoying. Several shippers have sold at a certain price and then before shipment was made resold at a better price to some one else.

The demand for plain oak is moderate but prices hold well. Quartered oak is also scarce and firm. Ash is unchanged in price, with a fair inquiry reported. Native chestnut continues to sell slowly in this market. Whitewood is firm. The demand is not large. Cypress holds steady. It is reported in Boston that the large Gulf mills are well supplied with orders. A steady trade in veneers is found in this market.

New York.

The situation in hardwoods in the metropolitan district continues steady with prices firm. The car shortage incident to the movement of fall crops is being felt to some extent with every indication from advices on hand that the car

shortage this fall will be very serious. To this end many of the wholesale and manufacturing houses are urging shippers to get in their fall orders immediately if they desire anything like prompt service.

The volume of trade for this season of the year continues about normal. There does not seem to be any surplus of stock in the better grades of hardwood, although there are sufficient supplies to satisfy current demand. With the opening of the fall activity it is believed that the increase in demand will be such as to speedily absorb available stocks and that there will be a shortage of good lumber before long. The manufacturing trade, such as furniture, trim, etc., have been sailing close to the wind in the matter of purchases and will undoubtedly be active buyers for fall and winter wants as soon as they are satisfied that the present situation will remain unchanged.

The general call locally still runs to ash, birch, oak and poplar, with a fair movement of the entire list. Many of the yards, while they have a fair assortment of hardwood stocks, are short of a number of desirable items and this fact is tending to fill in the breaches in buying and is providing a fairly steady late summer trade.

Philadelphia.

To the surprise of many who predicted a considerable slump in business during July and August, trading has kept up remarkably well, with indications favorable for fall trading. It must be confessed, however, that a slight dullness prevails in certain sections where activity in woodworking plants has fallen off and dealers are content to allow their stocks to remain in present condition until the fall season opens. Though there has been some little weakening in values generally, there is no cause for alarm, as reports from the mill centers show that there is no accumulation of stock of any kind and that it is difficult to obtain the better grades of hardwoods in large blocks. The question of railroad service at the mill districts is already agitating the minds of the manufacturers and dealers.

A careful view of the woodworking field in this section explains the exceptional prosperity which has marked these summer months. The eastern Pennsylvania furniture manufacturers, to the surprise of the other sections of the country, are still active, although not rushed. The sash and door mills are being pushed to get orders filled in time for such buildings as are about ready for their product. The flooring concerns have been busy all summer.

With the veneer and cigar box men there has been a slight falling off in their line, but the deviation is regarded as only temporary. Veneer values keep about normal, but stocks are not overplentiful.

Ash and chestnut are probably scarcer than any of the other hardwoods, poplar, oak and maple are running easier, but all values in hardwoods are said to be fairly steady at this time. Taking the lumber field on the whole, conditions are satisfactory.

Baltimore.

Hardwood conditions have not materially changed during the past two weeks. Oak, ash and other woods are still in good demand, with offerings rather more liberal, however, and some possibility of an easing off in values. The lower grades especially are more plentiful and the mills seem able now to meet the demands of consumers without trouble. A heavy congestion of stocks of oak in the Liverpool market has served to arrest the movement abroad to a considerable extent by materially depressing values and this will keep lumber at home which might otherwise be exported, weakening the domestic situation. So far, however, the decline in the foreign trade has not communicated itself to local trade centers and the whole range of values is quite satisfactory. Buying is perhaps a little more cautious and stocks are held down to quantities that can be disposed of without much difficulty. But experienced lumbermen also invite attention to the prospect of another serious car shortage in the fall, when the crop movement is heaviest, and advise dealers to make arrangements that will insure them an adequate supply of lumber. Reports given out here are to the effect that quotations are keeping up well. All the mills are busy and no efforts are made anywhere to curtail operations. The tendency is rather in the opposite direction, a number of new plants being projected or about ready to begin cutting. Good grades of oak and ash find ready takers, with other woods almost as active, while the same can be said of poplar. Manufacturers of poplar state that they have not sold any below list and that they are receiving record prices for choice lots, though it is admitted that the common grades are somewhat off.

The congestion of oak at Liverpool is attributed to a variety of causes out of the ordinary and may not act together again for a long time. Chief among them was the removal of the railroad embargo after a lot of lumber had accumulated at the mills, the movement being further favored by good weather. Then it so happened that both Baltimore and Newport News had a number of sailings within a short time and in the absence of other cargo loaded large numbers of planks. These arrived during the month of July in such quantities that they could not be distributed, and hence the quotations went off. The same lumber, however, cannot be bought lower in the domestic market and the enforced curtailment of further shipments is calculated to get Liverpool in shape in a comparatively short time.

Pittsburg.

Ideal weather conditions during the past two weeks have done much to lend encouragement to general lumber conditions. Building operations have gone ahead rapidly and all projects at the mills have been pushed with no hindrance from floods or excessive heat. As a result a slight improvement is noted in sales to yard men. There is a strong undercurrent of activity in the lumber market, which manifests itself in hardwoods in the increased inquiry for timber lands and the successful launching of many operations which have been held up temporarily for various reasons. It is also considered a very encouraging sign that in spite of the eagerness which pine wholesalers and manufacturers are manifesting to get rid of stock the hardwood men are showing little disposition to make any concessions in prices unless on broken or poor lots. There is some increase in stocks at the West Virginia mills, but not enough to be considered a menace to the market. For most hardwoods there is a good demand and the number of woods which are decidedly "off" in inquiries is more than overbalanced by the particular stocks which are hard to obtain.

"Steady to firm" tells the hardwood price situation in greater Pittsburg. Oak is, if anything, stronger than the first of the month. Poplar shows no tendency to fall off in quotations and is maintaining the remarkable pace in sales which has characterized the dealing for more than a year. Chestnut is a better seller this week and hickory and ash are being asked for in many quarters. Dealers in ties, poles and posts are having hard work to get stock for their demands owing to the great scarcity of labor and the fact that many mills have shut down.

Buffalo.

There is some report of quiet in the hardwood demand, but as a rule dealers are satisfied with sales and all agree that fall trade will be active. The biggest demand is for ash, which is more abundant than formerly, but is selling about as fast as it comes on the market, so that the yards run small chance of getting a stock for winter. Ash is very high, running above oak, but it is taken at sight, no matter what the price. The demand for poplar is also greater than the supply.

There is quite a stock of chestnut reported. Some dealers have a fairly good supply of it. The demand is good, though not so heavy as in case of ash and poplar. In most of the lesser hardwoods the sawmill prices are so high that jobbers are obliged to cast about sharply for the mill that will give them the best bargains, otherwise there is likely to be the same complaint from them as from the white pine dealers that there is so very little profit possible that the outlook is discouraging.

So many of the hardwood dealers are cutting at least a part of their own oak that they are rather easier in that direction than in most others and are able to make their own prices to a certain extent. Oak is selling well, some of the larger dealers complaining that they are still shipping out more than they are getting in. All are making an effort to increase their stock.

All the hardwood mills in the city, and, in fact, all mills of any description, are running strong and apparently doing well, though door and box factories are complaining of close competition.

Saginaw Valley.

There are no new features in market conditions here at present. Manufacturers and dealers are not carrying large stocks; in fact, they are much lighter than usual, because so many of the mill firms went into the season with practically the entire or greater portion of their output for the year sold to be delivered as manufactured. There is no great accumulation of dry lumber available. Prices are holding up well and the movement of stocks is seasonable.

The output for the year in eastern Michigan will probably exceed that of last year for the reason that at the close of 1906 conditions were such as tended to stimulate production. Stocks will be lighter in the opening of winter than they were last year. Many firms have been cutting on large orders and season contracts and have not accumulated stock and the good trade during the winter and spring absorbed a lot of lumber. The feeling is general that there will be on the whole a satisfactory business during the ensuing winter.

Indianapolis.

Business continues good with all local hardwood dealers and veneer companies, and prices are firm. There seems to be a plentiful supply of plain red oak and white oak, for which there is a good demand. The car service is quite adequate and shipments are coming in on good time. The telegraph operators' strike is causing some inconvenience, but lumbermen are keeping up their business by liberal patronizing of the long distance telephone companies.

Bristol, Va.-Tenn.

The car shortage is still causing much trouble to shippers in this section and the supply is hardly as good as it was a fortnight ago.

The hardwood market is rapidly recovering from the dullness that has characterized it for the past few weeks and there are indications that it will resume its normal status by September 1.

Poplar is and has been in heavy demand for weeks and this unusual call has resulted in a scarcity of the stock. Candor compels the statement that oak is still a little off in demand if not in price, and the yards are pretty generally well filled with this stock. The demand, however, is increasing and the situation is more encouraging.

Cincinnati.

A distinctly better feeling seems to pervade the local trade and with very few exceptions cheering reports are heard on all sides. This, of course, does not mean that a rushing business is being transacted, but there is no question but that there is more buying in the market than was the case a couple of weeks ago. Retailers assert that on account of the poor crop outlook earlier in the year a great deal of building was deferred. Some of this they think will go through this fall and this in addition to the regular fall trade will result in brisk trade.

Poplar again leads all hardwoods. The demand has shown some improvement over the last two weeks, but prices have not been increased. There has also been added inquiry for red gum, quartered oak and chestnut. Hickory and walnut have during the last two weeks received added impulse and several large transactions were made at satisfactory prices.

St. Louis.

The general condition of the market may be said to tend toward decided improvement. This week particularly this stimulation was noticeable. The car situation is normal and stocks are being acquired slowly but surely. However, they are not yet well rounded out. The fall demand, which seems to have started in, will take a good deal of stock and the prospective car shortage makes it look as though there would surely not be any accumulation for some time to come.

Nashville.

Just a trifle quiet is the report of market conditions just now. Many of the prominent dealers are away on vacations and are taking things easy. Contracts for houses to be built this fall are well nigh all made. It is just between seasons for lumbermen, and they are resting and getting strength for the busy times they expect this fall and winter. The principal effort of local dealers just now is to get stock in order that they may be ready to handle the fall business when it begins in earnest.

The leaders in the local market are ash, poplar and plain oak, and the effort is not so much to sell these woods as it is to get some of them to sell. The market is firm and a tone of general confidence maintains, which lumbermen say looks good for the future. The demand for chestnut is hardly so noticeable. No particular falling off is noted, however, in the case of any wood. The July trade was quite satisfactory. Already there is one disturbing feature in the situation, however. The spectre of the car shortage is looming up again and millmen on the branch roads running into Nashville have made complaint. Some of the firms report that matters have already worked a serious handicap to business for this reason.

Memphis.

The demand for hardwood lumber in this market is fairly active. Large buyers do not appear to be operating on a liberal scale, but there is sufficient business to keep most of the offices engaged. There is considerable disappointment over the export situation in some quarters, but

the regular exporters here declare that they expected the dullness and that they are not discouraged over the foreign outlook. Weather conditions recently have been well nigh perfect, thus leading to large production of hardwood lumber. There is, however, no surplus of dry stock and prices are fairly well maintained. Country mills are offering lumber to some extent, but this process is not as rapid as wholesalers had expected nor are prices easing off in first hands as much as they had anticipated.

Quarter-sawed oak is reported one of the best sellers in this market. There is very little quartered red oak for sale and this accounts for the strong undertone shown by this particular wood. Ash is in very satisfactory request and prices secured therefor are full. There is no particular urgency about the demand for ash, but there is quite enough to take up what is offered. There is only a moderate quantity of poplar for sale here and this is taken up as fast as it is placed on sale. Cypress is somewhat slow but the feeling in this lumber is a shade better than it was during the recent severe depression in yellow pine. Cottonwood and gum both continue to move freely in the lower grades which are used in box manufacture. Offerings are light and demand is satisfactory, thus insuring high prices. High grade cottonwood is in only moderate request and prices are somewhat easier. The same is true of high grade gum. There is no great amount of this for sale, but it is not sought with the eagerness which characterized the situation several months ago. The general view here is that there will be a revival of demand for hardwood lumber within the next three or four weeks.

New Orleans.

Hardwood conditions, according to reports from the interior, are showing some improvement, though prices appear so far to be unaffected thereby. There are frequent inquiries and the volume of orders has been growing somewhat. Stocks are by no means abundant and the outlook for the fall trade is encouraging. Export demand is spotted. White oak appears to lead in the demand, considerable quantities having been sent abroad of late. The stave people are reported to be making a quiet canvass of the interior for this wood, buying it on the stump. Gum is also in fair demand for export, while gum, oak, hickory and ash logs are finding a market abroad. The interior demand is growing stronger and with favorable weather and a let-up of the car shortage the hardwood men should have no further reason to complain during the present year.

Minneapolis.

A thorough canvass of the Wisconsin hardwood mills has demonstrated that nearly all this season's cut, both that in pile and that yet to be sawed, is in the hands of the middlemen. There was some talk earlier in the season about holding back from making contracts till fall conditions were better able to be forecasted, but everybody seems to have been afraid to wait, and so the wholesalers all got into the field and bought mill outputs as usual, even earlier and more completely than in former years. Good prices were paid, too, which insure that there will be no falling off in the market for the next few months. Business is comparatively quiet now, the country trade being slow, but the large consumers are all doing a thriving business, and while they have stock on hand for their present needs, they will be in the market in due time. Nearly all the northern oak has been bought by the factories and rock elm is extremely hard to find. Ash is scarce and some users are making anxious inquiry for new stocks of it. The supply of birch and basswood is good now and the time is propitious to buy, but prices are stronger than ever. A new level in birch values has been reached and will be maintained without any question, as the last year's experience shows. The supply of and a ready market.

Southern offerings are coming into this market, but the southern mills are already feeling the pinch of car shortage and deliveries are bound to be slow. This point is urged by the salesmen as a reason for placing orders promptly. Values are more favorable than they were in the spring but under the present conditions are expected to advance again this fall.

Toledo.

There is no complaint heard in the hardwood market. Nearly all hardwoods are in fair demand, and while the movement is not as rapid as it has been at times, it is steady, and prices are firm. In some instances there has been difficulty in securing as much basswood as desired and of the required quality, but where this has proven true substitutes have been found available to take their place. Stocks have also run a trifle low on ash, but, unlike basswood, the demand has not been pressing. Local box factories have been heavy consumers of basswood in certain grades, having used it in many cases as a substitute for white pine.

Manufacturing plants are all running at full capacity and buying large quantities of hardwoods. The furniture factories and woodworking plants are especially busy for this season of the year and have large orders ahead, assuring a heavy consumption for some time to come. Hickory and ash are in general demand at the vehicle factories. Poplar is in strong demand, with prospects for a rise in prices.

A careful study of the local field reveals that while there is no material surplus of hardwoods at the local yards, stocks are about normal, and with future supplies in sight there will be no shortage in the near future.

Ashland.

The outlook for the opening of the fall trade is excellent. This summer has been unprecedented in the activity of business and with the orders and prices keeping up straight through the months of July and August which are usually dull. There is very little stock on hand and not much prospect for timber next year. The price of poplar keeps up, especially in the high grades.

Little Rock.

The most striking feature in the hardwood situation throughout the state just now is the bountiful supply of the raw product at the mills. Many of the mills are running night and day and are still unable to keep the supply down to normal. This is due, in some instances, to the continued dry weather of the past five weeks, giving ideal conditions for reaching the forests and at the same time acting as an incentive to the farmers to "break even," financially, in case the dry weather resulted in a crop shortage. Prices for labor at the stave mills and in the woods have been attractive, while the demand for the finished product, especially staves, spokes, etc., has been unusually good.

Liverpool.

Trade has shown very little improvement during the last few weeks and as we are now in the midst of the holiday season we cannot very well expect any for some time to come. Hickory logs are very firm and are receiving a good deal of attention from most of our leading buyers. All seem in a big hurry to cover for their immediate requirements, with the inevitable result that higher prices are being seen. The stock is very small and the consumption is daily increasing. Three months ago no one would look at the wood and parcels were hawked all over the place and offered at all kinds of low prices without finding buyers. Today the market could easily take 500 to 600 logs and they would be eagerly snapped up. Mahogany is also very firm and higher prices still will be seen. Any of the better classes of panel or board wood are extremely scarce and overpriced.

complaining that they cannot obtain this class of wood in large enough quantities to satisfy their requirements. Poplar is very firm and the market can do with a large number of carloads without noticing any difference to the stock, as they would all go into consumption. Planed 5/8 Nos. 1 and 2 are practically cleared out and buyers are clamoring for this size.

London.

This month being the time when most people are enjoying their summer vacations, business is necessarily slow, although a fair quantity of lumber is going into consumption. The arrivals have been very heavy and importers find great difficulty in selling stocks from the quay on arrival except at greatly reduced prices.

Plain oak 3 and 4-inch planks are in good demand at fair prices, but there is not a large stock arriving. For prime boards the demand is very slow and quite equal to the arrivals. The lower grades have been arriving too freely, and buyers have had their choice both for price and condition, and the quantities arriving have broken the price considerably.

In quartered boards there is only a small stock here, but quite sufficient to meet present requirements. The demand for planks has fallen off.

There is a good demand for prime grades of whitewood in thin dressed stock and for inch rough boards; also for 3 and 4-inch planks, which would realize good prices. No. 1 common, also cull grade, has been in good demand, which has been supplied by recent arrivals, but there is still a good market for same.

Satin walnut has been arriving freely, but the market remains firm, as most of the parcels arriving have been shipped under contract.

There is a fair demand for walnut for the time of year and stocks are not heavy. Good logs are in demand at very high prices.

Tupelo is getting better known here and parcels arriving have realized higher prices.

In mahogany the arrivals still remain small and the market firm.

SEATTLE

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17½ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

How Many Pounds of Steam Do You Carry?

Are you unable to obtain more than 60 or 70 lbs. of steam?

Do you want to obtain from 90 to 100 lbs. from the same boilers?

The Gordon Hollow Blast Grate

Develops Every Ounce of Steam your Boilers are Capable of Making, regardless of the character or condition of your fuel, or of the state of the weather.

If you have been adding machinery until your boilers are overloaded increase their efficiency by putting in this well-known and wonderfully successful appliance. Try an outfit at our expense and risk. We will ship it on approval, subject to 30 days' trial, and if you conclude to return it, we will pay the freight both ways. No conditions are imposed in this test. Whether you keep or reject the apparatus depends entirely upon you. Don't forget that this grate

Answers equally well for plain furnaces or Dutch ovens, can be applied to any number of boilers, from one up, necessitates no change in construction of furnace or oven, makes firing easier, is so durable as to be really the cheapest grate made—cheaper even than any draft grate. Admits of maintaining a fire at night, when the blower is idle.

In writing for quotations please state how many boilers you have, whether you have ordinary furnaces or Dutch ovens, and how wide and how long the grate surface is.

The Gordon Hollow Blast Grate Co.
GREENVILLE, MICHIGAN

READ THIS LETTER

GRAND RAPIDS VENEER WORKS,

Grand Rapids, Mich.

Gentlemen: It is now two months since we remodeled our kilns and added your patent process, and we want to say to you that we are glad we made the change. We can now dry our lumber in about half the time it formerly took, and the saving in time is but a small part of the advantage, as the lumber dried under the new process comes out in much finer condition. It is entirely freed of all sap and none of it is warped or checked.

We can cheerfully recommend your system to parties needing an up-to-date system. Yours truly,
SCHILLER PIANO COMPANY.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

ANNUAL WISCONSIN HARDWOOD ASSOCIATION.

The twelfth annual meeting of the Wisconsin Hardwood Lumbermen's Association will be held at Marshfield, Tuesday, September 17. It will be called to order at 2 p. m. A full attendance is very essential to the hardwood lumber interests of the state, and it is hoped that every member will be present.

A. E. BEEBEE, Secy. & Treas.

MEETING OF HANDLE MANUFACTURERS.

Agreeable to the request of several leading handle manufacturers of the United States, and in accord with the approval of upward of a hundred other manufacturers, a meeting of these interests, including all the various lines of handle production, is hereby called, to convene at 10 a. m., Tuesday, October 8, at the Great Northern Hotel, Chicago. The purposes of this meeting are fully outlined in an editorial on this page.

HENRY H. GIBSON,
Editor Hardwood Record.

General Market Conditions.

Say what you will the hardwood trade the country over during the last two months has not been entirely satisfactory. It has been decidedly spotted. While the volume in some localities has been fair, in many sections quiet has reigned. During the last two weeks there has been considerable renaissance in demand and prices have materially strengthened. The trade of the last two years has been coming to manufacturers so easily that the situation of the last two months, which was only natural, owing to a comparatively tight money market and the prevalence of the summer season, has developed quite a stampede among some weak-kneed operators, with the result that considerable price cutting prevailed. With a recurrence of reasonable demand this feature of the trade has apparently ceased.

The general price situation in hardwoods should be very strong and is reasonably so. The chief features which tend to this end are the facts that stocks are very short, with no surplus in any variety, and that there is every prospect of an excellent fall trade in hardwood manufactured products.

The oncoming car shortage is also another feature that will strengthen market values. While loanable funds at banks are not in surplus, there is sufficient money to be had at reasonable interest rates

for all legitimate business enterprises. Again the excellent crop situation will tend to increased demand in all lines of trade and hardwoods will enjoy their full share of this increase.

Injury to American Trade.

The United States consul at Birmingham, England, makes some pertinent comments on the handling of foreign trade by American manufacturers that are well worth heeding. The criticism is on the disposition of many manufacturers in this country to accept foreign orders for lumber, machinery and other commodities when they know that the excess of domestic business will make it impossible to fill the foreign orders within the agreed time. Not only is the disappointed foreign customer so inconvenienced and angered by such treatment that he denounces everything American and determines to buy nothing from the United States that he can possibly avoid, but he relates his experience to business friends and thus American commercial reputation is seriously injured. The books of one large importer of machinery recently showed orders sent in by cable for immediate delivery which were still outstanding at the end of from four to eighteen months. It would be far better if American business men would decline foreign orders than to accept them unless they can deliver the goods promptly.

In commenting along these same lines the consul at Antwerp, Belgium, writes that although our representatives do all they can to further the interests of American trade, many complaints come in to them regarding the methods adopted by our merchants while seeking to popularize their line of merchandise. Many houses, for instance, demand either a deposit with order or cash against documents, even when their goods are unknown and untried. Of course it stands to reason that no careful buyer is willing to purchase goods under such conditions, nor should manufacturers expect a favorable market when they make unreasonable demands. The buyer naturally reasons that an American manufacturer who is desirous of reaching an entirely new class of trade should be willing to risk something in the venture and let results take care of themselves, assuming that if he does not he displays lack of good will and little confidence in his own goods, and that they may therefore be regarded with well-grounded suspicion.

While this may not necessarily be so, nevertheless it prejudices buyers from the start, so that what might otherwise be a pleasant and mutually profitable arrangement becomes a source of contention and is often entirely called off.

Timber Lands as Investments.

An enthusiastic but ill-informed editorial writer in the Chicago Journal advises all young men to invest their savings in timberlands. He avers that money can be used in no other way with greater and surer hope of rich reward. He says that the time will come when the tariff on lumber will be lifted and the man who then owns a lot of American timber land will be rich and that nothing is advancing so fast in price, and the forests will not have time to produce a new growth before the present available timber supply is gone. He states that it does not matter what kind of timber one buys, as he is sure to make money out of the investment! In ten years it

will show a much greater profit than most speculative investments, and has the advantage of being absolutely safe. Specifically, young men are advised to find cheap timberland somewhere in the West and South and put all their savings into it. They can not be stolen and every year will increase their value, not only because of artificial conditions, but through the processes of Nature. The only danger to be guarded against is fire and provisions against it are neither difficult nor expensive.

Perhaps in a general way the advice of the Journal is good, but young men seeking investment must not take as gospel all the writer avers. It does make a good deal of difference what kind of timber one buys and the would-be purchaser who is not well versed in the subject should be mighty sure that he is really buying timber when he makes an investment of this sort. Timber investors find that ninety per cent of the offerings of this class are gold brick enterprises and no one not thoroughly posted in timber values and real estate titles should even consider an investment without securing the advice and co-operation of experts in this line.

It must be recalled that nearly all large lumber operators constantly have representatives cruising all sections of the timber country looking for favorable purchases; and again it must be borne in mind that a small and isolated timber tract represents not nearly so much value in proportion to size as does a large and well situated one. If there is any intention of developing a timber region there must needs be railroads and equipment to further that end, and this initial expense being large, there is comparatively little attraction for the investor in small tracts, so that the man desiring to make a little investment in timber property is better off to secure a small share of stock in a large enterprise than to attempt to handle a small deal himself.

An excellent and safe form of investment is in timber bonds issued by several leading underwriters. These securities are passed upon by experts in titles, by competent cruisers, by experts in quality of woods, and by bankers themselves, and in the majority of cases constitute remarkably reliable and profitable channels for the investment of surplus funds.

New Inspection Rules of the National Hardwood Lumber Association.

The new rules for the inspection of hardwood lumber promulgated by the National Hardwood Lumber Association and adopted by it at the Atlantic City meeting in May last, which go into effect December 1, next, have just been issued by the secretary of that association.

It will be recalled that several important changes in standard lengths and in the system of inspection are instituted by these rules. Standard lengths under the new system will be 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15 and 16 feet, but not over fifteen per cent of odd lengths are admitted. However, it is specified that in the grade of Firsts and Seconds eight feet is the shortest length admitted, and there must not be more than twenty per cent under twelve feet, and not to exceed ten per cent of eight and nine feet lengths. Again, it must needs be recalled that the number of defects admitted to a given grade is based on the superficial measurement of the piece and not on its width, as heretofore. There are no radical changes in the various items known as standard defects, but there is a new grade interjected, viz., finish, which it is specified must be inspected from the good face of the piece, the reverse being sound. The grade of No. 3 Common is divided into two grades, specified as 3A and 3B.

A good many lumbermen from a casual reading of the rules would think that they would make a very important difference in hardwood inspection, but the HARDWOOD RECORD is entirely of the opinion of the ex-chairman of the inspection rules committee of the association, who claims that the new rules are not revolutionary, and that they can be more easily understood by those who apply them than the old ones. To demonstrate this fact it may be wise to take one wood and specify where pieces of various sizes and with a given number of defects would fall under both old and new rules. Selecting hard maple for this illustration it will be found that in Firsts and Seconds the following table holds:

	OLD RULES ADMIT.	NEW RULES ADMIT. (reduces to No. 1 Common)
1x 6—10 and 11 feet.....	1 defect	
1x 7—10 feet	1 defect	0 defect
1x 8—10, 11, 12 and 13 feet.....	2 defects	1 defect
1x 9—10 and 11 feet.....	2 defects	1 defect
1x10—10 feet	3 defects	1 defect
1x10—11, 12, 13 and 14 feet.....	3 defects	2 defects
1x11—10, 11, 12 and 13 feet.....	3 defects	2 defects
1x12—10 and 11 feet.....	3 defects	2 defects
1x13—10 and 11 feet.....	4 defects	2 defects
1x13—12, 13 and 14 feet.....	4 defects	3 defects
1x14—10 feet	4 defects	2 defects
1x14—11, 12 and 13 feet.....	4 defects	3 defects
1x15—10, 11 and 12 feet.....	4 defects	3 defects
1x 7—16 feet	1 defect	2 defects
1x 8—9 feet	0 defect	1 defect
1x 9—8 and 9 feet.....	0 defect	1 defect
1x10—8 and 9 feet.....	0 defect	1 defect
1x11—8 and 9 feet.....	0 defect	1 defect
1x12—8 feet	0 defect	1 defect
1x12—9 feet	0 defect	2 defects
1x13—8 and 9 feet.....	0 defect	2 defects
1x14—8 and 9 feet.....	0 defect	2 defects
1x15—8 and 9 feet.....	0 defect	3 defects

From this analysis it will be seen that twenty-six pieces of a definite size having one defect, grade lower under the new rules than under the old; that four pieces having two defects grade lower; and that two pieces on account of small measurement, that were formerly Firsts and Seconds, now go into No. 1 Common.

On the other hand, nine pieces of specific size, of one defect, are raised from No. 1 Common to Firsts and Seconds; five pieces with two defects are likewise raised, and two pieces of three defects are also raised. In other words, two pieces of certain sizes are dropped to No. 1 Common, thirty pieces have the number of defects lessened in number, and sixteen pieces formerly No. 1 Common are raised to Firsts and Seconds. However, one must bear in mind that six inches to nine inches, ten and eleven feet long, are sizes that prevail to a much greater extent than eight and nine feet boards of a width greater than eight inches. It is clearly manifest, therefore, that in the aggregate the grade of Firsts and Seconds maple is raised rather than lowered.

In No. 1 Common maple the following schedule will illustrate disposition of the various sizes and defects admitted under both the old and new rules:

	OLD RULES ADMIT.	NEW RULES ADMIT.
3 inches and over wide, 6, 8, 10, 12, 14 and 16 feet.		3 inches and over wide, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15 and 16 feet.
Pcs. 3 or 4 inches wide—1 clear face.		Pcs. 3 and 4 inches x 4 to 7 feet—clear.
Pcs. 5 inches wide 1 defect.		Pcs. 3 and 4 inches x 8 to 11 feet—2/3 clear face in 2 pcs.
Pcs. 6 feet—6 to 9 inches wide - 1 defect.		Pcs. 3 and 4 inches x 12 feet and over—2/3 clear face in 3 pcs.
Pcs. 6 feet 10 inches and wider - 2 defects.		Pcs. 5 inches and wider, 4 to 11 feet—2/3 clear face in 2 pcs.
Pcs. 8 and 10 feet and up—2, 3 clear in 2 pcs.		Pcs. 5 inches and wider, 12 feet and up 2/3 clear face in 2 pcs.
Pcs. 12 feet and up—2/3 clear in 3 pcs.		
Size of cutting—4 inchesx2 feet, 3 inchesx3 feet.		Cutting to be 2 feet by full width of piece.
In 10 feet and over heart must not show over 1/6 length of piece.		Heart must not show over 1/2 length of piece.

In No. 2 Common maple the following will show the maximum defects and the disposition of various sized pieces under both the old and new rules.

	OLD RULES ADMIT.	NEW RULES ADMIT.
3 inches and wider, 6, 8, 10, 12, 14 and 16 feet.		3 inches and wider, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15 and 16 feet.
Pcs. 6 to 10 feet—50% clear in 3 pcs.		Pcs. 4 to 11 feet—50% clear face in 3 pcs.
Pcs. 12 feet and over 50% clear in 4 pcs.		Pcs. 12 feet and over—50% clear face in 4 pcs.
Cutting 3 inches x 2 feet.		Cutting 3 inches x 2 feet.
Heart 1/2 length of piece.		Heart 3/4 length of piece.

In No. 3 Common the analysis is continued as noted in the following:

	OLD RULES ADMIT.	NEW RULES ADMIT.
3 inches and wider.		3 inches and wider.
4 feet and up—even lengths—25% sound cutting.		4 feet and up—odd lengths—25% sound cutting.

Of course anyone who desires to know precisely what all the changes incorporated in the present rules involve will be obliged to figure out an analysis similar to the above, covering the different hardwoods in which he is interested.

THE AWAKENING OF THE FOREST.

¶ A strange silence of expectancy is all about.

¶ It is broken at last by a faint sighing sound which hovers above as though the Darkness were loath to leave this place of coolness and perfume.

¶ From far away comes the crooning sound of a sleepy bird, and after a moment is heard the soft answering call of its mate.

¶ The Darkness seems to realize that his dominion is o'er, but reluctant still, closer covers tree and bush with his sable mantle. Under its pall the Popples become restless and rustle their leaves impatiently, until at length he slowly begins to uncover his beloved recesses.

¶ Again a bird-note breaks the stillness. This time it has the more insistent melody of waking life; but when the answer comes, soft and sweet, it speaks only of love.

¶ "Awake! Awake!" call the stately Pines from the eastern horizon. "Behold the Vanguard of the Sun!" It is the half-sister of the Darkness who is first to salute the retreating Night. Clad in soft misty gray she comes, touching each slumbering leaf with her fairy wand.

¶ The sombre Hemlocks do not bow their heads, for they disdain welcome except to the Sun himself. Staunch and upright they stand, as though they would be first in worship of the coming Day. The spreading Elms swing out their branches as the mist envelops them, and the silver bark of the Birches turns cameleon-like to gray in its embrace. The Beeches wave welcome and the Basses tip each leaf with dew that will turn to glittering jewels at the Sun's approach. The leaves of the Maples dance in anticipation.

¶ The gray turns to pearl as the Dawn flaunts her draperies of rose above the treetops. Each shimmering leaf trembles like a maiden awaiting her lover. The shadows are fleeing from beneath the densest masses of tree and bush.

¶ Suddenly the sky is aflame with crimson and gold; the whole woodland clothes itself in brilliant green! Each tree—each limb turns toward the Sun. As he lightly kisses the treetops and then wanders down each tremulous branch, leaves that all unwilling have been held by the shadows spring to meet him!

¶ All now is life, newly awakened life, sending up the incense of the woods in worship of the coming Day!

¶ The crystal water of the brook, hidden under sedge banks, is last to waken and join its rippling laughter to the chorus, as the Sun throws great bars of gold into its depths!

¶ Every tree holds a bird that lifts its voice to swell the glad paean! Each fluttering leaf as it is caressed by the balmy breeze that wanders in the Morning's wake becomes vibrant with joy, and the whole woodland grows warm and fragrant under the Sun's embrace!

¶ The Day has come! The Forest is awake!

—Idah McGlone Gibson.

AMERICAN FOREST TREES.

SIXTIETH PAPER.

Tamarack.

Larix laricina—Koch.*Larix Americana*—Michx.

This tree thrives from Newfoundland and Labrador to northern Pennsylvania, northern Indiana, Illinois, central Minnesota; it reaches out northwestward to Hudson Bay, growing freely along the Mackenzie river and Great Bear Lake—even within the Arctic Circle.

It is commonly known as tamarack in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, New York, New Jersey, Pennsylvania, Indiana, Illinois, Wisconsin, Michigan, Minnesota, Ohio and Ontario; as larch in Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Wisconsin, Minnesota, Ohio, Ontario and Minnesota; it is called hackmatack in Maine, New Hampshire, Massachusetts, Rhode Island, Delaware, Illinois, Minnesota and Ontario; the nurserymen of Vermont and Wisconsin call it the American larch, to distinguish it from other species of the same family; in Maine, New Brunswick, and along the shores of Hudson Bay it is often referred to as juniper; as black larch in Minnesota; as *epinette rouge* in Quebec; as red larch in Michigan; as *haemack* in literature; and the New York Indians gave it the name *ka-neh-tens*, meaning "the leaves fall." The tamarack blooms in May; its flowers are monoecious and sessile, forming on short branchlets; the pistillate ones are ovate, and of a rosy tint, while the staminate are yellow.

The fruit is a small cone, having concave scales which bear winged seeds; the cones are about a half inch long and grow on short peduncles at the ends of branches; in color they are greenish when young, turning brown at maturity.

The leaves are simple and thread-like; they grow in thick clusters on short twigs, and have no sheaths. They are delicate green, yellow in autumn, when they fall.

The bark of tamarack is thin, and becomes broken into scales.

The wood is heavy, hard, durable and strong, resembling spruce in some particulars. A cubic foot of seasoned wood weighs thirty-eight pounds. The heartwood is light brown, the sapwood almost white. The grain is coarse and the annual layers conspicuous; the structure very compact. Representative uses for tamarack timber are for railway ties, fence-posts, sills, telegraph poles, flagstaves, ship timbers, etc.

Until within the last few years little tamarack has been cut into lumber. Now, how-

ever, it is often made into two-inch dimension material and is used as a substitute for Norway pine and hemlock. It is being extensively sawed into inch boards of late; from the fact that it shows a considerable percentage of clear and has rather a handsome grain, even the knotty pieces not being unsightly, owing to their small, sound, red character, it is employed quite extensively in ceiling and wains-

against the blue sky on a clear day, make it an exceedingly ornamental and striking tree for landscape gardening; in the winter, however, it has a sinister, gloomy aspect. The tamarack reaches a height of from seventy to ninety feet and is from one to three feet in diameter.

The members of the larch family are cultivated as timber trees in Europe and to some extent in this country. They grow rapidly and can be raised with profit for ties and poles, as they are reasonably straight and free from knots; when planted in close contact with each other, in plantations, they are self-pruning. Along the Massachusetts coast and in the middle West they are planted for wind-breaks or shelter belts, and are readily grown from seed; they can be transplanted when quite large, provided it is done when they are dormant.

The wood is rich in resin, but does not burn easily. It does not splinter, so that in the days when steel for battleships was unknown, larch was used in their construction. In some of the old French chateaux timbers have been found to be perfectly sound, while the stones that supported them were crumbling away. Many of the famous artists of the old world painted some of their great works upon larch boards. Old wood from the tops of the Apennines and Alps presented a beautiful appearance when highly polished, and was made into rare cabinets and tables which brought fabulous prices. The wood of *Larix occidentalis*, however, ranks much higher than that of *Larix laricina*, or tamarack, or in fact of any other member of the larch family.

"The tamarack loves the northern mountain slopes and the cold swamps of Labrador and Canada and the northern states," says Rogers. "It is the bravest of all the conifers, standing erect, a pitiful miniature of its true self, on the very edge of the Arctic tundras, a line that no tree dares overstep. Its companions, the black spruce, balm of Gilead and an Arctic willow, are prostrate at its feet. Compared with

the European larch the tamarack is not a horticultural success. In rich soil and among luxuriant oaks and pines and thick-leaved maples, the tamarack looks ragged and forlorn. It is homesick for the cold, wet soil and the bleak wind and the valiant company of its kinsmen. Mountain bogs too deep to measure are covered with tamarack. The fibrous roots were the Indian's thread; tough and fine, it sewed the canoe of birch, making a seam that

TAMARACK SWAMP GROWTH, NORTHERN MICHIGAN

coting for common house building purposes. It finishes either naturally or under stain, as attractively as white pine, yellow pine, Norway pine or clear hemlock.

In general appearance this tree is tall and slender, pyramidal in shape, with horizontal branches which become pendulous when loaded with foliage. The dainty, cool green coloring of the tamarack in summer, and its extremely tall, slim figure, delicately outlined

E. V. BABCOCK

PITTSBURG, PA.

scarcely needed the wax of the balsam to make it water-tight."

The photograph from which the illustration accompanying this article was taken is of a sapling tamarack growing near Cadillac, Mich. The illustration is typical of the character of the growth but does not exhibit the splendid size often attained in regions one to two hundred miles farther north. The tree in the right foreground of the picture is a baby white pine.

Longfellow has depicted the Indian as a being totally in harmony with Nature, using her manifold gifts not ruthlessly and wan-

tonly, as have his successors, but frugally and gratefully. Thus Hiawatha, building his canoe, after offering homage to the spirit of the trees, took from each the material he needed:

Give me of your roots, O Tamarack!
Of your fibrous roots, O Larch-Tree!
My canoe to bind together,
So to bind the ends together
That the water may not enter,
That the river may not wet me!
And the Larch with all its fibres,
Shivered in the air of morning,
Touched his forehead with its tassels.
Said, with one long sigh of sorrow,
Take them all, O Hiawatha!

Builders of Lumber History.

NUMBER LI.

E. V. Babcock.

(See Portrait Supplement.)

Graduates from that great lumber training school—the state of Michigan—are to be found in every section of the country. Even the East has taken from it some of its most successful lumbermen. In the front ranks of the fraternity stands E. V. Babcock of Pittsburg.

Mr. Babcock was born January 31, 1864, at Fulton, N. Y. He worked on his father's farm in summer, and in winter attended school, until he was seventeen years old, when he began to teach. At the age of twenty-one he followed Horace Greeley's advice and started west, with the earnest intention of learning the lumber business. His first work was with the Robinson Brothers Lumber Company, then of Detroit, Mich., now of Tonawanda, N. Y., as a lumber hustler, at the munificent salary of a dollar a day. Two years later he secured a position as inspector and shipper of white pine lumber for Henry Stephens & Co. at St. Helens, Mich. A year afterward he was engaged by Switzer & Eastwood of Bay City, Mich., to sell their white pine in Ohio, Pennsylvania, West Virginia, Maryland and New Jersey, which position he held for three years.

January 1, 1900, the present firm of E. V. Babcock & Co. was established in Pittsburg, Pa., with a capital of \$3,000, F. R. Babcock, a brother, being the other principal of the concern. They carried on a car-load business, adapted to the needs of that heavy manufacturing and retail district, but also conservatively, with relation to the limited amount of capital invested. The capital grew, however, and along with it the coterie of customers. In 1899 the annual sales amounted to 120,000,000 feet. From 1902 to 1906 the volume of business increased to over 150,000,000 feet.

In 1898, to supply the lumber for the increased business, the Babcock Lumber Company was incorporated, with E. V. Babcock as president, F. R. Babcock secretary and treasurer, and O. H. Babcock and C. L. Babcock, two younger brothers, stockholders and active managers. Seven thousand acres of timber land was purchased in Somerset county, Pennsylvania, a sawmill built, stand-

ard gauge railroad constructed, camps managed by the company laid out, and thus the thriving town of Ashtola had its beginning. The hum of saws has continued, without cessation, night and day, year in and year out, ever since.

In 1901 the entire plant of Jas. Curry & Son at Arrow, Pa., with sawmill, planing mill, railroad, timber and in fact the entire settlement, was added to the Babcock Lumber Company's holdings; the sawmill capacity was increased and additional contiguous timber purchased from time to time until 45,000 acres had been accumulated. The company has at present an annual output of 40,000,000 feet of hemlock and 20,000,000 feet of hardwood, the whole operation giving employment to over a thousand men.

April 2, 1901, the Babcock Brothers Lumber Company was incorporated in the state of Georgia for the development of 33,000 acres of long leaf yellow pine timber, estimated to cut 300,000,000 feet. With sawmill, planing mill, dry kilns and the necessary laborers on the ground, the town of Babcock quickly sprung up in the heart of the tract, which is located in the southwestern corner of Georgia. A year or two later the town was incorporated as a city by a special act of the state legislature, and one of the most up-to-date lumbering plants in the South can be found there; in addition, there are electric lights, waterworks, churches, school houses, stores, Masonic Temple, and everything necessary for the comfort and happiness of the employees of the company, which owns all the buildings.

The Babcock Brothers Lumber Company has extensive turpentine stills, machine shop, car shop and thirty miles of standard gauge railroad in connection with the business; its annual output is 24,000,000 feet of kiln-dried long leaf yellow pine flooring, ceiling, siding, etc., with "Georgia rift" a specialty. The officers are F. R. Babcock, president; O. H. Babcock, vice president; E. V. Babcock, secretary and treasurer; M. A. Sexton, manager. In its five years of activity the company has purchased more timber than it has cut.

During the first half of the present year three deals have been consummated by the Babcock interests. The Babcock Lumber &

Land Company, E. V. Babcock, president, and F. R. Babcock, secretary and treasurer, a million dollar company, was organized and bought 46,000 acres of timber land in eastern Tennessee, which the principals believe to be the finest east of the Mississippi river; the larger portion of it was purchased from the Smoky Mountain Lumber, Land and Improvement Company. This property is a virgin piece of timber carrying 900,000,000 feet, of which 160,000,000 feet is poplar. The Babcock Lumber and Land Company expects to develop the property when the Babcock Lumber Company has finished operations in Pennsylvania, and proposes to build there the model lumber town of America.

At about the same time the Babcock Lumber & Boom Company was organized in the state of West Virginia, purchasing the holdings and business of the Thompson Lumber Company, the Blackwater Lumber Company and A. Thompson of Davis, W. Va., and of Philadelphia, Pa. Of this new company E. V. Babcock is president; O. H. Babcock, vice president; and F. R. Babcock, secretary and treasurer. With this property went sawmills, forty miles of railroad, planing mill and box factory, 9,500,000 feet of lumber on sticks, 8,500,000 feet of logs in Blackwater river, and 46,000 acres of timber land, estimated to cut 450,000,000 feet. The wheels of this entire operation never stopped a minute during the transfer. The output of the plant is 35,000,000 feet per annum, largely spruce.

During the month of July a half interest in the Tellico River Lumber Company of Tellico Plains, Tenn., was purchased by the Babcocks, and the company reorganized with E. V. Babcock, president; Lee Stout, vice president; F. R. Babcock, secretary; and S. A. Smith, treasurer. This concern has a double-band mill, planing mill and dry kilns at Tellico Plains, and 49,000 acres of timber land, consisting of poplar, oak, cherry, ash, chestnut, white and yellow pine, estimated at 480,000,000 feet, with an annual output of 30,000,000 feet. The timber adjoins that of the Babcock Lumber and Land Company on the south. These properties have the L. & N. and the Southern railroads for outlets.

The output of the Babcock mills will continue to be marketed through E. V. Babcock & Co., of Pittsburg, Pa. Every year since the partnership of E. V. Babcock & Co. was formed has been prosperous—each being better than the previous one, and 1907 will be no exception to this rule.

In all these various interests E. V. Babcock is the executive head, although he leaves most of the details in the big business of E. V. Babcock & Co. to his brothers, F. R. and O. H., who are well qualified both as to experience and ability to conduct its affairs. He is ably assisted in the management of the Babcock Lumber Company by his brother, C. L. Babcock.

E. V. Babcock & Co. have branch sales offices in Boston, Philadelphia, and Johnstown, Pa., and are contemplating opening others in New York and Cincinnati, to assist in handling the entire output of the plants, amount-

ing in all to about 150,000,000 feet annually, proportioned as follows:

	Timber holdings. Feet.	Annual cut. Feet.
Babcock Lumber Co.	325,000,000	60,000,000
Babcock Bros. Lumber Co.	300,000,000	24,000,000
Babcock Lumber & Land Co.	900,000,000
Babcock Lumber & Boom Co.	450,000,000	35,000,000
Tellico River Lumber Co.	480,000,000	30,000,000

Mr. Babcock was married four years ago to Miss Mary Arnold of Reading, Pa., who is one of Pittsburg's social leaders and handsomest women. He is the proud father of Miss Dorothy, aged three years, and Master E. V., Jr., aged one year. He is very popular socially and, although a member of the Duquesne Club, the Country Club, the Matinee Club and the Masonic fraternity of Pittsburg, can usually be found at home when business engagements do not interfere. With his family Mr. Babcock is spending the season at Hemlock

Lodge, Ashtola, Pa., his attractive summer home, which is located on the crest of the Allegheny mountains, and at the time of going to press is touring the New England states in his handsome forty-five horsepower Pierce Great Arrow car.

A great quartette are the Babcock brothers, and "E. V.," as he is familiarly known among his friends, is their chief. A stalwart, clean cut, genial, lovable man, he makes staunch friends as easily as he makes money, and it is a noteworthy fact that his best friends are those from whom he has made this money, because the business relations have invariably been profitable to them, as well as to him. E. V. Babcock, while still a young man, has not only placed himself among the millionaire lumbermen of the country, but has laid, carefully and gradually, a foundation that will enable him to estimate his material success in eight figures in the next few years.

is the item of next importance. Over half of the sawed timber is shipped from the Gulf ports. It consists principally of yellow pine; this is also true of the lumber and hewed timber shipped from these ports. About two-thirds of the exports of staves go from the Gulf ports, to be used for alcoholic pack-ages. The staves are almost exclusively of white oak and form nearly one-quarter of the annual production of white oak staves in the United States.

The exports of sawed timber in 1906 reached 552,548,000 feet, of which quantity Europe took two-thirds. By far the heaviest European buyer of this product was the United Kingdom, which led with 54.8 per cent of the total. Of the shipments to North America 58.7 per cent went to Mexico and 32.2 per cent to Canada. The shipments to Asia were absorbed almost entirely by the Chinese Empire, which took 95 per cent of the total. British Australasia took 65 per cent, and the Philippines 30.4 per cent of the exports to Oceania. South American shipments went largely to Argentina and Peru and over half those to Africa were taken by British South Africa.

Exports of hewed timber in 1906 reached a total of 3,517,046 cubic feet. Three-fourths of this amount went to Europe and about one-fifth to North America. During the same year logs and other timber were exported to the value of \$3,866,300. Of this amount it is estimated that 62 per cent of the quantity went to Europe and 37.3 per cent to North America.

Of boards, deals and planks, the heaviest items of export in the way of forest products, a total of 1,344,607,000 feet was shipped during 1906. More than one-third of this

Exports and Imports of Forest Products.

The Forest Service has just issued a bulletin under the above title giving interesting statistics covering the exports and imports of forest products of the United States during the fiscal years 1903, 1904, 1905 and 1906. The material in this circular was taken largely from the report of the Bureau of Statistics of the Department of Commerce and Labor on "The Foreign Commerce and Navigation of the United States for the Year Ending June 30, 1906."

Exports.

The total value of the exports of this country during these four years was \$70,906,994 in 1903, \$81,888,068 in 1904, \$74,686,008 in 1905 and \$89,602,637 in 1906; the increase in the value from 1903 to 1906 being over 26 per cent. It must be remembered, however, that an increase in value does not necessarily imply an increase in the amount of products exported. For instance, the entire quantity of sawed timber exported in 1906 was but little greater than that exported in 1903, but the value per thousand had advanced considerably—from \$14.07 in 1903 to \$19.17 in 1906. There was relatively little change in the quantity of hewed timber exported in the various years, and the average value remained about the same—between 23.9 cents per cubic foot in 1903 and 24.9 cents per cubic foot in 1906. Boards, deals and planks to the extent of 1,065,711,000 feet were exported in 1903, the average value of which was \$19.68 per thousand feet; in 1906 the amount reached 1,344,607,000 feet, and the average value was \$21.34 per thousand feet.

A summary of the exports for the fiscal years of 1905 and 1906 is given in a table in connection with this article.

THE SHOWING FOR 1906.

The Atlantic ports led in importance as exporters of forest products, in 1906 45 per

cent of the total going out from this region. The Gulf ports are next in importance, shipping 36.1 per cent of the total; the Northern border and Lake ports sent out 8.7 per cent; the Pacific ports 6.7 per cent and the Mexican border ports 3.5 per cent of the total.

The most important item of export is boards, deals and planks. The larger proportion goes from the Atlantic and Gulf ports, and the value for all ports is 32 per cent of the total value of the exports of all forest products. Sawed timber, with nearly 12 per cent of the total value of all exports,

a Tanning extract combined with bark previous to 1906.

quantity went to Europe, almost a third to North America, about a fourth to South America and small quantities to Oceania, Asia and Africa.

Joists and scantling in 1906 were shipped to the extent of 29,119,000 feet; three-fifths of this amount went to North America and one-third to South America. Africa and Europe received considerable quantities of this line also.

A very creditable showing was made in the exports of shingles, box and other shooks, staves and heading, the same countries as mentioned in the foregoing cases receiving the largest percentage of the shipments.

Timber and unmanufactured wood was exported during 1906 to the value of \$55,361,642. Estimating the equivalent quantity for items upon which the Bureau of Statistics gives no information, it can safely be assumed that the total quantity exported was over 2,300,000,000 board feet. This quantity probably required about 400,000,000 cubic feet of wood for its production. Estimating the amount of wood cut for all purposes in the United States in 1906 at 20,000,000,000 cubic feet, it follows that the quantity exported was 2 per cent of the total wood cut. The amount of wood exported in the form of hewed or sawed timber and lumber was about 5 per cent of the total lumber cut of the United States in 1906.

Imports.

The circular gives statistics of the imports of forest products during the fiscal years of 1903, 1904, 1905 and 1906, and a table is herewith presented giving a summary of the imports for 1905 and 1906. There has been a noticeable annual increase in the total of all imports; during 1903 the total reached \$74,578,674 and in 1906 \$100,065,394, an increase of slightly over 34 per cent during the four years. As in the case of the exports, the increase in the total value of the products does not indicate a corresponding increase in the quantity, as prices have advanced considerably.

A slight decrease in the importation of mahogany during these four years is noted. In 1903 imports of this wood amounted to 48,357,000 feet, valued at \$2,783,679, or about \$57 per thousand; in 1906 they reached 36,619,000 feet, valued at \$2,470,072, or about \$67 per thousand.

The hewed, sided, or squared timber imported in 1903 amounted to 207,554 cubic feet, valued at \$41,131, or 19.8 cents per cubic foot, and in 1906 to 256,180 cubic feet, valued at \$46,770, or 18.3 cents per cubic foot. In 1903, 720,937,000 board feet of boards, planks and other sawed lumber, valued at \$10,673,317, or \$14.82 per thousand, were imported; in 1906 the imports of this class

of material amounted to 949,717,000 feet, valued at \$14,813,733, or \$15.60 per thousand.

THE RECORD FOR 1906.

During the year 1906 the Atlantic ports received 75.8 per cent of the imports to this country; the Northern border and Lake ports 21.5 per cent; the Pacific coast ports 1 per cent; the Gulf ports .9 per cent and the Mexican and interior ports .4 per cent.

The products received from other ports in excess of those received through Atlantic ports are lumber, shingles and unmanufactured wood. Of these products the larger proportion is received through the Northern border and Lake ports, coming of course from Canada. It is interesting to note that the quantity of sawed and hewed timber and lumber imported through the Lake ports in 1906 was 72 per cent of the amount of the same materials exported from the Gulf ports. Of the total importations of forest products during 1906 45.1 per cent of the value was covered by india rubber, sawed lumber 14.8 per cent and all other unmanufactured wood, principally pulpwood, 4.3 per cent.

The total quantity of mahogany imported during the year 1906 was 36,619,000 feet, three-fifths of this amount being furnished by North America and three-tenths by Europe. Mexico supplied 21.3 per cent of the mahogany received from North America; British Honduras supplied 21.3 per cent; Nicaragua 14.2 per cent and Honduras 5.6 per cent. Practically all, 98 per cent, of the mahogany from Europe came through the United Kingdom. No mahogany is produced in Europe, but mahogany and other tropical woods are shipped there and then distributed to other countries. All of the mahogany from Asia was furnished by the East Indies and 98 per cent of that from South America was received from Colombia.

The importations of cabinet woods, exclusive of mahogany, in 1906, reached a total value of \$1,334,748, of which North America furnished 61.6 per cent and Europe 31.1 per cent.

Cuba furnished more than half of the total value of other cabinet woods received from North America; Haiti, one-seventh, and Mexico, one-tenth. The United Kingdom supplied over half of the total value of the imports from Europe. Brazil led in South America with two-thirds of the value of imports, followed by Colombia with one-fifth, and Venezuela with one-sixth.

A comparison of the value of exports and imports of timber and unmanufactured wood for 1906 shows that the total value of the exports of material of this class was \$55,361,642, or nearly two-thirds of the value of all exports of forest products; the value of the imports in 1906 was \$28,344,734, or 28.3 per cent of the value of all imports of forest products. The total quantity of wood imported in 1906 was equivalent to about 1,500,000,000 board feet, or approximately two-thirds of the quantity exported.

ports of wood and saw products for the fiscal year ending June 30, 1907—a total of 2,299,017,000 board feet, representing a value in round numbers of \$83,000,000. The detailed report shows that both the volume and average values had increased over the record of the previous year. Imports of wood and saw products for 1907 reached a total value of \$42,969,000, a substantial in-

crease over the showing for the previous year.

It must be remembered in making a comparison of the figures for 1905 and 1906 and those for 1907 that for the two earlier years forest products in their entirety were considered while for 1907 only wood and articles manufactured from wood are included in the total.

The Coming Handle Meeting.

The forthcoming meeting of handle makers to be held at the Great Northern Hotel in Chicago, October 8, promises to be well attended. It is to be hoped that an association will be formed at this time which will accomplish some definite results and assist materially in the betterment of the handle industry. Of the more than one hundred letters received from various handle makers throughout the United States there has not been one that was unfavorable to this movement. On the contrary the promises of attendance and support are almost unanimous. It is to be hoped that every handle maker in the country will make it his personal affair to be present with the distinct understanding that he is "out for business," as one correspondent puts it. The meeting will be called promptly at 10 a. m., in one of the large club rooms of the hotel, and posters will be displayed in the lobby giving the definite location of the room. In the last issue of the *HARDWOOD RECORD* a number of letters from handle manufacturers were presented and following a few others are attached, which are typical of the entire number received:

NEW ALBANY, IND., Sept. 4. Editor *HARDWOOD RECORD*: We have copies of your paper telling about the proposed handle meeting, and if matters shape themselves in the proper way we will probably have a representative at Chicago, October 8. I. F. FORCE HANDLE COMPANY.

STONY BROOK, L. I., August 24.—Editor *HARDWOOD RECORD*: At the present time we are making only a line of special small tool handles which hardly come under the scope of the proposed association; we are nevertheless deeply interested in the matter for the reason that we are even now negotiating for the purchase of a handle factory in the South. Owing to lack of material in this section we will be obliged in the near future to find another location, and with that end in view we are preparing to take our plant south, where we expect to locate within a year or so, and would then like to join the association, providing we can see that this would be for our interest.—CARL STOSSEL.

FIFE, VA., Aug. 26.—Editor *HARDWOOD RECORD*: We have your letter and inclosure of August 8 and note what you say in relation to forming an association of the handle industry. We would be glad to assist in any way we can and to hear from you further. What we want and need is more unity of action and a better knowledge or understanding with each other, and then rules agreed upon for grading handles. If your paper has a price list of all handles by grades we would be obliged to have it. Can't you get one up? We will be glad to assist in any way we can to form an association.—FARROW SPOKE & HANDLE MANUFACTURING COMPANY.

KNOXVILLE, TENN., Aug. 22. Editor *HARDWOOD RECORD*: We are at all times willing to

cooperate in any movement for the betterment of the hickory handle business that promises a successful issue, and if any plan can be suggested with a binding force that will hold an association to an agreement we shall be glad to join. We would suggest that there is no affiliation between ash and hickory handle manufacturers, and nothing could be gained by joining them together. They should be separate associations. We would further suggest that it would be a mistake to introduce buyers in a conference with makers of hickory handles, even though it were possible. The trade will be satisfied with any grades established, provided they are fixed and standard. We feel sure the most good that can be accomplished from a meeting of handle manufacturers would be along the line of a revision of grades, as there is no defense of the present custom of buying raw material under two or three grades and selling the manufactured goods under six or more. We believe a shortening up of the grades would be found more satisfactory to the makers and find quick favor with the buyers of handles. With best wishes for the success of the venture and your publication.—STANDARD HANDLE COMPANY, LTD.

WINSTON-SALEM, N. C., Aug. 17.—Editor *HARDWOOD RECORD*: This question is surely a hard one. The association formed some years ago has culminated in the control of something like forty factories by one concern, while the original owners are now trying for a new start. The old association was a fake of the first water, and, as you know, history repeats itself. We cannot at this time go into the details as we would like to do. However, we will say this—you mistake when you say that the same system of grading is in effect today as a century ago. The fact is, the quality of grades has increased nearly double what they were a few years ago. Here is the curse. Timber is bringing all it is worth, with us; we are getting fair prices for handles; but the grading is robbing everybody. It would be a great thing

and a feather in somebody's cap if this could be overcome, and we are ready to help.—WINSTON HANDLE COMPANY.

DAHLONEGA, GA., Aug. 22.—Editor *HARDWOOD RECORD*: We think you are on the right line and should meet with proper encouragement, and we feel sure it will be a good thing to have an association. There ought to be grading rules, and they should be attached to price lists, so the buyers could not say the grades are not up to standard. Prices should also be overhauled somewhat, as goods are now too cheap, in view of the present cost of producing them. Will be glad to hear from you in future, and hope you will organize the handle industry. Should you have the meeting referred to, the writer will try to be present and represent our little factory.—DAHLONEGA HANDLE FACTORY.

HILLSBORO, IND., Sept. 5.—Editor *HARDWOOD RECORD*: Will say that we are much in favor of an association of handle manufacturers such as broom, fork and hoe men, but not including axe, pick and hammer handle men, as the two kinds of handle manufacturers have nothing in common at all, selling to entirely different classes and using different kinds of timber and machinery; not only that but they have a good alliance of their own. The broom handle men, with the kindred lines of fork and hoe and dowels should get together. Broom handles and dowels are both too low in price considering the cost of timber and labor. Competition is called the life of trade, but when misused in such a way as it has been in the broom handle and dowel trade it is also the death of legitimate profits. We do not say that there are more manufactured than are needed, as from the orders we receive it seems to us there could be more factories making these goods and then not have enough. Then why cut prices, is what we would like to know. We have orders several months ahead all the time, and when we find it necessary to raise our prices a little there is always someone willing to make the goods cheaper. There is no sense in this, as there is plenty of business to keep every factory in the United States running every day, and still make a living profit. We have found it necessary to double the capacity of our factory in order to get ahead on incoming orders, and do not have to cut prices a penny to get them, as we accept orders with the intention of getting out the exact kind and quality of stock that our customers want. If there is to be a meeting to organize, we want to be informed where and when and will have a representative there. Thanking you for this opportunity to speak our little piece.—HILLSBORO NOVELTY WORKS.

The Teredo.

Doubtless the great majority of the readers of the *HARDWOOD RECORD* know very little about *Teredo Navalis*, and some perhaps, especially those living far in the interior of the country, have never even heard of it, and have no knowledge whatever of the vast destruction wrought in all kinds of wood and marine timbers by the borings of this worm-like mollusk.

The teredo is known to have existed for ages, as the remains or traces of his borings are found in fossil and petrified woods, but he first attracted the attention of men about 300 years ago when they began to seek some way to stop him from devouring the wooden hulls of the clumsy ships of those days. The field of his operations is as wide as the combined area of the seas of the earth. He is found in all salt water except the Arctic or Polar

regions; therefore, a short illustrated article in regard to this destructive animal will undoubtedly be of some interest to the readers of this paper. The teredo may be hatched from one egg of a billion of the sporadic offspring of the same parent which is hermaphroditic, or of both sexes. They are hardly as thick as a pin at this stage of life and are scarcely noticeable, though they move about in the water with some rapidity, and attach themselves to any wood they may come in contact with and immediately begin to enter it by boring a tiny hole. The body of the teredo is enclosed in an exceedingly delicate bivalve shell, and they are said to have eyes which disappear as soon as they are buried in the wood, where they spend most of their lifetime, sealed up in this wooden cell. The animal has a foot or soft muscular sucker-

BLOCK OF TIMBER SHOWING TEREDO'S MANNER OF ATTACK.

b—Siphon Tubes.

c—Body of Teredo.
d—Holes Through which Animal Enters.

TEREDO-INFESTED MAHOGANY.

This specimen was taken from a mahogany log 30" in diameter and 16' long in the bay at Belize, British Honduras, utterly destroyed by teredo.

like member that protrudes from the body apparently where the head ought to be, and for this reason they are considered acephalous or headless. This foot they alternately attach and loosen from the bottom of the hole and thus adjust and hold the delicate edges of their shell so that by their slight rubbing or rasping movement the cutting or boring is slowly performed. They also have two small flexible tubes or siphons which extend into the water from the small orifice which was made when the animal first entered the log or timber. These siphons are vital organs of the teredo and must at all times be in connection with the water, otherwise death would be immediate. These siphon tubes are sensitive and are extended or drawn in on the slightest disturbance, as are the palps or feelers of a snail. Through one of these tubes the animal takes in food and water and through the other discharges the excrement from his body. At maturity the teredo is cylindrical and worm-like in appearance, and whitish in color. The hole he makes gradually increases in size in accordance with the growth of his body, from the pin-hole on the surface to as much as three-fourths of an inch in diameter at the hemispherical termination where the boring ends. The animal ranges from two or three inches to three feet in length. Of course this is the extreme, and is never attained except in tropical waters, under the most favorable conditions, the average being probably twelve or fourteen inches.

When once inside the wood the teredo grows rapidly, and the size of the cavity in which he dwells is adjusted accordingly so as to fit or conform exactly to the size and shape of the mollusk at all stages of his development. As they proceed they line the walls of their cell with a calcareous or limy secretion, which hardens and protects them

from contact with the wood. The end of the hole, however, is left bare to facilitate the boring until the animal has gone as far as he wishes, when this too is sealed over, and his mission so far is completed and he rests for a time, as it were, in a hermetically sealed cell.

There are other changes that now take place in the development of the teredo. The spawning season is at hand, the animal dies and is dissolved and passes out in a fluid state

LOOKING OVER A MAHOGANY RAFT IN SEARCH OF TEREDO.

from the small orifice through which he entered and impregnates the sea to produce his kind.

The teredo, although there may be myriads of them, attack the same piece of timber simultaneously, as many as 50 or 75 to the square inch, so crowded together that only a very thin film of wood remains between their adjacent burrows. When they can proceed no farther without boring into the habitation of another, one must stop and cease to exist, and the survivors are enabled by the increase of room to proceed until some of their number are again cut off by their neighbors who have overreached them; and for this reason, the tunnels or tubes become larger but less numerous as they go farther into the wood. They never cross the slightest crack or crevice of any kind and if the hull of a boat is made of two layers of lumber,

the inner one will not be attacked as long as the outer layer remains in place. There is no opening into the animal's cell, save the little speck or opening where he first entered, and these are the only outer indications of his presence, although the interior when opened up may be honeycombed with his borings.

There are many varieties of this destructive pest, and the most heavily infested waters on the globe are the Gulf of Mexico and Caribbean sea, but they gradually decrease in proceeding northward to the coast of Greenland, where they are unknown. As a destroyer of harbor and dock timber the teredo has no equal. The hardness of the wood in which he works seems to cut no figure whatever with his borings, as he burrows with equal ease in pine, oak or mahogany, not changing his course much to avoid a knot or hard place in the wood, and frequently he perforates the harder woods such as ebony and lignumvitae, and it has been proven that a certain species of these mollusks, the limpet, burrow their way through rock. The grain of the timber does not affect his course in the least as he is liable to cut square across it, going through the annular rings or layers at right angles as he passes from the bark toward the heart of a log floating in the water, or he may direct his course downward or lengthwise of the grain as he usually does in a piling or timber standing upright in the water, as the woodwork of harbors or dock, or he may bore through the medullary rays of the wood at any conceivable angle.

OAK PILING BADLY DAMAGED BY TEREDO.

This section was cut from an oak piling removed from the dock at Porto Cortez, Honduras, which was utterly ruined by teredo after standing in the water two years. The specimen contained some holes fully three-fourths of an inch in diameter.

SECTION OF PINE DESTROYED BY TEREDO.

This piece of pine was taken from the keel of a row-boat destroyed by *Teredo navalis* at Porto Barrios, Guatemala.

At this time the value of cabinet woods has so increased, and their importation from the tropical countries into the United States has become so great that this branch of business bids fair to soon, if it has not already, take first place in the commercial interests between this country and our near neighbors to the south. Mahogany is now being brought to the states from the Pan-American countries and the west coast of Africa in quantities far surpassing the ideas of even many well-posted lumbermen. All of this wood comes from teredo infested coasts and the valuable logs constantly being destroyed by this pest is amazing. Much of this waste could be avoided by a better understanding of the habits of the animal. The mahogany is cut far up in the mountains, and is brought down the rivers in small rafts and tied up near the mouth of the river or along the shore in the salt water, where they frequently remain for months unnoticed, an easy prey to the teredo. As these animals have been known to totally ruin mahogany and cedar logs in four months the risk a timber merchant takes in thus neglecting his wood will be readily seen. Logs should be examined frequently if the raft is moored in salt water to await the arrival of a steamer to transport it to the northern markets. They should be turned upside down in a very few days after reaching salt water, for the reason that the teredo will only attack it from the underside or submerged portion, and is killed as soon as this is turned up and dries in the hot sun. A close observer might examine a whole raft of logs which had not been turned and see no indication from the top side that the teredo was devouring it. The labor and expense of frequently knocking the dogs loose, adjusting ropes and chains, turning each log in a string of rafts and re-driving the dogs is an item of considerable magnitude, but it is cheaper to do this than to take chances of losing much valuable timber. When the presence of teredo is found the depth of his boring can be determined by chopping into the log with an ax, and if it is found that they have not gone in deep enough to do much damage, further injuries can be prevented by turning it about one-third over, say once a week, or by rolling it out onto the beach.

Some mahogany cutters think the best plan is to stop all the rafts far enough up the river to hold them in fresh water where they are beyond the reach of teredo, but this plan too has its disadvantages. Usually it is several miles up the river to a point where the water is absolutely fresh, and the ships have to anchor quite a distance out at sea on account of the shallow water surrounding many of the southern ports, and taking it all into consideration it is usually a long distance from the logs to the ship, and a vessel is frequently delayed for an indefinite period of time in getting a cargo of two or three thousand logs aboard under these circumstances. To detain a craft of this kind is quite expensive. Yet I have known ships to lay at anchor longer in loading than the time

required to complete a voyage and discharge the cargo at any of our southern or eastern ports. Therefore, it would seem that careful attention and turning the logs frequently is the better and more economical plan. They can then be tied up where they will be in reach of the ship by a thousand feet or more of tow line and pulled alongside and hoisted aboard by the steamer's winch and tackle, and the time in loading greatly reduced.

All timbers used in and under the water should be protected if they are to last more than a year or so. For centuries the method of preventing the hulls of wooden ships from being destroyed by teredo was to cover them with thin sheets of copper. Piling and timbers driven into the sea upon which the more permanent class of docks were erected were sheathed with copper from a few inches from

the water line to several feet below it. Nails driven thickly into timbers were also resorted to as a means of protection. Much experimenting has been done along this line, and as yet no kind of paint, pitch, coal tar, or any chemical preparation applied to the surface of the wood has been found that would repulse them entirely. Even soaking timbers in creosote does not render them entirely impervious to the attacks of teredo. It has recently been demonstrated, however, that naphthaline oils, when forced deep into the pores of the wood, under heavy pressure by mechanical means, renders timber thus treated proof against the attacks of teredo, and it is a relief to know that an effective preventive has at last been found against the destructive assaults of these pests.—J. V. HAMILTON.

By-Products of the Hardwood Establishment.

While it may not be generally known, there has been a very substantial source of revenue to many of the lumber establishments in recent years by utilization of waste materials. Ends and pieces of hardwood lumber cut while manufacturing certain articles for buildings, boxes, furniture, cabinets, etc., which formerly were absolute waste in many cases, are now turned into ready cash. One reason for this change in their value has resulted from the introduction of cement and wood combinations for building purposes. Sections of cut timber, some of which are practically waste pieces

the waste heap because of being full of flaws, too small in size to use, partly decayed, knotty, warped, twisted, shrunk or cracked, are now reduced to sawdust by means of grinding stones, and are then formed into a pulp and cast into the various shapes required for commercial uses. Hence the progress in the waste lumber industry.

Referring first to hardwood waste for lighting fires we find that one of the most popular methods of getting the material in form for kitchen service consists in bundling the pieces as in Fig. 1. The plan

from the discarded lumber pile of the mill or shop, are now employed in connection with cement in the making of hollow or artificial stone for building purposes. The pieces of lumber which formerly remained on the waste heap until the gatherers of kindling wood took them away are now worked over into neat packages. Vast quantities of lumber which were consigned to

involves the collecting of individual pieces of lumber from the saws. These pieces have to be evenly bundled. The separate pieces are secured in cylindrical form in a mold, one side of which is open. The sheet iron mold assists in steadying the pieces while the adjusting and tying up is in progress. The plan requires that pieces of equal length be used, hence various lengths of

bundles are made of short pieces and long ones.

After the pieces are bundled, the cords secured and the end butted the roll is placed on the sawing table with the butted end first and the disks cut as in Fig. 1. The cord holds the pieces securely as at A. Next comes the saturating operation, as it is necessary that the wood burn lively in the range. Kerosene oil and pitch are used in the saturating tank. This tank is designated B. The drip tank is marked C and is connected with a pipe. After the rolls are properly saturated they are piled up for seasoning. Then they are sent to the markets.

Three grades of the rolls are made; first, the all-hardwood rolls; second, the all-softwood rolls; third, the mixed hard and soft wood rolls. The plan is a profitable one for woodworking establishments to dispose of waste odds and ends of lumber.

Instead of turning waste lumber over to the kindling-wood manufacturers, some of the lumber establishments find a more profitable field in cement and wood-building combinations, a view of one of the blocks being exhibited in Fig. 3, in which the shaded portions represent the wood. In the construction of many of the modern styles of cement buildings, in which the hollow cement block prevails, there is a tendency to add decorations. The interior and exterior finished walls are often plain cement facings with an occasional projection for securing a device.

In the making of combination cement and wood blocks opportunity is given to nail to the wood portions. Furthermore, some of the hardwood finishes which are obtained in these wood and cement blocks are beautiful to look upon. Halls are being finished off in the surface cement with intersecting lines of wood running through to form a pattern. There are white wood designs in cement beds. The making of cement and wood combinations is accomplished in cement block yards, where the facilities are at hand for doing the work. The cement block makers visit the hardwood lumber workers and buy up short ends from the waste piles. This, of course, makes a source of income to the hardwood men.

Considerable waste lumber from hardwood establishments finds its way into the pulp materials of the present age. The process of reducing the short pieces of rejected wood to a sawdust-like condition for the digesters in the pulp mill is effected by chipping machines and grinding devices. One of the grinders is shown in Fig. 4. It consists of the cylinder, E, which is made with a rough, grinding surface, so that as it revolves in its journals by belt power, and as the pieces of wood are projected end for end against it through the feed rolls, D, the grinding process wears off the ends of the sticks very speedily. The ground material falls into chutes below and passes to the boilers. Heat, moisture and stirring exertion in the steam boilers soon reduce the

woody dustings to a soft pulp. The digesters do the rest, as these cylinders are packed with the material and further saturation, steaming and stirring follows.

Then comes the molding of the stuff in flasks into brick shapes as in Fig. 5, or into cube-like forms, as in Fig. 6. Pulp balls can be made as in Fig. 7, and even pulp tubes are cast as in Fig. 8. The pulp car wheel has long been on the market. Cement flasks are used as molds in some cases, instead of metal ones, as shown in Fig. 9, in which the process of molding the base of the pulp post, F, is shown. Fig. 10 is one of the pattern molding flasks of metal, one side only being shown.

Of course there are many stages from the casting of the article to the finishing. The material has to be compressed under heavy pressure if the material is to be used where there is considerable strain. Then there are the seasoning and drying-out processes and the packing and strengthening work, which

includes finishing under pressure, so as to reduce the pack to desired size and at the same time add to its resisting powers.

There are processes of waterproofing and enameling and means for putting a gloss on the finished article. In fact, the hardwood lumber worker who has disposed of his waste stock to be manufactured into the various commodities it is now possible to produce with modern machinery and molds would hardly recognize his rejected heap of wood in the smooth, neat and finely finished articles into which the stuff is made in these days.

All this consumption of cast-away pieces of stock means increased income to the lumber operator. The result is that many of them are careful to conserve every bit of waste lumber with a view to selling it for some of the more profitable lines, instead of giving it away or selling it cheap for firewood, as they did in the old days.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Wants Curly Oak Veneers.

ST. PAUL, MINN., Aug. 30. Editor HARDWOOD RECORD: I am anxious for a list of people who cut curly oak veneers—that is, any one who cuts oak would occasionally get a curly log. I use a quantity of this and cannot seem to locate it fast enough. Wish to assure you anything you can do to help will be greatly appreciated. D. W. V.

The writer has been forwarded the names of a few sources of supply for this material, but any one else who has any to offer will confer a favor by communicating with him through this office.—EDITOR.

Who Wants Spokes?

DE WITT ARK., Aug. 19. Editor HARDWOOD RECORD: We are in the spoke business and would like to make contract for club-turned wagon and buggy spokes. Can you assist us? C. J. S.

Any one interested may have the address of above correspondent on application to this office.—EDITOR.

Who Makes Dogwood Handles?

SPRING BROOK, I. I., Aug. 24. Editor HARDWOOD RECORD: Would thank you to advise whether any of the handle manufacturers produce dogwood handles and to put us in touch with any in that line if you know them. C. S.

Any one interested in above inquiry may have the full address of above correspondent on application.—EDITOR.

A Letter from Germany.

MANHEIM, Aug. 15. Editor HARDWOOD RECORD: The students of several German forest academies, with their professors, were today in town to inspect the famous docks and visit several concerns prominent in the lumber industry. Their guide was the chief of construction of the Badisch saw

ways, Mr. Tegeler, the well known constructor of the Mannheim quays.

The visitors started with the saw and planing mill of Dreyfus & Mayer-Dinkel. The stately piles of pitch pine, saps, Russian, Finnish and Swedish lumber greatly impressed the foresters. Walking along the waterside, they witnessed the discharge of cargoes from large barges, and then, by way of the dry kiln, turned to the mill itself. Here they made a prolonged stay to study the working of the numerous planing and moulding machines, where millions of feet of flooring, moulding and wainscoting are made.

After a short walk through the docks the next stop was made at Luschka & Wagenmann's yards. The extensive stocks of all kinds of lumber from practically every continent proved of great interest, and so did the band saw of American manufacture where the big hardwood logs are cut up into any sizes asked for.

The splendid electric car system of Mannheim was highly appreciated by our friends, the other two lumber concerns being situated on the other side of the town in the new though already crowded docks just opened a month or so ago.

Stepping down from the cars, the students found themselves at the door of Emrichs Hobel werk. Here again they were shown the mode of manufacturing flooring, etc., but principally the cutting of lumber from native German timbers.

The last point in the program was the moulding mill of Huth & Co., the complicated and fine machinery of which did not fail to arouse the greatest admiration for the efficiency with which the lumber industry today may be handled. After a last glance at the large quantities of Swedish, Russian and Roumanian fir piled up around the factory buildings the visitors entered a tugboat to make a trip around the docks, the most extensive in the interior of any country.

This little review of our visitors' itinerary will give your readers some idea of the trade as conducted in our city of Mannheim.

L. M.

The Mayberry Mill Company of Columbia, Tenn., recently purchased a large tract of poplar timber land said to contain some very choice specimens. Some of the largest trees in the section are to be found on the property, one particularly fine one measuring twenty-one feet in circumference.

News Miscellany.

A Surprise to the Trade.

The Belding-Hall Manufacturing Company, manufacturer of refrigerators, with principal office at 196 Monroe street, Chicago, and with three large plants at Belding, Mich., has for years been regarded as one of the strongest institutions of the kind in the country. During the last week, however, out of a clear sky comes the announcement through creditors that the house is in financial difficulties, and that an audit of its affairs is in progress. The president is Jesse F. Hall of Winnetka, a Chicago suburb. He is said to be broken down in health and mind and has taken refuge in a sanitarium near Windsor, Ont. It is denied that Mr. Hall is a defaulter and it is thought that the company's assets will be sufficient to pay creditors in full. It is undeniable that the company owes a large amount of money, and that Mr. Hall has been engaged in some outside investments which have not proven profitable. The lumber trade are creditors to a considerable extent, but the chief ones are Chicago bankers.

LATER.—The accounts, which were audited shortly before this paper went to press, are said to show that for the past two years Mr. Hall has been "borrowing" for his own uses at least \$315,000 of the corporation's funds, merely giving his personal note as security. As far as can be discovered every dollar of this money went into mining stock which was backed up with no tangible property, theatrical ventures which made no money and other securities which the creditors are willing to sell in a lump for approximately \$4,000. Mr. Hall's fortune is said to consist of only \$80,000 worth of the company's stock. The further astonishing discovery was made that Mr. Hall had distributed something like \$40,000 additional of the company's funds among irresponsible persons connected with the concern—the only apparent reason for this being that they knew about his financial affairs. Frank H. Jones of the American Trust and Savings bank has been appointed receiver and has taken possession of the three factories at Belding, Mich., and the offices at 196 Monroe street, Chicago. An audit of the stock at Belding is said to show liabilities of about \$645,000 and assets of perhaps \$425,000.

Car Order Bureau.

The innovation put into being by Edward Bach, an old railroad man, at New Orleans should prove of material benefit to lumbermen. Mr. Bach is established in the Hibernia Bank building and his New Orleans Car Order Bureau is for the quick handling, tracing, ordering and placing of cars, loaded or unloaded, at that port.

The bureau has already proved that there is a need of its existence, and through the intelligent operation of Mr. Bach has saved considerable in demurrage. Orders for cars for any of its patrons are placed by the bureau, which then keeps right after the railroad until the cars are furnished either for loading or unloading. An institution of this nature, absolutely independent of any organization, is sure to be a success.

Two Big Fire Losses at St. Louis.

On the night of August 3 fire broke out in lumber yard No. 4 of the Charles F. Luehrmann Hardwood Lumber Company on the Iron Mountain Railroad at St. Louis, and before it could be checked swept over the larger portion of the yard and destroyed the new sheds which the company built last year. The loss is estimated at \$80,000, largely covered by insurance.

This is the second time in a little more than a year that this yard has been visited by fire. New sheds of red gum were erected after the first fire, equipped with switches and thoroughly up to date. This makes the fire a peculiarly annoying one, as the company had taken great precautions against a recurrence of fire and spent a considerable sum of money in improve-

ments. The yard at the time of the fire was well stocked with choice white pine, redwood, red gum, figured mahogany, vermilion wood, fine veneers and lumber intended chiefly to fill mixed car orders. The company will take steps to rebuild the sheds and restock the yard immediately.

On August 27 at midnight fire was discovered in the yard of the E. H. Warner Lumber Company, whose property adjoins that of the Luehrmann company, whose yard was visited by fire only two weeks previously, as recounted above. About half the yard was damaged, parts slightly and some more seriously, together with the company's stables and wagons, although all the horses were saved. The loss is estimated at \$22,000, partially covered by insurance. The fire started in a shed which was filled with a choice stock of poplar, cherry and other hardwoods, which will be a heavy loss, as the salvage on the lumber will amount to little or nothing. Mr. Warner is a specialist in these woods and had accumulated a large and valuable stock to take care of his fall trade. He will rebuild his office and the burned sheds as soon as insurance matters are adjusted.

Authorities in St. Louis are inclined to the belief that there is an incendiary at work in this neighborhood, as there have been several other fires in the locality recently, but they were checked before any damage was done.

Death of B. R. Thompson.

The death of Byron R. Thompson of the B. R. Thompson Lumber Company of Grand Rapids, Mich., occurred at his home in that city on the evening of Sept. 2. He had been ill but one week and his death came as a great surprise to many of his intimate friends. Mr. Thompson leaves a wife and one daughter. Funeral services were held Sept. 4 from his residence at 230 South College avenue; interment was at Greenwood cemetery.

B. R. Thompson was well and favorably known to the lumber trade and was an ex-director of the National Hardwood Lumber As-

THE LATE B. R. THOMPSON OF GRAND RAPIDS, MICH.

sociation. He was born at Curwensville, Pa., and came to Michigan thirty years ago. He operated at Fife Lake for a while, but in 1892 started in business with J. H. Bonnell, under the name of the Thompson & Bonnell Lumber Company, Mr. Thompson being the active man and Mr. Bonnell the financial backer of the enterprise. Its success was such that in three years Mr. Thompson cleared himself of the

1900 sold out his interests to engage in the hardwood business with Charles F. Perkins and T. W. Perkins. The Messrs. Perkins retired from the company about a year ago and since that time Mr. Thompson has been doing business on his own account.

Building Operations for August.

A great volume of building and construction is still going on throughout the United States. Official reports from some fifty representative building centers, to The American Contractor, Chicago, tabulated, show a gain in twenty-two cities, varying from 1 to 463 per cent, and twenty-eight cities show a loss from 1 to 74 per cent as compared with August of the last year. As 1906 was a record breaker in the field of building construction, the statistics of the past month make an excellent showing. Leaving out Greater New York, the average loss would be about 3 per cent. The particulars are as follows:

City.	August 1907, cost.	August 1906, cost.	Per cent gain.	Per cent loss.
Baltimore	\$ 676,628	\$ 712,970	5	
Birmingham	290,257	295,744	2

* Mobile issued one permit for \$248,000 August, 1906.

Fine New Wisconsin Veneer Plant.

The Roddis Lumber & Veneer Company of Marshfield, Wis., has just completed what is probably one of the largest veneer plants in the world. This plant is to replace the one which was totally destroyed by fire several months ago.

Having built two veneer factories and studied the needs of the business for the past fifteen years, W. H. Roddis and Hamilton Roddis, who are conceded to be among the best veneer men in the country, have been able to erect a model establishment, admirably arranged for convenience and equipped with as complete a line of machinery as it is possible to obtain. Labor-saving devices have been installed in all departments, and the buildings have been arranged so as to handle logs as they come into the yard, through all stages of manufacture to the finished state, economically and with dispatch. The plant is large enough to permit the company to double its force, which at present numbers over 200 men. The company's plant at Park Falls, Wis., which was also burned a few months ago, has been rebuilt on an improved scale and is now in operation.

Strenuous efforts have been made to make the plant as nearly fireproof as is possible for a woodworking establishment. Automatic sprink-

ling apparatus has been installed throughout the plant, and a fire sufficient to heat the pipes will release a flow of water in any part of the building, the pressure being secured from the company's special tank.

The engine and boiler rooms are of brick and detached from the main structure, as are also the dry rooms. Dust and refuse are automatically conveyed by a blower system to the fire boxes. The plant is lighted by its own electric lighting system, and tramways, roller conveyors and elevators are used in every conceivable place for the handling of the veneers. The main building is 84x288 feet in dimensions, three stories high.

The Roddis Lumber & Veneer Company enjoys a wide patronage, principally due to the fact that it manufactures a high class product and can be relied on to make good its claims. All kinds of native woods are used in the manufacture of its products, and a special line of mahogany veneers is turned out. The company ships to every state in the Union, and large shipments abroad are not infrequent.

Big Fire at Bay City.

The greater part of the plant of W. D. Young & Co., Bay City, Mich., was wiped out by fire on the night of September 2. The flames, starting in the dry kiln, spread with such rapidity that almost before the alarm was turned in the plant was doomed. Good work was done by firemen, as evidenced by the saving of the large warehouse just south of the flooring mill, which latter was entirely destroyed.

The fire was an exceedingly spectacular one, the dry material burning with great fierceness and sending long columns of flame into air, while the burning of the huge water tower and tank afforded illumination of the destruction below. The reflection of the fire was plainly seen in Saginaw, and that city offered assistance in checking it. There was lamentable lack of water pressure, though had it been even approximately what it should, the plant would undoubtedly have been destroyed.

The sawmill had been in operation day and night, and while its loss is well covered by insurance, more than 200 workmen are thrown out of employment. The fire started about 6 p. m., and almost as soon as discovered in the dry kiln had gained a tremendous advantage, which the wind favored, fanning the flames directly into the flooring factory and toward the warehouses, which contained 2,000,000 feet of finished hardwood flooring. At 8 p. m. the boilers fell and shut off the power from the pumps and hose which were keeping the flames from the band mill, so that it was soon ablaze. Several firemen had thrilling experiences, and B. P. Whedon, the company's manager, recalled that about \$3,000 and some valuable papers were in the safe of the mill, so under cover of a stream of fire he bravely took a desperate chance with falling walls and roof, entered the office and secured the valuables. Flying sparks threatened property and houses opposite the mill, which were only kept from burning by turning streams on their roofs at intervals all during the fire.

The kilns contained about 320,000 feet of maple, while about 25,000 feet of rough and dressed lumber was in the flooring mill. Manager Whedon announced that the loss would reach \$250,000. The company had a new Corliss engine of about 600 horsepower and another almost as good. The machinery was all in fine shape, and had been added to, improved and cared for always in such a manner as to make the plant one of the finest of its kind. The sawmill had a capacity of 100,000 feet a day and last year cut over 19,000,000 feet. The planing mill had an output of 50,000 feet a day. The loss from inability to fill standing orders will be close to that of the plant itself, as a large amount of business was standing on the books at the time the fire occurred. While W. D. Young is now in Europe, it is safe to say that the entire plant will be rebuilt in the near future.

Veneer Men at Munising.

The Rotary Cut Veneer Club, a subsidiary organization of the National Veneer & Panel Manufacturers' Association, met in Munising, Mich., August 21, with the following in attendance: D. E. Kline, Louisville, Ky.; P. B. Raymond, Indianapolis, Ind.; D. W. Williamson,

deduced, as is also the souvenir menu card presented at the charming little luncheon which followed. Mr. Anderson proved an entertaining toastmaster as well as musician, and many of the speeches which he called forth from his guests were exceedingly clever, though impromptu.

The morning of the following day, August 22, the guests enjoyed a launch ride and dinner at the Hotel Williams on Grand Island, which is part of the great natural zoological park of 13,600 acres located at the entrance of Munising harbor—the most beautiful one along the shores of Lake Superior. Grand Island abounds in attractive scenery and fine drives, and the veneer manufacturers will not soon forget the royal good time enjoyed at the hands of Mr. Anderson.

African Furniture Market.

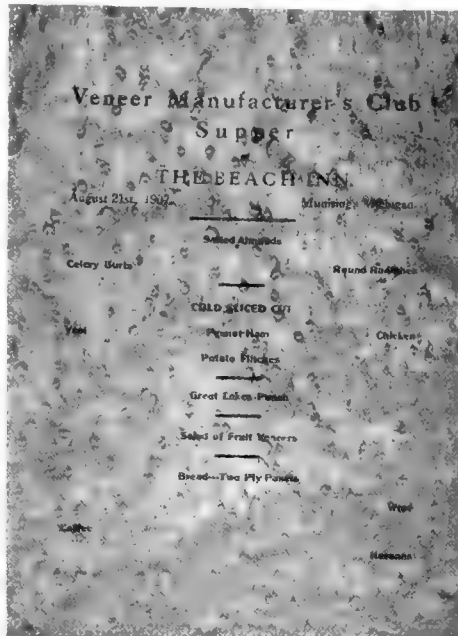

The South African Export Gazette says that there is a market in that country for increased sales of furniture. Last year's furniture requirements, exclusive of domestic ironmongery and earthenware, were valued at \$4,300,000, one-third of which represented the product of local factories and the remaining two-thirds importations from foreign countries. It is said to be admitted by South African manufacturers that in spite of the customs duty of 12 per cent on furniture from the United Kingdom and on that from foreign countries of 15 per cent, colonial goods are barely holding their own in competition with foreign makes.

It is stated that British furniture manufacturers have met with success in South Africa to a large extent owing to the way they pack their goods. The United Kingdom furnished nearly 78 per cent of the South African imports of furniture in 1906, Germany 4.61 per cent, the United States 8.66 per cent, and other countries 8.76 per cent. The value of the furniture sent from the United States last year was nearly \$250,000, while that of the United Kingdom was \$2,100,000. It is stated that what remains of the market to American manufacturers is very largely in roll-top desks and revolving office chairs, lines in which English firms are now offering keen competition.

In the matter of ordinary domestic furniture it is stated that the up-country Boers favor cheap Continental and American makes, which, imported in a "knock-down" condition, are quickly put together with the aid of glue and screws on arrival. There were \$270,000 worth of bedsteads imported into South Africa last year, of which the United States furnished about \$1,800 worth. Of billiard ware there were \$60,000 worth imported, of which the United States supplied \$2,000 worth. In picture frames the United States supplied one-fourth of the entire amount imported and one-fifth in value of the \$100,000 worth of school furniture, showing that there is a field open in South Africa if properly looked up. It is stated that the "knock-down" method of shipping goods followed by the British manufacturers is a triumph of ingenuity and helps to increase their business.

American Railway Mileage.

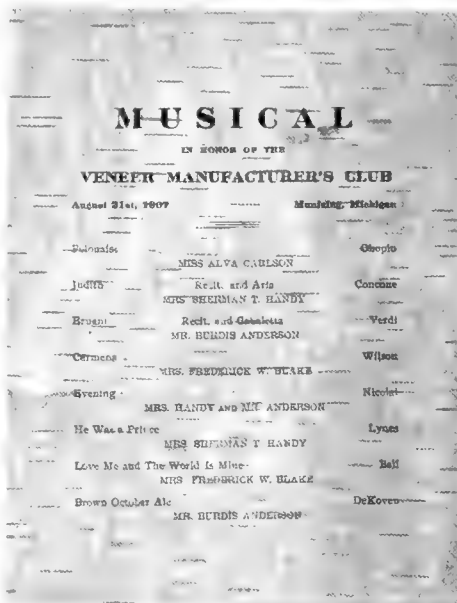

Statistics recently compiled by a German periodical published in the interests of railway science show that the mileage of railroads in the United States alone exceeds that of any other country in the world, and also that of all Europe. The United States consul at Eibenstein, in commenting upon this article, says that the total length of the railways of the world on January 1, 1906, according to its writer, was 563,771.7 miles, of which this country represents 215,713.39 miles and Europe only 192,247.52 miles. The total mileage of this continent is estimated to be more than half that of the entire world. Railway construction during the year 1905 added 12,524.33 miles to the world's total, 2,485.48 of which were in Europe alone, while Germany shows

MENU CARDS PRINTED ON BIRDSEYE MAPLE.

Baltimore, Md.; William Seiber, Central City, W. Va.; O. C. Lemke, Wausau, Wis.; S. B. Wadley, Nashville, Tenn.

Burdie Anderson of the Great Lakes Veneer Company acted as host, and the program which he arranged and carried out for the entertainment of the visitors was a delightful one. After the meeting they inspected the Great Lakes Veneer Company's plant and expressed them-

SOUVENIR PROGRAM PRINTED ON BIRCH BARK.

selves in flattering terms regarding its fine equipment and capable management.

A musicale was given for the veneer men and a few invited guests in the Beach Inn parlor; the unique program is herewith repro-

the comparatively largest increase, six times more than Great Britain. Considerable progress is now being made in building additional railways connecting German-African cotton and mining districts in the interior of Africa with the seacoast. The report estimates that the entire capital invested in the construction of the world's railroads amounted on January 1, 1906, to \$43,310,000,000.

New Ideas in Woodworking Machinery.

One of the most practical as well as interesting folders that has come to hand for a long time is "A Study in Feed Works Construction" as applied to sizers, matchers, moulders and surfacers. The development in this important part of woodworking machinery has been nothing short of remarkable, and we would call the

OLD FORM OF FEED ROLL DRIVE.

attention of our readers to the simplicity of this feed works arrangement. It would seem that manufacturers in all lines are working toward the simple rather than the complex in machine construction, and getting much better results than formerly.

We reproduce herewith illustrations of an old and a new idea. One shows the older method of feed-roll drive, nine small gears being used to drive two feed rolls. There is little difference in the approximate sizes of the rolls and

IMPROVED TYPE OF FEED ROLL DRIVE.

gears. The gear outside of the roll frame is called upon to stand the strain of the entire feed drive and the power to drive the top feed roll transmitted through the bottom roll, requiring double duty of the outside gear. These have been called double driven feed rolls, but in reality they are only "half driven." This feed roll drive might be likened to the past generation of bicycles with small gears and

very low speed. When bicycles were first introduced we thought little of speed or wear and tear on gears, but as their use became more general the smaller gears were thrown out and larger ones substituted, because the demand was for more speed and less strain. The reason for this is obvious. The wear on the smaller gears and chain drive was terrific because of the great number of revolutions necessary to cover a certain distance. The same principle is followed out in the small gear construction, and the great number of revolutions of one tooth against another, the strain of the feed rolls, all serve to shorten the life of the gear.

Many users of machinery expect small gears to stand up under a feed of a hundred feet per minute. They may for a while, but the high tooth pressure shortens the life of the gear, and when one tooth breaks the gear is of no value.

There are few points of the old construction in the second illustration. The most noticeable feature is the size of the gears and their increase in diameter over the rolls. Eight gears drive four feed rolls, each ten-inch roll being driven by a gear almost double the size of the roll itself. This not only increases the power of the roll, but greatly decreases the pressure upon the teeth of the gears. Some machines have one large gear and several very small ones, causing the tooth pressure to be extremely high and necessitating the changing of the small gears several times before the large gear wears out. However, large gears are used where power is needed, and the tooth pressure is reduced to the minimum.

Just as manufacturers developed speed and strength in a bicycle by doubling the size of the gears, so the speed and strength of this feed roll drive has been increased. The gears are broad-faced, the weight is well distributed, and in the first illustration there are as many parts to weight and drive two feed rolls as are used in the later construction to drive four. This feed roll drive will give better results on stock run at a hundred feet per minute than on the other at fifty feet per minute. This is one of the features that makes it possible for the Berlin Machine Works to put out a flooring machine under a guarantee of a hundred feet per minute, which is advertised under an absolute guarantee.

This new method of feed roll construction is simpler, stronger, and will last longer than the old. It gives a machine greater efficiency and capacity than can be obtained by any other method. This new arrangement is found on all the Berlin sizers, planers, matchers, inside moulders and stationary bed double surfacers. Any one desiring a copy of "A Study in Feed Works Construction" will be sent one gladly if he will address this company at Beloit, Wis.

Glass for Poles.

An architect of Cassel, Germany, has been granted patents in his own and other European countries, as well as in the United States, for an invention for manufacturing glass telegraph and telephone poles.

A stock company has been organized and a factory for the manufacture of glass poles has been built at Grossalmerode, a town near Cassel. The glass mass of which the poles are made is strengthened by interlacing and intertwining with strong wire threads.

One of the principal advantages of these poles would be their use in tropical countries, where wooden poles are soon destroyed by the ravages of insects and where climatic influences are ruinous to wood. Their selling price has not been fixed, but the company is willing to accept about \$6 for a pole twenty-three feet long. The Imperial Post Department, which has control of the telegraph and telephone lines in Germany, has ordered the use of these glass poles on one of their tracts.

To Extend Use of Cypress Abroad.

A worthy mission has been undertaken by the Louisiana Red Cypress Company. Robert C. Irwin, an official of the company, has been

sent abroad to endeavor to increase the use of cypress in foreign countries. The result of this experiment will be of great importance to the cypress industry of the country. Mr. Irwin goes first to the British Isles to prepare the way for what the company confidently expects ultimately will be a big consumer of this wood, which has heretofore attracted but little attention.

Mr. Irwin, who has recently been appointed superintendent of the planing mill machinery for the company, in addition to the various other important duties he performs for the company, is just the person to undertake this important task, as he has an experience of years' standing and knows the ins and outs of cypress business from the felling of the trees to the marketing of the finished product.

The company is quite positive of success in this direction, as there is a field for cypress of no little moment. The tank and vat manufactories around Manchester, which represent the chief industry of that section, to mention one instance, if they appreciate the value of the wood for this purpose would be large purchasers of it. At present the Louisiana Red Cypress Company is represented abroad on a commission basis, but if this venture proves successful a regular bureau will be established, through which all its foreign business will be handled.

Hardwood Mill at Seattle.

The Ehrlich-Harrison Company of Seattle, Wash., will within a few days commence the construction of a new plant to cost \$150,000 for the manufacture of hardwoods. The plant, which will be the only one of its kind in the Northwest, is to be in operation early next year. E. A. Abbott, vice president of the company, is now in the Orient arranging for a constant supply of hardwoods in the log, to be used in manufacturing ship parts, pulleys and mill fittings. The first shipment of 1,500,000 feet of Japanese white oak in the log will arrive within a few days, and further shipments will follow at regular intervals.

Increase of Capacity.

The Arthur Hardwood Flooring Company of Memphis has placed an order with the American Woodworking Machinery Company for an outfit which will double the existing capacity of its Memphis flooring plant. This apparatus will consist of edgers, planers and edge-matchers, and will be an exact duplicate of the present equipment of the factory. It is placed as a rush order to take care of the rapidly growing business of the concern, and it is expected that the new machinery will be in position and operation within thirty days. This addition to the company's facilities will give it the largest capacity of any flooring plant in the country.

Miscellaneous Notes.

An issue of \$5,000 preferred stock has been made by the Lee Veneer Company of Lexington, N. C., for the purpose of covering the expense of installing a new rotary machine. The company members of this concern are constantly planning to augment their facilities to take care of their rapidly growing business.

already has a very complete line of machinery at its plant, but the progressive and energetic

The Frost Veneer Seating Company, Newport, Vt., is building a two-story warehouse 180x40 feet in dimensions for storing its finished product.

Fire at the operations of the Michigan Veneer Company at Alpena, Mich., destroyed the company's excelsior mill and considerable unmanufactured stock. The loss is estimated at \$12,000. The mill will be rebuilt shortly.

The Houston Hoop and Handle Company has been incorporated at Houston, Tex., to manufacture barrel hoops and broom handles, with a capital stock of \$10,000. The company has purchased the necessary machinery for its plant, which will have a daily capacity of 15,000 hoops and 2,000 handles. Elm and gum lumber will be the material used. The company has a sawmill which will cut its own material.

Broom, hoe, rake and paint-brush handles will be manufactured by the Bedford Handle Com-

pany, recently organized with \$10,000 capital stock to operate at Bedford, Ind. The president of the concern is George M. Dodd and Boone Leonard is secretary and treasurer. The company has purchased a large tract of timber land to supply its timber requirements, which will be heavy, as about twenty-five machines of large capacity will be operated.

The Galloway-Pease Lumber Company of Johnson City recently purchased from the Bryan Lumber Company a tract of 1,300 acres of hardwood timber land situated near Cranberry, N. C. The tract will, it is estimated, cut about ten million feet and will be developed by the purchasers. Several circular mills will be installed at once.

The United States consul at San Jose, Costa Rica, reports that during the past two years the lumber business has been prosperous in Costa Rica, and a number of sawmills have been built. Many kinds of timber grow there, including mahogany, dyewoods, rosewood and cedar, the latter being extensively used in building. Much of the valuable timber is inaccessible owing to lack of roads. Could land be obtained adjoining or near the railroad a good opening is afforded for the manufacture of lumber. Prices for land near the railroad vary from \$50 to \$75 a manzana (about one and three-quarter acres). At a distance away prices are lower, but the expense of marketing the timber is much greater.

A small blaze at Huntsville, Ala., originating from sparks from an emery wheel, caused a loss of \$300 in the Consolidated Handle Factory.

Mrs. Alice Webb, known as the Texas tobacco queen, has purchased 122,000 acres of coal and hardwood timber lands in Rowan and Morgan counties, Kentucky, for \$1,250,000. J. Strickland and W. R. Briggs of New York negotiated the deal. The lands adjoin the coal properties belonging to the Frick interests.

A new factory for the manufacture of wagons and sleighs is in prospect for Lansing, Mich. J. W. Paterson will remove his plant from Holly to the former city, and a new company capitalized at \$100,000 will be organized.

The Gonave Island Development Company has been incorporated at Plainfield, N. J., to trade in precious woods found on the island of La Gonave, Haiti; the concern is capitalized at \$125,000 and the incorporators are Charles W. Russel, G. H. Werner and H. O. Hance.

M. J. Mobley is opening up a handle factory in Washington C. H., O. He also operates one at Xenia.

Incorporation papers have been filed by the Culver Tie and Timber Company of Mobile, Ala., the objects of the new concern being to buy, sell and own lands and timber rights and to manufacture ties, timber, lumber and conduct a logging business. The authorized capital is \$100,000. Horace T. Culver is president, C. L. Nabers vice president and W. M. Culver secretary.

M. Lawlis of Hugo, Okla., a well-known Indian Territory lumberman, recently sold to the American Hardwood Lumber Company of St. Louis 5,000,000 feet of lumber at an average of \$35 per thousand.

The Burma forest department disposed of 6,886 tons of teak timber at its depots in the Pinyin division during the last of May and first of June at unusually high prices. While in Berlin recently the king of Siam stated that Americans who had established sawmills in his country and begun exportation of teakwood are doing well. The king is negotiating with other Americans regarding new industrial enterprises in which his people cannot be sufficiently interested to invest their money.

Articles of incorporation of the Clark-Gay Manufacturing Company of Little Rock, Ark., have been filed. The company will make wagon hubs, spokes and other wood stock and is capitalized at \$80,000.

The Capitol Veneer Company, 1541 Lewis street, Indianapolis, suffered a loss of \$10,000

recently through the dropping of a lighted candle upon a pile of sawdust. Clearing away the debris has begun and the company will rebuild.

The Atwood Lumber and Manufacturing Company has been incorporated under the laws of Wisconsin, with the F. Weyerhaeuser Company and George A. Atwood as the sole stockholders. The capital stock is \$200,000. The company owns 300,000,000 feet of timber in Price, Sawyer and Iron counties, about three-fourths of which is hemlock and the remainder hardwoods. Plans have been perfected for the erection of mills and factories and work on their construction will commence early in January. A hardwood mill with an annual capacity of 12,000,000 feet will be established. The location for the plants has not been decided upon as yet, but it will probably be somewhere on the Wisconsin Central between Ashland and Abbottsford.

The Circle Bending Company, Pine Bush, N. Y., has been incorporated by George E. Decker, W. J. Ward, Agnes J. Ward and J. Erskine Ward. The company has a plant with a capacity of 2,500 feet per day, equipped with a bending machine, planer, rip saw, boring machine, etc. Oak and hickory rims are the principal output and enough orders have been closed to keep the plant in operation for six months.

The Evansville (Ind.) Veneer Company is soon to receive its first shipment of mahogany logs from Africa. They were shipped to England first and then consigned to Portland, Me., from whence they are en route to Evansville. The value of the logs is about \$3,000, and they are said to be of a fine species and very large. The company will use them for veneer work.

A big cargo of mahogany and cedar was brought to Boston within the month from Central American points. There were 869 cedar logs and 11,894 mahogany, all consigned to the George D. Emery Company.

A Swedish engineer has invented a new method for the utilization of sawdust whereby it may be finely ground and mixed with colors and a binding material, then hydraulically treated and employed for many purposes as a substitute for other building material. It is said to be desirable for making furniture, ship fittings, etc., and a large factory will be built in Sweden to produce the new commodity.

A dispatch from a Sydney (Australia) newspaper says an experimental shipment of 2,250,000 feet of Japanese timber has arrived there, and other shipments are to follow, and that a lumber firm says the cargo of Hokkaido pine, of which about 800,000 feet were discharged at Sydney and 1,500,000 feet in Melbourne, cost \$2.68 per 100 superficial feet c. l. f. Sydney for ship quantities.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

E. F. Dodge of the P. G. Dodge Lumber Company has returned from a southern trip.

William J. Wagstaff of Oshkosh, Wis., was a Chicago visitor recently.

M. S. McCullom, representative of Schultz Bros. in Roanoke, Va., visited the home office this week.

W. W. Mitchell of Cadillac, Mich., head of the large lumber interests which bear his name, was in the city a few days ago.

J. E. Meadows, Memphis manager for the Advance Lumber Company, of Cleveland, called at the Record office Sept. 6.

L. L. Skillman of the Skillman Lumber Company of Grand Rapids called at the Record office Sept. 7. He reports that trade in his city is excellent.

The Chicago Association of Commerce has decided to mark the site where Father Jacques Marquette and Louis Joliet first set foot on

titles. It is not a very high-grade timber, being of poor quality and full of knots.

Samples of wood for lead pencils grown in the Philippines are on the way to this country and certain New York capitalists have become greatly interested over the report that they will be found durable and in every way available for that purpose as a substitute for cedar.

The sawmill of the Lathrop-Hatton Lumber Company at Riverside, Ala., was destroyed by fire September 2 with a loss of \$50,000, partially insured.

Greenwood, Miss., is becoming quite a lumber town of late. Three new manufacturing plants are being erected there and three more are negotiating for sites. Nash & Dunn are erecting a new stave factory, and it will have a daily capacity of 5,000 finished staves, with dry kiln and finishing plant. W. S. Dundas is building a mill in which he will manufacture persimmon, hickory and oak dimension stock. Ropp, Whaley & Ropp, manufacturers of hardwood lumber, are also building a plant.

E. R. Buchanan of Lorain, O., has just purchased a tract of timber in the Little Kanawha valley of West Virginia which will cut from 50,000,000 to 60,000,000 feet of hemlock, oak, poplar and other hardwoods, which he will manufacture into lumber.

The American Veneer Company has already begun work upon its buildings at Fort Smith, Ark.

The spoke and hub factory at Mt. Carmel, Ill., recently destroyed by fire, will probably be rebuilt. About 100 men were employed.

The Virginia Land and Improvement Company of Williamsburg, Va., which owns a 5,000-acre tract in New Kent county, is about to build a large veneer factory at Boulevard, employing from forty to fifty men.

The Pugh pipe factory of Louisiana, Mo., made and shipped 316,000 pipes the past year from hickory poles.

The Crescent Lumber Company, with offices at Marietta, O., will on September 15 begin operating its new mill near Clay, W. Va. The equipment consists of an eight-foot Giddings & Lewis handmill, two steam skidding outfits, American log loader, etc. The company has just completed eight miles of three-foot gauge railroad to connect with the Buffalo Creek & Gaulley road.

Hartwell Brothers of Chicago Heights, Ill., large manufacturers of handles, are operating a modern mill and shaving shop recently established at Mammoth Springs, Ark., manufacturing their handshaved ax-handles, which are made from the best second-growth hickory. The plant is operated under the title of the Mammoth Springs Handle Works.

Chicago soil, nearly two hundred and fifty years ago. Historical documents and traditions indicate this spot to be on the bank of the Chicago river, just south of Blue Island avenue, and the city has donated a site for the erection of a suitable monument to commemorate the event. C. L. Willey, the prominent manufacturer and importer of mahogany and other precious woods, has generously donated a handsome mahogany cross, which will be erected late in September—that being the month, in 1673, when the two great explorers first landed. The cross will be fourteen feet in height and twelve inches thick. Dedication services will be held and a committee, consisting of T. E. Wilder, H. L. Green, Granger Farwell, J. E. Kehoe and E. L. Kimbark, has been appointed to arrange a program.

Miss Mary E. Brown, daughter of John P. Brown, editor of *Arboreticulture*, Connersville, Ind., died at her father's home last month.

Miss Brown was a brilliant woman and one who made her life well worth living. She was an expert nurse, and served several years as a medical missionary at Korea; not the least of her noble efforts was extended in the cause of tree planting, which she did much to promote, both in this country and in the Orient.

E. W. Pratt Jr. of the Pratt-Worthington Company, Crofton, Ky., was a Chicago visitor on August 29.

W. A. Gilchrist of the Three States Lumber Company, Memphis, was in Chicago week before last and favored the RECORD with a call.

E. F. Beugler, superintendent of the E. & B. Holmes Machinery Company at Buffalo, N. Y., sailed from Quebec, July 26, for England and the Continent. Mr. Beugler was accompanied by his wife; they will spend some time abroad.

C. G. Powell of the Fullerton-Powell Hardwood Lumber Company, South Bend, Ind., was in the city last week in conference with Manager McMullen of his local office, and sizing up Chicago hardwood conditions.

F. D. Robertson of the Robertson-Fooshe Lumber Company, the new Memphis hardwood house, was in the city last week.

W. E. Bonesteel, secretary of the Worden Tool Company, Cleveland, O., was a visitor with the local trade during the past few days.

J. W. Thompson of Memphis called upon Chicago friends in the hardwood trade September 5.

Frank F. Fish, secretary of the National Hardwood Lumber Association, spent several days last week among the Wisconsin trade.

W. W. Cummer of Jacksonville, Fla., has been in Chicago for several days in attendance at the sick bed of his brother-in-law, D. F. Diggins of Cadillac, Mich., who is at the Presbyterian Hospital. F. A. Diggins has been in town several times of late, on the same errand.

Boston.

The lumber yard of the C. W. Leatherbee Lumber Company, Boston, has again been visited by fire, causing a loss estimated at \$25,000 to \$30,000. The fire was largely confined to a shed containing hard pine.

George H. Davenport of the Davenport-Peters Company, Boston, recently returned from a European trip and since his return has been stopping at Bar Harbor, Me.

At the last meeting of the Massachusetts Wholesale Lumber Association the resignation of W. C. B. Robbins as secretary was accepted and F. W. Page was elected in his stead. Mr. Robbins has retired from the lumber business to enter an entirely new field.

Henry McDowell of the Davenport-Peters Company returned about two weeks ago from a two months' trip abroad.

Among the recent visitors from the South was N. F. Amours of Atlanta, Ga.

D. D. Nellis and H. J. Amos of Nellis, Amos & Swift, Utica, N. Y., recently visited their new Boston office, which is in charge of Frank J. Orent.

C. P. Chase & Co., Springfield, Mass., are making plans to move to Brightwood, where they have purchased 100,000 feet of land. They will erect several sheds, a planing and finishing mill.

Charles S. Wentworth of Charles S. Wentworth & Co., Boston, recently returned from a trip to New Brunswick.

The W. A. Fuller Lumber Company of Leominster, Mass., has again offered prizes to the leading pupils in manual training in the public schools of Leominster.

William H. Sawyer of the W. H. Sawyer Lumber Company, Worcester, Mass., who has been making a trip through Oregon and Washington, has returned.

William Curtis of William Curtis' Sons Company, Roxbury, is now traveling along the Pacific Coast in company with Mrs. Curtis.

M. W. Hart has been spending the week ends during the summer in Maine. Mr. Hart states that while the demand for hardwood is not

active, he is doing a very satisfactory business and looks for a good fall demand.

John K. Ordway, one of the best known lumber salesmen in Boston, died at his home in Dorchester, Aug. 26, after an illness of about fourteen months. Mr. Ordway was 55 years of age and is survived by a widow and three children. Mr. Ordway for the past fourteen years had been connected with the Atlantic Lumber Company. His competitors in business were his friends. The funeral was largely attended by members of the trade from all parts of New England.

New York.

E. J. Marsh, secretary of the Sea Coast Lumber Company, 1 Madison avenue, has just returned with his family from a vacation in Quebec, Canada. During his stay there he visited the extensive operations of Price Bros. Company, Ltd., for which his company is selling agent in the States.

Secretary E. F. Perry of the National Wholesale Lumber Dealers' Association, 66 Broadway, is back from a vacation spent in cruising in the northern waters of the Hudson River.

M. J. E. Hoban of the Hoban & Curtis Lumber Company, 1 Madison avenue, is spending a brief vacation automobilizing.

G. G. Barr of Beecher & Barr, Pottsville, Pa., and of the Tennessee Lumber & Manufacturing Company, hardwood manufacturers of Pottsville, spent several days in town during the fortnight in the interest of business.

Frank R. Whiting of the Janney-Whiting Lumber Company, Philadelphia, and the Whiting Manufacturing Company of Abingdon, Va., spent several days in town during the fortnight in the interest of business. The plants of the company at Abingdon and Judson are running full time on a good run of business, and he looks for a good fall trade.

Sam E. Barr, well known hardwood wholesaler in the Flatiron building, is well satisfied with hardwood conditions. He finds trade very fair for this season of the year and with excellent connections at sources of supply is doing an increasing business in the local trade.

An involuntary petition in bankruptcy has been filed against the Brooklyn Cedar Ware Works, with factory at 391-397 Leonard street and office at 97 Warren street, New York. There are a large number of lumber creditors. The liabilities are stated to aggregate \$14,000, with assets not as yet scheduled. The company was established in 1893 and was a New York state corporation with a capital of \$40,000. The officers were, president, E. L. Golden, and secretary and treasurer, Alfred H. Golden.

Richard W. Price, Price & Heald, Baltimore, spent several days here last week renewing acquaintances in the trade while on his way home from a vacation spent with Mrs. Price in Portland, Me.

The large piano and coffin factory of J. & J. W. Stolz, 420-426 West One Hundred and Sixth street, Manhattan, was damaged by fire on August 19, entailing a loss of several thousand dollars.

John N. Scatterd of Scatterd & Son, leading hardwood wholesalers of Buffalo, was a recent New York visitor. He expressed himself optimistically as regards the fall trade. Mr. Scatterd had just recovered from an automobile accident, and his friends were congratulating him upon his recovery. R. C. Scatterd of the New York & Batavia Woodworking Company, Batavia, N. Y., met his brother while here.

C. W. Manning, 66 Broad street, has just returned from an extensive business trip in western New York and reports the hardwood trade in very fair shape.

J. C. Turner of the J. C. Turner Lumber Company, 1123 Broadway, has just returned from a several weeks' tour of the West and Pacific coast, on which he was accompanied by his family, his itinerary including Yellowstone Park, points of interest in British Columbia

and along the coast. On his return he states that he found the cypress trade to be in very fair shape for this season of the year.

W. W. Lockwood, manager of the local office of the Rice & Lockwood Lumber Company, 1 Madison avenue, has just returned from an extended trip to Nova Scotia, where he visited the mill and operations of the Anthony Lumber Company at South Maitland, which is controlled by his company and the output of which they will handle in the local trade. The fine new plant recently installed has begun operations and the mill is already accumulating some choice stocks for the eastern markets.

J. M. Vosburgh of Bemis & Vosburgh, Pittsburg, Pa., spent several days in town last week in consultation with W. W. Powell, Jr., at the local office of the firm, 12 Broadway.

The local office of Mershon, Schuette, Parker & Co. has been removed from 18 Broadway to 1 Madison avenue, where the firm has leased commodious quarters.

C. E. Lloyd, Jr., of the Boice Lumber Company was a visitor in town last week in the interest of business. In referring to the business situation, Mr. Lloyd looks for a firm hardwood market for the balance of the year and believes that with the demand which seems assured there will be a marked scarcity in the most desirable items in hardwoods before January 1.

J. B. Ransom, president of the Hardwood Manufacturers' Association of the United States and head of the extensive hardwood interests of J. B. Ransom & Co., Nashville, Tenn., passed through the city last week en route home from a pleasure trip.

Philadelphia.

The Boice Lumber Company, after a good business during the summer, is now preparing for a heavy fall trade. C. E. Lloyd Jr., vice president and general manager, since his return from his vacation in the hills of Maine has made an inspection tour of the company's mill and yards. The company has been stocking its yards at Norfolk, Va., where it has every facility for seasoning. It also fortunately has excellent connections with the railroads, consequently will not be inconvenienced by the car shortage. Mr. Lloyd reports stocks in good shape and ready to be shipped at almost a moment's notice.

The W. W. Ritter Lumber Company of Columbus, O., opened an eastern office at 1402 Land Title building, this city, August 1, which is in charge of R. L. Gilliam, assistant sales manager, a thoroughly experienced lumberman, who has been located for the last five years at the home office. The local branch will control the territory of Pennsylvania, New England and New York, Maryland, Delaware, Virginia, West Virginia and North Carolina. Mr. Gilliam states that his company has now eighteen mills, situated respectively in Kentucky, Virginia, West Virginia, North Carolina and Tennessee, and that its output will exceed 100,000,000 feet of hardwoods, white pine and hemlock.

The Pennsylvania Lumbermen's Mutual Fire Insurance Company has proved one of the most successful concerns of its kind in the country. Justin Peters, manager, reports business to have exceeded all expectations so far this year. If the present prosperity of the company continues the amount of business written up for 1907 will make this the banner year.

The Righter-Parry Lumber Company, as usual, is among the prosperous concerns. The personnel of the company is again in harness and anticipates good fall trading. Frederick C. Righter is making a stock-hunting tour through West Virginia.

The Codling-McEwen Lumber Company reports business moving along smoothly. Frank B. Codling recently made a trip through the Pennsylvania, New York and upper New Jersey districts, where he gathered in some desirable or-

ders. Mr. Codling reports his mill at Azalea, N. C., working steadily. The company is making a specialty of one-inch oak dimension stock.

The Paul W. Fleck Lumber Company reports business moving fairly well. Mr. Fleck has just returned from Atlantic City, N. J., where he enjoyed a short respite from business cares. He regards the business outlook very promising, the only bugbear being the car shortage at the mill.

Wistar, Underhill & Co. have experienced no falling behind in their business during the summer; everything has been satisfactory. R. W. Wistar has just returned from the Pocono mountains, where he sought a much-needed rest. T. N. Nixon of this firm is on a selling trip through the Lehigh valley district and is sending in some good orders. J. W. Anderson is making a like trip through Canada.

W. H. Fritz & Co. are pleased with the trade situation. W. H. Fritz indulged in a most enjoyable trip to Niagara Falls and North Tonawanda, N. Y., this summer, and Elwood B. Hayman rusticated for a time in Ithaca, N. Y., and surrounding country. Mr. Fritz is now making a business trip through New York.

The Rumbarger Lumber Company reports many inquiries and good orders coming in, consequently is pleased with the future outlook. John J. Rumbarger has been working like a Trojan for the success of the convention of Hoo-Hoos to be held at Atlantic City, N. J., September 9, 10 and 11. He has spent the summer with his family at Ridley Park, Pa., but is at present enjoying a short sojourn at Atlantic City.

Among the recent visitors to the local trade were J. W. Byrd of the J. W. Byrd Lumber Company, Thomasville, Ga.; Valentine Luppert of Butler, Tenn., and Jacob Eisenberger, superintendent of the Evergreen Lumber Company, Evergreen, N. C.

Wilson H. Lear reports business excellent in every way and the month of August the best he has ever had. He is rushing the work of establishing his new yard at East Girard avenue and Fletcher street, as he is much in need of the extra space. Mr. Lear takes great pride in telling of the work accomplished by H. F. Thompson, one of his inspectors, who it seems has broken the record for quick inspection work. According to showing Mr. Thompson counted and inspected in 148 hours 873,276 feet of cypress; in one day alone he covered 74,121 feet of 5/4, 6/4 and 8/4, a dexterity certainly with which few would care to compete.

Sheip & Vandegrift report business good in all departments, their only drawback being a scarcity of expert labor. Jerome H. Sheip recently returned from his vacation in the Adirondack mountains and Big Moose lake. Asa W. Vandegrift sojourned for awhile at Eagles Mere, Pa.

The Philadelphia Veneer and Lumber Company is very busy both at its mill and in the wholesale line. F. Goodhue Jr. of this concern recently made an extended trip through eastern Pennsylvania and New England, where he gathered a good bunch of orders. He is now on a selling trip in New York. This company has recently obtained a desirable lot of chestnut which it finds is a good seller.

Officials of the Reading Coal and Iron Company, having pronounced the experiment made by the United States government to prevent the decay of mine timber a complete success, has decided to at once adopt the method. Timber chemically treated by experts of the government at the Silver Creek colliery a year ago was found in excellent condition, while other timber similarly situated but not treated was found in an advanced state of decay.

The furniture factory owned by the Union Furniture Company of McClure, Pa., with contents, was destroyed by fire August 27; loss, \$20,000.

The Aldan Supply Company's planing mill and sash factory at Chester, Pa., were destroyed by fire August 27. The loss is estimated at \$6,500.

The toy and wood novelty factory of A. Schoenhut Company, Trenton avenue and Adams street, this city, was visited by fire August 19. The loss is estimated at \$100,000 and is fully covered by insurance.

A five-story-and-basement reinforced concrete building is to be erected on Fifth street below Locust, which when finished will be occupied by Heywood Brothers & Wakefield Company, extensive chair manufacturers, who have taken a lease for same at \$26,000 per annum.

The lumber yard at Manheim and Green streets belonging to James R. Gates was recently sold to Frank D. Williams for \$21,000.

Upon the petition of Delaney & Co. and Kensington National bank, with claims for \$1,567.29 and \$13,500 respectively, William W. Price has been appointed receiver of the Ebert Furniture Company, which has been compelled to temporarily suspend business owing to lack of ready funds. The aggregate liabilities consist of unpaid bills \$10,356.22 and notes coming due \$36,551.01.

The Lovelady Lumber Company has been incorporated at Camden, N. J., by J. Gibson McIlvain and his associates in the firm of J. Gibson McIlvain & Co. of this city, to develop a tract of timber acquired last year on Lovelady creek in Virginia. The capital of the new corporation is \$15,000 and the incorporators are J. Gibson McIlvain, Hugh McIlvain and J. Gibson McIlvain Sr. The timber on the property consists principally of oak, chestnut and poplar. The product of the Lovelady Lumber Company will be handled by J. Gibson McIlvain & Co. of Philadelphia.

Baltimore.

The last quarterly meeting of the Lumber Exchange under the presidency of William M. Burgan was held at the Merchants' Club, September 2. Perhaps the principal subject to come up for discussion was the reservation of wharf space on the new docks for the lumber trade. The subject was brought up on a question of L. H. Gwaltney of the American Lumber Company, who wanted to know what was being done to keep the claims of the lumber trade before the municipal authorities. He stated that if the securing of the reservation on pier No. 6 was made a matter of competition he was very much afraid that the lumbermen could not offer as much as other interests, steamboat companies, for instance. It behooved the members of the trade to impress the proper officials with the importance of the lumber business to the city, he said, as work on pier 6 would be commenced within the year. A motion was adopted authorizing the president to appoint a committee with instructions to investigate and report at some future meeting.

The matter of appointing a salaried secretary came up next and elicited considerable discussion. E. P. Gill, as chairman of the special committee, reported in favor of this step, but declared that the committee was without means and that until these were provided nothing could be done. The exchange resolved to continue the committee, which is expected to report favorably on the proposition at the annual meeting in December. If it is necessary, in order to provide the money for a paid secretary, to raise the dues, which would necessitate an amendment to the by-laws, a resolution will be offered at the next meeting to authorize the change. Several matters relating to the inspection of lumber under the authority of the exchange were discussed, after which the members adjourned to the dining hall, where an excellent dinner was served.

The campaign in favor of John L. Alcock of John L. Alcock & Co. of this city for snark of the universe, which was started about two weeks ago, is progressing to the satisfaction of those in charge. Maurice W. Wiley, chairman of the campaign committee, has been in communication with many Hoo-Hoo, and says that he has received flattering assurances of support.

The campaign committee will go down to Atlantic City next Saturday to secure headquarters and make other preparations to get the Alcock boom under way by the time the delegates to the annual concatenation arrive.

R. E. Wood of the R. E. Wood Lumber Company returned last week from a trip to North Carolina, South Carolina and eastern Tennessee, where he went to look over general conditions. He also had under consideration arrangements with capitalists for various rights on the properties of his company. He found the mills busy, as a rule, and an optimistic feeling among the manufacturers.

M. S. Baer of R. P. Baer & Co. has gone on a trip to Mobile, Ala., where the company has a mill in operation. He will give attention to the work there and will also look around among other plants, studying trade conditions and getting information as to the supply of lumber.

Richard W. Price of Price & Heald, who spent a vacation in Maine, is back at his desk once more. He had an excellent time and made large gains in energy.

Holger A. Koppel, a hardwood exporter here, with offices in the Carroll building, Baltimore and Light streets, and Danish vice-consul, has returned from a trip home to Copenhagen, where he went to visit his parents after an absence of three years.

Pittsburg.

The Parkersburg Lumber Company is a new West Virginia corporation, with offices at Parkersburg. Its officials are C. B. Barnes, J. F. Ritchie, W. N. Engle and E. F. Hartley of Fairmont, W. Va. It has a capital of \$25,000 and will do a general hardwood business.

President George W. Haynar of the Reliance Lumber Company is taking two weeks off in the Northwest. His partner, H. W. Henninger, looks for a brisk fall trade in hardwoods. The company is getting into the market in good form this fall and will have some splendid hardwood connections.

President L. L. Satler of the L. L. Satler Lumber Company fears no break in prices. He says that his company is booked up with orders that will keep it busy until January 1 at its big plant at Blackstone, Va.

William R. Cornelius, who resigned as sales manager of the J. C. Moorhead Lumber Company in August, has started under his own name as a lumber wholesaler in the Bessemer building in Pittsburg. His three years' connection with the Moorhead company gave him a large acquaintance among the right kind of firms and mill men and showed his ability to make good. He is down in West Virginia now lining up some good hardwood connections.

W. M. Gillespie is back from Buffalo, Charleston and other lumber centers, where he has been journeying of late. He is satisfied that things are in better shape than a month ago and looks for a pretty satisfactory trade in hardwoods this fall.

The Linehan Lumber Company is not disposed to see any blue side in the present hardwood market. They quote prices, terms and general conditions throughout this section, as well as at the hardwood mills, to back up their position, and believe that the hardwood wholesaler with good dry stock has nothing to fear. The company rolled up one of the biggest summer records ever made in hardwood in this city.

The McDonald Lumber Company, which recently opened a Pittsburg office in the Bessemer building, reports that hardwood trade has steadily increased and it is now cutting 60,000 feet of lumber a day at its mill on the Western Maryland railroad thirty miles from Elkins, W. Va. Mr. McDonald notes a very good call from the Elkins yards, due to the big building boom in that section now.

The Mead & Speer Company reports prices of hardwoods uniformly firm. It is doing a good business in chestnut for boxing and coffin making and also has a brisk trade in shingles.

It will take at least three months for the Curll & Lytle Lumber Company to catch up with its orders for poplar. For the past two years there has been hardly a month when this company was "caught up" on its poplar orders, and it is getting a steady run of trade in this line that permits of no let-up in operations at its mills.

The Kaul & Hall Lumber Company shipped 3,000 cords of wood to the tanneries at Rolfe, Lock Haven and Mt. Jewitt last month. Fred Wilmarth & Sons, who handle the output of the plant at St. Mary's, Pa., do not find any sag in hardwood prices and are booking some nice orders to start the fall market.

J. F. Henderson of the Henderson Lumber Company notes a disposition on the part of the mining companies to buy often and get large orders of late. Throughout western Pennsylvania this company has a large trade in all kinds of mine stock and it has lately taken some of the best orders it has had for a year. August beat all records for that month both in shipments and actual cash business, which speaks well for the spirit of hustle which pervades the firm's handsome offices in the new Commonwealth skyscraper.

President Dombhoff of the Acorn Lumber Company announces that he will soon have a fine connection with mills in northern Pennsylvania. He is already well supplied with West Virginia stock in addition to having one of the best yellow pine agencies in Pittsburgh.

The J. C. Moorhead Lumber Company is pushing things at its Pennsylvania mills and is putting out a splendid lot of hardwood from its Pittsburgh office. It has lately added more salesmen and is planning to work the Pittsburgh district to a finish.

The Advance Lumber Company, through its Pittsburgh manager, C. G. McCoy, reports a very good month's business in August. Its city trade has kept up the past summer much better than the average firm's, owing chiefly to the fact that there are few wholesalers who are so thoroughly versed in Pittsburgh wants and how to meet them as Mr. McCoy. His specialty in inquiries lately has been railway ties, and the company is taking some good business along this line.

Manager S. A. Seaman of the C. P. Caughey Lumber Company says that he is sold up to October 1 on white oak and that prices are getting back to their old form. With his western Pennsylvania connections he is able to get as fine a quality of white oak as comes into this market.

The newly organized Vigilant Lumber Company is doing well. It will have permanent offices shortly and is getting some desirable connections.

Secretary J. H. Henderson of the Kendall Lumber Company has gone to the Crellin (Md.) mill to look over operations with S. A. Kendall. Last month the Kendalls shipped over 2,000,000 feet from this one mill. In all its August shipments totaled over 4,500,000 feet, the best August in its record.

General Manager J. N. Woollett of the American Lumber & Manufacturing Company reports hardwood conditions in fine shape. Prices are firm and the demand is ahead of that of a year ago. An instance of how well it pays to stock up a long time ahead with desirable lumber is furnished in an order booked by Mr. Woollett this week for 1,000,000 feet of cottonwood to be furnished from Arkansas. Over a year ago Mr. Woollett went scouting in the Southwest and contracted for an enormous quantity of cottonwood, which has played good service ever since.

Howard C. Cook of Johnstown, Pa., has contracted to supply 25,000 ties for the Southern Cambria Railway Company of this state. This is one of a dozen good tie orders that have been placed recently by Pennsylvania railroads and street railway companies and shows that the fall demand is going to be excellent. Proof

of this is furnished in the offer of a prominent tie man of Pittsburgh to buy 300,000 ties off from a certain piece of timber in West Virginia at 50 cents each at the track.

The Pittsburgh Lumbermen's Mutual Fire Insurance Company, under the active management of Secretary Carl Vandervoort, is piling up a splendid lot of business for a first year. During its six months in business it has had no losses. The company works along the same lines as other large mutuals and is on the best of terms with the leading companies in this country.

Buffalo.

At this time there is little doing in the line of personal news. The outings of the various bodies are over, but when the hardwood lumbermen get uneasy they get into their automobiles and with family and friends hie themselves away for a rest and change. Just now the dealers are about all home, but the Hoo-Hoo annual will claim quite a number of them in a few days. The attendance from here will not be large, but it will be quite representative.

Hugh McLean has taken his annual fall outing on the family preserve on the upper Ottawa and is back at business again. All the mills of the company are running at a good rate, but the office still complains of a scarcity of oak lumber.

G. Elias & Bro. will come into their own now, with the canal break mended, so that their stranded canal cargoes of lumber can move. G. Elias, president of the Hardwood Exchange, does not expect to resume meetings till late this month.

The yard of F. W. Vetter seems to bear out his late remark that he is getting his share of lumber, and the activity in loading out shows that he is also up with the others in sales.

The Buffalo Hardwood Lumber Company is carrying a big yard full of stock and it believes in the future of the trade, so there is more stock coming in right along, the greater part of it oak, though there is a good showing of other woods.

J. F. Knox is in full fighting trim again after his late tussle with malaria and is off to the mills of Beyer, Knox & Co. at Pascola, Mo., running the mills there. Oak is the chief product.

O. E. Yeager may not take in the Hoo-Hoo annual, as he has lately made the trip. He has stuck to business well and is able to report two very big months for midsummer, with every prospect of more of the same sort of thing.

T. Sullivan & Co. will add considerably to their stock of lake hardwood this fall and the steady pounding of the Pacific coast route has turned out a good lot of Washington fir and spruce for the winter when cars stop running.

I. N. Stewart & Bro. are handling a good lot of oak now and are still able to get what they want in the hardwood districts of Pennsylvania and West Virginia, not to mention the usual amount of cherry, with some walnut.

After A. W. Kreinheder gets all there is out of the Hoo-Hoo annual he will cross into Tennessee and take in the mills and tall timbers of the Standard Hardwood Lumber Company.

Scatcherd & Son are still finding that the chief difficulty with their trade is the scarcity of oak, in spite of the fact that their Memphis mills are running and every good lot of oak that offers is captured.

A. Miller is still catering largely to the city hardwood trade and is getting a big lot of all sorts of hardwood from both Canada and the South, including ash and cherry in quantity. The yard stock is large and excellent.

Bay City and Saginaw.

The fact that the lumber industry appears to have eased up a little compared with the early spring months will not restrict the output of logs and lumber during the fall and winter to any material extent. The regular

operators the year through usually run a little lighter force during the summer months. Wages range from \$28 to \$40 a month, and loggers state they are a little more easy than they were earlier in the season. Logging at best is going to be expensive and justify the existing high prices for lumber. With provisions so high, a crew of men will eat up a lot of money this winter, as woodsmen usually carry their appetites in their inside pockets. Frank Buell, the most extensive logger in Michigan, and probably in the Northwest, operating eight camps and employing 600 men, calculates that his men will eat up a pile of provisions that will make a bank account shiver. He will furnish 12,000,000 feet of logs to Bliss & Van Auker, 20,000,000 to the Kneeland, Buell & Bigelow Company, 3,000,000 or 4,000,000 to Bousfield & Co., and small lots for other parties, making a total output of 50,000,000 feet in all.

The E. C. Hargraves mill is cutting out a lot of hardwood lumber for local concerns. Mr. Hargraves is spending much of his time in Mexico, where he is concerned in the most extensive lumber corporation in the world, which is building a sawmill of 600,000 feet daily capacity.

The Richardson mill at Bay City is nearing completion. It will be one of the most modern and completely equipped mills in the country and will be stocked the year through. Camps will be operated in Montmorency county and the logs brought by rail to the mill. The Michigan Central has constructed two spurs of three miles each from the Haakwood branch of the Mackinaw division to reach into 20,000,000 feet of timber which he is to lumber.

The new Keys & Warboys sawmill at Tower, the machinery for which was furnished by the M. Garland Manufacturing Company of Bay City, started operations September 5. The mill will cut about 40,000 feet a day.

Ross Bros. are running camps and trucking logs to their mill at Beaverton. They put a number of million feet of logs into the Tobacco river which are rafted down to their mill. The firm handles about 10,000,000 feet a year.

Seely & Phillips, who have operated a yard at Saginaw for several years, report a very good business. Members of the firm are also stockholders of the Diamond Lumber Company organized at Green Bay last winter, and which took over the sawmill of the Diamond Match Company at Green Bay. Mr. Phillips has removed to Green Bay and manages the affairs of the new company, which bought timber and is cutting hard and soft woods.

Edward Jones of southern Michigan has purchased a band sawmill outfit and will remove it to St. Ignace, where he has bought a site. He will manufacture hardwood largely and has perfected arrangements for a stock. The plant will cut 60,000 feet daily.

Grand Rapids.

W. F. McKnight, secretary and treasurer of the Northern Lumber Company of Birch, Mich., who was in the city recently, said to the HARDWOOD RECORD correspondent: "Business is good with us and lumber of all kinds is stronger, with the possible exception of hemlock and birch. Basswood, oak, ash and elm are all strong, also railroad ties and posts. Cedar poles have been a little off, but it is a little out of season for them. I look forward to a good year's business. All legitimate industries are prosperous."

G. M. Luce of Mobile, Ala., president of the Luce Furniture Company of this city, reached Grand Rapids Aug. 30, accompanied by his wife. Mr. Luce has large sawmill and timber interests in the South.

Two of the most prominent furniture buyers who visit this market, C. A. Brockway of the Wanamaker stores, Philadelphia and New York, and George F. Clingman of the Tobe Furniture

Company, Chicago, were in the city last week.

E. L. Crossman, salesman for the East Jordan Lumber Company, has resigned to accept a position with the Grand Rapids office of Bradstreet's.

The Grand Ledge Chair Company has an order for three carloads of oak and mahogany goods to go to Buenos Ayres, Argentina. The furniture goes by boat from New York and is sent boxed and in the knock-down.

The Pontiac Turning Company has increased its capital stock from \$10,000 to \$16,000. A. L. Moore and Frank Lloyd of the company just returned from northern Michigan, where they bought half a million feet of hardwood timber, which will be used in the manufacture of ball bats and handles.

The Verity-Caswell Table Company of Portland, Mich., is building a large addition to its factory.

George H. Heimforth of Traverse City, who has bought several timber tracts on Little Beaver island, will erect a saw and shingle mill there.

F. S. Robbins, formerly of Big Rapids, and now president and treasurer of the Robbins Lumber Company, Rhinelander, Wis., writes as follows of the rebuilding of the company's extensive plant, which was burned about a year ago: "We are just completing a large factory and store house and dry kiln for the manufacture of rock maple and birch flooring. The flooring factory will occupy the first floor of a two-story cement building, 50x200 feet. It will be a three-machine mill with a capacity of 25,000 to 30,000 feet a day. The dry kiln, a cement building, with a capacity of 100,000 feet, has a large cooling shed connected with it and the flooring mill. The warehouse for manufactured stock will be 190x76 feet. As you see, we will be equipped to handle a large business in this line. We have a good stock of flooring lumber on hand, also extensive acreage of very fine birch and maple timber to draw upon."

Reports from the upper peninsula indicate that railroad tie timber is growing scarce, with buyers eager for the output at steadily advancing prices. The Lake Superior region has long been an important source of supply and many millions of dollars' worth of ties have been shipped to various states, even as far distant as Mexico. Ten years ago the railroads could buy the best ties for 18 cents each, and today they are paying 65 cents for them.

The Muskegon Boiler Works has a contract to supply new equipment for the large mill to be erected at McKenna, Wash., 100 miles from Tacoma, by the Salsich Lumber Company of Star Lake, Wis. The company has cut out in Wisconsin.

Frank Kelley of the Kelley Lumber and Shingle Company, Traverse City, recently bought a Harrison touring car in this city, which figured in rather a spectacular fire on the streets of Big Rapids the night of Aug. 30 on the run home. When getting ready to run the car to the barn for the night the acetylene gas tank exploded, the machine caught fire and Mr. Kelley and his two companions were rather badly scorched in their attempts to extinguish the blaze. The city hose cart was brought out to subdue the fire and the machine was saved from total destruction. The car was insured and was shipped back to the Rapids for repairs.

Governor Warner has appointed the new Michigan Railway Commission, to take office Sept. 28, it being composed as follows: James Scully of Ionia, C. L. Glasgow of Nashville, who is the present railroad commissioner, and George H. Dickinson of Pontiac. Mr. Dickinson is the practical railroad man of the trio. The interests of shippers of the state rest very largely in the hands of this commission.

Indianapolis.

A loss of about \$10,000 was caused at the plant of the Capital Veneer Company in this city last month, when a frame building used for

manufacturing purposes was destroyed. The fire started in a pile of sawdust and a large stock of dry lumber, both finished and unfinished, was burned. Much of the machinery was ruined and it will be some time before the damage can be repaired.

It is believed that the freight question will be settled finally at a meeting that has been called for Oct. 12 by the Indiana Railroad Commission. At this meeting all freight rates will be taken up and discussed and it is not improbable that there will be a complete revision. Reports of discrimination, high rates, etc., have reached the commission so frequently that the members have decided to take up the question in an effort to settle it.

J. W. Dickerson of Chicago has purchased an interest in the Franklin Desk Company and will assume part of the duties as manager in the future. R. J. Mossop, who has been superintendent for some time, will devote his time to field work. It is announced that extensive improvements will be made in the plant at once.

George M. Lucas of Freetown has been given a contract by the commissioners of Jackson county for 5,000 feet of oak flooring, which will be used in the construction of a new bridge near Brownstown.

J. W. Buck, who was a lumber dealer in Indianapolis for about thirty years, was instantly killed at Webb, Miss., last month by falling timber. The body was returned to Indianapolis for burial. Mr. Buck had been engaged in business in Mississippi for some time and during his absence Mrs. Buck and daughter made their home in Chicago.

The New Albany Veneering Company, organized at New Albany a few days ago, will manufacture veneered and built-up stock. According to the articles of incorporation the company has a capital stock of \$100,000, which is held largely by W. A. McLean, E. V. Knight, L. M. Clapp and Henry E. Jewett, who have been elected directors.

The Evansville Veneer Company of Evansville has asked the Indiana Railroad Commission to fix a lumber rate for veneers not to be used for decorative purposes. The Indianapolis Freight Association holds that it can not consistently reduce the veneer rate to a lumber rate, hence the appeal was made to the commission.

The Southern Lumber Company has moved its offices from 932 State Life Building to 811 Pythian Building, where it has larger quarters.

C. D. Houghton of the Greer-Houghton Lumber Company has returned from a three weeks' vacation at Asheville, N. C.

J. W. Hankins, formerly with the Dixie Lumber Company of St. Louis, is now chief clerk in the offices of the Robinson Lumber Company in this city.

The Indianapolis File and Cabinet Company has been organized and will locate in this city, manufacturing staple articles and novelties. William Gielow, H. A. W. Roesner and John Reagan hold the capital stock of \$15,000.

Frank Martin, a Manila lumber dealer, was killed at that place recently by being run down by a passenger train. A slight deafness prevented his hearing the approaching train. A widow and two children survive.

A wholesale merchants' board will be organized by the Commercial Club, and will include all wholesale concerns in the city who are represented in the club membership. Every effort will be made to induce outside dealers of every kind to patronize local concerns and missionary trips will be made frequently to different parts of the state.

Cincinnati.

The planing mill, the long lumber shed for the housing of finished material and hundreds of thousands of feet of lumber, the property of the Farrin-Korn Lumber Company of Winton Place, were destroyed last week by a fire originating from some unknown cause, either in

the planing mill or one of the stacks of lumber not far from it. Lumber, buildings and machinery were destroyed at a total loss of \$100,000. The property of the M. B. Farrin Lumber Company, which is directly opposite the Farrin-Korn Lumber Company's yards, was threatened, but the firemen did yeoman service and kept the flames from that place. Seven carloads of lumber and sawdust, ready for shipment were ruined. Three of the cars destroyed contained quartered oak, and were billed for Chicago. The concern employs about 100 men and they will be put at work to clear up. M. B. Farrin is president of the company, and Chester F. Korn secretary and treasurer. Mr. Korn, when seen, said: "I cannot give you the exact loss, but it will not exceed \$125,000, and may not be more than \$100,000. There were destroyed about half a million feet of lumber—oak and southern hardwoods. I do not know what amount of insurance we carry, but I am inclined to believe that the loss will be pretty well covered. We will rebuild everything that was destroyed, and will also install practically all new machinery. Our business will not be sadly crippled, as we have still enough lumber on hand to furnish all orders that we have and what we anticipate, and by the time that our present supply of lumber runs down, we will be ready to turn out more, as by that time I think our planing mill will be completed. Several piles of lumber that were not totally destroyed, and some of which were 'heated and wetted,' will be sold as inferior stock, and the loss on that will not be so great."

The saw mill of the Cincinnati Floor Company, located at 256 Butler street, was visited by fire during the last two weeks. The blaze, however, was noticed before it gained much headway and was extinguished with a loss of only \$500, which is fully covered by insurance. The sawmill received all the damage, but fortunately no saws were damaged.

Another large fire visited Cincinnati last week and licked up over a million dollars' worth of property. This fire, it is alleged, originated in the stables of the E. Roberts Lumber Company, in the rear of the Eagle White Lead Company's plant. The flames spread to the White Lead Company's plant and, fanned by a northeastern wind and fed by oil, paint and dry timber, reached the Morrison & Snodgrass Lumber Company's yard. The fire destroyed a large quantity of lumber, together with the planing mills and a great deal of veneered stock and machinery. The loss sustained by the E. Roberts Lumber Company is estimated at about \$20,000, of which only a part is covered by insurance, while the Morrison & Snodgrass Lumber Company's loss will reach about \$100,000, which is also only partly covered by insurance. Both companies will rebuild their plants at once, making the new buildings as nearly fireproof as possible. Both companies were doing a good business and had many orders on file for delivery in the fall as well as for immediate delivery. These will be filled by the companies, as they will be able to secure the stock from local dealers. This is the second disastrous fire the Morrison & Snodgrass company has had within a few years.

Southern roads must make restitution to lumber dealers within a short time, according to a ruling of the Interstate Commerce Commission. In a communication to the Cincinnati Lumbermen's Club the commission asked that organization to make report of claims, under the Supreme Court ruling, not satisfied. Cincinnati lumbermen claim the roads are showing no disposition to pay up, but that they are doing their best to bring about disputes between shippers and receivers as to which party should be the beneficiary of the restitution.

A chattel mortgage was given last week by the Cypress Lumber and Veneer Company to the Covington Savings Bank and Trust Company, as trustee for the creditors. The mort-

gage is given to secure a bond issue of \$975,000. There are to be 1,636 bonds, the first six for \$5,000 each, numbers 7 to 875 for \$1,000 each and from 875 to 1,636 for \$100 each, all bonds being dated July 15, 1907, and payable five years after date, with interest at the rate of 6 per cent, which is payable every four months. The mortgage covers all the real estate and personal property belonging to the company which is located in Cincinnati, Ohio, Sheffield, Ala., Wardsville, La., Lumber City, Ga., Pikeville, Tenn., Clarefield, Tenn., Montgomery, Ala., and Irvine, Ky.

R. E. Gilbert of the J. W. Darling Lumber Company, who assumes charge of the affairs of the company while Mr. Darling is away, has just returned from his summer vacation, which he spent at various places. He returned to the offices of the company in the Union Trust building looking hale and hearty and ready to do another eleven months' good work.

T. H. Smith, southern representative of the J. W. Darling Lumber Company, was in town recently and spent several days here visiting Cincinnati and its suburbs. He seemed very much impressed with the Queen City and stayed two days longer than he intended. Business with him in the South is very good, he said, and he looks for a booming fall trade.

B. F. Dulweber of John Dulweber & Co. has returned from a trip to the mountains, where he went to regain his health. He is now the picture of health and has again taken up active work.

John P. Hanna of the Wiborg & Hanna Company of North Fairmount has returned from a business trip through the South and Southwest. He considers the situation in the South highly satisfactory and anticipates a good fall trade, both in the South and in Cincinnati.

George Littleford of the Littleford Lumber Company has returned from his summer vacation to the lakes, where he said he had a delightful time. He has regained his strength and does not feel as though he had ever been ill. During his absence from the local offices Joseph Wehry was in charge. Incidentally Mr. Wehry is the proud father of a son that arrived some time ago.

W. C. Bell of W. C. Bell & Co. of Columbus, Miss., was here last week in search for desirable hardwoods, which were supplied him by the various dealers.

G. E. Williamson of the Iron Mountain Lumber Company of Baltimore, Md., was in town recently to get ideas on what is doing in the hardwood lines. He says that his mills are all busy and that he finds the lumber trade generally satisfactory.

William A. Sessoms of Bonifay, Fla., general manager of the Sessoms-Whitted Company, spent a few days in Cincinnati last week reviewing the hardwood situation. He returned to his place of business filled with good news from this point.

J. D. Farley of the Louisiana Red Cypress Company of New Orleans, whose home is in Dayton, Ky., has just returned from a vacation trip which he spent in Indiana, his birthplace. James Cowen of Schultz Brothers & Cowen of Chicago visited Cincinnati recently en route on a business trip through the South.

Thomas J. Moffett, president of the Maley, Thompson & Moffett Lumber Company, has returned from his three weeks' vacation trip to his old home in Indiana. Mr. Moffett is filled with good fish stories and is exploding one or more every day on his fellow comrades. One of his strongest stories is that he himself caught a big mud cat that weighed over 22 pounds. He said it was the largest one pulled out in the last two years—going some.

The next monthly meeting of the Cincinnati Lumbermen's Club will not be held until the first Monday in October. This will allow all the members time enough to straighten up matters and incidentally gather enough subjects to make the first fall meeting a hummer.

The month of August, as indicated by the figures of the Cincinnati Chamber of Commerce, show that the lumber trade has improved over the same month last year. This year's receipts during that month numbered 8,480 cars, while the shipments also show a good gain, being 5,873 cars, as compared with the receipts of 7,249 cars last year and the shipment of 5,330 cars.

William A. Bennett of Bennett & Witte, Thomas J. Moffett of the Maley, Thompson & Moffett Lumber Company and J. Watt Graham of the Graham Lumber Company were the principal factors in the annual field day of the Newsboys' Protective Association. The trio did yeoman service to entertain the little merchants and their efforts were well appreciated by everyone.

William A. Bennett, president of the Chamber of Commerce, while standing around the sales book of the grain department, asserted: "Gee, you grain men are certainly making enough money; look at those high prices on corn, hay and oats." With that William McQuillan, in a joking way, said: "Put down four cars of rough lumber at 40 cents a foot." Bennett amusingly looked around and asked what the joke was. McQuillan said that it was a true sale, and then asked Bennett who was making the most money, the lumber merchants or the grain dealers. Bennett said the grain merchants, but McQuillan did not agree with him. Finally McQuillan said: "Well, we grain men make money occasionally, but you lumber dealers are continually getting big profits." The last one stung, and Bennett walked away smiling. He had a chance to get even with the grain men a few minutes later, when he called a meeting. All the grain men were busy at their respective tables. Bennett pounded several times with his gavel, but the grain dealers refused to acknowledge it. Bennett then said: "When you grain men are through figuring out how to make more money, get ready and I will hold a meeting." They all dropped their work and attended the meeting. Bennett then announced that he wanted every member of the Chamber of Commerce, no matter what his business was, to co-operate with him to make the National Hay Dealers' Association convention, which will be held here October 2 and 3, a great success. He said that he is depending on every member individually and hopes that they will stick by him. Bennett's good natured ways and strict business methods have gained him a multitude of friends, and should his name be mentioned for re-election, it is doubtful if the yellow ticket will put up a man against him.

The Arbenz Furniture Company of Chillicothe, O., has been incorporated under the laws of Ohio with a capital stock of \$50,000 by F. C. Arbenz, Fred A. Arbenz, Carl H. Arbenz, Emma Arbenz and Robert W. Mauley.

President E. E. Shipley of the Cincinnati Business Men's Club has returned from a month's vacation trip to Long Island. During his stay in the East Mr. Shipley gained quite a reputation as a fisherman.

Several Cincinnati carriage and buggy manufacturers are interested in the National Association of Carriage Manufacturers, just organized at Indianapolis. The association takes its membership from Ohio, Michigan, Indiana and Illinois. Carriage men of Ohio and adjoining states have made an advance of 10 per cent in prices on all kinds of vehicles produced by them.

Evansville.

The Frisco railroad has run surveys on both sides of the Ohio river from Evansville to Paducah, Ky., with the intention of bridging either at Evansville, Ind., or Metropolis, Ill. The supposition is that this road will obtain control of the Mobile, Kansas City & Jackson railroad and will then have the shortest through line

from Chicago to New Orleans. This will also open up a wonderful field of hardwood timber, and Evansville will be the natural point from which this lumber will be distributed. There is little question of this deal going through. This will also give this line a direct route from Evansville to Paducah and will give access to the southern part of Illinois, which it never had before.

The Henry Maley Lumber Company owns forty acres of land on the I. C. railroad and is going to build a saw, dimension and planing mill. This concern does its own towing and will bring logs up the river to the I. C. incline, where they will be loaded onto cars and hauled about three miles to the mill.

C. P. White & Co. of Booneville, Ind., are looking for a location on the Southern railway for the establishment of lumber yards. They will use Evansville as a distributing point.

The Fullerton-Bowersock Company has leased ground on the E. & T. H. railroad. Switches have been ordered laid and permits secured for buildings. The company will open a distributing agency at once.

The World Furniture Company has just completed its building, which joins the old Evansville Coopers Company's factory, making it one of the largest furniture factories in Evansville. The same interests that control the Karges Furniture Company, the Bosse Furniture Company, the Bockstege Furniture Company and Globe Furniture Company are interested in this new plant, which will employ about 150 people. There is no question as to the success of this concern, as the parties interested are thoroughly posted in the furniture business and are considered the most successful operators in the city.

The Evansville Bookcase and Table Company has sold \$12,000 more of its stock to the present stockholders and with the orders in sight for the year ending June 30, 1908, this concern will make a much better showing than it has in the past. The stockholders have every confidence in the future success of the plant.

Chattanooga.

Captain A. J. Gahagan of the Loomis & Hart Manufacturing Company, who was married to Miss Elizabeth Telford September 4, is building a fine veneered brick residence on Third street.

The Ramhurst Lumber Company, a recently organized concern, of which F. W. Blair of this city is the head, is now running at full capacity at Ramhurst, Ga. The company has two portable mills there on the Central of Georgia railway, turning out 10,000 feet of lumber a day.

E. M. Terry, secretary of the National Lumber Exporters' Association, of Baltimore, Md., passed through Chattanooga recently on a tour of the South.

J. M. Card of the J. M. Card Lumber Company is on a business trip to Cincinnati.

S. A. Williams of the Williams & Voris Lumber Company has just returned from a trip to Indianapolis, bringing with him his family, who have been summering there.

Ferd Brenner, formerly of this city but now of Norfolk, Va., was in this city recently en route to Louisiana to visit his mill there. He has returned to Norfolk again and is making preparations for an extended European tour.

Arthur Gazlay of the Ferd Brenner Lumber Company of Norfolk, Va., was a recent visitor to this city.

Edgar W. Dennison, special agent of the Publicity League of Cuba, recently gave out some interesting facts concerning the progress of lumbering on the island. He says that capitalists of the States have made extensive purchases in Cuban timber land and are well satisfied with the investment. He says that with the gradual building of railroads timber properties will be opened when the possibilities of the island towards supplying the needs in the way of valuable hardwoods to replace those of this country,

which are rapidly being exhausted, will be appreciated. The hardwood industry throughout Cuba is flourishing and prices on all kinds of woods have never been as high as at present. Cigar box cedar is in especially active demand at fancy prices.

St. Louis.

The St. Louis Car Company has increased its capital from \$3,000,000 to \$6,000,000.

The Interior Lumber Company of this city has moved its offices to Hattiesburg, Miss.

A special meeting of the board of directors of the Lumbermen's Exchange was held recently, at which the chief business transacted was the selection of T. I. Robinson for the position of deputy inspector, owing to the need of increasing the force. Mr. Robinson has been in the employ of the J. D. Hartnett Lumber Company of Pine Bluff, Ark., of late and was at one time with the F. C. Moore Lumber Company. Those present at the meeting were F. Waldstein, W. W. Dings, W. A. Bonsack, P. J. Davidson, F. C. Moore, E. H. Warner and R. F. Krebs.

E. W. Blumer of the Lothman Cypress Company has returned from a southern trip among the company's mills. Mr. Blumer says that while mills are running day and night and getting stocks in fine shape, they are already beginning to feel the car shortage, which he predicts will be perhaps the most severe they have ever had to contend with.

George E. Hibbard of Steele & Hibbard has gone to Lake Minnetonka for his much needed vacation. Mr. Steele has returned from Fortress Monroe, whither he went a few weeks ago in pursuit of rest and recreation.

F. A. Garetson of San Diego, Cal., vice president of the Garetson-Greason Lumber Company, has been spending several days in town. W. W. Dings left September 4 for his Atlantic sea voyage.

C. E. Thomas has returned from his vacation spent on the Atlantic coast.

A Memphis hardwood house has just closed a deal to furnish all the interior finish for two big buildings now in process of construction in St. Louis, all to be of red gum. Even counters and other stationary fixtures are to be of red gum. Something more than 1,000,000 feet will be required.

The R. F. Krebs Lumber Company has removed its office to Yard Hall street and St. Louis avenue.

Paul J. Davidson, secretary of the Lumbermen's Exchange, has resigned, to assume duties with the Ozark Cooperage and Lumber Company.

Nashville.

The Buckeye Spoke & Handle Company is to locate a new factory at Centerville, Tenn. The company has let contracts for the necessary buildings and its representatives have been busily engaged in getting hold of timber rights. They claim to have enough timber in sight to last twenty years.

The Roberts-McGill Carriage Company was this week granted a permit for the erection of its new factory to be built at the corner of Wedgewood and Benton avenues. The firm has just been chartered with a capital stock of \$50,000. The incorporators are T. M. Robinson, W. J. McGill, Ernest Coldwell, J. H. Fall and H. G. Lipscomb.

The Dust Avoid Manufacturing Company, a new concern in Nashville which is making a preparation for cedar shavings, etc., to be used in sweeping, has moved into larger quarters on North Adams street. James and William Cassetty are the principal owners of the company, which has done such a big business that the former quarters became inadequate for its demands.

Reports from Hartsville, Tenn., indicate considerable activity there in the lumber industry. The little city now boasts five large

lumber yards, and over 100 wagons are said to come daily to the town from the hills of Macon county. Notwithstanding all this, timber is said to be plentiful, and it is claimed there is enough white oak and poplar to last for years.

Deputy Marshal James Duggan has just returned from a trip to Wayne county, where he has been serving injunctions in what promises to be a most important and interesting law suit. The Bon Air & Iron Company owns several thousand acres of land in that section and a number of families have been living on the property. The company, it seems, did not mind the squatters living on the land and clearing some of it up. When they began cutting the timber and selling it, however, the injunction suit followed. Some of the alleged squatters claim they have been living on the land for forty years. Should Judge Clark decree that the defendants will have to vacate, the officer will no doubt have a rough time in getting them out.

A "Tie-Haulers' Union" at Dover, Tenn., is the latest thing in the lumber and industrial line. About seventy-five haulers who were working for Ayer & Lord, crosstie dealers, organized and have made a demand for a flat raise of 5 per cent. It is also rumored that the tie-haulers from Cumberland City will ask for a 5 per cent raise and that even the tiemakers thereabouts are going to ask for a raise of from 10 to 15 cents a stick.

Secretary of State Morton has chartered the Roane Mountain Coal & Lumber Company with a capital stock of \$50,000. The officers are: T. A. Wright, president; John Molyneux, vice-president; J. E. Fox, secretary, and A. T. Daniels, general manager.

A special from Tuscumbia, Ala., announces that a big mortgage on several thousand acres of land in Morehouse Parish, Louisiana, and lumber and timber stocks in other states, including the Tuthill & Pattison plant at Sheffield, Ala., has been placed on record at Tuscumbia to secure an \$875,000 bond issue. The Savings Bank & Trust Company of Covington, Ky., has been named as trustee under the instrument.

Simon Lieberman of Lieberman, Loveman & O'Brien is in New York enjoying a short vacation. Mr. Loveman of the same firm is back from a pleasant trip to Canada. He went up the Saginaw River, and reports some fine fishing.

John B. Ransom is in Nova Scotia, the guest of John W. Love at the latter's fine hotel at Markland.

Nathan Bradley, a large lumber producer of east Tennessee, was a visitor to the city last week.

Henderson Baker, president of the Dunlap Lumber Company, has gone to northern Mississippi in search of poplar logs.

Nashville lumbermen continue to get more wrought up every day over the approaching ball game to be played in Memphis in the near future in which the contestants will be nines chosen from the lumbermen of these two rival cities. The result of the game will decide which is the "largest hardwood center in the South." The Nashville lumbermen feel confident of winning, but declare that winning such a game would be like winning your own money or taking it out of one pocket and putting it in another.

Memphis.

Interest in the forthcoming series of baseball games between the lumbermen of Memphis and Nashville continues to grow, as demonstrated by the attendance at the meeting of the Lumbermen's Club last Saturday to perfect arrangements for the game. At this meeting W. H. Russe introduced a motion to the effect that the cup offered by the American Lumberman for the victorious club should not become the possession of the winner until it had won two

successive series of games. This was unanimously carried. Mr. Russe said that he had taken up this matter with the lumbermen of Nashville and that they had agreed thereto. This is assurance that there will be match games for several seasons between the lumbermen of Nashville and Memphis, of which one series is arranged for this year. A committee has been appointed to look after the entertainment of the Nashville lumbermen while here. On the committee are J. W. McClure, chairman; G. A. Farber, C. W. Holmes, L. C. Nolan and J. E. Meadows.

J. W. Thompson, who is captain of the team, has appointed W. R. Anderson to look after the team work. Mr. Anderson has had some experience in ball playing and is devoting considerable time to getting his prospective players into proper form. Practice work is being carried on every day in the week except Sunday, and all reports indicate that the men will round to in great shape.

The following committees have been appointed to look after various features:

Publicity—W. R. Anderson, chairman; C. W. Holmes, L. C. Nolan, W. H. Russe, J. W. McClure, E. E. Sweet and Wright Smith.

Advertising and Finance—W. H. Greble, chairman; F. E. Stonebraker, W. A. Ransom, S. C. Majors and W. R. Barksdale.

Sale of Tickets, Score Cards and the Like—George E. Ehemann, chairman; J. E. Meadows, P. H. Ravises and W. R. Barksdale.

The committee having charge of the sale of tickets has held a meeting and has decided to have the tickets on sale within the next few days. It is expected that every lumberman will take active part in this work and dispose of as many tickets as possible.

Three nines, it is reported, have been organized at Nashville, but Memphis is not very far behind, having two good teams which are playing against each other. If Nashville wins she will know she has been in a fight.

There was a meeting on September 4 of the Finance Committee, which is raising funds for the entertainment of the forthcoming annual convention of the Deep Waterways Association to be held here October 4 and 5. This meeting was attended by the chairmen of a number of subcommittees and those present pledged about \$12,000 of the necessary amount. There were less than half of the sub-chairmen present, and, if all had been there, it is more than probable that the greater part of the necessary funds would have been pledged at that time. S. M. Neely, chairman of the Finance Committee, has announced that, while he expected \$20,000 would be sufficient at the start, he now believes that \$30,000 to \$35,000 will be necessary to entertain on the elaborate scale commensurate with the importance of the convention. The sub-chairmen appointed to look after subscriptions from the lumbermen of North and South Memphis, respectively, were not at the meeting last night, and it is therefore impossible to say what these chairmen will pledge. However, in view of the active interest that lumbermen are taking in this convention, it goes without saying that they will be just as generous in their donations for this cause as any other business men of this city.

The program for the convention has not been fully arranged, but the following addresses have been provided for:

Theo. E. Burton, Ohio, October 4—"Our Rivers and Harbors Policy."

Gov. Joseph W. Folk—"Commercial Value of Waterways to Missouri."

Gov. John Burke, North Dakota—"The Commercial Advantages to the Northwest of the Deep Waterways from the Lakes to the Gulf; or, The Commercial Advantages to the Northwest of the River Improvement."

Gov. Albert B. Cummins, Iowa—"Importance to the Commerce of the United States of Improvement of the Upper Mississippi River."

Senator-elect Jona Sharp Williams, Mississippi

"Value of River Improvement to Commercial Interests of the United States."

Gov. E. W. Hoch, Kansas—"Kansas and Transportation."

Lyman E. Cooley, Chicago—"Lakes to the Gulf Deep Waterways."

Gov. B. B. Brooks, Wyoming—"Improvement of the River."

Gov. Newton C. Blanchard, Louisiana—"Value to Louisiana of the Deep Waterways."

Gov. X. O. Findall of Arkansas and Gov. N. B. Broward of Florida will both make addresses, but the subjects have not yet been announced.

The car situation in this territory is becoming serious. Wholesalers and manufacturers having interests in the interior say that there is already considerable difficulty in securing the necessary cars, and they expect that, as the season progresses, this condition will become even more serious than now. There is no special difficulty so far as the local market is concerned, as Memphis has sufficient cars. The shortage is manifesting itself from three to four weeks earlier than ever before, and this is one reason why the trade is somewhat discouraged over the outlook.

Weather conditions throughout this territory during the past fortnight have continued favorable and rapid progress is being made in putting lumber on sticks. The supply of labor is rather larger than usual at this time of the year, and this is a potent factor in the large production now being witnessed.

Fire occurred at the plant of the Florence Pump and Lumber Company in South Memphis a few days ago, destroying one shed at an estimated loss of \$15,000. The fight against the fire by T. L. Green, manager of the plant, with the equipment provided by the company saved a large quantity of lumber as well as the plant from total destruction. Announcement is already made that the burned shed will be rebuilt. This fire was the second at the plant of the company in three days, the first being discovered and extinguished by C. R. Evans, night watchman, with practically no loss. Mr. Evans was the recipient of hearty congratulations and a check from the company in recognition of his excellent service.

The various lumber companies of this city have paid their corporation tax under protest by advice of the committee of business men which was appointed to investigate the best method of procedure. A test case will be made to determine the constitutionality of this law, and, if it proves to be unconstitutional, those who have made their payments under protest will secure the return thereof. There is a very strong opinion that the law will not stand the test.

The Rust Land & Lumber Company, which is affiliated with the Three States Lumber Company and W. E. Smith Lumber Company, is rapidly completing its mill at Merouge, La. It will be ready for operation by October 1. It is to be a circular plant and will have a daily capacity of 40,000 feet. It will manufacture cypress exclusively. W. H. Greble, who makes his headquarters at Memphis, has just returned from a visit to that point.

W. A. Gilchrist, vice president and general manager of the Three States Lumber Company and the W. E. Smith Lumber Company, has returned from an extended northern trip on business and pleasure bent. Mr. Gilchrist is optimistic over the situation and expects that consumers will be actively in the market in the very near future.

The Bodley Wagon Works of new South Memphis has increased its capital stock to \$100,000 with a view to making some additions to its business. The company, which has been in operation here for about three years, came from Virginia, and it has operated for some time a large plant in New Orleans. It manufactures heavy wagons, log carts and other such equipment.

The sensational litigation between John F.

Rutherford, one of the largest stockholders of the Bluff City Lumber Company of Pine Bluff, Ark., and J. B. York, president of that company, in which the former asked for the appointment of a receiver, has resulted in the appointment, by Chancellor John W. Elliott, of John F. Rutherford and J. B. York as receivers. Robert York, the former manager, is eliminated from the management of the business. This elimination of Robert York was one of the particular objects Mr. Rutherford desired in filing his suit against the company. He declared that as long as the younger York had anything to do with the management of the company's affairs he himself would not take any active part therein. This litigation began by the filing of suits some time ago against Mr. Rutherford and some of his companies by the Bluff City Lumber Company. Mr. Rutherford brought the counter suit in which he sought the appointment of a receiver for the Bluff City Lumber Company and certain changes in the management of its affairs. It is estimated that property valued at \$1,500,000 was involved in the litigation.

The Memphis Car Company has secured a site in new South Memphis, paying \$7,000 therefor. The company was formed for the purpose of building a plant for the reconstruction and repairing of freight cars, and will begin operation just as soon as the plant can be completed.

The Agee Wagon Works of Camden, Ark., has completed a new brick and iron warehouse and is making extensive improvements at its plant. It has recently expended nearly \$10,000 in new machinery and improvements and will have a capacity of 5,000 wagons annually.

W. R. Barksdale, president of the Barksdale-Kellogg Lumber Company, has returned from an extended eastern trip and is now looking after the various interests of his firm in this city.

New Orleans.

The State Board of Equalization of Taxes has finally completed its work of equalizing the assessments on timber land in the state of Louisiana, and though it raised a good deal of havoc with pine timber it has allowed hardwood lands to go practically undisturbed. Both pine and cypress lands were divided into three classes, while no steps for dividing hardwood were taken, the board allowing the assessments made by the various parish assessors to stand as they were made. Classes A, B and C in pine are assessed at \$17, \$12 and \$5 respectively, while the assessments on cypress are \$20, \$12 and \$5 respectively. Regarding hardwood land the committee's report says: "As to hardwood land, we have endeavored without avail to get information sufficient to enable us to classify same. Therefore we recommend for the purpose of equalization that all hardwood timber lands remain at the assessed value as fixed by the several assessors throughout the state for the year 1907." This recommendation was adopted by the board.

In reviewing the lumber situation in New Orleans during the trade year which closed August 31 lumber exporters declare that during that period this port has held its own as a lumber and stave exporting center. The shipments of staves through this port have always surpassed those of any other port, they declare, and there has been no decrease in the volume of that business during the last year. There is a project at this time before the Board of Port Commissioners upon which the future of New Orleans as an outlet for forest products will largely depend. This is the proposed lumber dock. Exporters generally and the New Orleans Lumber Exporters' Association in particular are vitally interested in this matter. The port commissioners are favorably inclined towards the project but have not the necessary \$300,000 to \$400,000 for the work. However, this board has \$1,250,000 in unsold bonds that it will dispose of as soon as the money

market admits of their sale at a reasonable figure, and part of these proceeds will be devoted to the building of the lumber wharf. There is also a probability that the lumbermen will furnish the lumber for the wharf and take dock board bonds in payment, the dock board building the structure with its own forces. If this is done there is little doubt that the wharf will be constructed.

The Houssiere Lumber Company, recently organized at Jennings, La., has purchased a large tract of pine, oak and gum timber and is now working on plans for a sawmill with 30,000 feet daily capacity. It will build a modern plant in the vicinity of Jennings.

Michigan capitalists, represented by C. E. Freed, have just closed a deal for a good tract of hardwood timber near Winnfield, La., and will establish a hardwood mill and finishing plant there.

The Labarre-Riggs Company, Ltd., has been organized at Melville, La., with \$100,000 capital, to develop 10,500 acres of timber land near Melville. G. J. Labarre of Paincourtville, La., is president, and R. Lee Riggs of Patterson, La., is treasurer.

W. A. Burkhalter, operator of a woodworking plant at Greenwood, Miss., will shortly install machinery for manufacturing porch columns and other turned woodwork.

Announcement is made that the Armbreicht-Tompkins Lumber Company has been incorporated at Hattiesburg, Miss., with \$10,000 capital. J. C. Tompkins and C. H. Armbreicht of Hattiesburg and E. H. Stone of Pittsburg, Pa., are the incorporators.

Dr. J. W. Huffman of Eunice, La., has just bought from Simon Johnson the Johnson sawmill, about fifteen miles northwest of Eunice, and about 200,000 feet of lumber, part of which has been run through the planer. The mill has a capacity of 25,000 feet per day.

The new plant of the German-American Lumber Company at Millville, Fla., which replaces the plant destroyed by fire last December, will be ready for operation in a short time. The old mill had a capacity of 75,000 feet per day, while the new plant will turn out 100,000 feet. This company is one of the largest lumber exporters in Florida.

Minneapolis.

The Soo railroad is reported to be picking up all the tracts of hardwood timber that can be purchased along the route of its new line to Duluth, particularly in the vicinity of Mille Lacs lake, in northern Minnesota. In fact, it is understood that one great reason for building the Duluth connection over this route was the desire to utilize this hardwood timber for the manufacture of cars. It is expected to have trains running over the line as far as Onamia, one of the new towns near Mille Lacs, this fall, and hardwood mills are likely to be built this winter there, and possibly at Isle and Wabkon. They will probably be controlled by the railroad company, and the product will be largely used in the manufacture of car stock. It will include birch, elm, ash and basswood.

Julius Rosholt, a prominent investment banker of Minneapolis, is financing a mill to be built at Cohasset, Minn., on the upper Mississippi, just west of Grand Rapids, and a company with \$200,000 capital will begin manufacturing there early next year. It will be primarily a hardwood mill, most of the timber being drawn from the Pokegama lake country, and logging will begin this winter. The company has options on a site, and the business men have subscribed \$1,000 to clean out a bayou adjoining the river, which the company will use for storage booms. The plant will probably branch out in diverse lines and will employ 200 to 300 men. The company has stumpage to last many years, both pine and hardwood.

W. H. Sill of the Minneapolis Lumber Com

pany is back from a business trip which took in Kansas City and other towns. He predicts a fine corn crop in Nebraska, Kansas and Iowa and says that while business is quiet down there now it is bound to boom when the crop returns begin to come in.

W. E. Meader of the Hawkins Land and Lumber Company is back from a trip to their mill at Hawkins, Wis. This is a new proposition, but is coming along nicely and this summer has cut 1,500,000 feet of lumber, including maple, birch, elm and hemlock.

D. F. Clark of Osborne & Clark is back from a business trip over in Wisconsin and is now busy nursing hay fever, which has troubled him for eighteen years. C. F. Osborne, who recently had a short sojourn in the hospital with nervous prostration, is still down in Illinois recuperating and getting ready to resume the business grind.

A. F. Hein of Tony, Wis., vice president and secretary of the John Hein Company, hardwood lumber and cooperage manufacturers, was here on business a few days ago. They are figuring on branching out with a pulp mill at Tony and are getting estimates on the cost of putting in water power to run the plant.

E. Payson Smith of the Payson Smith Lumber Company is back at his desk after a short vacation. He says shipments are coming along nicely now from the southern hardwood mills and that they are getting caught up on orders for the first time in eight months. Trade is satisfactory with them and prices holding firm.

Many retail dealers have been in the twin cities attending the Minnesota State Fair. They are not buying much lumber as yet, but generally report prosperous conditions in their communities.

Toledo.

The Ohio Shippers' Association has won in its efforts to compel the railways to abide by the new rules adopted by the Ohio Railway Commission governing car service and demurrage for charges in this state. It would seem that every railway doing business in the state has now concluded to respect the authority of the local tribunal. In order to give time for the service of notice on the interstate commission of the changes in rules made necessary by the new order, the time for taking effect was extended to Oct. 1, at which time it is now certain they will be in force. Some of the features of the new rules are that shippers will be able to arrange for the average plan, which was not before available to them, while the time for loading and unloading cars without demurrage charges has been extended one day.

There have been claims filed with the Interstate Commerce Commission against the southern railways for repayment of overcharges under the decision of the Supreme Court, amounting to between \$2,000,000 and \$3,000,000, of which more than \$300,000 come from Toledo and other Ohio lumber firms. This does not, however, represent nearly the total claims, as many of the lumbermen have forwarded their claims directly to the railway companies themselves for adjustment instead of filing them with the commission. While there have as yet been no remittances received, the claims have been acknowledged and the assurance given that they will receive proper attention.

Ashland.

The R. G. Page Lumber Company of this city and Nathan Goodman of Ironton, Ohio, have purchased the entire stock and holdings of the Licking River Lumber Company of Farmers, Ky. The consideration was \$150,000, and the purchase included planing and sawmills, with a daily capacity of 50,000 feet, houses, store, hotel, office buildings and real estate, together with large booms and about 8,000,000 feet of logs. The purchasers have opened a sales office in Ashland. They will retain the name of the

Licking River Lumber Company. H. G. Irvine, who has been sales manager for the Licking River Company, will have charge of the local office. The plant at Farmers will be in charge of Mr. Goodman, who was for many years general manager of the Ironton Lumber Company of Ironton.

R. H. Vansant of Vansant, Kitchen & Co. is confined to his home in this city, very low with typhoid fever.

R. G. Page has returned from a combined business and pleasure trip to South Bend, Ind.

N. Goodman, vice president of the Licking River Lumber Company, has returned from Michigan, where he bought machinery for the new band mill the company is building at Farmers, Ky.

Contractor W. L. Schweickart of Ironton, Ohio, has recently bought from the Dawkins Lumber Company its Second street plant in that city. Before the deal was closed Mr. Schweickart had begun building an extensive addition to his plant.

The W. H. Dawkins Lumber Company of this city is contemplating the erection of an up-to-date sawmill at Ironton. The company owns about 2,000,000 feet of lumber which was cut by Fenson's mill and is now stacked in the Fenson yards. It is doing a large business in Ironton and feels the necessity of a new mill.

The J. L. Walker Lumber Company will soon erect a new mill on Beech street, Kenova, W. Va., near the tie hoist. The superintendent, J. L. Corn, will have charge of the building of the new mill.

Wausau, Wis.

The John Week Lumber Company of Stevens Point, owner of a large tract of hardwood northwest of Mosinee, will log about 4,000,000 feet of down timber the coming winter. A heavy windstorm felled about that amount recently, so that it must be cut soon to save it.

Ed Weinkauff of Wausau has purchased eighty forties of hardwood lands near Interwald, Taylor county, from his father, Carl Weinkauff. There is 1,500,000 feet of timber on the lands.

The Standard Core Company has been organized in Grand Rapids by R. L. Kraus of Marshfield, George W. Mead and I. P. Witter of Grand Rapids. The capital stock is \$10,000. It is proposed to build a plant in the last named city for the manufacture of hardwood cores. The cores are used in paper mills to wind rolls of paper on.

W. H. Dick and family have moved to Phillips, Miss., to reside. Mr. Dick is a partner of State Senator W. H. Hatten of New London in the lumber and factory business. They have purchased large tracts of timber lands in the South.

The Stang-Ellis Lumber Company of Grand Rapids expects to get its plant in operation about October 1. Work was started on the plant last spring. The main factory building is 180x100 feet, two stories high. The company is also building a sawmill.

The hardwood mill of Chris Wunderlich at

Mayking, near Antigo, was recently destroyed, loss \$20,000. A considerable amount of lumber was also burned. The mill was destroyed once before, about nine years ago, resulting in a long drawn out legal battle between Wunderlich Bros., the name of the firm at that time, and insurance companies. The Wunderlichs finally got a judgment of \$35,000. The present firm cuts out large quantities of bicycle rims and plow handle stock.

Ex-Governor W. H. Upham, who about a year ago disposed of most of his lumber interests to the Copper River Land & Lumber Company, recently purchased 3,500,000 feet of hardwood on Jump River and a like amount near Ogema. It is likely that most of it will be manufactured into veneer stock.

F. Schubring of Wausau has purchased Hoenisch Bros.' sawmill in the city mentioned. It is strictly a hardwood mill and cuts 20,000 feet daily.

The Daley-Beswick Company of Menominee is building a plant for the manufacture of hardwood columns, etc.

A log six feet in diameter was recently sawed into lumber in a Chippewa Falls mill. The log was cut ten years ago and it has been in the water ever since. Before it could be sawed up it was necessary to split it into four sections with the aid of dynamite.

The Coye Furniture Company of Stevens Point is building a new dry kiln 40x80 feet in size, nearly doubling the firm's drying capacity and increasing the output of the mill.

The R. Connor Lumber Company of Marshfield has purchased of A. C. McComb of Oshkosh a tract of 4,000 acres of hardwood land in Iron county on which are several million feet of high grade timber. Mr. McComb is largely interested in Arkansas and Louisiana lands, and the above tract was the last of his northern holdings.

The Wisconsin Cabinet Company, recently organized, has purchased the Badger Sewing Company's plant in Fond du Lac and will convert the same into a factory for the manufacture of high grade furniture. A dry kiln 28x34 feet has been erected and a boiler and engine room constructed.

The planing mill operated in Waupaca by the Central Lumber Company of Oshkosh was recently struck by lightning and destroyed together with a large amount of finished lumber. There was no insurance on the plant or lumber.

Wisconsin, one of the greatest lumbering states in the country at one time, has practically been denuded of its forests, and yet it ranks third in the list of states having forest preserves. Although the state practically neglected its forest wealth as far as state intervention is concerned, up to four years ago, it now has 274,000 acres under preservation in the northern part. The northern part is a barren waste as a consequence of the reckless and wasteful methods of the great lumbering companies of early days. Now the companies are using more restraint in cutting timber and better care is taken of old slashings, to prevent forest fires.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

Demand has had a dragging tendency for some weeks, but there seems to be quite a recovery in the call for nearly every variety of hardwoods at the present time, with very favorable prospects for a satisfactory fall trade. Oak and poplar have been the two items that have held up in good call all during the summer, and there has been very little noticeable cutting in prices to induce orders. Gum has been a rather slow seller except in the coarse qualities, which

have been taken on very freely by the box-makers. The demand for wagon stock, especially in sawed pattern material, has been slow for two months. The wagon trade, apparently by united effort, ceased buying to any appreciable extent some time ago, with an evident intention of breaking the market if possible. This result has not been accomplished and there is at the present time an increased call for nearly every variety of wagon material. Northern woods are in very short supply and are having

a better call than the southern varieties. There is practically no black ash, rock elm or basswood for sale and the stocks of maple, birch and beech are sold close up to green stock. The local hardwood flooring trade is in very good shape and the interior finish and furniture factories are very well employed. Prospects for a good fall trade are excellent.

Boston.

There has been no marked improvement in the demand for hardwood lumber in Boston and New England. While this condition exists, no weakness has developed in values and dealers do not expect any. Manufacturing consumers of hardwoods are not willing to anticipate their wants to any extent. Manufacturers of interior finish are fairly busy. Those making furniture have fair sized orders on hand, but are not willing to buy lumber ahead very freely.

As the time for moving crops is about at hand the question of cars is becoming a most serious one. It is freely predicted that rolling stock will be more difficult to secure at shipping points than last year. Several large dealers have been bringing considerable lumber in and storing it. Whether this is a speculative move or done to take care of regular customers remains to be seen.

The demand for ash has been fair and prices are a little firmer in some instances. Plain oak, one inch, is firmly held and offerings of desirable stock are small. The call for quartered oak is good. All dealers complain of a shortage of good stock. Prices are very firm. One inch is held at \$85 to \$87. Whitewood is firm. Some buyers have been talking an easier market, but with actual sales of one inch at \$60 this week it does not look as though holders would be willing to drop quotations. Chestnut is in fair call and black walnut is steady and firm.

New York.

The hardwood situation in this district shows a stronger tone than is usual at this time of the year. While it is true that there is a slight increase in offerings, the demands of the market keep supplies pretty well absorbed. Prices are very firm. Ash is in particularly good demand with supplies scarce. Of course the present price situation is deterring buyers from purchasing as much hardwood as they ordinarily might, but this is by no means a bad feature of the market, as it simply means a postponement of active buying for a little while, as the demands of the manufacturing and general trade will undoubtedly be felt in the early fall, when buyers will all come into the market at once. Of course the waiting is done in the hope that prices will ease off, and while there is some opinion expressed to that effect in certain circles, the reports relative to the amount of supplies available at mill points would certainly seem to preclude anything but firm prices for the balance of the year. If the latter proves to be the case there will undoubtedly be an advance in prices when the real demands of the market are in evidence. There is a fair trade in plain oak, poplar, birch, basswood, maple and chestnut, and although in a number of these woods supplies are good they are not sufficient to crowd the market, and sales are made at good figures.

Philadelphia.

A decided improvement in the hardwood situation is noted as the fall season approaches. Those who thought it advisable to defer buying until fall, believing values would drop, are now beginning to realize their mistake, and are doing the best they can to protect themselves. The car shortage is again troublesome. Evidently there is no accumulation of good stocks at mill centers, and values are steady, with an upward movement imminent. The indications for fall and winter business to all appearances are prom-

ising. Flooring concerns are active and the veneer and cigar box men are moving along steadily.

Ash, poplar and chestnut still hold the lead, price cutting does not prevail to any extent and there is no sign of weakening anywhere. Building work is progressing rapidly, new permits are being taken out almost daily, consequently a steady consumption of lumber may be expected for some time.

Baltimore.

The hardwood market continues satisfactory. Dealers as well as manufacturers say they are receiving numerous inquiries, and while the offerings appear to be fairly liberal at the present time, values are firmly maintained. Oak and other lumber had begun to move in fair quantities and there was a prospect that accumulations might attain some volume, when the car shortage grew more acute and shipments were again impeded. Mill men especially along the Norfolk and Western railroad complain of inability to get cars and as a result stocks are piling up at points of manufacture, which imposes a strain upon the resources of the mills. Some producers say they are putting twice as much lumber on sticks as they send to market.

The better grades of oak especially are in good demand, with the quotations about as high as ever. Some feeling of uncertainty prevails, but it does not seriously affect the trade. The lower grades are fairly easy and there is no immediate prospect of a change. The export movement is without striking features, stocks in some divisions of the trade being larger than is consistent with a strong market.

Ash, chestnut and other hardwoods are in very fair request at figures that encourage production. The selection is perhaps more liberal, but nothing like congestion prevails and the outlook is very promising. Poplar is to be had in larger quantities in the lower grades, while the better stocks are holding their own and bring in some instances record prices. Box makers are exceedingly busy and consume large quantities of lumber, while the export business also takes large supplies, though some of the foreign markets appear to be a trifle congested.

Pittsburg.

September opens with the hardwood trade in good shape. Lumbermen are getting their full share of inquiries and orders and are looking for about all the business they can handle. Prices are generally satisfactory. A few dealers venture the opinion that there will be higher quotations on some woods before January 1, but all agree that collections are "bum." Wholesalers are keeping an eye to windward for the threatened car shortage and they are encouraging their customers to get in their orders for winter stock early.

Hardwood specialties are badly wanted. These include locust posts, white oak ties, hickory of all grades, beech piling, maple flooring and ash and elm. Prices for good stocks in these lines are higher than one year ago. Oak is bracing up after a slight decline. Reports show that sound wormy chestnut is going to be a good fall seller at prices even up with last spring's quotations. Most of the mills in West Virginia and Pennsylvania are carrying only fair stocks and some of them have very little dry lumber on hand.

Buffalo.

The hardwood lumber trade still leads almost every other wood in activity, as it does in general stability and satisfactory prices. Scarcity of stocks is no new thing and is to remain right along, but the steady profit is there just the same and there is not the fluctuation in price that exists in southern pine, for instance, and there are not the excessive mill prices that exist in white pine.

It is true, however, that there will have to be an adjustment of sorts before long to make up for the lack of poplar, ash and chestnut, but it can be done, at least for awhile. Dealers say that it is better now to use oak than ash that costs more than oak, and the same is true of chestnut. Very odd that any one will pay more for chestnut at any time than for oak. Still there is quite a good amount of all these woods coming into the Buffalo yards and the extra effort to find them will succeed awhile longer.

As to such woods as birch and maple, they are not only plentiful but they are going into almost anything for which hardwood is needed. The only thing that does not look right about them to the jobber is that the sawmill prices are getting pretty high. Some of the jobbers are staying out of the lake district so far as birch and ash are concerned, but the producers hold meetings and discover that they are now going around the jobber mostly and selling to the consumer direct. Then the jobber has nothing to do but buy his own timber and set up his own mills. In this way he places himself in a more independent position than the white pine dealers have been able to do and he can hold the position he has carved out so long as there is timber to cut.

Bay City and Saginaw.

There is no use in denying what is known to the trade generally—that there has been for ninety days an easing up in the absorption of lumber. High prices have influenced this, but there are other causes also. Last year there was such an extraordinary demand the manufacturers sold everything ahead for the current year, and they have not yet been able to accumulate much stock. Dry lumber is reported quite scarce. The market is steady, though less persistent than it was some few months ago. There is no reason to expect any sharp depreciation of prices, and it is the consensus of opinion that quotations will rule steady. There has been a call for hardwood culls for the box trade, and some very large contracts have been filed in this line. Negotiations are also in progress to purchase a few hundred million feet of timber and have the logs shipped by rail to Bay City.

Indianapolis.

There is considerable uneasiness among hardwood men just now because of the car shortage which railroad men predict. Until now the service has been exceptionally good, permitting the prompt receipt of lumber and as prompt shipment of the finished product. Business has continued with little interruption throughout the summer. Inquiries for cars are becoming lively and there is more tonnage moving than usual, despite the fact that grain is not moving as rapidly as might be expected.

The hardwood market continues steady with the demand and supply satisfactory. If the expected car shortage occurs, the market will likely take an upward tendency.

Cincinnati.

The hardwood situation during the last two weeks has not shown any change over the previous fortnight, with the exception that quartered oak and poplar have gained a little in demand. Both these woods have been in good request for some time and prices are firm. The demand for quartered oak is especially urgent, and sales are made at prices a little above the standard. The demand for white oak has been slow for several weeks, and from present indications will not regain its strength for some time. There is practically no inquiry for it now, and several dealers have made slight concessions in price. Cypress and mahogany are active and prices are generally conceded steady. Walnut has increased a little in demand, but prices have remained un-

changed. Chestnut and red gum are a little quiet, but are expected to pick up within a short time. Tight money is figuring somewhat in the demand for hardwoods. Dealers are holding off from buying owing to that fact, and unless there is more money thrown into the market the prospects are that there will be no change in the situation for a few weeks.

Chattanooga.

Lumbermen here generally report that the midsummer dullness is a thing of the past and that trade for the fall is fairly well under way. Good dry stocks of all kinds of hardwoods are scarce, but what wood is in good shape goes into consumption readily. Although no advances in quotations have been made recently, prices generally are satisfactory.

Poplar in all grades holds first place in point of demand on the hardwood list. The demand for quartered oak is not as active as usual, this being attributable to the fact that as oak timber of the best physics is growing scarce rapidly and plain oak is in better demand than quartered, the mills are sawing plain oak the more extensively.

The export trade is active and it is reported that the demand for all lines of hardwood is satisfactory and prices good.

St. Louis.

The autumn business has started up remarkably well. Most of the orders are for quick shipment, and so many are for mixed cars of different thicknesses, grades and varieties that it is evident stocks in the hands of consumers are depleted, though equally obvious that they are unwilling to buy heavily just at this time. Business is good and steady, which would indicate that prices will hold up well for the rest of the year; moreover, the summer dullness has not developed any marked tendency to cut figures. Poplar is strong; cypress is holding its own; plain oak is in heavy supply but selling well; quartered white is a leader, and red is a trailer. Ash, being so scarce, is remarkably

strong. In fact, the only shadow on the path ahead is the prospective car shortage, which is already being felt further south.

Nashville.

Some improvement in the market situation over recent conditions is noted just now in Nashville. More inquiries are reported, even if there has been no perceptible increase in the volume of business done. The only handicap to business in this section is that of a car shortage, already noted. Good demand for poplar is noticeable, especially the better grades. The lower grades of quartered oak are not moving briskly. Chestnut is in good demand. Light stocks of ash are noted, and a consequent heavy demand. There is a good deal of activity being enjoyed by the local box factories. The retail lumber concerns, however, are not doing a land-office business, for the reason that there has been a slight let-up in the amount of manufactured building material used. This is explained by the fact that much concrete is being used in buildings here.

Memphis.

Some improvement in the demand for hardwood was noted the past few days and the trade is of the opinion that it will only be a short time until active business is resumed. There is a tendency toward increased firmness in values. The car situation is serious, and the trade expects it will prove a decided handicap. Where consumers are showing a disposition to remain out of the market, wholesalers and manufacturers are urging the placing of orders without delay so that shipments may be gotten out as rapidly as possible. The export situation does not show any decided change. The demand is still rather slow. Production of hardwood lumber is increasing steadily and large quantities are being placed on sticks. The mills are well supplied with timber, but there is no surplus of dry stock, and this is one of the main reasons why wholesalers and manufacturers are as firm as they are in their views of values.

Quarter-sawn oak, in both red and white, is a good seller and prices are well maintained. There is also an excellent demand for the lower grades of both cottonwood and gum, which are scarce and which are moving as freely as the limited offerings will allow. The higher grades of these woods are also moving at a fairly satisfactory rate, the slowest feature being Firsts and Seconds cottonwood, running from 6 to 12 inches. Ash is offered in only a moderate quantity and the sale for this is comparatively easy at good prices. There is a particularly good demand for dimension stock. Poplar and cypress are offered in only a limited way and no difficulty is experienced in disposing of what is for sale. Cypress is recovering somewhat from the depression of a short time ago. Yellow pine prices are reported from 50 cents to \$1 per thousand higher than recently and, as cypress declined in sympathy with yellow pine, it is only natural that it should feel the influence of the better tone and higher values in that wood.

Minneapolis.

Factory trade is engaging the principal attention of dealers here. The season of orders from the retail yards has hardly opened yet, but is expected to be good as usual when it starts. The Northwest has not as large a crop as usual, but it is good in quality and prices are higher than ever before, so farmers will be in good shape. City building continues at an active rate. While not so much lumber is going into buildings as before, most builders are calling for the best finish, and the hardwood consumption is heavy as ever in this line. The railroads are getting into the game again also, especially for oak, but they are looking for car stock as well, and elm sells readily.

Northern hardwood is practically all in whole-

sale hands now, and is held at firm prices. Birch has not advanced any in price, but is selling readily at list, and is one of the most active woods on the market. Basswood is also a good seller, and the lower grades are practically gone now. There is a little northern white oak, which sells readily when offered, and red oak is also sought for. Southern hardwoods are more freely offered in this market than for some time, and while there is no material change in the prices made, they tend to be somewhat easier than they have been in the past. The volume of business done by northwestern dealers this fall seems likely to be limited only by the stocks they have for sale, and those who accumulate lines of southern hardwood will be in the best position to take care of the trade. The northern output in every line seems certain to be inadequate. Some northern mills have done summer logging and will saw this winter, which will help the situation some next spring.

Toledo.

The hardwood market, while still fairly firm, is not quite as strong as it was a few weeks ago. Railway and other heavy construction work which furnished a good outlet for certain grades of hardwood has slackened up considerably and the demand from those sources has somewhat diminished.

While building operations are fairly active at this time they are confined largely to cheap residences and hardwoods are not in demand for finishing in this class of buildings. One of the largest hardwood yards in the city reports a considerable falling off in trade during August, business being far below that of June and July.

Poplar has made a recent rise of from 50 cents to \$1, give and take, and is extremely difficult to secure. This is especially true of siding, the supply of which is low and the amount in sight limited. Some good poplar is to be had from the West Virginia territory, but the delays occasioned by car shortages have been very annoying. Shipments from there to this market have been held up for more than thirty days because of a lack of transportation facilities, and ten to fifteen day delays from the same cause are rather the rule recently.

Liverpool.

Very little change has to be reported during the last fortnight. August is a big holiday month in the Lancashire cotton towns, most of them closing down for a week and business being entirely suspended. This naturally makes things quiet. The very wet summer has tended to make everything worse and has prevented much outdoor work in the lumber trade.

Poplar is firm in tone and we have considerable difficulty in finding supplies. Hickory is still strong. Though a few hundred logs have been imported, they cannot have much effect on the market. Oak, both plain and quartered, is in demand, but the supplies for the moment are ample for present requirements. Wagon and coffin oak planks of suitable specifications are in much demand. We heard of quite extraordinary prices being realized for a parcel of wagon planks with a large proportion of 16 ft. and up. Maple logs have been overdone and no more should be sent to this market. Birch is better than it has been, though the stock is still large. Mahogany on this side still keeps firm and higher prices are being realized for stock. Really we would not like to say how high the price of this wood is going, and we should not be surprised to see extremely high prices at the back end. In fact, we unhesitatingly advise American buyers to at once send to the English sellers for their requirements of this year, as it will undoubtedly pay them. Once the holidays are over here an immediate sharp advance will take place. Ash logs and planks are much as before.

CORRESPONDENCE SOLICITED

When you have anything to sell, or wish to purchase anything in the way of

HARDWOOD LUMBER

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town
Name of concern
Name of buyer
Line manufactured
Kinds, grades and thicknesses of lumber
Kinds and sizes of dimension stock
Kinds and thicknesses of veneers
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

HARDWOOD RECORD, Chicago

LET US KILN DRY YOUR LUMBER

Consign your carload lots direct to us.

Switch tracks to our new modern dry kiln make it most convenient to Chicago and vicinity.

No charge for unloading and reloading.

Our dry kiln has a capacity of 600,000 feet and contains every known device that money can buy for the perfect seasoning of all lumber.

Quantities less than carload lots receive just as careful attention.

All consignments will be returned to you promptly as soon as seasoned.

We don't make claims for our res

that the resaws won't back up

don't build resaws for looks, or gild the edges, but every effort is toward securing trial results and a saving in saw kerf. And when it leaves our shops and is installed in a plant, you have the combined result of our technical ability and your experience. The criticisms and suggestions of lumbermen are greatly responsible for the success of our resaws.

Advertising an Article is an Invitation to Test Its Merits

We can't tell you much about the No. 289 on paper, but here are some points on which we can: Our PILOT WHEEL SET WORKS are more rapid in adjustment, more accurate and easier to operate than any other in existence.

We don't say this alone—lumbermen say it—and why? Because you don't guess the time of adjustment. You can change the position of the rolls to any cut in the time it takes to grip the handles and move them to the width desired. Quadrant registers in degrees and fractions, so practically no time is lost. Rolls can be adjusted throughout entire range by means of Pilot Wheels—no crank necessary when you want large adjustment.

No Over-Hang on the No. 289—Base Cast in One Piece

The construction of the No. 289 is such that you can run it on any mill floor without a foundation. No trouble from joints slipping. If floor sags, the machine will remain in perfect alignment. Weight is perfectly distributed at points of greatest strain.

No Strain Too Quick for the Straight-Line Device

We call it "straight line" because the force is exerted in straight lines, direct from weight to fulcrum, from fulcrum to upper bearings. No friction on pins to retard instant action. And the arrangement is so sensitive that the whole weight that balances it may be moved up or down with the tip of the finger. When you favor the blade, you increase its efficiency, capacity and quality of work it turns out.

BELOIT, WISCONSIN

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock $17\frac{1}{2}$ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

Write for Full Description.

SAW MILL MACHINERY
Indianapolis, Ind.

No. 107 Inside Moulder

Built to work 12 or
15 inches wide by
6 inches thick.
Four or Five Heads.

SOME OF ITS QUALITIES: Patent side wing, self-oiling, self-adjusting clamp boxes; patent belt-releasing device for matchers, vertical adjustment of side spindles from above frame while machine is running; patent pin setting guide adjustable across bed of machine at intervals of one inch. Ample provision for projection of knives to permit of making deepest cuts and means for quickly adjusting bars and other parts to conform to the work of a planer and matcher. A combined Moulder, Planer and Matcher with the advantages of both machines.

A Cordial Invitation is extended to visit our exhibit at JAMESTOWN EXPOSITION, Norfolk, Va., Machinery Building, Section 15.

**SMITH of
SMITHVILLE**

NO. 105-A, EXTRA HEAVY 12-INCH MOULDER

IT HAS been our purpose during the last half century to develop a line of wood working machines containing the best workmanship and material that American skill and wisdom can afford. This fact we are proud to say is well established in the minds of our many patrons. We have, however, now exceeded ourselves by the development of a remarkable Moulder, the excellence of which is due to our obtaining written suggestions from more than a thousand operators throughout America. This machine stands alone as being the composite idea of the thinking operators of this country. One year's test of its work has convinced us that it is impossible for you to compete successfully against the Smith Moulder with any other machine. Can't we send you prices and literature?

Lidgerwood Combination Hardwood Logger

(Patented)

Especially Designed to Log the Hardwood Flats Bordering on the Mississippi River. A Machine that Can be Used Twelve Months in the year.

RIGGED AS A CABLEWAY SKIDDER.

To be used in sloughs, swampy places and during the wet season, especially where the timber runs high to the acre per thousand feet, or where the timber is thick and small with lots of underbrush.

RIGGED AS A SNAKER.

Should be used when flats are dry enough for a horse to return tongs into the woods, especially where the timber is large and scattering.

RIGGED AS A SLACK ROPE MACHINE.

To be used only when impossible to operate either the snaking or cableway system, or when the railroad is so located that a slough or low swampy place must be crossed, thus preventing the return of line by horse.

Lidgerwood Manufacturing Co.

DETROIT, MICH.

RAPID AND ECONOMICAL LOG LOADING

Largely depends on the independence of the loader.

¶ As logs are usually skidded to the nearest point on the railroad, they are necessarily scattered along the track and it's cheaper to go to the logs than move the logs to the loader.

That's just what makes the

McGIFFERT STEAM LOG LOADER

so rapid. Being self propelling, it can bring in its own empties, spot them and load the logs just as they lie.

¶ No waiting for anything or anybody—just logs. *Our booklet tells more*

CLYDE IRON WORKS **DULUTH MINN.**

C-74

How to Burn Sawdust

"We are burning all of our green cottonwood sawdust, and we saw nothing but cottonwood on the night run—and we do not find it necessary to use any dry wood at all, keeping steam entirely on the sawdust and the small blocks direct from the saw. All of the firewood we sell. Before we put in the bars we could not burn more than half the sawdust, and had to fire up almost entirely on dry wood. We are never delayed by lack of steam, and frequently have to shut off the blast while running on good sized logs."

The foregoing is a letter from the Otis Manufacturing Co., of New Orleans, La., to the Gordon Hollow Blast Grate Company, of Greenville, Michigan, stating the results incident to the use of the Gordon Hollow Blast Grate.

The Gordon Hollow Blast Grate ceased to be an experiment years ago. It is known and used wherever lumber is made. According to the testimony of users, it gives as good results with wet, green or frozen sawdust as a draft grate gives with dry wood, and burns wet or green slabs with equal facility. No change in construction necessary. Can be used in either furnaces or ovens, and in any number, from one up. No difficulty in starting up in the morning, or in keeping up steam when the blower is idle, and no objection to so doing. Saves labor in firing. First cost reasonable, and cost in the long run far less than for draft bars. We give you thirty days in which to test the outfit, paying the freight both ways in the event of rejection. If you have difficulty in making sufficient steam, or in burning your refuse, DON'T fail to try it. In writing for prices, state how many boilers you have, and whether you have plain furnaces or Dutch ovens, and give width and length of grate surface.

Five hundred testimonials like the above from leading lumbermen.

READ THIS LETTER

GRAND RAPIDS VENEER WORKS,

Grand Rapids, Mich.

Gentlemen: It is now two months since we remodeled our kilns and added your patent process, and we want to say to you that we are glad we made the change. We can now dry our lumber in about half the time it formerly took, and the saving in time is but a small part of the advantage, as the lumber dried under the new process comes out in much finer condition. It is entirely freed of all sap and none of it is warped or checked.

We can cheerfully recommend your system to parties needing an up-to-date system. Yours truly,

SCHILLER PIANO COMPANY.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

MEETING OF HANDLE MANUFACTURERS. AMENDED NOTICE.

It has been decided that the meeting of handle manufacturers to be held on Tuesday, October 8, at the Great Northern Hotel, Chicago, will include manufacturers of both hickory and ash handles. The morning session will be devoted to hearing addresses from leaders in association movements, who will explain the benefits of organized effort and what an association is privileged to do and what not to do within legal limitations. The meeting will then resolve itself into two separate bodies, one of the hickory handle producers and one of ash handle makers. If it is deemed wise separate associations of each of these interests will be organized.

Particular attention is called to the article on another page of this issue, entitled "The Coming Handle Meeting."

HENRY H. GIBSON,
Editor Hardwood Record.

General Market Conditions.

Hardwood market conditions are in good shape in many sections of the country, but in others very spotted, according to reports in the HARDWOOD RECORD from the numerous trade centers published in this issue. There seems to be a diminution of demand in the East, which is always sensitive to monetary stringency. More than likely this is but a passing wave of slight decline in sales, as advices from abroad and the large centers of this country point to a marked improvement in the financial world. One authority declares that the money outlook the world over is much better than it has been for a long time. While there is a slight easing of the tension which will increase as the business let-up goes on, there is likely to be another hardening in the money market when the full tide of crop movement gets under way. Much depends upon the corn crop, as to how extensive this movement will be. The weather of the past two weeks has been distinctly "corn weather" and with another two weeks of warm moist weather the crop should be a good one.

There is still little demand for bonds of any kind in the general market. Railroad securities as well as timber bonds go begging and it is not expected that there will be much loose money for this class of investment until after the first of the year.

Poplar seems to be leading the van in lumber demand and prices are ranging high. In some sections even oak has eased off a little, but apparently only temporarily. Northern woods are in fair demand.

The strength of the entire hardwood situation lies in the fact that there is very little lumber in the hands of manufacturers and comparatively small stocks owned by jobbers. Even if trade should fall off twenty-five per cent there would scarcely be lumber enough to go around.

Owing to the diminution of speculative building less big orders are out for hardwood flooring and interior finish than usual, but there seems to be a large amount of repair work and small building in progress, making a fair trade in these two lines.

The furniture manufacturing business evidently has not much snap in it but still the aggregate purchases in this class of trade is not small. There seems to be a renaissance of car building and the demand for car material is increasing.

On the whole the situation is excellent, and no fear should be entertained for the future of the market.

The Coming Handle Meeting.

As noted at the head of the editorial columns there has been a slight change in the plans for the handle meeting to be held at Chicago, Tuesday, October 8. In the morning a joint meeting of both ash and hickory handle makers will be held, at which addresses on the subject of association work will be made by W. H. Russe, president of the National Hardwood Lumber Association; Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States; E. W. McCullough, secretary of the National Wagon Manufacturers' Association; E. H. Defebaugh, secretary of the National Veneer and Panel Manufacturers' Association, and others prominent in association work.

During the afternoon the hickory and the ash handle makers will have separate conferences at which time it is expected that each interest will organize an association. From the number of acceptances received it is anticipated that more than a hundred handle makers will be present, and there is every promise that excellent results will be realized from the meeting. All handle makers will be welcome.

Revival of Waterway Transportation.

It is gradually coming to be recognized that we are about to enter upon a new era of waterway transportation. The influence of the great convention of the Deep Waterways Association to be held at Memphis, Oct. 4 and 5, will be far reaching. For a generation railroads have fought every proposal for the improvement of internal navigation. This attitude is now changed, for they have found it impossible to handle the traffic of the country.

Canal building is an ancient art, and even in the United States it antedates railroad construction. Development of a country in cycles is one of the strange phenomena that students of industrial history have noted. After a period of great activity a corresponding era of depression occurs. The popularity of our canals waned of late years almost to the point of extinction. Now the pendulum swings back and the country is about to witness the greatest period of canal building and improvement of waterways that it has ever

known. The people will again turn to canal construction with the same enthusiasm that they took up railroad extension. Canal building is an expensive undertaking as compared with railroad construction; it frequently costs five or ten times as much to build a mile of canal as to construct a double track railroad, but canals will accommodate far more traffic and handle it at a minimum of expense, as compared with the railroads.

The platform of the National Rivers & Harbors' Congress, with a membership extending throughout the country is "an annual river and harbor appropriation of at least \$50,000,000." As a result of this movement Congress at its last session voted \$183,000,000 for waterway improvements—the largest appropriation ever devoted to this object—and the president followed its action by the appointment of an Internal Waterways Commission to study and make recommendations for the comprehensive utilization of our waterway resources.

Current Issue Hardwood Record.

The publishers are particularly proud of this number of the *HARDWOOD RECORD*, as it is believed to be the handsomest number of a lumber trade paper that has ever been issued. The special feature is an elaborately illustrated story of the great lumber and allied interests of the city of Cadillac, Mich. The frontispiece is a picture of the typical hard maple growth of Michigan, artistically reproduced in four colors. The title page of the story is embellished with types of three great Michigan forest trees—each a monarch specimen—white pine, gray elm and hemlock, and also with a beautiful photographic reproduction of one of the leading lumber plants of Cadillac.

One cannot read this article without fully realizing that the lumbermen of Cadillac are lumbermen in reality. They know how to do things and do things well. The type of the timber which supplies logs to these mills is of its kind unexcelled in the known world. There are no better sawmills built than are used by these people and no one manufactures lumber better than they do. What is true of this lumber product is also true of the allied production of hardwood flooring, veneers and panels, crates, heading, last blocks and iron-working tools, wood chemicals and pig iron.

Above all else, the laborer in the woods and mills of this section works under conditions more favorable than in almost any other region that can be named.

Truly Cadillac is entitled to its name of being "the biggest little city in the country," which is the natural sequence of the fact that the people at the helm of business affairs there are "big men."

National Forestry in Other Countries.

The forests of Japan have been managed by the imperial government for many years. The national forests of that country cover an area of about 30,000,000 acres, or slightly more than half the total forest area. The management of these forests by the Japanese government has proven successful and profitable.

In France the forest mountain regions were in the way of complete denudation before 1860. Their mighty sponges of roots, deciduous deposits and undergrowth which regulated the flow of the streams, were exposed and dried, and on taking fire were destroyed. Heavy rainfall washed away the disintegrated mountain soils which filled the river beds and checked navigation. Productive land became barren. There was a dearth of lumber. Cities with large manufacturing interests were punished with torrential floods, or drouth, and the punishment increased recurrently. The French government at last bestirred itself and appropriated \$15,000,000 to purchase 400,000 acres of the deforested area. For over forty years it has incurred an annual expenditure of \$600,000 for reforestation and plans are on foot to acquire an additional tract at a cost of \$20,000,000. While the state-owned lands of France will remain unproductive for many years, the plans promulgated are deemed wise and of eventual profit.

The systems adopted by Japan, France, Germany and many other foreign nations should appeal to the lawmakers of this country and there should be no more babble against forest reservations. While the government has at last secured the protection of a large area of mountainous lands in the western part of the country, its holdings are absolutely nil in the East. The White Mountain reserve as well as the proposed Appalachian timber purchase should come about very promptly.

Standardizing Wagon Material.

The National Wagon Manufacturers' Association is an organization that has been maintained for about twenty-five years, and is made up of wagon manufacturers throughout the United States. For many years manufacturers of wagons have deemed it wise to buy special and specific sizes of dimensions for their vehicle work. This system enabled them to hold the hardwood manufacturers who produce stock for them under close contract. In other words, after a lumber manufacturer had produced a quantity of special sizes for a wagonmaker, he was unable to market the stock to another wagon manufacturer, or to get out regular stock ahead of his specific orders.

Of late years it has been the opinion of leaders in the National Wagon Manufacturers' Association that it would be wise to unify not only sizes but grades, and make them satisfactory alike to all manufacturers of wagons and to all producers of rough wagon dimensions. The association has worked on this proposition for a long time, and at a special meeting held in Chicago on Thursday, September 19, a set of standardized sizes for rough wagon material and a new set of modified grading rules were agreed upon. Before these rules and sizes become effective they will be passed upon by both the Hardwood Manufacturers' Association and the National Hardwood Lumber Association. A request has been made to both these organizations for the appointment of a special committee on rough wagon dimensions, to confer with a like committee from the National Wagon Manufacturers' Association, and it is deemed probable that within a very few weeks a joint agreement will be reached.

On a news page of this issue will be found the report of the meeting held by the wagonmakers, in which the new rules and standardized dimensions are fully outlined. It is to be hoped that this very desirable movement will be crowned with success.

Annual Car Shortage at Hand.

The car shortage which the *HARDWOOD RECORD* has predicted would menace trade during the fall months, as usual, is already at hand, for from many sections of the country complaints are arriving that there is difficulty in securing sufficient equipment to move lumber. A good many buyers have forestalled this situation by placing their orders early and securing their shipments in advance of actual needs, but still there are others who have postponed purchasing until there is every likelihood that they are going to encounter a lot of trouble in keeping their lumber stocks lined up for fall and winter requirements. Every man who has any expectation of needing stock for the next four months will be wise in making purchases and crowding his shipments along as fast as possible, because the car shortage in view of the great crop movement, is absolutely inevitable.

Bad Management of Lumber Trust.

Bulletin No. 77 of the Bureau of Census recites that practically all varieties of merchantable timber during the past few years have increased in stumpage value. From 1900 to 1905 the estimated increase in yellow pine stumpage value was from \$1.12 to \$1.68 per thousand feet; white pine, from \$3.66 to \$4.62; Douglas fir, from 77 cents to \$1.05; hemlock, from \$2.56 to \$3.51; oak, from \$3.18 to \$3.83; spruce, from \$2.26 to \$3.70; cypress, from \$1.58 to \$3.42; the total average increase being forty-four and one-tenth per cent.

The same document shows that the average increase in value of all kinds of lumber during the same period was from \$11.14 to \$12.76, or an increase of fourteen and five-tenths per cent.

In view of the foregoing figures a contemporary suggests that if a "lumber trust" exists in this country, its manager is a mighty poor specimen of the American business man! If raw material has nearly doubled in value in five years, why has not the aforesaid trust been able to secure more than fourteen and five-tenths per cent increase in lumber values?

Pert, Pertinent and Impertinent.

Nawthn' Doin'.

The ancients thought the world was flat
And right they were;
There's not a bit of doubt of that
I must aver
They had no bridge, heighten dubs;
No brainstorms then;
They had no cigarettes and clubs

Like modern men
They had no choons gals, no graft
No car ahead
They had no Ponder, no Taft,
No valiant Ted
They had no mergers in their day,
No ice or gin
They thought the world was flat, and say
It must have been

Luck.

Luck means you get a six o'clock start
Living on a diet of fat if you can earn two
Minding your own business and not meddling
with other people's
Luck means appointments you have never failed
to keep
The trains you have never failed to catch
Luck means trusting in God and your own re-
sources
MAX O'REILLY

A Wise Man.

He who makes
ignorance pay well.

Different.

If you want to
please a man tell him
he's in his prime;
but don't presume to
say it to a woman,
unless you want to
get even for some-
thing.

Few, However.

Some men miss a
lot of fun because
they're too wise to
be foolish.

Don't Take His Word.

When a man an-
nounces that he
"has a kick com-
ing," he doesn't
mean that it would
be safe for you to
give it to him.

Avoids It.

It isn't the spot-
less woman who usu-
ally craves the spot-
light.

Make Haste.

It's all right to
"think it over," but
don't think so long
that the other girl
beats you to it.

Insincerity.

Few tears come
from the heart; buck-
ets full from the
eyes.

OTHERS HAVE BEEN ASLEEP.

PARTY WITH NIGHTMARE; I knew this car famine talk was all a bugaboo!

To Our Sorrow.

Every dog has his
lay; but the cats
monopolize the
nights.

True.

The absent are not
always wrong.

Bears Watching.

Look out for the
man who always
looks out for him-
self!

Why Is It?

Few people are con-
tented to think
"poetry" — they
must write it out.

Be Not Hasty.

The question, "Is
it right to call a man
a liar?" may best be
answered by the size
of the man.

Roller Skating.

When you take a
hard fall and mere-
ly break one of the
commandments, you
get off easy!

Forgets It.

Every time a wom-
an makes a dunce of
a wise man he sim-
ply charges it up to
experience and lets
it go at that.

Usually.

Usually a man who
boasts of his brav-
ery hasn't nerve
enough to push a set-
ting hen off her nest.

System Run Mad.

Oh, isn't it great to be "up-to-date"
And live in this year of grace,
With a system and place for everything,
Though nobody knows the place!

We've an index card for each thing to do,
And for everything under the sun;
It takes so long to fill out the cards,
We never get anything done.

We've loose-leaf ledgers for saving time—
The Lord knows what they cost;
But half our time is spent each day
Hunting for leaves that are lost.

It's sectional this and sectional that
(We'll soon have sectional legs).
I dreamt last night that I made a meal
Of sectional ham and eggs.

I dreamt I lived in a sectional house
And rode a sectional "hoss."
And drew my pay in sections from
A sectional "sectional boss."

Stenographers who spell like h—,
And make us swear and cuss;
When we are not dictating to them,
Why, they dictate to us.

AMERICAN FOREST TREES.

SIXTY-FIRST PAPER.

Persimmon.

Diospyros Virginiana Linn.

Persimmon is found from southern Connecticut along Long Island and southward to Florida, east of the Allegheny mountains; it grows through southern Ohio down into Alabama, and westward to southwestern Iowa, southern Missouri and eastern Kansas; through Indian Territory and Texas.

It is known by the name persimmon in Connecticut, New York, New Jersey, Pennsylvania, Delaware, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Mississippi, Louisiana, Kentucky, Missouri, Texas, Arkansas, Illinois, Indiana, Iowa and Ohio. It is called date plum in New Jersey and Tennessee; simmon and possumwood in Florida, and plaqueminer in Louisiana.

The genus *Diospyros*, to which this tree belongs, is of the ebony family; the ebony of commerce—a native of Ceylon and the East Indies—is one of its numerous species. Aside from being used as lumber, the ebones are planted for ornament, on account of their lustrous foliage and decorative fruits.

The leaves of persimmon are three to five inches long; simple and alternate, with short pubescent petioles; in shape they are thick, broad and oval, with pointed apex and rounded base; they are dark green and lustrous above, paler and dull below, and are bordered with a dainty fringe.

The flowers blossom in June, after the leaves appear; they are dioecious, the staminate in three-flowered cymes hardly opening; the pistillate are solitary and wide open. They are small and of a yellowish color.

The fruit of the persimmon is globose and pulpy, also sessile; when green it is exceedingly astringent, but when ripe edible and sweet. In color it is reddish-yellow, and is usually about an inch and a half in diameter. The negro and the southerner alike enjoy this queer fruit after it has been touched by frost, but the majority of people are quite content to let it alone, particularly if they happen to have been tempted when it was green. A traveler in the old Virginia colony a hundred years ago wrote back to England about "the pessimins that grow on a most high tree, that are harsh and choakie and furre in a man's mouth like allam!" Tannin is found in the fruit, and to this element it owes its astringent property; a coloring matter obtained

from it is useful in making indelible ink. The Indians roasted the seeds and made a beverage somewhat similar to coffee. In combination with hops it is still brewed into beer and made into brandy.

The bark is broken into rough plates; it is very dark colored, and tinged with red. From it a medicinal extract is brewed.

In general appearance the tree is slender

in light, sandy soil, or in damp woodlands; it is prone to grow well in fence rows, or abandoned fields. It is distinctively a southern tree, and although occasionally found quite far north, in Ohio and New York, this climate is by no means best adapted to it. Perhaps its finest proportions are reached in Oklahoma forests.

The *Diospyros kaki*, or Japanese persimmon, is now planted largely in many of the southern states, and seems to thrive almost as well as in its native land. Its picturesque figure, large, thick, glossy leaves, and rich fruit make it decidedly ornamental in landscape gardening.

The wood of persimmon is very close-grained and of compact structure, resembling hickory to a considerable degree. The medullary rays are conspicuous. The heartwood, which does not develop until the tree is about a hundred years old, is very dark brown or black, the sapwood lighter, often having dark spots upon it. As to structural qualities, persimmon is hard, strong and heavy, a cubic foot weighing about forty-nine pounds. It is very popular in this country for making plane-stocks, shuttles, etc., and manufacturers in England are constantly calling for supplies of it to be used in making golf sticks and heads for baseball bats, etc. In fact, foreign buyers seem to stand ready at all times to absorb as much of the entire cut of the country as they can lay hands upon.

Transplanting a Great Tree.

The oldest yew tree in Germany, perhaps in the world, has just been transplanted from the old to the new botanical gardens of Frankfurt-on-the-Main. Its age is estimated at 700 years. Expert botanists began preparations for its removal three years ago, by gradually clipping off the root tendrils to a radius of about six feet. When it came time to remove the tree from the ground a crate was built about the roots and clinging earth and the tree kept erect by guy ropes, so that it could be skidded. The crate was about thirteen feet square and six feet deep, while the tree is sixty feet tall and its weight when packed was about 90,000 pounds. Instead of putting the truck which carried it on wheels rollers of hickory were used, and in places where pipes or sewers were underground heavy timber beams were arranged to take the weight of the rollers. The tree is now propped in its new location lest the wind blow it down before the roots get a firm hold on the soil.

FOREST GROWTH OF PERSIMMON, ALABAMA.

with a handsome round top and spreading or pendulous branches. It reaches a height of from twenty to sixty feet. The branches are often hollow. For ornamental purposes the tree is desirable on account of its rich green foliage in late summer and its graceful habit. It is not often successfully transplanted, but may be readily raised from the seed.

Persimmon reaches its highest development

GEORGE D. EMERY

CHELSEA, MASS.

Builders of Lumber History.

NUMBER LII.

George D. Emery.*(See Portrait Supplement.)*

George D. Emery of Chelsea, Mass., the greatest factor in the mahogany trade of America, began to learn the lumber business at the early age of fifteen, when he secured a position as tally boy in a white pine yard, at Buffalo, N. Y., belonging to Oliver Bugbee. Soon after, when Mr. Bugbee entered the hardwood business, the tally boy was promoted to the position of buyer, and traveled through Michigan, Ohio and Indiana, locating stocks of oak and walnut, which were forwarded to Toledo and accumulated for shipment by lake to Buffalo, thence by canal to Albany, which, in those days, was an important market for lumber.

After nine years of this valuable experience and consequent gathering of knowledge concerning lumber affairs, Mr. Emery entered the manufacturing field, operating a mulay sawmill in Noble county, Indiana, for seven years. Skillings, Whitneys & Barnes then secured his services for two years as buyer, but he was anxious to get into business for himself again, and did so, this time with greater success. He built several mills and opened headquarters at Indianapolis, where he located a plant. His specialties were black walnut and oak, and as they grew scarce in Indiana, Kentucky and Missouri, he sought the timber as far south as Louisiana, Texas and Arkansas.

Mr. Emery was at that time the largest producer of walnut in the United States, but, after thirty-one years, he felt that the supplies obtainable in that line were not adequate to maintain his enterprise upon its large scale for a much longer period of time; so he looked about for a new branch of the lumber industry in which to engage extensively. Mahogany appealed to him as a great and growing factor in the trade, and he resolved that he would operate not upon the usual lines of purchasing, importing and distributing logs, but that he would commence with the trees themselves and superintend operations from the forest to American markets.

He accordingly invested something like a third of a million dollars in this gigantic enterprise, and although at times beset by various difficulties, has proven his foresight, good judgment and capable management by the great results and success which he has attained.

Mr. Emery's mahogany operations are located in Central and South America, and his company controls the entire concessions for lumbering that valuable wood on the Atlantic side of Nicaragua as well as large holdings in Honduras, Guatemala, Belize and Colombia. About one thousand men are employed in felling and shipping the trees; only about one hundred and fifty of them are Americans. Two steel vessels have been built especially for carrying cargoes of mahogany,

each with a capacity of 1,100,000 feet of round logs; thirty miles of standard gauge railroad and an immense commissary department are maintained in connection with the foreign operations.

The elder son, Herbert C. Emery, assumed active control of these great interests in the tropics at the age of twenty, and continued to manage them until about 1900, when he succumbed to the dangers of tropical climates and, after a severe attack of fever, was obliged to abandon the work. He is now first vice president of the George D. Emery Company, which has its home office and plant in Chelsea, a suburb of Boston. This institution is the largest mahogany manufacturing plant in the world. Mr. Emery, Jr., was succeeded in his work at the scenes of woods operations in the tropics by S. D. Spellman, second vice president of the house, who main-

PRINT OF PERSIMMON LEAF, HALF ACTUAL SIZE.

tains headquarters in Bluefields, Nicaragua, and attends to the lumbering and shipping of consignments of the plant. This plant has a

capacity of about 15,000,000 feet of lumber annually and an immense output of veneers.

The business is not now being actively conducted by Mr. Emery and his son, as in earlier days. The general policy of the company is controlled by the board of directors, composed of Mr. Emery, Herbert Emery, Charles A. Vialle, president of the National Bank of the Republic of Boston; Charles W. Noyes, a prominent lawyer of the same city, and George L. Cade, treasurer, who has been with the Emery company for many years and has contributed largely to its success. The active management of affairs, under the board of directors, is in the hands of Mr. Spellman, at the scene of woods operations; Mr. Cade, who has charge of finances and general management, and Allen T. Fuller, in charge of lumber and sales, the two latter located at Chelsea.

Mr. Emery, while in good health for a man who has just passed his seventy-fourth birthday, is trying to enjoy in his later years a little of the rest that he has so well earned, and takes part in the business only in an advisory capacity, as does Herbert Emery.

Mr. Emery has been twice married, and has two sons and a daughter. He is decidedly domestic in his tastes, and inclines to quiet home life rather than to active social duties and publicity of any sort; he is a member of the Congregational church at Allston, another suburb of Boston, where he resides. Most of his spare hours are spent at home in his library and garden. Politically he is a Republican.

In general appearance Mr. Emery is dignified and imposing. He possesses the firm mouth and square chin which denote firmness and dogged persistence in the face of obstacles and even defeat; in his business career he has overcome difficulties which the ordinary man would have considered insurmountable. His kindly manner and noble character have won him many friends and have endeared him to his employees.

The HARDWOOD RECORD is pleased to present Mr. Emery's portrait to its readers.

The Coming Handle Meeting

As heretofore announced in the HARDWOOD RECORD, a meeting of handle manufacturers has been called for Tuesday, October 8, at the Great Northern Hotel, Chicago. The urgent call for this meeting comes about equally from manufacturers of hickory and makers of ash handles. It has therefore been resolved to devote the morning session of this meeting to a joint gathering of these producers for the purpose of listening to addresses from several people prominent in association work. The gentlemen who have promised to address this meeting have been instrumental in the organization of associations in the lumber, veneer and box industries, and can tell the visitors convincingly the benefits that have been derived from association work. They will also enlarge on the legal points involved and tell the handle people ex-

actly what they can lawfully do in this sort of an organization, and what it will be necessary to avoid.

At the afternoon session of the meeting, the hickory handle producers and the ash handle makers will go into separate conferences on the subject of the possibilities of association work in their two branches of the trade, and if deemed wise, each will organize a distinct association. Furthermore, it is anticipated that all the other divisions of the handle industry as well will eventually join in a parent association to work for the common good of all the others.

From the interest manifested in the hundreds of letters received by the editor of the HARDWOOD RECORD, it is confidently expected that there will be a large attendance at this meeting. Every effort will be made to insure

the success of the movement. Already acceptances of the invitation have been received from approximately a hundred handle manufacturers, stating that they will be present at this conference, and before the date of the meeting it is hoped that at least double that number of acceptances will be received. It must not be imagined by anyone that this gathering is in any way a sectional affair; all manufacturers of hardwood handles throughout the country are invited to attend, whether their product be of maple, beech, elm, or what not—though the ash and hickory people may be expected to predominate, since they cover the greater portion of the field. Acceptances of the invitation have been received from widely scattered localities; a factory in western Kansas, one in eastern Massachusetts, one in northern Michigan, and one in southern Arkansas have sent in responses signifying the intention to be represented.

There is every evidence that there is an urgent need of association work among both the hickory and the ash handle producers, and this is the time to get together and do something. Excerpts from a few letters which indicate the great interest that is being manifested in this movement are appended, but they include a very small number of the total received.

CONWAY, MASS., Sept. 10.—Editor HARDWOOD RECORD: Yours of the 7th inst., regarding forming a handle association, received. I do not go into hickory handle lines at all, so that such an association would not interest me unless they take in, as your letter suggests they may do later, the whole handle industry. If this is the object I should be in favor of such an association being formed, for there is need to improve conditions. I think the greatest source of trouble in handle manufacturing, as in other lines, is that there are too many selling goods that don't know what their goods cost them, and if they only get a big lot of work to do they think they must be making money. Again, once in a while somebody goes into business with the intention of getting in debt as deep as possible, fail, pay 5 or 10 per cent on the dollar and make prices accordingly, any old prices so long as they sell goods. I also believe too many manufacturers that are out after business are too easily influenced and believe too often what a prospective customer tells them as to what they can buy such and such goods for; and to get the order make a price that no man can manufacture goods for and pay his bills. To illustrate, I had a letter from a party this month with sample for quotation. I quoted at a price I could give them a good article for and make merely a fair profit. They replied that their customer told them he had been buying the handles for about \$4. Now, the actual cost of the two items of raw material, lumber and ferules, will cost anyone \$4.60 per thousand. I wrote right back and told them to keep on buying of the party, and that my price was final; they could take them or leave them as they saw fit. It will not be possible for me to attend the meeting, but I would like to know what is done, and hope you will send me report. H. G. REED.

REDFORD, PA., Sept. 11.—Editor HARDWOOD RECORD: We have your favor of the 7th inst., with reference to the meeting of handle manufacturers, Oct. 8, at Chicago. Our Mr. J. L. McLaughlin will represent us at this meeting. J. L. McLAUGHLIN & SONS.

ASHLEY, OHIO, Sept. 14.—Editor HARDWOOD RECORD: If possible the writer will be at the handle meeting Oct. 8. Having had eighteen years' experience, might suggest a good many

points of interest. Enclosed find \$2 subscription to HARDWOOD RECORD. Will try to be with you. UNION HANDLE & MANUFACTURING COMPANY, H. D. HALE, MGR.

FAYETTEVILLE, ARK., Sept. 13.—Editor HARDWOOD RECORD: The writer will endeavor to be at the meeting in Chicago. As to suggestions, will leave them to people who have been in the business for some time, whom I hope to meet there. WM. CHARLESWORTH HANDLE COMPANY.

WESTPORT, CONN., Sept. 7.—Editor HARDWOOD RECORD: Would say that were we manufacturers rather than consumers of handles we would be glad to enter into your proposed association. As it is, however, we must be content to sit by and watch your proceedings, and note what effect the same may have on us as consumers. We do not wish to encroach on your time, but would make a suggestion that one of the principal advantages which we as consumers would gain from an association of this kind would be prompt filing of orders. Thanking you for your invitation to join in this conference and wishing the association all manner of success.—G. W. BRADLEY'S SONS, INC., H. T. LEES, MGR.

ATCHISON, KAN., Sept. 10.—Editor HARDWOOD RECORD: We beg to acknowledge receipt of yours of the 7th instant, and to say we will endeavor to have a representative at this meeting.—JACKSON WOODENWARE COMPANY, T. R. CLENDINEN, MGR.

GREENFIELD, MASS., Sept. 10.—Editor HARDWOOD RECORD: Your notice of the proposed handle makers' meeting at hand, and the writer will try to be present, as we believe such a meeting can not fail to be helpful.—RUGG MANUFACTURING COMPANY, F. A. RUGG, TREAS.

HICKSVILLE, OHIO, Sept. 12.—Editor HARDWOOD RECORD: We note you have substantial encouragement for calling a meeting to organize handle manufacturers. We make cant hooks, jack lever handles, etc., also farm tool handles, and feel that it is our duty to encourage anything in the way of bringing manufacturers or producers together. We can not understand each other too well. Labor is much higher than formerly, we have to go farther for timber, freight rates are rigid and prices have not advanced in proportion to cost of production and timber. We shall be glad to meet with you and lend all the encouragement we can. Wishing you perfect success. KERR BROTHERS MANUFACTURING COMPANY, G. B. WILSON, TREAS.

HOPE, ARK., Sept. 13.—Editor HARDWOOD RECORD: We will try to have a representative at the meeting in Chicago Oct. 8, and would suggest that, if it is possible to do so, the grading of handles be changed so that they are graded according to quality of timber and general service, not on appearances, as many that have a little red on them, or little blemishes that mar the looks, are just as good for general service as all white. Of course it will be a hard matter to educate the consumer to using handles that are not all white wood, but hickory timber is beginning to get so scarce that the price of handles will soon advance to where the poor man can not buy if he insists on having a nice, clear, all-white handle.—IVORY HANDLE COMPANY, T. R. KING, MGR.

RURAL HALL, N. C., Sept. 11.—Editor HARDWOOD RECORD: We think something must be done so that handle manufacturers may realize a respectable profit from their investments. If possible a representative from among us will be pleased to attend the meeting in Chicago. We feel this is a move along the right lines and hope much good may be accomplished by it. Hope to be present.—SMITH-KIZER MANUFACTURING COMPANY.

PITTMAN, CONN., Sept. 9.—Editor HARDWOOD RECORD: Our Mr. Tatem, Jr., may not be able to attend the meeting. He will, however, be willing to serve on any committee and will do all he can to help the association in this section,

and hopes to attend the next one.—J. B. TATEM & SON.

PITTSBURG, PA., Sept. 13.—Editor HARDWOOD RECORD: We have duly received your two circular letters of recent date, relative to the proposed Association of Handle Manufacturers. We are heartily in favor of such a movement, believing that an organization of this kind will no doubt tend to better the conditions surrounding this line of production. There is certainly plenty of room for betterment, and we will gladly lend our endorsement to any such movement. We will consider sending a representative to the meeting at Chicago. Wishing you success in the undertaking.—THE PITTSBURGH SHOVEL COMPANY.

CARUTHERSVILLE, MO., Sept. 10.—Editor HARDWOOD RECORD: Our greatest need at present is a uniform set of grades and rules that will cover both North and South. Such rules as are now supposed to govern our business were formed long ago, when timber was plentiful and only the pick of it used, and are so distorted and changed that every buyer and seller has a set to suit himself. The lumbermen had this same thing to contend with until they got together a few years ago and reorganized and changed their rules and grades to suit the requirements of the times. I should like to make the suggestion that in getting up a committee on grades and rules they be not picked from one section or state, but have them appointed from different ones, in proportion to the amount of timber used in this business from each state. A set of grades and rules that will govern only northern timber will work an injustice on southern timber. You must have representatives from all sections to form grades and rules that will be fair and just to all. Any person acquainted with timber in both North and South will bear me out in this.—GEORGE C. PEATTE.

NEW ALBANY, IND., Sept. 9.—Editor HARDWOOD RECORD: Providence permitting, the writer will try to attend the meeting of handle manufacturers Oct. 8. As to giving suggestions relative to what would benefit the handle manufacturers, we do not care to go into details at present, more than to say that there are many manufacturers who would be on a good footing today if they were getting anything for their goods. People who do not know what their goods cost them do not know how to sell them at a profit. We note that many speak of a certain concern as being a "trust"; it is one of our strongest competitors, still does a legitimate business. Every factory which it owns has been bought and paid for in cash, not in stock, and we see no reason for complaint of anyone who sees fit to buy out other manufacturers, paying their price in cash, and continuing the business. We endeavor to sell our goods for the highest market prices, and when prices in any market are such that we do not see a margin we withdraw from that market and hunt such places as we can sell at a profit. If every manufacturer of handles, especially hickory handles, would follow this line they would have no particular cause to complain. We dare say you can get a thousand and one ideas from people in regard to a handle association and how it should be run, but are these people successful in their business? If not we do not see how they are capable of advising others how to manage theirs. The writer has been familiar with and represented this firm in every hickory handle organization there has been, and for this reason he is very familiar with all this business, the successful and unsuccessful parts of it, and the only way to have a successful one is not to allow anyone to join who is not financially able to carry his business should there be a lull in trade, and not be forced to sell his production at low prices to meet borrowed obligations.—I. F. FORCE HANDLE COMPANY, F. W. PETERS, SEC'Y AND TREAS.

KEENE, N. H., Sept. 12.—Editor HARDWOOD RECORD: As to my opinion regarding the formation of an association, allow me to say I don't think it will help some things much. My obser-

is not financially able to carry his business should there be a lull in trade, and not be forced to sell his production at low prices to meet borrowed obligations. I. F. FORCE HANDLE COMPANY, F. W. PETERS, SEC'Y AND TREAS.

KEENE, N. H., Sept. 12.—Editor HARDWOOD RECORD: As to my opinion regarding the formation of an association, allow me to say I do not think it will help some things much. My observation in the past has been that sometimes, after a turner thinks he has learned all about the trade, he starts in for himself by hiring a water-power mill back in the country. He then goes to the city and tells one of my customers he can supply him with good handles much cheaper than others because he is right in the woods where lumber is cheap. The buyer gives him quite a large order and writes me he is able to buy handles at less than I charge, and has done so. Before the year is up the man in the woods finds he has lost money, feels all discouraged and gives up the mill, saying he hasn't enough capital to do business with. Now, can and will an association prevent this sort of competition?—AUSTIN A. ELLIS.

PIQUA, OHIO, Sept. 9.—Editor HARDWOOD RECORD: We are not at present able to state whether we will attend the meeting of handle makers Oct. 8, but believe a move toward organizing a national association is all right. If we can be of any assistance in the matter we shall be glad to hear from you again. PIQUA HANDLE AND

MANUFACTURING COMPANY, WILLIAM COOK ROGERS, PRES.

CADILLAC, MICH., Sept. 10.—Editor HARDWOOD RECORD: The writer can not now give a promise to attend the forthcoming meeting. He will, if he can, and will request D. A. Stratton, manager of the American Handle Company, at Grand Rapids, Mich., to try and arrange his affairs so he can be present at this preliminary meeting. We thank you for the interest you are taking, to which we attach full credit, and also for your invitation extended to us.—CADILLAC HANDLE COMPANY, A. W. NEWARK, MGR

BAXTER, TENN., Sept. 14.—Editor HARDWOOD RECORD: My product is sold under contract, but I realize the good that might be affected by an organization with the objects you outline in view. I endorse the movement and will render all the aid I can. J. A. ISBELL.

CANFIELD, OHIO, Sept. 13.—Editor HARDWOOD RECORD: You can always count on us for progression in the handle business, for we see no pleasure in doing business for nothing. Trust the meeting will help many conditions of the trade.—CANFIELD MANUFACTURING AND NOVELTY COMPANY.

MT. EAGLE, PA., Sept. 10.—Editor HARDWOOD RECORD: Yours of the 7th at hand and contents carefully noted. Hope the meeting may be a great success and a great advantage to the handle manufacturers.—E. H. LEATHERS.

association: North Western Lumber Company, Eau Claire, Wis.; Quaw Lumber Company, Edgar, Wis.; H. W. Wright Lumber Company, Merrill, Wis.; Mackenzie & Co., Madison, Wis. Our present roll of membership consists of fifty-three firms.

In accordance with the resolution adopted at the Grand Rapids meeting a special assessment of \$2 per million feet was levied, and most firms promptly paid the amount assessed to them. Two firms refused to pay anything. One firm whose assessment was \$138 paid \$16. Another firm whose assessment was \$80 paid \$22; one firm paid \$30 on an assessment of \$104;

H. C. HUMPHREY, DIRECTOR.

Annual Wisconsin Hardwood Lumber Association

The twelfth annual meeting of the Wisconsin Hardwood Lumbermen's Association was held at Marshfield, Wis., on Tuesday, September 17. While the attendance was not large, the meeting was an interesting one. Several new firms were added to membership and election of officers was held, which resulted in the following choices:

President, E. E. Finney, Marshfield, Wis.

Board of Directors: H. C. Humphrey, Appleton; Thomas Wall, Oshkosh; B. F. McMillan, McMillan; E. E. Finney, Stanley; G. H. Lusk, Thorp; E. J. Young, Madison; Guy Nash, Shanagolden.

The report of Secretary and Treasurer Beebe is herewith given:

Secretary's Report.

At the spring meeting of this association, held at Grand Rapids, March 19, 1907, the following firms became members: Cooper & Maxson Lumber Company, Milwaukee, Wis.;

and one whose assessment was \$22 sent in \$10. The balance of the members paid in full, the assessments varying from \$2 to \$80.

A few days ago the secretary sent out blanks for lumber statistics and replies were received from twenty-six firms. A summary of said report is as follows:

STOCKS ON HAND

	*Dry lumber.	*Green lumber.
Ash	2,083,000	256,000
Basswood	5,525,000	2,163,000
Birch	22,345,000	5,131,000

*Mill run No. 3 common and better.

A stock report gathered in March showed a total of \$9,817,000 feet. At that time twenty-seven firms reported.

At the Norfolk meeting the various associations affiliated with the National Lumber Manufacturers' Association were assessed various amounts in order to raise funds for the car stake complaint and suit. This association was assessed \$300. Same has not been paid and the association at the meeting today should take some action in regard to this matter.

In regard to the special assessment to raise funds for paying expenses of delegates and committees would state that several members who were entitled to have their expenses paid refused to put in bills, consequently the large amount (\$335.66) of the special assessment fund is still in the hands of the treasurer.

E. P. ARPIN, RETIRING PRESIDENT.

B. W. DAVIS, VICE PRESIDENT.

Vice-president, B. W. Davis, Phillips, Wis.
Secretary and Treasurer, A. E. Beebe, McMillan, Wis.

Steven & Jarvis Lumber Company, Eau Claire, Wis.

Since that time the following named firms have, for various reasons, withdrawn from the

Treasurer's Report.

RECEIPTS.

Cash on hand September, 1906, meeting	\$ 112.01
Sale of books of grading rules	2.90
Membership fees	6.00
Annual dues 1907	285.00

Balance on hand, First National bank, Marshfield	502.40
	\$1,083.21

A. E. BEEBEE, SECRETARY AND TREASURER.

E. J. YOUNG, DIRECTOR.

Meeting Wagon Manufacturers' Association

There was a special meeting of the National Wagon Manufacturers' Association held at Chicago, Thursday, September 19, to standardize sizes of rough dimensions for wagon stock, and to make recommendations on grading and inspection rules for this material. What was accomplished at this meeting can best be told in the following communication written by E. W. McCullough, secretary of the association, which he very kindly supplies at the request of the HARDWOOD RECORD.

Standard Dimensions.

Heretofore the cutting of wagon material has been done almost altogether on special order, owing to the varied specifications of the wagon manufacturers. Few mills have dared to accumulate stock on hand or hold it for the better price it would bring when seasoned because of there being no uniformity of requirements. Serious delays were frequent, annoying to mill and wagon manufacturers alike—so our association, representative of the farm wagon industry of this country, has spared neither time nor expense in endeavoring to reduce the various requirements of its members to the smallest number of sizes on common parts as axles, poles, bolsters, sand boards, reaches, sawed felloes, eveners, etc. This will require sacrifice on the part of some,

but it establishes sizes that will be as standard as plank with the largest number of wagon manufacturers and will be salable everywhere. The millman, therefore, can safely cut and pile up when it suits his pleasure wagonstock of these dimensions and feel perfectly sure of a market for it.

Grading and Inspection.

Perhaps nothing in the dealings of mills with wagon manufacturers has caused more annoyance and trouble than the varied views as to what constituted good wagon materials and what should be rejected as unfit for this purpose.

Realizing that timber is a product of growth, and no two pieces entirely the same, wholly different from any class of manufactured product, the wagon manufacturers, fully appreciate the difficulties in laying down rules for grading and inspection of this class of materials, but those that they have recommended—and they are willing to confer with the proper representatives of the hardwood manufacturing interests—are given below, and are believed to be fair and equitable to producer and consumer alike, and, furthermore, cover only what is absolutely required in materials for the manufacture of the highest grades of wagons.

It is true that in the past producers of

materials, organized into associations, have endeavored to formulate similar rules, but it has been found that those so promulgated are incomplete and are not fairly representative of the requirements of either producer or consumer of these materials; therefore, it is hoped that, as these rules will be reviewed by committees representing the producers as well as the wagon manufacturers, the outcome will be to the greatest satisfaction of all.

Grades and Standard Sizes.

AXLES.

To be from good, tough, straight grained black or shell-bark hickory, free from rot, knots, splits, hearts, heart rings, shakes, worm holes, bird pecks and wane. Bright sap no objection. If any of the foregoing defects can be cut out so as to reduce to a smaller size used by the buyer, it shall be so inspected.

Sizes: $2\frac{3}{4}" \times 3\frac{3}{4}" - 6'$; $3" \times 4" - 6'$; $3\frac{1}{4}" \times 4\frac{1}{4}" - 6'$; $3\frac{1}{2}" \times 4\frac{1}{2}" - 6'$; $3\frac{3}{4}" \times 4\frac{3}{4}" - 6'$; $4" \times 5" - 6'$; $4\frac{1}{4}" \times 5\frac{1}{4}" - 6'$; $4\frac{1}{2}" \times 5\frac{1}{2}" - 6'$; $5" \times 6" - 6'$; $5\frac{1}{2}" \times 6\frac{1}{2}" - 6'$; $6" \times 7" - 6'$.

BOLSTERS.

To be good, tough, straight grained hickory or oak (white, red or burr oak only), suitable for wagon material, free from knots, hearts, cracks, checks, splits, worm holes and wane. Bright sap no objection. If any of the foregoing defects can be cut out so as to reduce to a smaller size used by the buyer, it shall be so inspected.

Sizes: 3×4 ; $3 \times 4\frac{1}{2}$; 3×5 ; 3×7 ; $3\frac{1}{4} \times 4\frac{1}{4}$; $3\frac{1}{4} \times 5$; $3\frac{1}{2} \times 4\frac{1}{2}$; $3\frac{3}{4} \times 4\frac{3}{4}$; $3\frac{3}{4} \times 5\frac{1}{2}$; 4×5 ; 4×6 . Lengths: $4'1"$ and $4'6"$ or multiples.

REACHES.

To be straight and from good, tough, straight grained hickory or oak (white, red or burr oak only), suitable for wagon material, free from knots, hearts, cracks, splits, worm holes, bird pecks and wane.

Sizes: $2" \times 4" - 8'$ and $10'$; $2" \times 4\frac{1}{2}"$, $2\frac{1}{4}" \times 4\frac{1}{4}"$, $2\frac{1}{2}" \times 4\frac{1}{2}"$, $2\frac{1}{2}" \times 5"$ $10'$, $12'$ and $14'$.

POLES.

To be straight and from good, tough, straight grained ash or oak (white, red or burr oak only), suitable for wagon material, free from knots, hearts, cracks, checks, splits, worm holes, bird pecks and wane.

Sizes: $2\frac{1}{2} \times 4 \times 4 - 12'$; $2\frac{1}{2} \times 4\frac{1}{2} \times 4\frac{1}{2} - 12'$; $2\frac{1}{2} \times 2\frac{1}{2} \times 2\frac{1}{2} \times 5 - 12'$; $2\frac{3}{4} \times 2\frac{3}{4} \times 2\frac{3}{4} \times 5 - 12'$; $3 \times 3 \times 3 \times 5 - 12'$; $3\frac{1}{4} \times 3\frac{1}{4} \times 3\frac{1}{4} \times 5 - 12'$.

SAND BOARDS.

To be from good, tough, straight grained hickory or oak (white, red or burr oak only), suitable for wagon material, free from knots, hearts, cracks, checks, splits, worm holes and wane. Bright sap no objection. If any of the foregoing defects can be cut out so as to reduce to a smaller size used by the buyer, it shall be so inspected.

Sizes: $2\frac{3}{4} \times 3\frac{1}{2}$; $3 \times 3\frac{1}{2}$; 3×4 ; $3\frac{1}{4} \times 3\frac{3}{4}$; $3\frac{1}{2} \times 4$; $3\frac{1}{2} \times 4\frac{1}{2}$; 4×5 .

Lengths: $4'1"$ and $4'6"$ or multiples.

EVENERS.

To be from good, tough, straight grained black or shell-bark hickory, free from rot, knots, splits, hearts, heart rings, shakes, worm holes, bird pecks and wane. Bright sap no objection. If any of the foregoing defects can be cut out so as to reduce to a smaller size used by the buyer, it shall be so inspected.

Lengths: 2×4 and $2 \times 4\frac{1}{2}$, $4' 2"$; $2\frac{1}{4} \times 4\frac{1}{2}$ and $2\frac{1}{2} \times 5$, $4' 6"$.

SAWED FELLOES.

Sound white, red or burr oak, free from knots, checks, sap and all other defects, cut full sizes and proper circles. Twenty-six pieces to set.

Sizes: $1\frac{3}{4} \times 2\frac{1}{2}$; $2 \times 2\frac{3}{4}$; $2\frac{1}{2} \times 2\frac{3}{4}$; $2\frac{3}{4} \times 2\frac{3}{4}$; $3\frac{1}{4} \times 2\frac{3}{4}$; $2\frac{1}{2} \times 3$; $2\frac{3}{4} \times 3$; $3\frac{1}{4} \times 3$; $4\frac{1}{2} \times 3$.

Circles: $3'$ and $3' 8"$; $3' 4"$ and $4'$; $3' 8"$ and $4' 4"$.

Hardwood Record Mail Bag

[In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Opinion on Timber Investments.

RHINELANDER, WIS., Sept. 12.—Editor HARDWOOD RECORD: I noticed in the present issue of the RECORD an article about the advice given by the Chicago Journal to young men advising them to buy timber lands, no matter where or of what kind. I agree with the editor of the Journal more than I do with you. Remembering that ten years ago hemlock logs delivered at the mills were worth only \$1.75 per thousand, and that five years ago jack pine had no particular value at all, and comparing these with the present year, when jack pine lumber sells for \$20 per thousand and hemlock at an average of about \$18, would it not appear to any young fellow that timber, even of the kinds despised at present, would be a good purchase if he could buy it cheap? The most satisfactory investments in timber from the standpoint of the young man are the kinds that are neglected now, or which are in an almost inaccessible region and not available to market. Such lands can be bought at a cost that would permit holding them till the raise in price or shortage of supplies would induce the owner or some millman to build railroads or improve the navigable waters, so as to bring their products to market. The cheap timber of today, if there is any such thing, is the kind to invest in. Available nearby timber is too high priced to buy now, except for immediate use or to hold as a reserve for some established plant. And, again, what kind of timber is there now that does not have a value and that will not increase as the years pass? I will grant that oak or hickory or basswood and elm will increase above the present range of value, but not to so great an extent as some kinds that are hardly in demand at all now, and which have more leeway to advance on. As a wood gets expensive people begin to look for a substitute for it, just as hickory and rock elm, for buggies and wagons and many other such uses, are being replaced wherever possible by hard maple and birch. A few years ago people would not have dreamed of using anything but oak or hickory; now they take up another wood and find that it answers the purposes for many uses just as well as oak. The neglected woods are the ones to buy and make the greatest profit on.—C. P. C.

The warning the HARDWOOD RECORD intended to convey to those seeking investment, in the editorial referred to, does not in any way antagonize the arguments brought forth by this correspondent. There is no doubt that even fairly well bought timberlands in either large or small quantities represent a mighty good investment. But be sure to get actual timber lands. Perhaps this correspondent is not familiar with the fact that there are a good many bunko men abroad in the land who attempt to separate people from their money by offering spurious timber properties. Cases have been known during the last year where purchasers found their titles worthless. In many cases the estimates are fictitious and the purchaser is badly mulcted. There was

one transaction a few years ago where an astute lumberman was shown a magnificent tract of cypress and supposedly purchased it. Shortly afterward he made the unhappy discovery that he had not been within twenty miles of the lands described in his deeds, and that his property was absolutely devoid of timber. Hence the warning held out to prospective purchasers: Be sure of the character of the people with whom you deal; be sure of the integrity and judgment of your cruiser; be sure of the abstract of title; be sure that the physics of the wood are good. With these precautions a timber purchase almost anywhere represents a good and solid investment.

—EDITOR.

More About Teredo.

CHILSEA, MASS., Sept. 13.—Editor HARDWOOD RECORD: The paragraph on page 27 of the issue of Sept. 10 in regard to cargo of mahogany and cedar is flattering to us, but did you ever figure how much of a cargo 12,763 logs would make? At an average of 400 feet to the log—which is about what they will run, cargo in and cargo out—you will have 5,105,000 feet. The new Lusitania, if everything was cleared out of her and she was turned into a freight boat, would carry considerable more than that, but I never heard of a freight steamer which would carry that quantity of logs. As a matter of fact, the cargo did consist of 2,799 logs, which surveyed 1,177,877 feet.

Mr. Hamilton's article in the same paper on the teredo was both interesting and instructive, but do you suppose he ever actually tried that plan of turning the logs partly over in the water from time to time? If not, and he will try it, we think he will have a merry time in making them stay in any position except the one way that nature compels them to float on account of the uneven distribution of their weight. Mr. Hamilton does not make his statement quite strong enough when he says that "mahogany and cedar logs are sometimes totally ruined in four months in brackish water." We have known them to be badly damaged in four days, although not, of course, totally destroyed in that length of time. We know of only one way to absolutely prevent damage by the teredo in tropical waters, and that is to keep the rafts entirely above brackish water until it is known absolutely when the vessel will be ready to receive them. GEORGE D. EMERY COMPANY, BY GEO. L. CADE.

The error in statement of measurement noted above is one of those technical blunders that will happen occasionally in any print shop; and the correspondent's suggestion to Mr. Hamilton about turning logs may not be out of place.—EDITOR.

More About New Maple Inspection.

GRAND RAPIDS, MICH., Sept. 16.—Editor HARDWOOD RECORD: In your issue of Sept. 10, on page 14, under the article entitled "New Inspection Rules of the National Hardwood Lumber Association," you describe a maple board 1x6 inches 10 and 11 feet, as No. 1 common according to the new rules adopted by the National Hardwood Lumber Association. I find nothing in the new rules which would prevent such a board from being a second, and I should be glad to be informed how you arrive at your conclusions. On page 10 of the new rules I find "In the grading of firsts and seconds the lengths are 8 to 16 feet," and on page 16, "A second must be 6 inches and over wide." Therefore a piece 8, 9 or 10 feet long and 6 inches and over wide, if clear, would

be a second according to my interpretation of the rules. If this is not correct please advise me.—MACBRIDE LUMBER COMPANY.

With reference to the above, the correspondent will note that under "General Instructions—Standard Lengths," page 10 of the new book, it says that 1s and 2s shall be 8' and longer, and on page 16 it says that 1s will be 10' and longer; therefore it is assumed that under the caption of 2s it should read 8' and longer. Admitting this to be a fact, a strip 8' long, if clear, would be a second, providing it is 6" and over wide, but the editorial referred to only treats of specified sizes where the old and the new rules differ. The rule on page 16 says that defects will be admitted according to surface measure of the piece, therefore a strip 6" wide and 10 or 11' long, not having 6' board measure, would not admit of one defect, thus putting it into a No. 1 common, while the old rules will admit this size with one defect into the grade of 2s.—EDITOR.

Addresses Wanted.

STOUGHTON, WIS., Sept. 10.—Editor HARDWOOD RECORD: We wish you could furnish us names of makers of birch hubs, particularly those located in the Adirondack mountain and Maine districts. Would much appreciate such a list.

— & Co.

Our records are deficient in names of above-mentioned manufacturers and all those who are engaged in this line, or any reader knowing such manufacturers, will confer a favor by sending their names, that we may compile as complete a list as possible.—EDITOR.

Wants Dimension Stock.

PUTNAM, CONN., Sept. 17.—Editor HARDWOOD RECORD: Kindly give us the names of handle manufacturing or other firms who get out hickory and dogwood stock around Nashville and Memphis.

— & Son.

A few names have been supplied above correspondent, though not in the district specified. Anyone interested may have his address on application.—EDITOR.

Who Makes Bicycle Rims?

MILWAUKEE, WIS., Sept. 10. Editor HARDWOOD RECORD: We manufacture a punching bag platform which requires a rim similar to a half bicycle rim. Inasmuch as you probably have in your possession the names of bicycle rim manufacturers we would thank you to kindly advise us what concerns would be in position to furnish them. The rim is about 25 inches in diameter and 1 to 1½ inches thick.

C. K.

We have supplied this correspondent with a few names, and anyone else desiring to communicate with him should address this office.—EDITOR.

New Secretary Michigan Hardwood Manufacturers' Association.

J. C. Knox of Grand Rapids has been appointed secretary of the Michigan Hardwood Manufacturers' Association by the Executive Board, succeeding Bruce Odell, who was obliged to retire on account of the quantity of work he has to perform for the Cummer-Diggins Company. Mr. Knox has been chief clerk in the freight department of the G. R. & I. railway for many years, has a large acquaintance among members of the association, and is thoroughly posted on traffic matters. This will make him a particularly desirable acquisition for the association in the place which he will occupy. The secretary's office will be continued at Cadillac.

Belize and the Mahogany Industry of British Honduras

Belize, the queen of the Caribbean sea, sits amid the palm trees that fringe the Honduras coast, bathing in the healthful spray from the ocean and the sea breeze, basking in the sunshine of a climate most salubrious and looking out o'er the myriads of coral isles that stand like sentinels to protect her from the anger of the surging billows. She gazes longingly to the eastward and to the northward, beckoning the world to her peaceful dominion. Nature has filled her realm to overflowing with a goodly wealth of all material things that await only the magic touch of the hand of modern man to develop a land of fabulous beauty and riches. Nestled at the foot of the mighty chain of cordilleras which lift their lofty peaks to the ethereal blue of the distance to the westward, she waits in patient security.

Belize, British Honduras, is probably the greatest mahogany port in the world. The mahogany logs coming from British Honduras and the surrounding country are the best quality of timber known and, strictly speaking, the only true mahogany is that

are mostly engaged in buying, selling or getting mahogany down from the forests.

To better handle this great branch of business sworn or licensed measurers or inspectors, appointed by the British colonial government, are located at this place. It is their duty to number, brand and measure, in a fair and impartial manner to both buyer and seller, all logs handled at the port. Their decisions and estimates are supposed to be final and dictations are little heeded, although either of the other parties concerned may have a representative to accompany him if he wishes, and they may settle by arbitration any slight difference that arises between them. One of the measurers with whom I became well acquainted while working in the mahogany timber business in Central America was Paulstro Thiens, a creole and native of that country—a very interesting and intelligent person.

A measurer's salary depends on the amount of timber he measures, as he receives so much per thousand feet, according to Doyle Scribner rule, paying his own expenses and the hire of one or

work of measuring and marking up the raft.

The tools required are the scribe, the adz, the log rule and the branding hammer, and these, accompanied by the pencil and Scribner's log book, constitute the entire equipment for measuring timber. A sail boat is generally used to carry the party and provisions on long trips up and down the coast to measure up lots of timber that are gotten out and ready for inspection. The raft is first gone over by the adz man and each log is dubbed with an adz, which means cutting or adzing off a smooth, flat surface on the upper or most convenient place on the log, size about 12 by 18 inches, this being the most laborious part of the work. He is followed by the scribe man, who scribes the number of each log and the initial and mark of the owner on this smooth spot. The scribe he uses is a tool invented expressly for this purpose. It somewhat resembles and is used in much the same way as a compass. It consists of a handle and two points, one of which is a sharp prong and the other a flat blade, bent in such a way as to stand out at a peculiar angle, about an inch from the point. At the lower end of this blade is a very sharp corner, or angle, which acts as a gouge, and by placing the point against the log and giving it a quick twist or turn

COURT HOUSE AT BELIZE, BRITISH HONDURAS.

HOW MAHOGANY LOGS ARE BRANDED.

coming from this region. There are vast quantities of this wood brought from the west coast of Africa and other countries, but it is not mahogany, such as comes from Central America, southern Mexico (including Yucatan) and the West Indies. In fact the wood from all semi-tropical countries is better than that from countries more directly under the Equator. All the region of country tributary to the Belize river, and many smaller streams, are channels of commerce through which vast quantities of timber flow down to the city of Belize.

For many miles up and down the coast the logs are brought from the mountains in the interior to the bar or the lagoon, where they are picked up by the small steam tugs or tow boats calculated for shallow water and towed to Belize. As this is the only city touched by the large ocean steamers in a stretch of hundreds of miles of tortuous and deeply indented coast line, naturally much trade centers at this point. There are many energetic, hustling and competitive timber dealers located at Belize. They

sometimes two helpers, viz., an adz man and a scribe man; still I have known his net profits for a day's work to be as much as \$25 or \$30. There is a lot of hard work and some rather unpleasant features connected with measuring mahogany, which is most all done on the raft, where it lies in the water. If the logs are large enough or firmly bound together so as to hold up a man's weight, the task is not so difficult, but if they are small, and many of them entirely loose, kept in place only by those on the outer edge being fast, the labor is more tiring and disagreeable. In such cases the measurers are compelled to go on a hop and jump from log to log, and much of the time are in the water to the knees, on account of the logs settling down under their weight. The man who does not average two or three duckings a day is a sure-footed and lucky fellow. The best way is to use two boards or poles long enough to reach across several logs, and thus take advantage of their combined buoyancy. A person can stand on the one while shifting the other and thus more easily perform the

an exact circle or half or quarter circle about two inches in diameter is cut in the wood. By turning it slightly sideways a straight groove or mark can be cut, by a sort of a free hand stroke, and by combining these straight marks and circles and parts of circles the operator who is in practice with this instrument can neatly make any figure, letter or mark required, as shown in the cut of the log number 635, and experts in the use of this scribe are envious of each other's skill in handling this instrument. While the dubbing and branding is going on the inspector, or measurer, is placing his rule across the top end of each log and declaring its diameter and length, which he calls out, and at the same time puts down in his book. It is also written on a tally sheet by another interested party. When all this is done the buyer's initial is placed on the ends of the logs with the branding hammer and the work is complete, except taking the amounts from the scale card, adding up the long columns of figures and making out a report showing the total results.

J. V. HAMILTON.

White Oak in the Southern Appalachians

First Paper.

The above is the title of an interesting and valuable brochure which has just been issued by the Forest Service. It covers so many phases of the question—characteristics of the white oak, pruning, reproduction, lumbering—that it forms a valuable piece of lumber literature and is reproduced herewith in abridged form in two sections, the first covering the distribution, present stand, uses and sylvical characteristics of white oak and the second its susceptibility to injury, reproduction and forest management. Great credit is due W. B. Greeley, Forest Supervisor, and W. W. Ashe, Forest Assistant, as the authors of this excellent treatise.

DISTRIBUTION AND PRESENT STAND.

White oak is one of the most widely distributed hardwoods in the United States. It is, moreover, the most widely used, and its annual cut of over 2,000,000,000 board feet is more than double that of either red oak or yellow poplar, its nearest competitors. Of the total annual cut of hardwoods in the southern Appalachian region, excluding Kentucky, white oak forms forty-nine per cent. No other hardwood is manufactured into as many important commodities.

The approximate remaining stand of white oak timber in thousand feet in the states comprising the region is given in the following table. These estimates include only timber merchantable for lumber or tight cooperage, and exclude cross tie material:

Maryland	130,000
Virginia	1,467,500
West Virginia	4,925,350
Kentucky	2,652,125
Tennessee	2,098,165
North Carolina	1,208,200
South Carolina	93,325
Georgia	387,700
Alabama	140,000
Total	13,102,365

Variations in character and quality are marked. In the broad belt of rough and inaccessible mountain and plateau land extending through West Virginia and eastern Kentucky there are still large bodies of virgin white oak, the largest and best stands in the United States. In the higher, more rugged ranges of eastern Tennessee, southwestern Virginia, and the western portion of the Carolinas there are still considerable stands of virgin white oak, though far more scattered and irregular than in Kentucky and West Virginia. East and west of the mountain belt, however, railroad development has been rapid; lumbering has been far more extensive. In the valley districts white oak has been logged more heavily than any other hardwood except walnut and yellow poplar. In many instances accessible timberland has been cut over a second and even a third time for the smaller and rougher trees which were left in the earlier lumbering.

In many other sections, notably the blue grass regions of Kentucky and Tennessee and the great valley of northwestern Virginia,

white oak saw timber is almost exhausted, and the remaining stand is utilized chiefly for cross ties and similar products.

Two-thirds of the standing white oak of the southern Appalachian region has been more or less heavily culled. The best occurs in the well-watered valleys of central Kentucky and eastern Tennessee.

THE WOOD AND ITS USES.

In the region as a whole, exclusive of Kentucky, about forty-three per cent of the annual cut of white oak goes into sawed lumber, including car stock, bridge timbers, etc.; about forty-five per cent into cross ties, and about ten per cent into cooperage stock. About two per cent is used for miscellaneous products, such as tool handles, wagon spokes and furniture and basket veneer.

Of the total annual production of white oak cross ties, about thirty per cent is cut in the valleys of the Tennessee and Cumberland rivers in Tennessee and northern Alabama, and forms the annual cut there. The cooperage industries are also localized in the valley districts of central and eastern Tennessee and northern Alabama, which produce about twenty per cent of the total annual cut of white oak barrel staves and heading. In the more mountainous region extending through southwestern Virginia, eastern Tennessee, western North and South Carolina, and northern Georgia, the cut of white oak is almost exclusively for sawed lumber.

The most important feature of recent years in the manufacture of white oak lumber has been the marked increase in quarter-sawing, a method of milling by which the boards are cut nearly parallel to the pith rays, so that the silver grain is shown. A large proportion of the total cut is now quartered. Many producers quarter-saw only clear logs twenty-four or twenty-six inches and over in diameter at the small end. In this way only the best white oak timber, not more than fifteen or twenty per cent of the total amount manufactured, is quarter-sawed, and a high grade of both quartered and plain-sawed stock is maintained. Many firms believe that the smaller and rougher logs cannot be used as profitably for quartered as for plain-sawed lumber. Other mills quarter everything that is fairly clear, down to sixteen or eighteen inches at the small end, and claim that the much higher prices for quarter-sawed oak make this method more profitable, despite the waste in manufacture. Under the stimulus of the high prices of 1903 many mills quartered seventy-five per cent of their total cut of white oak. As a result of this large output of quarter-sawed lumber from small logs the market was overstocked with narrow, low-grade quartered oak, which caused in part the decline in prices of 1904. In that year the demand for even the best grades of quartered oak fell off sharply, while that for plain-sawed oak remained unchanged. Since 1904 an increasing proportion of white oak has again been plain sawed, and many of the larger hardwood dealers think that the

trend of lumber prices in the last three years indicates the wisdom of restricting the cut of quartered white oak to the better grades of timber.

Quarter-sawed lumber from the Appalachian region is shipped mainly to furniture and cabinet factories. Plain-sawed oak is shipped to planing and finishing mills for manufacture into flooring, ceiling and other interior woodwork. A great deal is used also in the manufacture of cheaper grades of furniture and for carriages, wagons, farm tools, agricultural machinery, tongues, reaches, bolsters, wheel felloes and framing. It is a fine all-around wood for this purpose. The poorer grades are used locally for flooring and ceiling, or for fencing, storm sheeting, outside finish and heavy packing cases for pianos and the like.

Large quantities of high-grade white oak dimension stuff and boards, both plain and quarter-sawed, are used each year in the manufacture of railroad coaches. There is in addition a special grade known as "car stock," cut from inferior timber and consisting of boards, planking, beams and dimension stuff of all sizes, which is used extensively in the manufacture of freight and box cars. Car stock is usually cut from small, scrubby timber, or from larger trees which are limby, knotty or defective from pin worms. Sound knots, stains, "cat faces," and wormholes, all of which lower seriously the grade of ordinary lumber, do not count as defects in car timbers. Bridge timbers and switch ties are cut from the same kind of material. A great deal of white oak was formerly used for trestle piles, but it is now being largely replaced by creosoted longleaf pine.

The logging of white oak cross ties is confined chiefly to the valleys of the large southern rivers, which furnish cheap transportation to northern railroad centers. White oak, with its great strength, toughness and durability, is the most valuable tie timber of the South and today furnishes seventy-four per cent of the total cut of ties in the Tennessee and Cumberland river valleys. Small, rough timber under sixteen inches in diameter at the stump is usually taken for this purpose. Sound knots, wormholes, streaks and small patches of rot do not rank as defects in the ordinary white oak cross ties.

Tight barrel staves form the third of the principal uses of white oak timber in the region. The stave industry competes directly with the lumber trade for the best grades of white oak, taking only clear, straight-grained trees, eighteen inches and over in diameter at the stump. With its great strength and close, dense grain, white oak makes the strongest and most valuable staves. It is the only timber generally used for whiskey, port and brandy barrels. White oak staves are used also for kerosene and cotton-seed oil and turpentine cooperage. In addition to the immense annual cut of staves, about a third as much more white oak is used for heading. It is considered the only wood suited to this purpose and clear, sound timber of the best grades is required.

Of the other uses of white oak, the most important are for veneer, wagon spokes, tool handles and chair and table stock. For furniture veneer only the best clear white oak

is taken, the specifications usually requiring logs twenty-eight inches or over in diameter at the small end. These logs are cut into quartered oak veneer, one-fourth to one-twentieth of an inch thick, for use upon cores of inferior wood. Smaller and rougher timber is used for basket veneer. The strongest and highest priced market and bushel baskets are made of white oak.

Small quantities of very strong, straight-grained white oak are used for wagon spokes and plow handles, and in the manufacture of these short-bodied, open-grown and second-growth trees are preferred. The material used for chair stock is chiefly small-dimension stuff, an inch or two square. A number of the larger mills have put in special machinery and are now utilizing much of their oak mill cull and waste for this purpose. Larger strips are cut into chair backs, and a few mills are cutting fine quartered oak table tops in short lengths.

With the diminishing supply of white oak timber, other and cheaper woods have, in many cases, been substituted for it. For wagon stock, tool handles, and farm implements, red oak and chestnut oak are the principal substitutes and are coming into widespread use. Red and black oak and red gum have almost entirely replaced white oak for slack barrel staves, and chestnut oak and red gum for oil barrels; for furniture and interior finish chestnut and red oak are in many instances being extensively substituted.

Probably the most important and extensive substitution, however, has been that of yellow pine in flooring, ceiling and interior finish, especially in the lower and poorer grades.

In Decatur, Ala., in the summer of 1904 the best grades of plain-sawed white oak flooring and ceiling were quoted at from \$48 to \$50 per thousand feet, while yellow pine finish of the same grades sold from \$16 to \$18 a thousand feet. A number of large southern planing mills now manufacture oak finish only on special orders, and many have given it up altogether. Under the exceptionally high prices of 1903 this substitution of cheaper woods for white oak finish became more general than in any previous year. It caused in part the marked depression in the hardwood market of 1904. The best grades of longleaf pine flooring were quoted on the New York market in June, 1905, at from \$21 to \$44 per thousand feet, as compared with from \$39 to \$88 for the corresponding grades of plain and quarter-sawed white oak. Thus the increasing tendency is to limit the use of white oak finish to the special or fancy trade.

SILVICAL CHARACTERISTICS.

Quality of soil and amount and uniformity of moisture are the chief factors which determine the local distribution of white oak. Though a very widely distributed species, it prefers broad, deep-soiled flats, coves and gentle lower slopes and is here found in greatest abundance. White oak seldom forms a pure forest. In typical mixtures a proportion of ten or fifteen per cent is usually sufficiently high for the forest to be called a "white oak" forest, unless there is a higher proportion of some more valuable species like yellow poplar or white pine. For its best

development white oak requires a fresh, porous, loamy or sandy-loam soil. The finest of the southern Appalachian region grows in the deep-soiled, broader valleys of West Virginia, Kentucky and Tennessee. Constant moisture, such as is found in the coves, favors its abundant occurrence and thrifty development, although well-formed trees are often found on comparatively dry soil. Thorough drainage, on the other hand, is essential in all situations.

White oak has a vigorous root system and often establishes itself among the boulders and broken fragments of very rocky soils if there is but a thin cover of earth and humus to hold moisture and supply the roots with nourishment. On such localities, however, the trees are invariably short-lived, stunted and scrubby in form. Sandy soils, on the other hand, are not favorable; the trees are scattered and of poor development.

During the sapling and pole stages white oak on good soils forms a large, thrifty stem, with considerable taper. The side branches are very persistent during the early life of the tree, even under a fairly dense forest cover. Mature stems frequently bear numerous knobs and small irregularities, due to defective pruning, while small sap branches are very common on the trunks of large trees.

The average size of mature trees varies widely on different forest types in the same locality. Below are given average dimensions of virgin white oaks, twenty inches and over in diameter, breasthigh, on the three main types in the Cumberland mountains of northeastern Tennessee and in the Tennessee valley region:

TREES OF CUMBERLAND MOUNTAINS.

Type.	Total height. Feet.	Clear length. Feet.	Diameter, breast, high. Inches.
Cove land	95	44	25
Slope land	80	35	24
Ridge land	68	27	21

TREES OF TENNESSEE VALLEY.

Cove land	98	45	28
Slope land	70	30	23
Ridge land	45	18	22

Differences in depth of soil, moisture and exposure have a marked effect upon the development of white oak, especially upon its total height and clear length, which fall off very rapidly on the poorer sites.

White oak is comparatively tolerant in early life. Young reproduction will establish itself under the shade of a high hardwood canopy of considerable density if the ground is clear; they are rarely found under low clumps of saplings, rhododendron or other shrubby undergrowth. In the sapling and early pole stages, white oak requires at least one-half or two-thirds of the full overhead light for vigorous development. Its growth under adverse conditions, however, while slow, is very persistent, and its power of recovery after the shade is removed is great. Many trees which have come up under the crowns of old timber and have attained in fifty years a diameter of but two inches will, when the mature stand is logged and they receive the light, almost immediately begin to grow rapidly and vigorously.

Young trees which have persisted as seedlings and saplings under the shade of an old stand usually succumb to the adverse conditions soon after the pole stage is reached. In middle and late life white oak is distinctly

intolerant, enduring but little direct overhead shade. White oak is more tolerant than red and chestnut oak, and, as a rule outnumbers the two other species in the younger age classes as well as in the mature virgin forest. On poorer soils, however, and away from broad river valleys, the black oaks tend to replace white oak in both the mature stand and in the young growth coming up beneath. The great advantage white oak has over black oak is its persistence of growth, ability to recover from suppression when shade is removed, longevity and inherent resistance of decay, insects and fungus, to which black and red oaks are far more susceptible.

White oak is a poor self-pruner. Because of its comparative tolerance in early life, natural pruning is delayed, and occurs mainly in the later pole stage and in middle life. The lower limbs of the crowns are very persistent, and when dead often remain on the mature bole as sound, hard stubs, which are shed with difficulty. Except when heavily shaded, white oak, in late life, nearly always forms numerous small sap branches, which, however, do not affect the quality of the timber.

Second Paper.

Susceptibility to Injury.

In resistance to fire, insect attack, disease and other injury, white oak is one of the hardest of southern Appalachian trees. Its timber runs sounder and freer from damage than that of almost any other important commercial species of the region.

As with all other trees of the southern Appalachian forests, the greatest source of injury to white oak is found in the frequent, often periodical, fires which are so common in southern woodlands. The effects of these fires upon old white oak timber are seen in stagheadedness, in many scarred and hollowed butts, and the deadening and removal of the bark and layer after layer of wood. In a few cases this last process is continued until the weakened trees are broken at the butt by the wind, or are twisted off at the root swellings. The actual death of mature white oak from fire, however, is rare. It is killed by spring and summer fires only, or by fires that feed upon the slash left in logging, or upon the trunks and limbs of other more easily killed trees, like chestnut. Far more destructive to mature timber than the actual injury from fire are the attacks of insects and fungi which invariably follow a burn. The weakening of the tree through fire predisposes it to disease and lowers its power of resistance. Furthermore, the wounds at the base of the tree readily catch the spores of fungi, and the decay of the exposed wood quickly ensues. White oak is slow to heal over wounds of this character, and even after the scar is closed on the surface the decay goes on within. The result is dote and hollow-ness, which often extend up the trunk for ten or fifteen feet, or unsound heartwood from red rot, and black, flaky streaks. To all of these injuries, due directly or indirectly to fire, white oak, while often seriously

damaged, is more immune than most of the other important Appalachian hardwoods. It is much more resistant than chestnut oak or red oak. While in many badly burned sections a large proportion of the old timber is fire damaged, on the average not more than ten or twenty per cent of the trees have to be butted in logging on account of dote or hollowness.

A great deal of white oak seed is destroyed every year by light surface fires. In addition, its seedlings and coppice are burned down to the ground and its reproduction confined largely to sprouts from the still living stumps of former growth. On repeatedly burned areas these sprouts become sparse and stunted in development. The burned stumps and roots often become decayed; the fresh crops of coppice are therefore diseased and short lived, and in time the sprouting power of the stumps is exhausted.

The most common and destructive insect which attacks wounded white oak is the pin worm, the larva of a small, reddish beetle. As a rule, from fifteen to twenty per cent of the white oak in the southern Appalachians is defective because of this insect, reducing seriously the grade and commercial value of the lumber.

The patch worm also often lowers the grade of white oak lumber and staves by black streaks, "steamboats," or grease spots formed about the minute holes left in the wood by the insect.

The most serious fungus enemies are members of the *Polyporus* group, which attack the heartwood of living trees when entrance can be gained through a fire scar or some other fairly deep wound. The dote originating in this way often extends for several feet up the center of the tree, and necessitates heavy culling of the butt log in lumbering. An examination of 1,668 white oak stumps in Greenbrier county, West Virginia, shows that trees of any size may become rotten at the butt.

In addition to the fungi which destroy the heartwood, there are numerous species which infest the sapwood of dead, weakened, or badly injured trees. White oak is more resistant to fungus attacks than chestnut, black oak, red oak and chestnut oak. Decay in its wood progresses slowly, since fungi which enter the tree at the stubs of dead branches usually affect only a small area of heartwood immediately around the point of entrance. The upper parts of the boles are generally sound. Cull on account of unsound, wormy timber is, as a rule, much smaller in white oak than in any of the other oaks.

White oak suffers very little from wind-throw: Old trees, especially on poor soils and exposed situations, or when weakened by fire, are apt to become wind-shaken at the butt, but white oak is probably the freest of the oaks of the southern Appalachians from this defect. The proportion of shaky timber in the total annual cut is very small.

REPRODUCTION BY SEED.

The age at which white oak begins to bear seed, the frequency of seed years, and the amount of seed borne in each seed year are all affected by site conditions, especially the amount of light, of soil moisture, and the depth and fertility of the soil. White oak grown in the open on deep, well-watered soil begins to bear seed when eighteen or twenty years old and often bears heavily nearly every year. In open woods seed bearing may begin at forty years, but under normal forest conditions acorns are not produced, as a rule, before the seventieth or eightieth year.

White oak is comparatively deficient in seed production. Good crops are borne once every four to seven years, and full, heavy crops once every eight to ten years. Deficiency of seed is often an important factor in limiting the reproduction of white oak. In this respect it is very inferior to yellow poplar, and somewhat inferior to black and red oak and chestnut. A large proportion of the seed, moreover, is destroyed by worms, rodents, birds, hogs and forest fires. All told, probably not more than ten or fifteen per cent of the total mast produced by white oak escapes destruction from one cause or another. Squirrels and crows are active agents in dissemination. They secrete the nuts in the ground; many are subsequently forgotten and thus left in ideal places for germination and thrifty seedling growth.

The percentage of fertility in white oak seed is relatively high, running from seventy-five to ninety per cent. The acorns germinate in the fall, usually before the ground is frozen. If conditions do not at that time favor germination, the seed perishes. It is practically impossible to hold white oak acorns over winter for spring planting.

White oak acorns germinate readily on loose soil if there is a sufficient cover of leaf litter, or if there is shade enough to preclude drying out. Since a certain amount of oxygen is required for germination, it will not take place when the seeds are buried too deep or when the germinating bed is poorly drained.

From a number of causes, therefore, black and red oak possess marked advantages over white oak, and tend, as a rule, to crowd it out of the young growth. White oak reproduction of any character is relatively scarce, forming usually less than fifteen per cent of the young growth in virgin woods, even on lands where this species may form thirty or forty per cent of the mature stand. In second growth, after lumbering, the scarcity of white oak is still more marked.

There are, of course, numerous local exceptions to these rules.

SPOUT REPRODUCTION.

White oak sprouts readily from the stumps of seedlings and saplings which have been killed by fire, cropped or trampled by stock, or broken off in lumbering operations. Sprouts of this character are especially abundant on lands subject to frequent fires and form, as a

rule, seventy-five per cent of all the white oak reproduction in the region. This power of sprouting afresh after each injury seems to be continued almost indefinitely. The stumps of old virgin timber almost never sprout. The thriftiest trees, especially those growing in deep, rich soil, sprout most abundantly and retain the power longest. In most localities an age of 120 years marks the limit of vigorous sprouting capacity. Black oak and red oak are somewhat more likely to sprout than white oak, both from the stumps of felled trees and from the stubs of fire-killed seedlings, though less so than chestnut.

In white oak the duration of vigorous growth is greater than in any of its associates except yellow poplar and possibly chestnut. It retains its vigor and resistant qualities to an advanced age. For these reasons white oak in the long run overcomes and replaces in the mature virgin stands the black and red oaks, which have such a marked advantage over it in early life. As a rule, in virgin woods the proportion of white oak increases steadily in the older age classes. It often forms the bulk of the mature timber in stands where but ten per cent of the young growth is white oak.

The rate of growth of white oak sprouts, while vigorous, is considerably less rapid than that of chestnut and of black oak and red oak. Instances are frequently found in the oak belt of central and western Tennessee and Kentucky where white oak sprouts have been cut stripped in growth and badly suppressed by black and red oak sprouts of the same age.

FOREST MANAGEMENT.

Because of its marked deficiency in natural reproduction as compared with other species, the outlook for future supplies of white oak timber under existing conditions is poor. White oak has been more heavily logged than any other of the Appalachian hardwoods except yellow poplar and walnut, and this has further tended to its replacement by black and red oak, and the perpetuation of white oak in commercial quantities will necessitate the adoption of more conservative and far-sighted management of hardwood timber land.

The price of white oak stumpage is high. Low-grade stumpage, or cull and small trees less than sixteen inches in diameter breast-high, sells at from \$1 to \$2 a thousand feet at an average distance of five miles from shipping points; while better grades, twenty inches or more in diameter breast-high, yielding a large proportion of uppers, have, in like situations, a stumpage value of from \$10 to \$15 a thousand feet, board measure.

The first and most essential step in management is protection from fire. This is especially true in the case of young timber and cutover forests, where the danger from fire is very great. The following protective measures, if carried out, should greatly lessen the fire danger:

The construction, wherever possible, of a permanent system of roads; the prohibition of restriction of grazing and swine herding

within the forest; the posting of fire notices, containing the local fire law and offering rewards for evidence leading to the conviction of violators; the cooperation of owners with tenants. Tenants should be made fire wardens, given a nominal and fixed pay, with limited pasturage rights, for preventing fires, their services being required without additional compensation for fighting fires whenever they occur; the employment of a guard on large tracts, especially while logging is in progress, and for several years afterwards. One man should patrol 15,000 acres; the requirement, when logging is done by contract, that the contractor burn slash when it would become dangerous, organize logging crews into a fire-fighting service which can be used whenever a fire occurs, and, when a railroad is used, maintain a burned strip on both sides of the track.

It is not advisable to cut mature white oak until there is a profitable market for tops and cull trees. Holding stumpage until the timber can be used with little waste insures the owner a return from the low-grade trees and upper cuts, and at the same time a higher price for the best cuts. It likewise enables the buyer to reduce the cost of logging by the larger stumpage cut. Contracts for the sale of stumpage should require the utilization of all sound timber over twelve inches in diameter in felled trees. The recent rapid advances in the price of car stock, ties and bridge timber should justify holding white oak stumpage until utilization of such timber is possible. Nor is it advisable to cut white oak when it forms only a small proportion of the mixture unless some of the species of less value with which it is associated—as beech, black oak, maple, and hemlock—can be simultaneously cut.

Because of the relatively small amount of virgin white oak, the use of high-grade timber should be restricted. Frequently very little discretion is displayed in making selection for specific uses, and high-grade logs, suitable for plain uppers or quartered stock are converted into bill stock, bridge boards, or even ties or car stock. There is a large amount of low-grade timber and second growth available for these uses, while the amount suitable for high-grade lumber is appreciably lessening each year.

The stumpage value of large trees suitable for high-grade lumber is so much greater than that of small trees that in situations favorable for the best growth of white oak it would be profitable to cut to a high diameter limit—twenty or twenty-two inches breasthigh—and leave the trees below that limit to grow. In situations where the large timber is defective and is adapted only to common uses, its stumpage does not acquire with increased size a sufficiently high value to justify the production of large diameters. In localities where the transportation facilities are poor, where the total stand is not heavy, and lumbering is expensive, the diameter limit might be lowered to sixteen or eighteen inches.

When beech, sugar maple, red maple, black

eye, hemlock, black oak, hickory, and black gum occur with white oak on the best sites, they should be cut to the smallest possible diameter. Yellow poplar, basswood, ash, chestnut, and walnut, like white oak, should be cut to a high limit, and their young growth should be protected. The fact that white oak often grows naturally in large, pure groups, indicates that, in many situations, its proportion of the mixture could be largely increased. Because of its heavy seed it tends to reproduce in groups and clumps near the seed trees. Two trees to the acre above fourteen inches in diameter should always be left for seed trees. Where there is a deficiency in the number of seed trees below the diameter cutting limit, trees should be left above that limit.

The intervals between cuttings should not be less than fifteen years, and preferably should be longer. While cutting at regular intervals is advantageous in keeping the cover somewhat open and stimulating growth, cutting at too close intervals does not give clumps of seedlings sufficient time to become large enough to prevent their being badly broken down in logging. Such clumps should always be protected as far as possible in felling, swamping, and snaking, and neither thrifty young white oak nor young trees of the other desirable species should be used in any of the construction work required in logging when timber of less desirable species is available.

Second-growth white oak is partly of seedling and partly of sprout origin. In favorable situations seedlings and many of the seedling sprouts are capable of producing large timber, but sprouts in general, especially those from large-sized stumps, will not grow to large sizes. Inferior sprouts can usually be told by their short stems and extreme taper, and a common characteristic is a swollen butt with a small exposed hollow.

Since second-growth seedling trees are capable of producing large-sized timber the minimum diameter limit for them should be not less than sixteen inches breasthigh for the first cutting, and this should eventually be raised to the limit suggested for virgin growth. Sprout timber may be cut to a diameter of fourteen inches breasthigh. After two or three cuttings, sprout growth will be largely eliminated from the forest, and the high diameter limit and heavier cover will eventually prevent much sprout reproduction on these sites. Otherwise, second-growth timber admits of the same management suggested for unthinned forests.

Change in Handle Company.

D. C. Bennett, formerly secretary and treasurer of the Dexter Handle Company of Dexter, Mo., has disposed of the plant there, also of the plant at Boone, Mo. The former was moved to Batesville, Ark., and is now in operation. The latter is known as the Boone Handle Company, located at Powe, Mo. It is operating as formerly, but only turns handles in the rough, the stock being shipped to the Clark Danforth Handle Company of Cairo, Ill.

Mr. Bennett has purchased an interest in the Eagle Handle Company of Campbell, Mo., and is manufacturing fork, rake, hoe, mop and other handles, tent stakes, slides, etc., out of ash timber.

Delos F. Diggins—An Appreciation.

The world is poorer that a good man has gone from it.

Delos F. Diggins of Cadillac, Mich., succumbed to Bright's disease at the Presbyterian hospital in Chicago on September 7.

His passing has not only sorely bereft a devoted wife, a venerable mother, loving brothers, sister and other relatives but it has caused sincere grief among a large circle of friends and deep regret to those to whom the name Delos F. Diggins stood for unselfish kindness, unfailing consideration and honorable dealing.

Mr. Diggins had "a charity as wide as want" and no deserving individual or benevolent association asked of him in vain for help. Yet with peculiar modesty he never spoke of his benefactions, and it has only transpired since his death that he recently gave \$30,000 to Harvard, Ill., the city of his birth, for the erection of a library.

The beneficent donor of beautiful Mercy Hospital never saw the fine building, as since its gift to the city of Cadillac Mr. Diggins had been fighting the Grim Destroyer, who at last won the victory.

Delos Franklin Diggins was born at Harvard, Ill., May 16, 1852. His father, Franklin Diggins, died in 1891. His mother, whose maiden name was Ellen C. Blodgett, is yet living, making her home in Cadillac. He was married to

DELOS F. DIGGINS

Miss Esther C. Gerrish at Hersey in 1877. In addition to his wife and mother, Mr. Diggins is survived by Mrs. Edna Hollenbeck of California and George H. Diggins of Iowa, a daughter and son of his father by a former marriage, and by Albert B. Diggins of Harvard, Ill., and Fred A. Diggins of Cadillac, his brothers.

He came to Cadillac in 1883 to enter the banking business as cashier for the D. A. Blodgett & Co. bank. In 1890 he became an active member of the lumber firm of Blodgett, Cummer & Diggins.

In recent years Mr. Diggins has been identified with W. W. Mitchell in the Mitchell-Diggins Iron Company and in the Cadillac Chemical Company, and was president of the Cummer Diggins Company, extensive lumber, flooring and wood chemical producers of Cadillac.

While the material wealth left by Mr. Diggins is not small, the value of the memory of his good deeds, absolute unselfishness and big-hearted endeavor in all ways that make for the best citizenship cannot be computed.

He was a Christian gentleman in every sense of the word, and his loss will be long felt in the community in which he lived. Everyone will grieve with those who loved him best, for, "take him all in all, we shall not look upon his like again."

Hoo-Hoo Annual Convention at Atlantic City

The sixteenth annual convention of the Concatenated Order of Hoo-Hoo opened at 9:09 a. m., Monday, Sept. 9, at Atlantic City, N. J., with Snark A. G. Ramsey presiding.

After a prayer by the Rev. Herbert N. Gesser of the First Presbyterian Church Mayor Franklin P. Stoy of Atlantic City addressed the convention, welcoming the visitors and presenting the snark with a huge key, purporting to be that of the city, which he said was to be theirs to use freely for the coming ninety-nine years. The mayor's address was responded to by W. E. Barns of St. Louis in a very happy vein.

John L. Alcock of Baltimore, supreme arcanoper, then delivered an address of welcome from eastern members of the order and John J. Rumbarger of Philadelphia was called upon to say a few words, which were enthusiastically received. Jerome H. Sheip then presented Mr. Rumbarger with a handsome tray and decanter, on behalf of the Finance Committee, as a token of its appreciation of his work as vice-gent snark and his efforts in the interest of the convention.

After a few minutes talk on behalf of the western contingent by Wallace W. Everett of San Francisco the snark delivered his annual address. He reported that the membership of the order had increased steadily during the past year, covering new territory, particularly western Canada, and that financial affairs are in excellent condition. He took up the question of the increased dues, scrivener's salary, meeting places, etc., and enlarged particularly upon the question of eligibility of candidates for admission to the order, recommending that they be carefully considered and by no means taken in unless proven directly and indisputably eligible.

Scrivener James H. Baird of Nashville then presented his report, which showed a balance on hand of \$8,172.76. This is the largest cash balance ever reported at an annual meeting and shows a gratifying financial status. The records showed that the past year has broken all previous records in number of members initiated, though fewer concatenations were held; 2,490 new members were added, with a total of 109 concatenations.

A pleasant surprise was the presentation to

Jerome H. Sheip of a handsome loving cup on behalf of the Committee on Arrangements, the speech being made by John J. Rumbarger. After some informal discussion the session adjourned.

Tuesday's session was largely occupied by reports of various committees and discussion of

Supreme custodian—John H. Kennedy of Hattiesburg, Miss.

Supreme arcanoper—Lucius E. Fuller of Chicago, Ill.

Supreme garden—O. H. Rectanus of Pittsburg, Pa.

GROUP OF THOSE IN ATTENDANCE ON SIXTEENTH ANNUAL OF HOO-HOO.

various subjects, including the extension of the order abroad. It was decided to resume publication of the Hoo-Hoo Handbook, which has been incorporated with the Bulletin for two years, and to authorize the House of Ancients to compile a history of the order.

Wednesday's session took place in the Hotel Islesworth instead of on the Steel Pier, where the others were held. Reports of several committees were read and adopted and it was decided to hold the next annual in Chicago. Adjournment was taken after election of officers for the ensuing year, which resulted as follows:

Snark of the universe—John S. Bonner of Houston, Tex.

Supreme senior Hoo-Hoo—John L. Alcock of Baltimore, Md.

Supreme junior Hoo-Hoo—Wallace W. Everett of San Francisco, Cal.

Supreme bojum—William A. Hadley of Chatham, Ont.

Supreme scrivener—James H. Baird of Nashville, Tenn.

Supreme jabberwock—Jay S. Hamilton, Portland, Ore.

At the annual sessions of the Osirian Cloister, which were held at the Hotel Islesworth Sept. 8, the following officers were elected:

High priest of Ptah—L. E. Fuller, Chicago.

High priest of Anubis—J. W. Long, New York.

High priest of Thoth—J. H. Baird, Nashville, Tenn.

High priest of Hathor—John Oxenford, Indianapolis, Ind.

High priest of Osiris—A. D. McLeod, Cincinnati, Ohio.

High priest of Ra—Lewis Doster, Nashville, Tenn.

High priest of Isis—W. M. Baugh, Houston, Texas.

High priest of Shu—O. H. Rectanus, Pittsburg, Pa.

High priest of Sed—Maurice W. Wiley, Baltimore, Md.

An enjoyable banquet was given by the Cloister the evening of Sept. 10.

The annual concatenation was held Sept. 9 at the Islesworth and was largely attended. At its conclusion a smoker and vaudeville performance was given in the cafe. The Entertainment Committee were warmly eulogized for their efforts in providing lavishly for the pleasure of members and lady visitors.

News Miscellany.

Substituting Eucalyptus for Hardwood.

The scarcity of hardwood on the Pacific coast and its advance in price are attracting attention to substitutes that will to some degree supply the increasing demand. Recent developments indicate that the Australian eucalyptus or blue gum tree bids fair to fill the long-felt want to a satisfactory degree. A grove of these trees planted in 1863 near San Jose, Cal., by John Tully, was recently purchased by T. J. Gillespie, an experienced lumber dealer, and converted into lumber equal to hickory or oak. When Mr. Gillespie announced that the wood was equal to many varieties of hardwood his claim was ridiculed by experienced dealers, but subsequent developments proved that the wood was an excellent substitute for the valuable woods of the East. The discovery has created considerable interest among the lumbermen of the Pacific

coast, and several strong companies have been organized for the purpose of planting eucalyptus trees with a view to supplying the future hardwood market.

The eucalyptus is a remarkably rapid grower and can be raised on almost any kind of land. After the first three years it requires little care. There are about 150 varieties of the tree, but with the exception of two or three species the wood has no value aside from fuel purposes. In selecting the proper variety for lumbering purposes it is necessary to exercise great care. The trees are ready for the market in from twenty to twenty-five years and with advanced methods could probably be made marketable many years sooner.

The eucalyptus is extensively used throughout California for railroad ties and similar purposes and is an excellent substitute for more

expensive woods. The Southern Pacific and Santa Fe companies have planted large groves in sparsely wooded sections, and an unlimited supply of lumber is being provided for the future. In the Santa Clara valley of California the trees grow to enormous size, while around Los Angeles and other southern points good results are being obtained in their cultivation.

The first eucalyptus trees were planted by the early California pioneers chiefly for shade and ornamental uses, and it is only recently that they have been found available for commercial purposes. The tree is a native of Australia, where it flourishes in tropical luxuriance, but has not attracted especial attention owing to the fact that hardwood trees abound in that country.

The trees grow best in a temperate or semi-tropical climate, and in many sections of the great plains could undoubtedly be profitably cultivated. Particularly is this true of the southern and border states. The winters of the north-

ern states along the lakes and in the Mississippi valley are probably too severe. The principal groves in the West lie south of San Francisco bay, but the tree has been successfully grown much further north.

The experiments in eucalyptus growing in California have attracted the attention of several large eastern manufacturers, and inquiries regarding its commercial possibilities are constantly being made. They state that hardwood is becoming scarce and that they must look about for a future supply. If the eucalyptus can be made to answer the purpose it will be more profitable to plant it than to ship hardwood from South America, Africa and other distant points. With this point in view California lumbering interests are deeply interested in the new industry, which promises to fulfill a long-felt want in the markets of the world.

Red Gum.

The Timber Trades Journal of London has the following to say about red gum, or satin walnut, as it is known across the ocean:

"There has been a large, steadily growing and generally satisfactory shipment of red gum—or satin walnut, as it is generally called here—directed to the London market during the last twenty-two years or so, and it is now looked upon as one of the staple hardwoods for use in the cabinet and other trades. Although we have but an indifferent opinion of its qualities, the liability of the wood to twist and warp being its most serious defect, the fact that such an extensive and regular business has been done for so long proves that the wood is in favor and adapted to the needs of many English consumers, and we should express the opinion that so long as the price can be limited to present reasonable rates a constant and steady demand will continue for the wood, the market being capable of absorbing large quantities of the material.

"The consumption here has been slightly weaker the last year or two, the wood having been supplanted for the manufacture of common classes of furniture by the fashion for unquartered or plain oak, of which there has been generally abundant supplies at low rates. The trend of fashion, however, is again turning, and red gum is once more coming to the fore.

"It has been on trial as a material for street paving, but the result did not prove a success, whether owing altogether to the unsuitability of the wood or to the defective quality said to have been supplied not being clearly defined. If the wood on any further trial should prove adaptable for such purpose a very large and extensive outlet would be found for its use.

"A continuance of the growing scarcity of poplar, which appears to be a certain probability, should benefit the market for the wood, as some substitute will have to be found to take the place of the lower grades of poplar, and, in the absence of few other varieties at present before the market this satin walnut should, for many purposes, have a good chance. At the present time there is a quiet, steady trade being done, with supplies moderate, but sufficient to meet present requirements.

"In the northwest counties the market for satin walnut is very limited. As is generally known, it is principally used for the cheaper class of cabinet work, principally in the manufacture of bedroom suites. As in other things, there is fashion in wood manufacture, and latterly red gum, or satin walnut, has not met with so much favor. Latterly shippers to Liverpool have been sending a larger proportion of medium grade, and this has met with a better reception than prime. Perhaps the best center for this wood is the Midlands, a good deal being used in Birmingham."

A Welcome Visitor.

The many friends of L. V. Boyle, the veteran hardwood operator of Chicago, Indiana and the south country, have had the pleasure of a visit from him during the last few days, and the HARDWOOD RECORD was honored with a call.

Mr. Boyle has had a long history in lumber affairs. He was born near Logansport, Ind., seventy-six years ago, and today is as sprightly and alert of mind as many men twenty years his junior. He is accompanied by his wife, who is two years his senior, and is also in remarkably good health. In 1852, in connection with his father, Mr. Boyle ran a sash saw mill near Boyles-ton, Ind. He operated from 1870 to 1880 near Indianapolis, largely in walnut. He recalls that at the time of his operations near Boyles-ton he sold the good end of the splendid walnut of those days at \$18 a thousand, and hauled it to Logansport for delivery, whence it went by canal to Toledo, being reshipped three times before reaching destination at Philadelphia.

Between 1870 and 1880 Mr. Boyle had saw mills in the vicinity of Indianapolis, cutting hard-

L. V. BOYLE.

woods, largely walnut, and also conducted a distributing yard in Chicago. Contemporary with him in the trade at that time were George D. Emory, of Chelsea, whose portrait appears as supplement to this issue of the RECORD, and the late Col. A. D. Straight, of Indianapolis. Between 1880 and 1890 he operated very largely in poplar at Ohio, Tenn., and from 1890 to 1895 was engaged in a hardwood enterprise at Boyle, Miss. In 1895 he retired from business and removed to California, locating near San Diego, Cal. Since that time he has been engaged in growing oranges and lemons. He has just disposed of his grove. From Chicago the couple will go to various points in Indiana, where they spent their early married life. They will then return to California, where Mr. Boyle has planned to build a home to spend his remaining years.

Mr. Boyle is the father of Clarence Boyle of Chicago, vice-president of the Heath-Witbeck Company, and this visit of his father and mother is particularly to see him and to celebrate the fifty-fifth anniversary of their married life. The portrait accompanying this sketch was made especially for the HARDWOOD RECORD and is an excellent likeness of Mr. Boyle.

Acclimatizing Trees.

Trees are fixed, almost inflexible, in their habits. For centuries, indeed as long as we have record, each species has kept in its beaten ways, insisting on the same average temperature and refusing to grow where this could not be found; seeking and occupying

certain kinds of soil and demanding certain amounts of moisture and avoiding situations where these were wanting.

The latest authorities go so far as to declare that trees can not be acclimatized; that is, that even the ingenuity and perseverance of man are unable to induce trees to change their habits far enough to adopt a country not closely like their native habitat.

This fastidiousness in the habits of trees has its good and its bad sides. It absolutely limits the forester's choice of trees to grow in a given region. To seek to force tree growth in uncongenial conditions is entirely fruitless. But, on the other hand, there is practical certainty of results. If beech or spruce thrives where the average warmth and moisture of the growing season from year to year ranges between certain degrees, then wherever else, in the northern hemisphere at least, the same average is found, the forester may plant beech or spruce, whether or not they be not already there with confidence that they will flourish.

The same law works both ways. If the forester finds beech or spruce or any other tree growing in a region of which the climatic conditions are not recorded he knows within very narrow limits what the climate is, simply because he knows that at home this tree grows in such a climate. In other words, trees, especially, of course, those which are particularly fastidious, are very satisfactory substitutes for thermometers and barometers so far as the average temperature and moisture conditions during the vegetative seasons are concerned.

There is a close relation between a tree's demands upon temperature and its demand upon soil. Given the proper temperature, it will grow where the soil is unfriendly, and given the most congenial soil, it will grow where the temperature is not ideal. The colder and wetter the soil the better will it grow with a relatively high temperature; the drier and warmer the soil, the better will it grow with a relatively low temperature. Thus, on a northern slope the forester will often find it safe to plant trees which would not thrive on the southern slope of the same mountain, because northern slopes are cooler and moister than southern ones, and this difference may suffice to offset a slight disadvantage in the general temperature of the region.

There is a wide variation among trees as to the range of temperature which they endure. Some, such as the Douglas fir, yellow pine, eastern spruce, or aspen, grow over the wide areas from north to south; others, such as Mexican white pine, eucalyptus, or redwood, are more narrowly confined. But it should not be inferred that only geographical lines can be drawn for the distribution of any species. The right temperature conditions may be found outside of the geographic distribution at higher or lower altitudes. A southern species whose home is in the mountains may possess a second home in the northern latitudes of a level country, and a northern lowland species may thrive, also, on mountains in the south.—U. S. Bulletin.

Stearns Lumber Company.

The Stearns Lumber Company, Inc., which conducts extensive lumber operations in Whitley county, Kentucky, with headquarters in the town which bears its name, has accomplished a great deal in the past four years. Sixteen miles of railroad have been constructed, some of it under great difficulties, over steep grades, curves, cuts and fills. The town of Stearns now has about 1,200 inhabitants, and other towns of from 200 to 500 have sprung up, known as Worley, Barthell, Yumacraw and Oz. The company now

operates four mines producing a little over 1,000 tons of coal per day and four more mines are now being opened up on the opposite side of the river from Stearns, which when thoroughly equipped will produce 1,500 tons more. The company expects to have the mines in operation late the coming fall, although opening them up may be delayed somewhat longer.

The saw mill cut of the Stearns Company in this region is about 15,000,000 feet of oak, hemlock, pine and poplar, oak being the largest quantity of lumber produced and the others following in above order. Minor quantities of about eighteen other varieties of wood are also produced. The timber holdings are extensive enough to last approximately fifty years, while the coal holdings, on the basis of 2,500 tons production, should endure about fifty centuries. Thus it is fair to presume that the production will be greatly increased.

J. S. Stearns is president of the Stearns Lumber Company, Inc.; W. T. Culver is vice-president, and R. L. Stearns is secretary and treasurer. F. R. Seeley has general supervision over the manufacture of lumber at Stearns, Ky., as well as the marketing of the stock.

Spanish Lumber Market.

Considerable American lumber of all classes is used in Spain, it being preferred to other foreign lumber marketed there. Shipments for Seville are made via Barcelona and Valencia, which is much more expensive than if made direct. The market could probably be further enlarged by using catalogues printed in Spanish, with prices in Spanish currency and measures in the metric system. Terms of sale are generally from thirty to ninety days after receipt of shipment, but some firms take advantage of the best cash discount. There are no tariff restrictions against American lumber. The American consul has forwarded a list of furniture manufacturers and lumber dealers in Seville, which has been placed on file in the bureau of manufactures.

Lumbering in Chihuahua.

The northern portion of the Mexican state of Chihuahua has made great strides in industrial growth within the past six months, notably in mining and lumbering. There is a daily train service from Ciudad Juarez into the interior on the Mexican Central trunk line. The Rio Grande, Sierra Madre and Pacifico has a tri-weekly service, having as its terminus Casas Grandes, 158 miles from Juarez, but the road is now being extended into the timbered districts. The same company is extending the road from the timbered regions at Medara and will continue until the two projections meet. An extension to the coast will also be constructed.

Lumbering is a new industry, and, judging from the progress made of late, will be a very profitable one. No lumber has been exported up to date, as not all the necessary machinery for complete lumber operations has been received and installed. However, there are now in operation or course of construction in that section extensive drying sheds, saw mills having a capacity of 500,000 feet of lumber a day, log pond, planing mills and turpentine stills.

The Pole Supply.

To users of telephone and telegraph poles the question of how best to meet the scarcity of suitable timber is of paramount importance. Latest reports from the Census Bureau show that there were in operation in 1902 approximately 700,000 miles of pole line; subsequent additions and lack of reports on many lines show that these figures must be much greater

today—at least 800,000. The average line contains about forty poles to the mile, so there are doubtless 32,000,000 poles in use. Assuming that the average life of one is twelve years, it follows that for the maintenance of the lines now in operation there are needed each year more than 2,650,000 poles. That this demand will tell upon present low available supplies is recognized by the companies and has led to a long series of experiments in cooperation with the government to ascertain best methods of cutting, seasoning and perpetuating the life of poles. Those cut in winter and spring are more durable than others.

Michigan Forestry Association.

A gathering which will attract national attention will be the convention of the Michigan Forestry Association at Saginaw, Nov. 12 and 13. It will cover wider ground than ever before, from the fact that many forestry and lumber experts from Wisconsin, Minnesota and Ontario, as well as some engaged in the government service, will appear before the meeting. The pine problem particularly is a serious one, not only in Michigan but through the entire northern part of the country, and it must be met by some means or other. Not only the disappearance of the wood before the ax must be combated, but adequate protection from fire must be assured for remaining stands. The association accomplished a great stride forward when it secured a committee, named by the state, to look after waste lands and set out new nurseries. Delegates from many states will attend and much will undoubtedly be accomplished for the good of the cause.

"Cheaper Logging."

Under the above title, the Clyde Iron Works, of Duluth, Minn., has just issued the first edition of its new catalogue. A great deal of pains and expense have been devoted to the preparation of this work and the result warrants much more than passing notice.

The book fully illustrates typical skidding and loading operations in connection with their most modern and practical machinery, showing actual service and conditions as they exist, without any embellishment or retouching. A handsome colored frontispiece adds greatly to its appearance and the numberless large illustrations are done in three-color scheme, with wide ornamental borders. The smaller ones are artistically vignettized.

The famous "Metliffert" is portrayed in various stages of operations throughout West Virginia, Wisconsin, Arkansas, Mississippi, Texas, Louisiana, Michigan, the Carolinas, Tennessee and other states, showing logging going on under widely differing conditions, but with equal success and certainty. The average lumberman is always interested in the methods and operations of his brothers all over the country, and, believing that to influence and convince it is first necessary to interest, the company has collected these remarkable views, that anyone may see for himself just what the machines can do, are doing and how they are doing it—supplementing the illustrations with only such descriptive matter as will give a clearer and more intelligent understanding of the apparatus.

Surely the Clyde Iron Works may well be proud of having put out one of the handsomest and most artistic books of the kind that has ever been issued.

Popularity of Walnut.

Just now it is walnut which holds the palm as the favorite wood for furniture. Dealers say that walnut has taken a firm hold on the market and, for some reason or another, it appears to be more in demand than the long supreme mahogany.

The Circassian walnut is the special kind which is attracting attention, and when the visitor to the furniture shop sees the beautiful veining, the soft color and the dull, attractive finish of this wood he does not wonder

at its popularity. Its particular charm is its wonderful veining, and the best marked pieces, without any trimming or finishing at all, give the effect of being elaborately decorated, simply through the colorings and the lines in the wood itself.

The color is a dull brown on the olive shade, the Circassian walnut being several shades darker than the ordinary kind. It is more expensive than mahogany, some pieces ranging in price from \$10 to \$25 more than pieces of a corresponding size and style in mahogany.

The choicest wood is taken from the root of the walnut tree, and consequently a whole tree has to be sacrificed for a comparatively small amount of the wood. The best pieces of furniture are made with pieces which match almost exactly. A bed, for instance, which has its head and its footboard of almost an identical pattern in the veining is the best and most expensive. A bedroom set consisting of the bed, small dressing table and two chairs made of this Circassian walnut costs more than \$1,500, while the best mahogany set in somewhat the same style would amount probably to a hundred or more dollars less than this amount.

Besides its beautiful grain, its dull color is attractive to many, and the dull finish and lack of a shining, reflecting surface is a change from the mirror-like surface of mahogany, golden oak and the others with bright finish. There is a softness about the color and the tone which is new and decidedly pleasing.

The question of keeping mahogany polished and without blemishes is always an important one. It is almost impossible to save it from the scratches and the markings that will come from everyday use. With Circassian walnut it is different. There is no wood which is more easily cared for and with less difficulty kept with its appearance of newness. On account of its dull finish and lack of varnish it can not easily be scratched. While even a soft rag may put a few blemishes on a new mahogany piece, this will never happen on walnut. Perhaps this is the most important reason for its popularity in this serventless age.

All sorts of pieces of furniture are made of this walnut—pieces for the dining room, bedroom, library or dressing room, and although they may be found in many styles, some with the ornamentation of the empire days, others severely plain, it is found that in every case the style is a minor point as compared with the appearance of the wood itself.

That it will finally supersede mahogany altogether is not predicted, but it is a fact just now that among the buyers of expensive pieces there is a strong inclination to this newer wood.

Lumber Importations in China.

The imports of lumber from foreign countries during 1906 were as follows: From the United States, \$38,736 worth; Hongkong, \$1,368; Japan, \$259,111, and Chinese ports, \$5,000; total, \$304,215. Japan furnished more than eighty per cent of the lumber. Only \$5,000 worth of foreign lumber was imported from Shanghai, against \$42,000 of the year before. As this lumber is unclassified by the customs it is impossible to state with any degree of accuracy how much American lumber was imported from Shanghai, but as the figure in 1906 was very small it is not worthy of consideration.

Lumber importers state that practically fifty per cent of the lumber shipped from Shanghai to the port of Newchwang consists of American pine. American pine is used in all buildings for the heavier and more important work. The Korean pine can not be compared with the American product; the former is very soft, has not much strength and is very easy to work. All timbers are sawed by hand, and a Chinese contractor when sawing American pine will charge more than double the amount figured in sawing Korean pine. Of the total of American pine imported during 1906 about fifteen per cent consisted of flooring, fifteen per cent timbers and the remainder in boards and plank.

Susceptibility of Wood to Moisture.

It is a well-known fact that water will soften wood, only in less degree, as it does a piece of paper, cloth or sponge. Thus it is that by different methods of seasoning two pieces of lumber from the same log may be given varying degrees of strength and durability. Wood, when green, contains moisture in all its pores, as a honey comb contains honey; it is also found in the very substance of the cell walls. Seasoning or drying lessens the weight of the wood by the evaporation of the moisture, but does not affect its strength. In fact, it is not until the moisture in the substance of the cell walls is drawn upon that the strength of the wood begins to increase. Scientifically, this point is known as the "fiber-saturation point." From this condition to that of absolute dryness the gain in the strength of wood is remarkable. In spruce it is multiplied four times. Even after the reabsorption of moisture, when the wood is again exposed to the air, the strength of the sticks is still from fifty to one hundred and fifty per cent greater than when green. When the fiber-saturation point is passed, the strength of wood increases as drying progresses, according to a definite law.

Builders, engineers and manufacturers want to know not only the strength but the weakness of the materials they employ and so are quite as much interested in knowing how timbers are affected by moisture as in knowing how they are weakened by knots, checks, cross-grain and other defects. Experts, while showing that small pieces gain greatly in strength, do not count on proportionate results with large timbers, owing to the fact that they usually have defects which counterbalance the gain from drying.

The Forest Service has just issued a publication called "Strength of Wood as Influenced by Moisture," in which is shown the strength of representative woods in all degrees of moisture, from the green state to absolute dryness, which will be sent free on application, and which should prove a very interesting analysis.

New Incorporations and Business Changes.

Prescott, Ark.—Prescott Table and Furniture Company, capital \$10,000.

Chicago, Ill.—Nelson Wheel Company, capital \$200,000.

Indianapolis, Ind.—Indianapolis File and Cabinet Company, capital \$15,000.

Burlington, N. J.—Burlington Chair Company, capital \$25,000.

Pomeroy, Ohio.—American Pipe Organ Company.

Nashville, Tenn.—Wilson Lumber and Land Company, capital \$250,000.

Rockwood, Tenn.—Rock Mountain Coal and Lumber Company, capital \$50,000.

Spokane, Wash.—Sanitary Furniture and Car Seat Company, capital \$100,000.

Decatur, Ala.—Bixby Lumber Company, capital \$40,000.

Dardanelle, Ark.—Dardanelle Hardwood Lumber Company.

Halstead, Ark.—Rock Creek Lumber Company, capital \$20,000.

Kingston, Ark.—Kingston Spoke Manufacturing Company, capital \$15,000.

Chicago, Ill.—Chicago Bank Office Fixture Company, capital \$10,000.

Chicago, Ill.—Merkle Timber and Land Company, capital \$100,000.

Laporte, Ind.—Indiana Moulding and Frame Company, capital \$25,000.

New Albany, Ind.—New Albany Veneering Company, capital \$100,000.

Newcastle, Ind.—Indiana Fibre Box Company, capital \$10,000.

Union City, Ind.—Union City Hoop and Lumber Company, capital \$12,000.

Avawam, Ky.—Smith Sizemore Lumber Company, capital \$30,000.

Jabez, Ky.—Jabez Lumber Company, capital \$25,000.

Pellston, Mich.—Pellston Turning and Manufacturing Company, capital \$10,000.

Toledo, O.—Standard Cabinet Company, capital \$10,000.

Flat Gap, Va.—Williams-Adams Lumber Company, capital \$20,000.

Tazewell, Va.—Hall Lumber Company, capital \$41,500.

Jenningston, W. Va.—Perley & Crockett Lumber Company, capital \$225,000.

Cambria, Va.—The Averill & Mitchell Corporation has increased its capital stock to \$100,000.

Lenoir, N. C.—The Coffee & Kent Manufacturing Company has recently commenced the manufacture of veneers.

Pine Bluff, Ark.—A stockholder of the Bluff City Lumber Company recently started suit asking for the appointment of a receiver.

Miscellaneous Notes.

A. W. T. Bottomley, receiver of the Puna Sugar Company, Ltd., of Hilo, Hawaii, has contracted with the Hawaiian Mahogany Lumber Company, Ltd., to allow the latter to lumber the sugar company's forest lands in Puna. The property of the company is under a mortgage of \$1,000,000. The land to be lumbered includes about 5,000 acres. The Hawaiian Mahogany Lumber Company, Ltd., will undoubtedly construct a branch line of railroad in Puna to carry the stock to the seacoast.

There is an opening for a lead pencil factory in British India, as the field is said to be entirely clear and the demand for pencils is large, while labor is cheap.

The approximate quantity of milling timber on the crown lands of New Zealand is 18,666,300,081 superficial feet, and on private and native lands 17,119,573,386 feet. A review of the position reveals the fact that if the destruction of native forests of the north continues at the present rate it will cause a cessation of the sawmill industry there within about fifteen years. In the southern district it is estimated that in four years' time there will be few if any mills working. In fact, the timber supplies of New Zealand are rapidly diminishing both in quantity and quality. Reforestry is being taken up, however, and about 30,000,000 trees are growing in government nurseries.

The building of the Grand Trunk Pacific railroad through Alberta, Canada, and westward is likely to be greatly hampered by the difficulty of securing ties. The road is to run through an open country almost free of timber of any kind, and agents are offering forty cents per tie for all they can get delivered on cars near Grand Forks. While it has been generally supposed that the railroads are doing comparatively little new construction work this year, it is said that the demand for material so far this year is

much greater than for the first nine months of 1906 or previous years.

The Wisconsin Cabinet Company has commenced operations at Fond du Lac, Wis., with about forty employees. A score or more of men will be added to the force soon.

Harley W. Goss of Hillsboro, N. B., has for the past few months been superintending the erection of a new mill for his company, the Hillsboro Hardwood Flooring Company, and announces that operations will commence within two weeks.

F. G. Eberhart, Jr., and R. G. Page, members of the R. G. Page Lumber Company of Ashland, Ky., together with Nathan Goodman of Ironton, Ohio, former general manager of the Ironton Lumber Company, have bought the entire stock of the Licking River Lumber Company of Ashland, Ky., and will manage the latter entirely separate from the R. G. Page Lumber Company, continuing it under the same name, with general and sales office at Ashland and mills at Farmers, Ky. F. G. Eberhart, Jr., is president, N. Goodman vice president, and R. G. Page secretary and treasurer.

The Clandy School Desk Company has been incorporated at Zanesville, Ohio, with a capital stock of \$75,000 and is now erecting buildings and installing machinery.

The Roberts Chair Furniture Company, Columbus, Ohio, has been incorporated with a capital stock of \$10,000 for the manufacture of leather chairs and upholstered furniture. The company is now preparing plans for its factory, which will be equipped with modern machinery.

A charter has been granted to the Parkersburg lumber company, with offices in Fairmont, W. Va., and chief works in Sampson county, North Carolina. The capital stock is \$25,000, and incorporators are Messrs. Dickerson, Barnes, Ritchie and Hartley, all of Fairmont.

The Saw Mill Company of Cleveland has been incorporated with a capital stock of \$25,000. The officers are W. P. Porter, president; H. H. Sherman, vice-president; C. H. Foote, treasurer; A. M. Foote, secretary. The company was organized to buy standing timber and manufacture lumber.

The schooner H. D. Moore, bound from Harbor Springs, Mich., to Port Washington, with a cargo of hardwood lumber, went ashore on South Manitou Island in a storm Sept. 12. The crew was rescued by life savers, but the vessel will probably be a total loss. The schooner S. B. Paige, bound from Chicago to Green Bay with a cargo of posts and ties, was driven ashore during a storm recently and wrecked. The crew was saved.

The fifty furniture factories and woodworking plants of High Point, N. C., ship an average of sixty solid carloads of furniture a day during an average season, or 1,560 a month of twenty-six working days.

A. O. Sullivan, representing F. R. Pollard, of Marshfield, Wis., who bought the Spirit Lake saw mill, is contracting with farmers in that section for hemlock and hardwood timber, pine and cedar shingle bolts. The mill will be overhauled and put in good shape.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

On the 17th of this month the G. W. Jones Lumber Company shipped from Appleton, Wis., twenty five carloads of straight and mixed lumber.

G. G. Roberts, representing D. G. Courtney of Charleston, S. C., spent a couple of days in the city last week. Mr. Roberts is certainly one man who has no kick to make regarding Chicago trade,

for within the last thirty days he disposed of a million and a half feet of poplar and oak in this market.

J. B. Wall of the Buffalo Hardwood Lumber Company, Buffalo, N. Y., was in Chicago last week in attendance at the convention of prison wardens.

E. Bartholomew, representing John B. Ransom & Co. of Nashville, was a caller at the Record office Sept. 19.

The American Panel Club will meet at the Genesee hotel, Buffalo, N. Y., on Oct. 8.

In addition to the rapidly growing business of the Arthur Hardwood Flooring Company of Memphis, Tenn., D. S. Hutchinson, who was recently in the city for several days, says they are working up quite an export trade, and have recently made some important shipments to England.

The editor acknowledges receipt of an invitation to attend a concatenation in London, England, Sept. 28, which will be held by Max Sondheimer, R. L. Withnell, H. W. Flatman and E. Haynes. It is promised that "there will be something doing every minute," and these gentlemen are fully capable of making good.

A new concern in the Chicago trade is the Overholser Lumber Company, 602 Plymouth building, dealers in hardwoods, cypress and yellow pine; also oak and maple flooring. W. C. Overholser is manager.

Prof. E. E. Bogue, head of the forestry department of the Michigan Agricultural College, is dead as a result of an operation for appendicitis. Mr. Bogue was a graduate of the Ohio State University and was forty-two years of age. A widow and daughter survive him. By this sad occurrence the school has lost a valued and loved instructor and the cause of forestry in the United States one of its warmest champions.

The North Branch Flooring Company suffered a fire loss of between \$60,000 and \$70,000 a couple of weeks ago at its plant on Belmont and Western avenues. Several firemen were injured in fighting the flames.

Boston.

The question of traffic is again becoming serious and the lumber dealers anticipate slow shipments as winter approaches. A report received from the South states that the movement of cotton will be heavy and that the railroads will pay more attention to this commodity than to the moving of lumber. Several have added new equipment during the past year, but their rolling stock is still insufficient to take care of the business offered.

Luther N. Chick of the firm of Chick & Holmes, Chelsea, Mass., was married early in the month to Miss M. F. Noble of Blaine, Me.

A. C. Place of Place Brothers, Boston, has returned from a trip to New Hampshire.

The B. G. Luther Company, Worcester, Mass., has been incorporated with a capital stock of \$20,000. This corporation succeeds to the business of B. G. Luther & Co., manufacturers of woodworking machinery. Benjamin G. Luther has been elected treasurer.

George E. Greenwood, connected with George F. Sloan & Bros., Baltimore, Md., was a recent visitor in Boston.

The chair manufacturing plant of Nichols & Stone, Gardiner, Mass., has been destroyed by fire, causing a loss of \$100,000; insurance about \$35,000.

A building on Beverly street, Boston, occupied by several woodworking firms, has been visited by fire, causing a loss of about \$10,000. The fire started in the works of George H. Carter.

E. D. Sawyer of the E. D. Sawyer Lumber Company, Cambridge, Mass., died in Hull, Sept. 16, at his summer home. Mr. Sawyer was sixty-nine years of age. He started in the lumber business in Cambridge in 1873. He is survived by a widow, three sons and one daughter.

James A. Nichols is rebuilding his planing mill and woodworking shop at Danielson, Conn., which was destroyed by fire last spring.

The vacation season is about over. Among the Boston lumber people who have returned are John E. Bugbee of the Holt & Bugbee Company, wholesale and retail dealers in hardwoods, and Frederick S. Ramsey.

Miss Mabel A. Evans, manager of the Boston office of Wiley, Harker & Camp Company, spent the early part of September in North Wood stock, N. H.

William O. Curtis of the William O. Curtis Sens Company, who has been spending the past two months on the Pacific coast, is expected home about Oct. 1.

Herace M. Bickford of the H. M. Bickford Company is expected home from Europe the first of the month.

New York.

Because of increasing trade the Kalt Lumber Company, prominent in the retail hardwood trade, Sixty-fourth street and Second avenue, Manhattan, has leased a new yard on Second avenue running from Sixty-third to Sixty-fourth streets, where they are carrying a choice stock of hardwoods and general lumber. Henry W. Kalt, senior member of the company, reports business very satisfactory and is much gratified with the success of his company.

Captain A. P. Bigelow, head of A. P. Bigelow & Co., West Fifty-fourth street, and John F. Steeves of Church E. Gates & Co., One Hundred and Thirty-eighth street and Railroad avenue, have just returned from a camping trip to Canada. While there, in company with several prominent Buffalo lumbermen, Messrs. Steeves and Bigelow acquired a choice camp site, embracing a number of lakes in the famous Gateauau sporting district of Canada, which they will develop for future use.

Mershon, Schutte, Parker & Co., prominent wholesale house, has removed from 18 Broadway to 1 Madison avenue, where the firm has leased handsome offices suitable to their increasing business. Manager W. D. Mershon will continue at the head of the local office, assisted by a competent corps of salesmen. The general wholesale trade of this company is developing rapidly and they are particularly gratified in the increase in their California redwood trade.

The Metropolitan Lumber Company has been incorporated in this city to manufacture timber products with a capital of \$25,000. The incorporators are Charles B. Flinn, C. D. Bull and N. W. Jones.

F. H. Doyle of Doyle, Thomson & Co., hardwood dealers, 16 Beaver street, is on a business trip up the state. C. B. Thomson of the same firm returned recently from a yachting trip with Mrs. Thomson in Canada and was likewise an attendant at the Hoo-Hoo annual at Atlantic City last week. The business of this progressive house is increasing very satisfactorily and with the excellent mill connections which they maintain they are enjoying a large and profitable trade in the local district.

Frank H. Sprague, retailer, of 91 Plymouth street, Brooklyn, is spending the week ends with his family at Stamford, Ulster county, N. Y.

John R. Glover, a well known Brooklyn lumberman and principal in the firm of W. R. Adams & Co., is on a southern pleasure trip, which will include the Jamestown Exposition, Washington and Atlantic City.

Willard Winslow of the Indiana Quartered Oak Company, East Forty-second street, Manhattan, is rusticiating at Cape Cod.

T. S. Miller, manager of the hardwood department of Stevens-Eaton & Co., 1 Madison avenue, is back from a lengthy business tour of the hardwood mills of the South and Middle West. He is much gratified at the success of his trip. While he found hardwood conditions very firm and good stock not plentiful, he secured a number of choice lots of hardwood for fall and winter offerings.

George D. Burgess, Russe & Burgess, Memphis, Tenn., arrived from Europe last week, where he has been automobiling during the past month or two.

Gilbert H. Shepard, the well known wholesaler, 1123 Broadway, is pushing a choice line of veneered red gum doors and house trim with his local cypress trade. It is a very handsome product and should be well received by the trade.

Clark R. Whiting of the Janney Whiting Lum-

ber Company, Philadelphia, Pa., and the Whiting Manufacturing Company, Abingdon, Va., was a recent visitor in the interest of business.

Philadelphia.

The Lumbermen's Exchange held its first regular monthly meeting since their adjournment a few months ago on Sept. 12 with President William L. Rice in the chair. The meeting was well attended and much interest was manifested in all of the proceedings. A special committee composed of Nathan B. Gaskill, Charles Este and C. E. Lloyd, Jr., was appointed to take under consideration certain specifications for lumber submitted by the chief constructor of the United States Navy Department. The Pennsylvania Door and Sash Company was elected member of the exchange.

John Farrior of the Farrior Lumber Company, Asheville, N. C., was a recent visitor to the exchange rooms.

Joseph H. O'Neill, one of the members of the exchange and a wholesale lumber dealer, with office in the Crozer building, on leaving a street car recently struck his leg against a seat, inflicting a painful though not serious wound. He has sufficiently recovered, however, to make a business trip to Baltimore, Washington, Pittsburgh and Buffalo.

Soble Brothers report business in fairly good shape and the volume of sales showing up well. Their mills are all working full time and turning out some of the best material ever placed on the market. Frank B. Folsom, who was formerly with this house, has left them, presumably to start business in the South on his own account.

The Tomb Lumber Company reports good business right along. They have recently put in a larger boiler in the mill near Williamsport, Pa. Their hardwood department is improving and they claim their white oak, which is mostly sold for export, is of the very best grade, a good seller and holds steady values.

J. Randall Williams & Co. are prepared to meet all conditions, therefore do not trouble over the trade situation. The senior partner of this firm has returned to the city from his summer home, and J. Randall Williams, Jr., has come back from his trip abroad, looking fit to tackle any trade proposition that may arise.

Kirby & Hawkins Company is a busy concern, although only a beginner in the hardwood line. It has succeeded in this department beyond all expectations. They report railroad ties selling actively. Recently they engaged A. M. Nevin, formerly with Joseph P. Dunwoody & Co. as salesman, to look after Philadelphia and surrounding territory.

R. M. Smith & Co. are preparing for increased business as the fall advances. Their mills are all working full capacity.

Benjamin C. Currie, Jr., sales manager, is making an extended selling trip through New York and Eastern Pennsylvania.

Owen M. Bruner Company has no cause to quarrel with trade conditions, as they have been exceeding past record month after month this year. Henry Whelpton of this concern has just returned from a six weeks' trip among the mill sections of the South and West, where he has been looking up the stock situation.

Holloway Lumber Company reports business holding on satisfactorily, with every indication of a good fall trade.

Creditors filed a petition Sept. 16 in the United States district court asking that William E. Paul and Andrew Luffbarry, Jr., individually and as co-partners, trading as William E. Paul & Co., be adjudged involuntary bankrupts. The petitioning creditors and their claims are Wilson H. Lear, \$2,060.06; Producers' Lumber Company, \$4,552.35, and Samuel H. Shearer & Son, \$5,360.25.

Edwin S. Cramp, formerly of the William Cramp & Sons Ship and Engine Building Company, and George W. Norris, both of this city, are behind a proposed company to construct a

dry dock and marine way at Norfolk, Va. It is announced that the organizers have purchased a tract of land suitable for the plant near Norfolk. Mr. Norris gave it out that the company does not intend to enter the shipbuilding business, but will devote all its time to the repairing of small craft. The capital will not be extensive and will be controlled by Philadelphia and Virginia parties.

The State Forestry Commission is having difficulty to secure land for forestry reserve purposes. Land is scarce now. Times are good and nobody wants to sell. It is evident land owners are holding off for higher figures, but the state will not pay fancy prices.

The Lewis Chair Company, Wilmington, Del., was incorporated under Delaware laws Sept. 12, capitalized at \$100,000.

The Damascus Lumber Company, West Chester, Pa., obtained a charter under Delaware laws Sept. 12, capitalized at \$100,000.

The Philadelphia Textile Machinery Company is too busy filling orders to worry over trade conditions. Their Proctor system dryer is highly commended by those fortunate enough to have it installed. The Roddis Lumber and Veneer Company of Marshfield, Wis., has installed the Proctor girt conveyor dryer, which they report eminently satisfactory. The National Veneer and Panel Manufacturers' Association, which met in Munising recently, inspected with great interest the two Proctor girt conveyor dryers which are being operated in the plant of the Great Lake Veneer Company, and it was the consensus of opinion that the problem of proper drying has at last been solved. The Goshen Veneer Company, Goshen, Ind., writes that the new Proctor girt conveyor dryer enables them to turn out their entire product in ten hours instead of twenty-four, as heretofore, with a corresponding saving of labor and fuel. The Park Falls Manufacturing Company, Park Falls, Wis., is installing a Proctor girt conveyor dryer. These are but a few of the many favorable reports coming in testifying to the worth of this machine.

Henry Disston & Sons, Inc., Tacony, Penn., veteran saw and file manufacturers, stand as a stupendous illustration of what enterprise, push and the production of honest goods for the money can accomplish. The business was started by William and Charles Johnson in 1836, and Henry Disston was one of their employees. In 1840 the firm failed and Mr. Disston in payment for services due him received tools, steel and other material sufficient to begin the manufacture of saws in his own name. From this humble nucleus has sprung the present gigantic business, which is of world-wide distinction. Up to 1845 a number of small concerns started up, which were eventually bought out by Mr. Disston. Mr. Disston had a hard struggle to introduce the American made article, as all saws, files, etc., were at that time imported from England, but integrity in work and an unflinching tenacity of purpose had its reward and today the Disston saws and files are shipped to all the South American states, England, France, Germany, Russia, India, Australia and South Africa. From generation to generation the Disstons have controlled this business; even the mechanical part has never been yielded to outsiders. Father and son have followed in an unbroken sequence, and the little town of Tacony has become a populous and attractive place of residence as the site of these famous works. The Disstons are proud to refer to the good feeling and confidence existing among their employees. They have six mechanics who have been with them for over fifty years; thirty employees who have worked for them uninterruptedly for forty years and upwards; 149 for thirty years and 306 for twenty years, all of whom combined constitute, of course, but a fraction of the labor employed. They claim to have been the first concern to make crucible

in the United States to build and install an electric furnace in which crucible steel is made.

The company has just issued its handbook for 1907, which contains a most complete history of the Disston business, a detailed description of all kinds of saws, how they are made and how they should be preserved, with excellent illustrations of the various important mechanical departments in these works.

Baltimore.

Secretary E. M. Terry, of the National Lumber Exporters' Association has come back from a long trip south made in the interest of the organization. He went as far as New Orleans, and not only got in touch with the association members in different cities, but also conferred with exporters outside the organization with such good result as to make various additions to the roll. The main object of his journey, however, was to open negotiations with kindred bodies and urge consolidation, to the end that the trade might be strengthened and the association be made a more effective instrument for good. Some excellent results have already been attained, but the fact that a number of influential exporters remained outside the ranks has at times militated against the work. Then, too, the existence of several bodies, each pursuing the same or similar aims, served to create confusion in the minds of buyers abroad and tended to weaken the endeavors to remedy trade abuses. To the end that the ranks of the exporters might be lined up solidly in behalf of the adoption of the American system of inspection and other eminently equitable demands, and that the movement of stocks might be better regulated, especially with regard to the forwarding of lumber suitable for the foreign trade, a conference with the New Orleans Exporters' Association was arranged by Secretary Terry. At this conference the National Lumber Exporters' Association was represented by William H. Russe, of Russe & Burgess, Memphis; Gustave A. Farber, of Memphis; M. S. Baer, of R. P. Baer & Co., Baltimore, and Secretary Terry. On the part of the Crescent City body a number of the most influential members attended. The situation was extensively discussed, and as a result the Gulf shippers announced that their association would combine with the National Lumber Exporters' Association on certain conditions. These conditions were deemed by the representatives of the national organization entirely acceptable, but they asked to be allowed to submit them to the board of directors, which is confidently expected to give its assent, so that amalgamation seems assured. Mr. Terry was accorded a cordial reception in New Orleans and spent three busy days there. He went from Baltimore to Norfolk, Va., thence to Bristol, Knoxville, Chattanooga, Memphis, Mobile and New Orleans, everywhere encouraging the members and studying export conditions. He returned via St. Louis, South Bend, Ind.; Cincinnati and Columbus, Ohio; Pittsburg, Pa., and Cumberland, Md., making a complete circuit.

The National Lumber Exporters' Association has received an invitation from the Lumbermen's Club at Memphis, Tenn., to hold the next annual meeting in January, 1908, there. The invitation is likely to be accepted. The Neal-Dolph Lumber Company and the Pettibone-Taylor Company, of Memphis, are the latest concerns to be admitted to membership.

Some disappointment is felt here among members of the Hoo-Hoo because John L. Alcock, Baltimore's candidate, was not elected grand snark of the universe at the Hoo-Hoo annual. His popularity was fully attested, however, by his election as senior Hoo Hoo.

The Baltimore office of G. S. Briggs & Co., of Norfolk, dealers in hardwoods and pine, will hereafter be conducted as an independent concern, the G. S. Briggs Lumber Company having been incorporated here last week by Richard J. Colonna, Charles T. Howard and J. Kemp Bart-

lett, of Baltimore, and George S. Briggs and William L. Perry, of Norfolk. The capital of the company is fixed at \$25,000 and business will be carried on in much the same way as heretofore. Messrs. Colonna and Howard have been in charge of the office for some time. Mr. Colonna since the withdrawal of the late W. S. Rowe to engage in the lumber trade on his own account. The incorporation will not affect the Norfolk office, incorporation having been decided on as a means of fixing liability and recognizing the energetic work of Mr. Colonna. Mr. Briggs will be a stockholder in the company. The office of the company will remain at East Falls and Canton avenues.

The firm of Hays, Wasmuth & Co., has been appointed by the National Lumber Exporters' Association to look after the relations between the railroads and the shippers.

Mr. Price, of the Price Hardwood Company, also an officer in the newly organized Chattanooga Lumber Company, returned from the scene of that corporation's operations at Madison, S. C., where a mill is being erected, and reports that the plant will probably be in running order about Nov. 1. Some delay occurred over the construction of the track to the mill, a distance of about one-half mile. This track is now completed and the machinery is being put up as fast as possible.

There is a prospect that with the inauguration of the coastwise direct service between Baltimore and New Orleans by the Southern Pacific Louisiana red cypress will become a more important factor in the lumber trade here than it has been in the past. The Louisiana Red Cypress Company has been sounding dealers here with regard to the placing of shipments by the new steamers, and even proposes to send a full cargo to Baltimore. The local representative of the company here is Robert C. Irwin.

A. C. Bonham, a well-known hardwood producer at Chillumie, Va., was here about ten days ago and called on a number of firms. He stated that the plants had plenty of orders on hand and that practically all of them were running to the limit of their capacity. He expressed the opinion that the market would hold up well.

G. W. Eisenhauer, of the Eisenhauer-MacLea Company, dealers in hardwoods at Central and Eastern avenues, this city, was in New York this week taking a vacation. He was accompanied by Mrs. Eisenhauer.

Pittsburg.

The William Schuette Company is pushing its hardwood business with a good measure of success and finds the general tone better than one month ago. Its salesmen have pulled in some very nice trade from the big manufacturing towns lately.

W. A. Kessner of the Crescent Lumber Company is taking a week off in Ohio. The Crescent is getting a good list of orders for posts, ties and piling and is making a specialty of locust posts.

W. A. Clay of the Clay-Schoppe Lumber Company spent a few days in Parkersburg last week. Farther down in West Virginia he bought a large lot of white oak. A big order of piling is going from this concern's mills to Parkersburg by barge this week.

J. T. Parsons of the Parsons-Cross Lumber Company is spending the week among Ohio towns. The firm is getting a good call for chestnut and is making rapid headway in the yellow pine market.

Manager S. A. Seaman of the C. P. Caughey Lumber Company is well satisfied with his September business to date. This company has four mills cutting white oak in Washington county, Pennsylvania, and is well prepared to make quick shipments on either the Pennsylvania or the Wabash railroad. Washington county oak is known the country over for its splendid quality, and the Caughey company has built up a fine trade in timbers. It has recently contracted for a large amount of mine rail stock and ties

for fall shipment to Pennsylvania points. Last week Mr. Seaman secured a big order for fir to be used in steel barges. The company is extending its business rapidly and has lately made some splendid connections in the South, which will enable it to be a live competitor in the yellow pine market.

F. W. Vetter found time at the last moment to attend the Hoo-Hoo convention at Atlantic City, having brought up his yard stock of late to a standard not always reached by a dealer so lately embarked on his own account.

The operations of T. Sullivan & Co. were so active early this month that F. M. Sullivan gave up the Atlantic City trip after having made arrangements to go. Lake and rail receipts are both active.

J. F. Knox is off to look after the Missouri mills of Beyer, Knox & Co., satisfied that the malarial mosquito has gone out of business for the season. A new mill has lately been added to the list.

A. Miller has a stock of hardwood lumber that will be the envy of the trade for some time, as it contains plenty of such scarce woods as ash, basswood and elm, which have been arriving from all directions lately.

The yard of I. N. Stewart & Brother is still finding place for a good assortment of chestnut without admitting any falling off in the old specialty, cherry.

Scattherd & Son are keeping their mills in Memphis turning out oak lumber, but there is always room for it in the eastern and foreign markets, without bringing it into the Buffalo yard for storing.

A. W. Kreinheder is booked for a month at the mills of the Standard Hardwood Lumber Company in Kentucky and Tennessee, and in the meantime the roads are kept busy bringing shipments this way, fearing car shortage later on.

O. E. Yeager has not relaxed his hold on the buying trade, though he does not find it easy to get hold of everything in poplar that the consumer would like.

G. Elias lately paid a visit to the Jamestown Exposition, but is now back at his desk, looking after the many-sided trade of the firm, which is reported as fairly active, with a good season ahead.

The Buffalo Hardwood Lumber Company is carrying a heavy stock of lumber, especially oak, which is finding a ready sale. Car shortage is already developing in the Southwest, which makes a full stock especially valuable.

Hugh McLean returned lately from his annual hunting trip to Canada, and resumed his old stunt of making a big hole in the oak and other stock of his companies. He is quite equal to the activity of all his mills.

Frank M. Graham reports an encouraging increase in inquiry for ties. He has just filled an order for 2,200 hardwood ties which go to one concern for 75 cents each.

The Nicola Lumber Company has little fault to find with the hardwood market. Its sales so far this season have been very encouraging and it is putting out perhaps as much building lumber as any company in Pittsburg.

The J. C. Moorhead Lumber Company has added to its force of salesmen G. H. Trump, who has been in the employ of the Kendall Lumber Company for a long time and is a thoroughly versed lumber seller. He will handle the Pennsylvania and New York trade for the Moorheads.

The Acorn Lumber Company, under the guidance of President Domhoff, is booking orders with a regularity that speaks well for its profits at the end of the year. It has some of the best connections at both ends of the line to be found in Pittsburg, and hardwood is its specialty.

The Willson Brothers Lumber Company note no diminution in the demand for hardwood. Their inquiries show that the fall trade will be better, if anything, than the late spring trade, and they look for a satisfactory business season from now until Feb. 1.

The Curll & Lytle Lumber Company heads the list in the poplar trade. Its order books have enough business to keep it busy for two months in advance. Its mills are all in the best condition, and every arrangement has been made to get out a big winter's cut.

William M. Pownall of the Colonial Lumber Company has been stirring up the wilds of West Virginia lately in search of new trade. He has found it, too, for he got some fine lots of hardwood which he is disposing of rapidly at first-class prices.

Members of the Western Lumber Company have bought 2,500 acres of hardwood timber on the Gauley river, in West Virginia, and will develop the operation at once. The land is on the B. & O. railroad and will cut at least 20,000,000 feet of lumber.

W. E. McMillan is getting the newly organized W. E. McMillan Lumber Company swung into the current in good shape, and will roll up a total of hardwood sales for the last four months of this year that will put the firm squarely on its feet. He has secured some splendid West Virginia connections, in addition to the firm's large mill of its own near Elkins, W. Va., and is bustling the Pittsburg trade with his old-time energy.

The West Virginia State Board of Trade, including twenty-one affiliated county and city boards and commercial bodies, has called a meeting to be held at Elkins in October, when West Virginia's forest resources and timber interests will be fully considered. This will be the first meeting of the kind ever held in the state, and promises to attract much attention from lumbermen all over the country, especially from the hardwood interests.

Pittsburg firms are well satisfied with the decision of Judge A. M. Cochran of Kentucky, making Herbert Jackson of Cincinnati temporary receiver of the Boice-Grogan Lumber Company of Lexington, Ky., which failed recently, and of the Cypress Lumber and Veneer Company, an allied corporation. All the mills will continue work.

The Otterman Manufacturing Company has been organized at Morgantown, W. Va., with a capital of \$25,000. It has purchased the plant of the Valley Woodworking Company, and also a tract of hardwood timber near Morgantown.

The J. M. Hastings Lumber Company is cutting 20,000 feet of oak a day at its mill at Jacksonville, W. Va. It now has over half a million feet on sticks at that plant and is getting out its orders in a way that is eminently satisfactory to its customers. Mr. Hastings has been at the plant for a week looking over operations.

J. C. Linehan of the Linehan Lumber Company has bought a handsome home in the East End for \$14,000. This firm is putting out a bunch of business that keeps its bookkeepers busy, and every bit of it is hardwood. Its hardwood flooring trade is creeping up rapidly and its plant at Catlettsburg, Ky., is now loading a car a day.

During the month of August the Babcock Lumber Company shipped from its plant at Ashtola, Pa., over 2,000,000 feet of lumber, mostly hardwood. This was 700,000 feet more than it manufactured at this point, indicating the strong tone of its trade. The total shipments for the month of the Babcock interests were over 5,000,000 feet, or 1,000,000 feet more than they manufactured.

The Newell Brothers Lumber Company has succeeded in getting some very good West Virginia connections since the first of the month and is now prepared to get out all sorts of hardwood on short notice. Its own mill, on the Western Maryland railroad, is cutting 30,000 feet a day. The company has three salesmen and is pushing right to the front as a hardwood distributor.

A happy man is T. C. Tipper of the wholesale lumber firm of T. C. Tipper & Co. He is on a month's honeymoon trip through the east and his start on this journey was not altogether lacking in surprise for his friends. The joyous event,

which preceded the journey, occurred Tuesday evening, Sept. 17, when Miss Etta Florence Muehlbronner, daughter of former Senator Charles A. Muehlbronner, became the wife of Mr. Tipper. They were married by the groom's brother, Rev. William Tipper, and will reside in the Hiawatha apartments in Allegheny. Mr. Tipper has scores of friends in the hardwood trade and his auspicious venture into this new field is welcomed by them as another chapter in his successful career.

The Miller Brothers Lumber Company has finally perfected its organization with these officers: President, J. C. Miller; secretary, James Miller; treasurer, F. E. McGillick. J. C. Miller managed the Pittsburg end of the Jenks business for five years and is well known throughout this territory. His brother James has served ten years with William Schuette Company and William Whitmer & Sons, Inc. Mr. McGillick is a thorough-going builder and contractor and a large real estate owner in Pittsburg. The Miller family have been lumbermen for several generations and know every phase of the business, from the stump to the details of office work. The company has offices in the House building and has made some connections in West Virginia which will enable it to compete very successfully with the hardwood trade in Greater Pittsburg.

Buffalo.

Lumbermen have been much interested in the hearing given on freight matters by the State Utilities Commission, which began September 16 and lasted three days. Complaints from shippers in many lines had been sent in to the commission and the attendance showed a deep interest in the subject. The commission conducted the hearing in a manner that won the good opinion of all, even the railroad attorneys, though they had to listen to some very serious cases of abuse. There were many lumbermen at the hearing and A. J. Elias, M. M. Wall and M. S. Burns took an active part in presenting cases. Mr. Elias also submitted an elaborate plan which he believed would correct the abuses he complained of. It took up such different points as reciprocal demurrage and the fixing of a minimum speed at which freight should move. He claimed that the roads have cars enough and at his urgent request the commission took a trip along the water front and through the railroad yards to see the great number of cars always standing there. It was claimed, both by the commission and by shippers, that there was no desire to punish the roads, but rather to assist them in solving the transportation problem, which seemed to them to have baffled the efforts of the present operating departments of the roads, the commission will return October 14 to resume the hearing, leaving its railroad expert, Frank P. Barry, here to look into the complaints made by the shippers, giving the roads opportunity to explain them as they see fit.

Bay City and Saginaw.

Walter D. Young, who has been in Europe some weeks and was absent at the time his plant was burned, is expected home about Sept. 24, when the matter of rebuilding the plant will be taken up. While the old plant was one of the most extensive of its kind in the world, it is believed it will be rebuilt on a still larger scale. The firm has unlimited timber resources behind it and the location is one of the best. The plant was also well insured and the firm has a large amount of property that will be available in the construction of the new plant.

The Kneeland-Bigelow Company sawmill, which shut down the last of August for an overhaul, after a steady run of a year, day and night, has been placed in commission and has resumed business again. This plant turns out 20,000,000 feet annually, and it takes a train-load of logs every twenty-four hours to keep the saws moving. Under the management of

Charles A. Bigelow this business, as well as that of Kneeland, Buell & Bigelow Company, has proved a wonderful success.

The Strable Manufacturing Company erected last winter at Saginaw what is pronounced one of the most complete plants of the kind in the United States, and it has been doing a steady business with orders enough to keep it moving briskly.

Bliss & Van Auken are doing their usual amount of business. The outlook for the firm in a business way for the fall and winter is excellent.

The S. L. Eastman Flooring Company has not experienced any idle hours or let-up in business this season. Mr. Eastman is one of the largest operators in the West and constantly carries a stock of nearly 20,000,000 feet of lumber. This year he handled practically the entire cut of lumber suitable for flooring manufactured by the Kneeland-Bigelow and Buell plants.

At Onaway, north of Bay City, on the Huron shore, Gardner, Peterman & Co. have enlarged their plant and increased its capacity by installing some new machinery, and are now erecting a tramway 1,500 feet long. This concern has taken a contract to cut 35,000,000 feet of lumber in the ensuing seven years for the Lobdell & Churchill Company.

The woodenworks of the Standish Manufacturing Company were burned last week. Considerable stock in process of manufacture was also destroyed. The building burned was 50x150 feet area and contained the sawmill and much other woodworking machinery. The lumber in the yard was saved. The loss is estimated at \$10,000, well insured.

Grand Rapids.

A. F. Anderson of Cadillac and W. N. Kelley of the Kelley Lumber & Shingle Company, Traverse City, were in Grand Rapids Sept. 10.

The Imperial Furniture Company has plans for enlarging its table plant in this city next year. Manager Stuart Foote is aiming to have the largest table plant in the world and has very nearly realized his ambition already.

A. E. Dennis of Dennis Brothers, his two daughters and chauffeur narrowly escaped serious injury recently when their touring car was struck by a street car at the corner of Fifth and Madison avenues. The car was whirled completely around on the wet asphalt pavement, but aside from a shaking-up the occupants were uninjured. The automobile suffered some minor damages.

The Algoma Timber & Lumber Company, capital \$120,000, was organized last week in this city and will do business at Algoma, Ont., where a large tract of timber has been acquired. The stockholders holding equal shares each are Henry G. Dykhouse of the Acme Lumber Company and Henry Idema of this city, W. W. Hanchett, Jacob Van Putten, J. J. Cappon and George E. Koilen, all prominent business men of Holland.

A statement recently filed in the probate court at Muskegon by executors shows that nine months have served to disburse practically the entire estate left by Thomas Munroe, the wealthy lumberman-banker of that city, who died last fall. The sum disbursed, which included many legacies and bequests, has been over \$300,000 since Jan. 7 last.

Murphy & Diggins, Cadillac lumbermen, who have been assessed large taxes for school purposes in Colfax township, Wexford county, in districts where no school was held for several years, have been informed by the state department of public instruction that such assessments are illegal and that the taxes can be recovered.

The Cleveland-Cliffs Iron Company is building a model town in the Swanzy district of Marquette county, comprising an area of 440 acres, lying between the two branches of the Escanaba river. It will be called Gwinn, in honor of William Gwinn Mather of Cleveland, president

of the company, and waterworks, sewers and electric lights will be provided, also telephones, with all wires laid underground. Unsightly billboards will also be forbidden. Plans have been provided for a fine hospital and modern high school building and library. Twenty-four dwelling houses have been built and the company has awarded contracts for thirty more, each of different design and all having modern conveniences. Streets in the residence portion are being laid out eighty feet in width, and the natural beauty of the place will be enhanced by parks and trees, making it one of the prettiest towns in the state.

The I. N. Conrad Iron Company, Boyne City's newest industry, has started manufacturing operations. The company was in business twenty years at Mt. Pleasant and twelve years at Stanton, Mich., and turns out mill and woodworking machinery.

William Beitner & Son of Traverse City have bought forty acres of hardwood timber located on the Avery place, near Silver lake.

Fred Smith is now in charge of the Elk Rapids and Boyne City plants of the Lake Superior Iron and Chemical Company and will live in Elk Rapids.

Industrial prosperity at East Jordan has influenced the state bank of that village to increase its capital stock from \$20,000 to \$50,000.

The Holland Veneering Company at Holland is having plans prepared for an addition, 40x50 feet, two stories and basement, to its factory at Holland. This is the third enlargement of the plant that has been necessary on account of a fast developing business.

A. J. Whitworth, manager of the Grand Rapids Desk Company's plant at Muskegon Heights, has resigned and will return to Grand Rapids.

Indianapolis.

An important decision, abolishing the "milling in transit" regulation, establishing a sliding schedule of log rates and covering a number of other points, was handed down by the Indiana Railroad Commission on Sept. 20. The decision was in the case of the North Vernon Lumber Company against several Indiana railroads who required that in order to get a reduction from regular lumber rates on log hauls the finished product must be shipped over the line hauling the logs. In the future this will be done away with and the following rates established: Ten miles or less, 2.5 cents; 10 to 20 miles, 3 cents; 20 to 40 miles, 3.5 cents; 40 to 50 miles, 4 cents; 50 to 65 miles, 4.5 cents; 65 to 80 miles, 5 cents; 80 to 100 miles, 5.5 cents; 100 to 125 miles, 6 cents; 125 to 150 miles, 6.5 cents; 150 to 175 miles, 7 cents; 175 to 200 miles, 7.5 cents; 200 to 250 miles, 8 cents and 250 to 300 miles, 9 cents. The minimum car capacity is fixed at 34,000 pounds and 500 pounds allowance must be made for standards used in loading, the consignor to furnish the wire.

Jacob P. Smith, a well known local lumberman, has moved his offices from 514 State Life building to 932 in the same building.

J. W. Hankins, formerly with the Dixie Lumber Company of St. Louis, is now chief clerk for the Robinson Lumber Company of this city.

The Schelosky Table Company has been organized at Evansville and promises to become a substantial addition to the rapidly growing furniture industry of that city. The company will make a specialty of tables and desks, although other lines of furniture will be manufactured. Moritz H. and Adolph R. Schelosky and John Peters, Jr., are the directors. The capital stock is \$40,000.

The Evansville Veneer Company has received a shipment of eleven mahogany logs from the forests of Africa. The logs made just two carloads and were valued at approximately \$3,000. The shipment is said to be the first ever received in southern Indiana from Africa.

A contract has been let by the New Albany Veneering Company for the construction work on its new plant at New Albany and the work is to be rushed to completion in order that the plant can be occupied during the early part of the winter. The company was organized last month with \$100,000 capital stock and promises to be one of the largest concerns of its kind in Indiana.

It is understood that the C. P. White Lumber Company of Boonville is to locate at Evansville shortly. A suitable site has been obtained along the Illinois Central railroad tracks, near the new location of the Henry Maley Lumber Company. The company handles a full line of hardwoods.

A planing mill to cost \$20,000 is being erected by the Hercules Buggy Company of Evansville. It will be a two-story brick structure.

Two meetings of carriage manufacturers were held here during the last two weeks, ostensibly for the purpose of forming an organization that will boost the price of carriages and other pleasure vehicles. Some seventy-five manufacturers were present and it is understood that an increase of 10 per cent at the beginning of the season was agreed upon. Manufacturers claim that the price of lumber for manufacturing purposes is so high that an increase in cost of the finished product is necessary to come out even, much less to make a profit.

Samuel J. Record of Connersville, who holds an important position with the Forestry Service, has been spending several days in Indiana, following an extensive investigation of the national timber supply throughout the country.

M. M. Erb, who until recently held an important position in the Birmingham, Ala., lumber field, and J. D. Case of Connersville have formed the Case Lumber Company and will locate in Connersville.

Students at Purdue University have started the course in forestry established at the beginning of the school term and are starting on an extensive test of Indiana woods for manufacturing and building purposes. At present the strength of longleaf pine is being tested, but later a complete investigation of Indiana hardwoods relative to their strength and the soils best adapted for their growth will be taken up.

L. L. and D. D. Langton, sons of H. A. Langton, head of the Langton Lumber Company of Terre Haute, exporter of hardwoods, have returned from a two months' trip through Europe. They were accompanied by Manager Prager of the export department and while away secured some fine walnut for their gunstock business.

The Interior Hardwood Company of this city has about completed the extensive improvements they have been making during the summer months and are enjoying an unusually heavy business.

The National Hardwood Flooring Company of Indianapolis has moved a few doors from the old location. It is still in the Pembroke Arcade, the change being necessary because of the rapid growth of the business.

Bristol, Va.-Tenn.

According to a statement issued this week by C. Boice, he is not concerned in the failure of the Boice & Grogan Lumber Company, Boston, further than that William B. Woodward of Washington Court House, Ohio, to whom he sold all of his stock in the company, owed him a balance of about \$30,000 on the purchase price. Mr. Boice further states that at the time he retired from the concern which he organized and disposed of his stock, he agreed to allow the company to use his name in a business way for a period of two years.

John J. Rumbarger of the Rumbarger Lumber Company, Philadelphia, is buying lumber in this section and reports business very good.

Emil Guenther, a prominent hardwood dealer and manufacturer of Philadelphia, spent the entire part of last week looking after business interests in Bristol and Johnson county, Tenn.

AN ILLUSTRATED REVIEW OF THE COMMERCIAL, MANUFACTURING, AGRICULTURAL AND SOCIAL
FEATURES OF THE TRADE CENTER OF NORTHERN MICHIGAN.

W. A. B. & C. CO.

INDUSTRIAL CADILLAC

FOREWORD

Hans Andersen once wrote a series of tales which he named, "Bilderbuch ohne Bilder"—a picture book without pictures. The accompanying sketch, in direct antithesis, is intended to be a story told by pictures. It is the story of Cadillac, the enterprising, influential, beautiful and homelike city of northern Michigan, aptly called "the biggest little city in the country." The text employed herein is used simply to emphasize the facts told by the illustrations.

HISTORICAL.

The very name Cadillac is pregnant with historical reminiscence. It is a far cry from the year 1701—when with fifty settlers and fifty soldiers Antoine de la Mothe Cadillac founded Detroit—to the year 1907, when that community has become the metropolis of a great state, and has sent its influence out in all directions, so that even far to northward thrives an enterprising city, of 9,000 inhabitants, which perpetuates his name. An appropriate choice it was, for the noble Frenchman was the first commander of that vast and indefinite region lying north and west of Detroit, known to the early settlers and explorers as Michilimackinac.

The city of Cadillac, in Wexford county, is now about thirty-five years old. In February, 1872, the northern extension of the Grand Rapids and Indiana Railroad was completed as far as the twin lakes in Wexford county and the primitive village of Clam Lake, afterward known as Cadillac, was founded.

At an early date the fine agricultural lands of Wexford county attracted the settler. In September, 1862, B. W. Hall located land in this county lying on the main trail to the Grand Traverse country. The following spring he settled on the lands he had acquired, and others soon followed. In 1865, J. H. Wheeler came from Western New York and the settlers willingly subscribed their labors to help him build a sawmill. Until that time all the houses had been built of logs, the nearest sawmill being that of Hannah, Lay & Co., at Traverse City. The new mill was located on Wheeler's creek, a branch of the Manistee river, one mile north of the present village of Sherman and, difficulty being experienced in building the dam, was not completed until the summer of 1867. It was the first sawmill in Wexford county and was equipped with a mule saw. In later years this old site was occupied by several successive mills, of which two were destroyed by fire. Wheeler's frame house, built in 1867 out of lumber cut by his mill, was the first of its kind in Wexford county.

It was the original intention of the Grand Rapids and Indiana Railway Company to build its lines between Little and Big Clam lakes, but George A. Mitchell, the founder and real father of Cadillac, a sturdy, forceful pioneer lumberman who became owner of a large tract of pine contiguous to the lesser lake, saw that a choice mill and town site lay on its east side, and induced the railroad com-

manufacture of lumber at Cadillac, and their house has continued an important factor up to the present day.

The real inauguration of the lumber industry in Wexford county, however, was in 1872, when, in addition to the heavy timber operations which found an outlet for logs by way of the Manistee river, four sawmills were erected with capacities varying from 25,000 to 75,000 feet daily. These four sawmills were soon cutting 4,000,000 feet of lumber a month. Thus, between the logging operations on the river and the sawmill enterprises in its midst, the village rapidly became an important lumber town. Other mills were soon erected at Haring, Long Lake, Bond's Mills and McCoy's Siding, all in the vicinity. The original

Haynes' planing mill was built in 1872. J. W. Cobbs soon afterwards became associated with W. W. Mitchell in the firm of Cobbs & Mitchell, which house has been incorporated and perpetuated under that name, its interests now being largely held by Mr. Mitchell and Frank J. Cobbs, son of the founder.

Among the other pioneer lumber manufacturers of Cadillac were J. R. Hale, Shackelton & Green, Harris Brothers, McCoy & Ayer, Combs Brothers, and M. J. Bond. As time progressed, these various operators cut out their pine timber and retired from activity in the lumber affairs of the district. The two real pioneer interests

CITY HALL, CADILLAC.

pany to build its line along that shore. The utilitarian reasons that induced him to urge this route were that the prevailing winds were from the West, which would help to float logs across the lake to his mill, and that the gradually rising ground on that side afforded a good location for a town. The lesser of these two pretty lakes is called Lake Cadillac, and the larger and westerly one Lake Mitchell, in honor of the late George A. Mitchell.

In 1871, previous to the advent of the railroad, J. W. Cobbs erected a small mill on the present site of Cadillac, and in 1872 another was erected by Shackelton & Green. In 1878 the latter was purchased by J. Cummer & Son, who became prominently identified with the

remaining are those of Cobbs & Mitchell, Inc., and the Cummers.

Today almost the totality of the splendid white pine and Norway of the Cadillac region is exhausted, and present operators interested almost exclusively in the production of hardwoods and hemlock are Cobbs & Mitchell, Inc.; Mitchell Brothers Company, operating a large mill at Jennings, twelve miles east of Cadillac; Cummer-Diggins Company; Murphy & Diggins; Cadillac Handle Company, and Williams Bros.' Co. Other institutions depending directly on the forest resources of the region are the Cadillac Veneer Company, manufacturers of veneers and panels; Cummer Manufacturing Company, manufacturers of

egg and vegetable crates and ladders; Cadillac Manufacturing Company, makers of heading; the great maple flooring plants of Cobbs & Mitchell, Inc., of the Cummer-Diggins Company, and of Mitchell Brothers Company at Jennings; the Cadillac Chemical Company, with two mammoth plants; the Mitchell-Diggins Iron Company, whose charcoal supply comes from the chemical plants; Haynes Brothers, who conduct a planing mill and manufacture interior finish; the Cadillac Lumber Company, which operates a planing mill and conducts a retail lumber business; and the St. Johns Table Company, which manufactures tables.

In addition to this array of lumber manufacturing enterprises properly belonging to Cadillac, are the institutions largely controlled by A. F. Anderson—one manufacturing lumber at South Boardman, in the vicinity, and the other the Wexford Lumber Company of Buckley; the Cadillac Machine Company, manufacturer of special tools for sawmills, flooring factories and chemical plants, is also closely allied with the lumber industry.

THE CADILLAC OF TODAY.

Cadillac, from a sawmill village of crude shacks set upon cedar posts for foundations, straggling along the shore of a little lake, has become one of the most beautiful, well cared for and progressive cities of the country. It is not exaggeration to state that it is

not only one of the beauty spots of Michigan, but the biggest little city in the United States, as the pictures with which this article is illustrated bear testimony.

A well known local writer has said: "Communities are but the material and visible reflection of their citizenship, be it strong or weak, and the growth and advancement of any city is dependent entirely upon its men and women and their mental and physical equipment; location while helpful is not the essential thing. In the possession of a strong and forceful citizenship from its inception in the primeval forest, Cadillac has been fortunate."

It is indeed a fortunate community in many respects. It is well situated from a climatic viewpoint. There is no excessive heat in summer and the winters are far from rigorous. It is still the center of a large area of uncut timber in the hands of comparatively few owners, which fact insures the continuance of its present status in lumber manufacture for well toward a quarter of a century to come.

Cadillac is progressive and its inhabitants are united in the spirit and work of advancement. Anything that tends toward the good of Cadillac is the immediate and personal business of every citizen. Cadillac takes pride in its homes, its public buildings, its streets, its religious and educational institu-

tions, its morals. Cadillac is hospitable. It welcomes the stranger, be he workingman seeking employment or capitalist desiring to establish a new industry.

The pictures with which this article is illustrated show conclusively the splendid character of the industrial plants with which the city abounds; the beautiful and park-like appearance of its streets; the picturesque features of its surroundings; the charm of its homes; the excellence of its school and church buildings, and the general attractiveness of the entire community. They cannot, however, exhibit the sterling, forceful, enterprising and unselfish character of its citizens. Here is a town absolutely without "knockers"! Every man is for Cadillac first, last, and all the time, seeming to realize that what is good for Cadillac is for his own best interests. There are no petty jealousies in Cadillac. Everyone is willing and anxious that everyone else shall prosper. A commercial failure is almost unknown. The spirit of the town is truly altruistic and as such it has forged to the front in growth as well as in general advancement and commercial importance.

Cadillac is ninety-eight miles north of Grand Rapids, at the junction of the main lines of the Grand Rapids and Indiana and Ann Arbor railways, and from it extend branch lines of the former road to Jennings and Lake City. From Jennings sixty miles of

logging railroad, belonging to Mitchell Brothers Company, extend northeast, and from Cadillac in a northwesterly direction, the logging road of Cummer-Diggins Company, which handles the timber from their holdings as well as from those of Murphy & Diggins. From Boyne Falls, seventy-five miles north of Cadillac, another extensive logging road owned by Cobbs & Mitchell, Inc., penetrates their timber properties in Charlevoix county. During the coming year another logging road will be extended still further north from the main line of the Grand Rapids and Indiana, by the Cadillac Handle Company, to penetrate their Emmet county holdings. Both trunk lines of railroad are used extensively for the transportation of logs to the mills at Cadillac. These two systems, with the connections, form admirable outlets for the manufactured products of the city.

Cadillac has most of the advantages and none of the drawbacks of much larger cities.

Its main street is excellently paved; its residence streets are macadamized, with cement gutters and curbing; its cement sidewalks extend to the very suburbs, and between them and the streets proper are handsome grass plats; it has excellent waterworks, sewerage, electric light system and gas plant. It is the judicial seat of Wexford county and boasts of a fine city hall building, public library, handsome high school, four graded schools, Baptist, Catholic, Congregational, Methodist, Presbyterian, Swedish Lutheran, Swedish Baptist and Swedish Mission churches. There are two banks, both strong financial institutions, a handsome new Y. M. C. A. building in process of construction, a hospital nearly completed, two daily newspapers, and many minor and worthy business enterprises not separately mentioned in this article.

Cadillac is an exceptional city among lumber manufacturing communities in that the greater portion of working men employed

about the several manufacturing plants are owners of their own houses. These homes are homes in fact as well as in name. Almost without exception they are neat frame structures set on stone or concrete foundations, well painted, and attractive both inside and out. They have lawns and gardens and are kept up in the perfection of neatness that prevails throughout the entire city.

Fortunate is Cadillac in its recreation privileges. The twin lakes, Cadillac and Mitchell, afford fine boating and fishing and the numerous small streams within reach of the city are a delight to the fisherman. The lakes with their sandy beaches provide excellent bathing in many places, and the wooded banks make delightful picnic and camping grounds. On one of the beaches of Lake Mitchell many Cadillac citizens annually erect tents and portable houses for residence during the months of July and August. This little community of tent dwellers is known as the "White City."

Panoramic View Part of Lumber Yard, Maple Flooring F

from the Tower of High School Building.

Recently a hundred acres of wooded area on the banks of Lake Cadillac have been acquired by the city and converted into a public park. As time goes on it is more than likely that a great many residents of the cities further south will avail themselves of the natural advantages and resort privileges of these two lakes. In many respects these lakes and the near-by city of Cadillac afford greater advantages to the resorter and pleasure-seeker than any other locality in northern Michigan.

AGRICULTURAL.

The soil of Wexford and contiguous counties is a sand and gravel loam, and the highest quality exists where hardwoods once abounded. The territory immediately surrounding Cadillac and its two lakes originally contained white pine growth and this land is not as desirable for agricultural purposes as that a little further from the city. Thus one riding along the main line of the Grand River

and Indiana railway encounters pine stump land which up to this time has not been very largely placed under tillage. The land south of Cadillac is very fertile, as is also that lying along the Ann Arbor road northwest of the city. In fact, there is considerable variation in soil in its outlying districts.

On the whole, the agricultural possibilities of the lands of Wexford and the counties adjoining it are on a par with those of many sections of Michigan lying north or south. They lend themselves readily to conversion into farms and afford excellent crops. As fast as the region is cleared of its timber it is rapidly being settled by farmers who have purchased anywhere from forty acres to a half section of land at prices varying from \$3 to \$8 an acre, depending on location and quality of soil. They are building homes for themselves and rearing families to follow in their footsteps. The various farm pictures

accompanying this article show conclusively that nearly every variety of farm produce can be grown in this region.

The potato crop yields from 125 to 200 bushels an acre, depending on the year, and the price varies from forty to sixty cents a bushel. Wheat grows to good advantage but does not produce quite as heavy a crop as in sections further south, the average being only from twenty to thirty bushels to the acre. Corn runs about eighty bushels to the acre on an average. Hay flourishes and shows one and a half to two tons to the acre, selling at from \$10 to \$15 a ton. Oats run from forty to sixty bushels to the acre and sell at from thirty-five to fifty cents. It is a splendid vegetable region, well adapted to the growing of berries and small fruit, as well as one of the best apple countries in the entire United States; at this writing orchards throughout the entire section are heavily laden with fruit. Except for potatoes, prac-

ically the entire crop raised by northern Michigan farmers is consumed locally. Thus the farmers receive a much higher price for their commodities than those of most agricultural regions. The surplus potato crop is shipped in large quantities to points south, east and west, and of necessity must stand a freight charge.

One farm pictured herewith is an eighty-acre tract which was purchased by the present owner eleven years ago, with hardwood timber standing thereon. This timber was removed by the original owner the following

winter. Since that time, the present farm has been a standing evidence of what an enterprising man can accomplish in the way of farm building within a period of ten years. The owner has fine house and barn structures, good orchard, fenced and stumpless fields, and good crops. The man started with a capital of \$400 and now owns his farm clear of all debt. This is not an exceptional case, but is

a fair history of every man who has embarked in farming enterprises in this region. Opportunities for investment in stump lands are available every day, for just so fast as the lumbermen clear the timber from their

PEOPLES SAVINGS BANK.

lands they are anxious to dispose of their holdings. The prices at which these lands are sold are extremely reasonable and offer an opportunity to any intelligent farmer to secure a home and independence within a very short time.

CORNER OF CITY PARK.

Here is an excellent land proposition—one that is not duplicated anywhere in the United States. In some instances the settler can pay for his land from the timber left by the lumbermen, besides making money enough to pay household expenses, while clearing it for agricultural purposes. There is a good market for the remaining cord-wood and for such ties and fence-posts as can be secured from the cut-over lands. Good district schools abound throughout the entire region and settlers can have the advantage of higher education for their children by sending them to the most excellent graded and high schools of

GRANITE BLOCK—GENERAL OFFICES A. T. ANDERSON.

Cadillac when they graduate from the country institutions.

The land is well adapted to raising live stock and several large stock farms are already in successful operation in the region. In fact, this section is particularly attractive to the stock raiser as the average annual rainfall is about thirty-six inches, well distributed during the growing season.

HARD MAPLE.

TIMBER OF MICHIGAN.

Cadillac achieved its original reputation as a lumber producing section from the splendid quality of its white pine, which grew in large quantities and in very dense stands in the region of which that city is the center. These magnificent forests have been almost entirely dismantled; such white pine as may be found is the occasional tree interspersed with hardwood growth. The present important timber stand of the region is the hardwoods and hemlock, which still abound, and are held by Cadillac operators to the extent of perhaps 250,000 acres, or enough to keep the several sawmills of that city in active operation for well toward a quarter of a century to come. The white pine growth originally extended in irregular patches over quite a portion of this area also, but the hardwoods and hemlock were considered of very little value in those early years and were not cut at the time the white pine was felled. Involved with the white pine growth was a large quantity of very excellent Norway, which materially contributed to the total lumber output of the district for more than twenty years after it became a lumber producing center. Now Norway pine is also a matter of history.

Today the lumber sawed at Cadillac consists entirely of hemlock, hard maple, gray elm, rock elm, basswood, birch, beech and black ash. Of the total remaining stumpage, perhaps twenty-five per cent is hemlock, and of the remaining portion fully forty per cent is hard maple. Next in importance is the gray elm and following this in regular order are beech, basswood, birch, rock elm and black ash. The average annual output of lumber of the Cadillac district is approximately 125,000,000 feet. Up to this time the region has produced approximately 4,000,000,000 feet and it will therefore be seen that its lumber history is but little more than half completed.

It is universally conceded that the original white pine and Norway growth, upon which the fame of Cadillac was founded, was very high—perhaps as high as that of any other pine producing section of the country, but of still more excellent quality, comparatively speaking, is the hardwood and hemlock growth. A specific description of these varieties of hardwoods will prove interesting because the soil of this region produces timber types that are certainly far superior to similar species growing in any other region. The hard maple is of the very highest quality, and in the following woods operations one sees tree after tree ranging from sixteen to twenty four inches in diameter, in which a silver dollar will cover all the heart defect. The gray elm of the region stands pre-eminent among its kind and no better beech grows anywhere. The remaining rock elm is said by experts to be the best that exists. The basswood is of excellent type, as are all the other woods enumerated.

Hard Maple.*Acer saccharum.*

Unquestionably the highest quality of hard maple growing anywhere is that range of it in the northern portion of the southern peninsula of Michigan, from Cadillac and Gray-

BLACK ASH.

SOFT MAPLE.

CHERRY.

WHITE CEDAR.

General View Sawmill, Lumber Yard, Flooring Factory

ling to the Straits of Mackinac. A large part of this region is covered with forests showing an average of about forty per cent hard maple. Originally interspersed in this growth were white pine, Norway, hemlock and cedar, which have been very largely felled and converted into lumber.

One unfamiliar with the hardwood forests of the North can gain very little idea of the splendid proportions and tall straight trunk of the maple from his knowledge of it in village or field. In the forests of Michigan near Cadillac the tree attains its highest perfection in quality of timber, size and

symmetry often reaching a diameter of three feet and rising sixty feet to the first limb. Mingled with maple growth are gray and rock elm, black ash, basswood and birch.

The distinctive feature of the woods landscape, however, and the real king of the forest, is the hard maple. In the northern

The Big "Electric" Flooring Plant

Chemical Plant Cummer-Diggins Company at Cadillac.

peninsula of Michigan, northern Wisconsin, over the Minnesota line, in northern New York, Vermont, New Hampshire, Pennsylvania, West Virginia, Kentucky and Tennessee, there are scattering stands of this wood, and these constitute about all that remains in this country. The timber of the first named

sections is not so large and free from defects as that in the Cadillac district, but is extremely hard in texture and valuable for many of the uses to which maple is placed. The wood growing in the last-named states will not bear any comparison with the Michigan product.

The color of the heartwood is brownish, and the sapwood, which predominates, is much lighter, almost ivory white. The structure is compact, the grain close, occasionally curly or birdseye. The wood is tough, heavy, hard, strong, will take a high polish, wears evenly and is very durable when not exposed to alternating dryness and dampness.

Agricultural Views about Cadillac.

CREAMERY NEAR CADILLAC.

Its chief uses are for flooring, agricultural implements, furniture, machinery frames, wood type, pegs, interior finish, vehicles and veneers. When green, maple has a strength greater than that of hickory, but when seasoned, and especially after being exposed to the weather, it fractures easily under a sudden jar, with a short break, so that in important structural qualities it is somewhat deficient. The tree grows slowly and those even twenty-four inches in diameter are perhaps 250 years old.

Hard maple as a material for lumber is a comparatively new wood, and only within a few years has it received serious consideration from that standpoint. Fully half the log product is now sawed into inch lumber and converted into tongued and grooved flooring, used extensively for public and office buildings, warehouses, stores and residences. The next largest quantity of maple produced is sawed into thick planks and used by agricultural machinery makers for framework, furniture and shoe lasts. That percentage of the wood which shows a peculiar turn of the grain, or the birdseye effect, giving it a beautiful figure, is usually sold to veneer makers, who reduce it to thin layers for the veneering of furniture and for interior woodwork.

Maple has to be cured with the greatest care to avoid staining and thus disfiguring its fine ivory color. It is, therefore, that of late a great deal of pure white maple as it comes from the log is seasoned on end, in sheds built for that purpose, so that no sticker marks may by any chance show upon the surface of the wood when it is dry. Maple is very susceptible to the chemical action of the sun and often "yellows" when exposed. The wood has become the most important product of the northern hardwood forests.

Gray Elm.

Ulmus Americana.

The American or gray elm is known in some parts of the country as swamp elm and rock elm, but it is not the true rock elm, which is discussed in another sketch.

The tree is graceful and wide-spreading, from seventy-five to one hundred and twenty-five feet high, with a trunk about three feet in diameter and often free from branches to a height of sixty feet. The bark is thick and gray, divided by deep fissures into broad ridges. The wood is heavy, hard, strong and tough. It is coarse-grained, with a light brown heartwood and sapwood thick and somewhat lighter. The timber is very durable when in contact with water or earth. A cubic foot weighs about forty pounds.

This wood is the softest remaining in Michigan, with the exception of basswood. Deals four to six inches thick are often manufactured entirely free from knots and shake. The wood has not the strength of rock elm, but a very high type of lumber is obtained from it and used extensively by furniture makers, manufacturers of billiard tables, bar fixtures, etc.

The highest type of gray elm is found in the northern portion of the lower peninsula of Michigan. The trees there are large and tall and the wood is soft and smooth, while in some sections the grain is inclined to be tough and stringy, and the lumber will not bring nearly so good a market price. In the region noted the trees grow from two to six feet in diameter at the butt and from fifty to seventy-five feet in height to the crotch, with branches often so large that each produces a log.

The grain of gray elm is similar to that of black ash, but not so pronounced, and it has much more strength. The wood makes a very satisfactory interior finish and can be toned to any desired color not lighter than the natural tint of the wood, which is about like that of white oak.

A tally of more than half a million feet of gray elm lumber recently manufactured by a Michigan house showed twenty-nine per cent of firsts and seconds, forty-one per cent of Nos. 1 and 2 common and thirty per cent of No. 3 common. A division of Nos. 1 and 2 common showed sixty per cent of the former and forty per cent of the latter. In the past gray elm has not met with the appreciation its high qualities warrant. It can be produced in good widths, has a large proportion of high grades and as a substitute for certain woods is very satisfactory for many purposes. It is the second most important of the hardwoods of the Cadillac district.

Beech.

Fagus Americana.

In full growth this beautiful tree is round-topped, with wide-spreading branches, and

APPLE ORCHARD ON OUTSKIRTS OF CADILLAC.

HEINZ SALTING STATION NEAR CADILLAC.

shows a normal altitude of about sixty feet. In its forest form it often attains a height of from one hundred and twenty to one hundred and forty feet, with smooth rounded bole, as symmetrical as the pillar of a cathedral, and a diameter of from two to four feet. The bark is light gray and remarkably smooth. The color of the heartwood is reddish, the sapwood nearly white. Beech timber is close-grained, hard, strong and tough, but not durable when exposed to the weather. It takes a fine polish, but has to be seasoned with care to avoid checking. Representative uses of the wood are for tool handles, the interior work of fine furniture, wagon making, inside finish and flooring. Abroad it is used quite extensively in carpentry work. The weight of a cubic foot is about forty-two pounds. Beech wood is deficient in elasticity and is somewhat inclined to warp and crack.

The tree grows in a mixed forest, and in its northern range is commonly found interspersed with hard maple, birch, basswood, elm, ash and hemlock. It is only within the last ten years that beech has been considered an important commercial wood; previously its consumption was entirely confined to the charcoal furnace and domestic purposes. Of late the merits of the wood have been exploited and appreciated, with the result that it now constitutes a large element of hardwood manufacture.

Many millions of feet are being converted into flooring and the "pure red" product is highly esteemed for ornamental floors in modern homes. While possibly it may not wear as well as maple, it stays in place beautifully, and nearly all the large flooring factories of the North whose principal output is maple have a side line of beech flooring. Another great and growing use of the wood is for interior woodwork in cabinet furniture. It is especially desirable for drawer sides, ends and bottoms, for backing, as a base for veneer work. Its uses are rapidly widening, as the price is relatively low.

The beech is one of the truly beautiful trees of the forest, and in the eyes of many is as much to be admired as the American elm or maple. Covered with blossoms in early spring, it is a splendid sight, and its perfect leaves are seldom eaten or spotted by insects. Even in winter, after they have fallen, its bark has a particularly sparkling appearance and its massive head may be seen to advantage.

General View from Lake Cadillac of

Birch.*Betula lenta.*

This tree is known as black birch, cherry birch and sweet birch, and is one of the best known and most highly prized natives of the northern forests. It is round, with slender branches and ranges from thirty to ninety feet in height. Its bark is dark brown and smooth when young, but rough as the tree grows old. The diameter is from two to four feet in forest growth. The heartwood is dark brown tinged with red, while the sap-

wood has a yellow tone. The grain is close, the structure compact, the wood heavy, strong and hard, taking stain and high polish very readily. Representative uses of birch are for furniture, interior finish, door making, veneer making, woodenware and flooring. A cubic foot weighs about forty-seven pounds.

The northern portion of the lower peninsula of Michigan produces a high grade of birch and northern flooring makers have taken it up as a standard material. Its fine compact grain and rich color make it very desir-

able for alternating with maple in fancy floors. Today the demand for selected, strictly red birch flooring is in excess of the supply, and such flooring commands a higher price than any other made in the factories.

Because of the fine physical characteristics and color of birch, and because it lends itself readily to staining in imitation of mahogany, it has become a great favorite with the furniture maker. Many a "mahogany" set of the present day is made largely of birch. However, on account of its greater strength

Saw Mill of Murphy & Diggins.

Corner of Lumber Yard, Murphy & Diggins.

Lumber Yard of Murphy & Diggins.

it is used extensively with genuine mahogany for those parts of furniture which receive the greatest strain. For interior finish it is becoming very popular in this country and abroad. Its rich cheerful color and ability to hold finish, as well as its durability, make it a favorite for doors and trim. A large portion of birch growth shows a convolution of grain which when rotary cut by the veneer machine produces a charming figure and effect. Both plain and curly wood are favorite materials with veneer makers and are

growing in popularity as their merits and beauty become more generally recognized.

The wood has always been comparatively low-priced, but its relative value should have warranted a much higher scale. There is a certain sheen to birch that is possessed by few woods; under a smooth and perfect finish it has a sparkling luster due to the grain and linings of the pores. Oil similar to that of wintergreen is distilled from the bark, limbs and leaves, and is quite an important article of commerce.

Basswood.

Tilia Americana.

Basswood is known indiscriminately as American linden and whitewood, the latter being the name applied to it in the English market. The tree ranges from eighty to one hundred and twenty feet in height and from two to eight feet in diameter at the stump. The bark is dark brown and deeply ridged. The average weight of the wood is about thirty pounds per cubic foot.

HOTEL AT SPRINGVALE.

Basswood is one of the softest and most easily worked commercial hardwoods. The grain is fine and even and the surface lustrous. The uses of the wood are many and varied. It is employed for beveled siding, house finish, moldings, woodenware, cheap furniture, drawers, backing of high-class fur-

DINNER AT ONE OF THE COBBS & MITCHELL CAMPS.

niture, panels and bodies of vehicles, boxes, turnery, paper pulp and boards, and is very largely employed of late for rotary cut veneers, and is used not only as a base upon which to veneer higher class hardwoods, but also as individual pieces, or in three-ply or

five-ply for many purposes. The wood is growing in the estimation of foreign buyers and is largely exported in the form of logs, occasionally in boards and planks. The color of basswood is ecru-white and remarkably uniform. The highest type grows in northern Michigan and Wisconsin. There it seems to attain absolute perfection. The proportion of clear lumber is remarkably high, the wood is usually free from blemish and defects and when properly seasoned it goes upon the market perfect in color and physical qualities.

Rock Elm.

Ulmus racemosa.

In general appearance this tree varies from other members of the elm family in having shaggy, stout limbs like some of the oaks, and less of the graceful but stately aspect of other species. It grows from seventy to ninety feet in height and from two to three feet in diameter, reaching its highest development in southern Ontario and Michigan. It will flourish either on low ground where there is heavy clay soil or on gravelly ridges and high bluffs. It is a very slow-growing tree, and this fact, combined with utter neglect in replanting is threatening it with extinction, which is exceedingly unfortunate. A recent report made by the Michigan Hardwood Manufacturers' Association shows that there was a total of less than 1,000,000 feet of the wood in the hands of the manufacturers of that state on July 1, 1907, of which quantity 600,000 feet were sold. The stock on hand in Wisconsin was probably considerably less than the quantity in Michigan.

Rock elm thrives best in a mixed forest,

CORNER OF BUNK-HOUSE AT ONE OF THE COBBS & MITCHELL CAMPS.

and the finest specimens of the tree are found among hemlock, maple and birch growth—never in a pure stand.

The heartwood is light brown, having a reddish cast in many cases, while the sapwood is yellowish white, and the two are not particularly well defined. The weight is about

TRAINLOAD OF LOGS, COBBS & MITCHELL OPERATIONS.

sidered the best timber of all the elm family, for its elasticity and toughness make it well adapted to heavy agricultural implement work, wheel stocks, hames, railway ties, sills, bridge timbers and axe handles.

It is especially esteemed in shipbuilding, and its value has always been greatly appreciated by foreign boatbuilders who have, to a very large extent, exhausted the best growth.

Black Ash.

Fraxinus nigra.

Black ash is of the olive family. In height it ranges from thirty to one hundred feet. The tree is found farther north than any other of the American ashes. It is essentially a swamp growth, as it reaches its highest development in damp soil. Even in the ranges of growth known as black ash sections this tree rarely constitutes ten per cent of the forest, and usually its distribution is very scattering. The species is becoming scarce and its complete extinction in the United States as an original forest growth is fast approaching.

As an instance of its intolerance of other forest trees a white pine and black ash were recently seen struggling for existence side by side, and while the ash thrived the entire foliage of the pine nearest it was blasted as though stricken with fire. The pine, apparently in an effort to escape the proximity, had leaned away from its neighbor to an angle of fully fifteen degrees, but still it had suffered from the manifest poison exhaled by the ash.

CLEAR THICK GRAY
YARDS, SOUTH ISAWMILL AND CORNE
WENFORD LUMBER CO

A. F. Anderson at South Boardman.

A. F. ANDERSON
at South Boardman.

The chief sources of supply for black ash are Canada, Michigan and Wisconsin. The wood resembles that of oak in that there are bands of open pores in both, but ash is coarser, less attractive, easier to work, tough, elastic and somewhat lighter than oak. It seasons well but does not last when exposed to the weather. The light brownish wood has a beautiful grain and is heavy, although not very strong. The wood separates easily into layers, and one feature not frequently encountered is excrescences known as burls; their distorted and involved grain causes them to be highly prized for veneers. In hardness black ash compares with beech and chestnut. It is used generally in the furniture and refrigerator trade, for interior finish, barrel hoops, splint baskets and chair bottoms.

Hemlock.

Tsuga Canadensis.

Hemlock ranges in height from sixty to one hundred feet; the trunk is straight and symmetrical, usually two to three feet in diameter, but sometimes much larger. It thrives best on dry, rocky ridges, generally facing north. Under these conditions it often forms dense forests in which no other wood is found. Less frequently hemlock is found on the border of swamps in rich deep soil.

The bark becomes rough and deeply furrowed with age; it is rich in tannin and is the principal material used in the northern states for tanning leather. In the White Mountains and parts of Michigan and Wisconsin many trees have been destroyed solely for this pur-

pose, causing great waste of timber. The wood is coarse, brittle and perishable. The heartwood is reddish brown, with darker sapwood; it weighs twenty-six pounds to the cubic foot.

Hemlock is largely made into coarse lumber and used for outside work, railway ties, joists, rafters, sheathing, plank walks, lath, etc. It is rarely employed for inside finish, owing to its brittle and splintery character. However, clean boards made into panels or similar work and finished in the natural color present a very handsome appearance, owing to the peculiar pinkish tint of the wood, ripening and improving with age.

With the growing scarcity of white and Norway pine, hemlock has become the natural substitute for these woods for many purposes, notably for framing and sheathing ordinary structures. Michigan is second only to Pennsylvania in volume of production. The last fifteen years have covered the era of hemlock production and consumption in the United States, and the output has gradually increased from an insignificant amount to a vast quantity. Hemlock areas are becoming very limited, and it will not be many years before the wood is as scarce as white and Norway pine. The demand for the lumber has grown so rapidly that the very coarsest of it is now sold at a good figure above stumpage and milling cost.

LUMBER PRODUCTION.

As previously noted, the white and Norway pine production of the Cadillac section is well nigh at an end, and the remaining growth of the country consists chiefly of hemlock, maple, beech, basswood, gray elm and birch. The hemlock is manufactured into dimension material, sheathing and finishing lumber and is distributed throughout the country, very largely to the retail lumber yard trade. The hardwood business is entirely distinct in its character. While most of the plants manufacture various kinds of hardwood into lumber, for sale both to wholesale distributors and to wholesale consumers, makers of flooring, interior finish, furniture, etc., several of the larger concerns manufacture maple lumber with specific reference to

TWO OLD CRONIES AT A CUMMER-DIGGINS COMPANY CAMP.

the requirements of their own large flooring factories. Other houses which do not produce flooring make a specialty of winter-sawing maple, and end-piling it under sheds to produce the white maple stock employed largely in furniture making.

It can be said of the manufacturers of the Cadillac district that they are experts in both lumber and flooring production. Pri-

marily, initial expense is not considered in the building of railroads, construction of sawmills and factories. Everything is done after the best plans that brains can devise and money execute, with the natural result that the manufactured product is of the very highest type. The methods employed insure the highest efficiency, together with a minimum of cost. Notwithstanding the great expense entailed in original plants, it is doubtful if any community in the United States produces better lumber or flooring at less expense.

Economic and systematic methods are pursued from the forest to the loaded car. The management of woodwork entails not only taking from the forest, but also the utilization of the woods' waste, which either in the woods or at the mills is converted into "chemical wood" and eventually turned over to the Cadillac Chemical Company, which operates two retort and distillation plants, one at Cadillac and one at Jennings. The wood alcohol and acetate of lime produced by this company go very largely into the export trade, while most of the charcoal is sold to the Mitchell-Diggins Iron Company, which operates a blast furnace at Cadillac for the production of Lake Superior charcoal pig iron. Thus the forest refuse is carefully utilized.

HARDWOOD FLOORING.

It is well known that Cadillac is the chief manufacturing center of maple flooring, and incidentally it produces a considerable quantity of beech and birch flooring. Two large institutions are engaged in this industry at Cadillac and one at Jennings.

The character of the maple timber growing in the Cadillac region has been fully discussed in a previous section of this article. When converted into lumber by the modern methods pursued by local manufacturers, it constitutes the basis of the extensive flooring industry of the district.

It is only within the past fifteen years that maple has received serious consideration as a lumber product, and it is only within that length of time that users of hardwoods have realized the intrinsic merits of the wood.

FELLING A MAPLE TREE. MITCHELL BROS. COMPANY.

The most remarkable development in the use of hard maple has been in flooring production. Some fifteen years ago it was conceded that hard maple would make a very desirable flooring material, and a number of practical lumbermen undertook its conversion into the dressed and matched article. It was found that many difficulties lay in the way. Preservation of the harmonious tone of the wood required that the lumber should either be manufactured during the winter season, or that great care be taken if seasoned during warm weather. It was found that it required many months of thorough air-drying and supplementary kiln-drying. When this process had been satisfactorily mastered, it was discovered that there was no machinery in existence capable of working so hard, dense and refractory a wood into perfect flooring. By slow degrees, with the assistance of the best woodworking machinery geniuses in the country, machines of more than double the strength of the old type have been evolved, until today apparatus is built that will stand the tremendous strain necessary to produce accurately made maple flooring. Gradual evolution in the manufacture of maple flooring has brought many new ideas into practice as the years have gone by, and today Cadillac is the most important producing market for this material, making maple flooring that is accurately matched, as well as end-matched, hollow-backed, smoothly finished, polished and bored for blind nailing.

Maple flooring is manufactured largely into three universal widths of face, 2, 2 $\frac{1}{4}$ and 3 $\frac{1}{4}$ inch, from strips $\frac{3}{4}$ of an inch wider

CROSS CUTTING A MAPLE. MITCHELL BROTHERS COMPANY.

than the face indicates, to provide for jointing and waste. It is made by regular six-inch gradations, in lengths from two feet up to sixteen feet. It is made in three qualities—"clear," which has a face free from all defects; "No. 1," which admits of slight imperfections in both material and dressing, but must lay without waste; and "factory," which must be of such character as to form a good, serviceable floor with slight cutting out of defects. Therefore, it will be seen that with all these grades, lengths and widths of flooring going forward in a big factory at one time, the work involved in assorting and arranging the stock for shipping is not inconsiderable. Sections of sorting racks are shown among the various pictures. There is an alley of them for each width of flooring, and a space in each rack for particular lengths and grades.

It is worthy of note that within a little more than a dozen years maple has become the standard flooring material for the majority of large offices, school houses, residences and factories throughout the country. Its light and cheerful color, the readiness and economy with which it can be laid, and its ability to resist wear have popularized it to such an extent that the demand is increasing every day.

COBBS & MITCHELL, INCORPORATED.

The largest manufacturing institution at Cadillac is that of Cobbs & Mitchell, Inc. Their timber involves 32,000 acres in Charlevoix and Cheboygan counties. From Boyne Falls, seventy-seven miles north of Cadillac, the company has built a railroad running in a northeasterly direction, and about evenly dividing its immense timber holdings. The road is of easy grade and follows a wide valley nearly its entire distance; the land is rolling and there are no abrupt hills. On each side of this main line, spurs are projected a mile or so apart, and penetrating the great forest. It is estimated that eventually nearly 100 miles of railroad will be necessary to reach all the timber on the tract, and while railroad building is comparatively easy in this section, the total cost will be formidable.

Near the center of this tract has been located the executive headquarters of the woods operations, the little settlement being known as Springvale. Here is a large general merchandise institution conducted by Cobbs & Mitchell, Inc. It is a big building, having a frontage of fifty-four feet and depth of 160 feet, and is two stories in height, with a large cellar under the entire structure. In the rear is a hay shed 180 feet long. The range of merchandise covered in this store is surprising; everything from agricultural implements to pins and needles is sold. It is a veritable department store in the back woods, and contains all the necessities and many of the luxuries desired by the local inhabitant or the woods worker. The list of departments comprises drugs, hardware, carpets, bedding, clothing,

SKIDDING. MITCHELL BROTHERS' OPERATIONS.

boots and shoes, general dry goods and notions, farm machinery, etc. It is heated by steam and lighted by gas. The store is located about fifteen miles east of the city of Petoskey, in the middle of a forest, but it does an annual business of about \$100,000. This, however, is not astonishing, when it is considered that Cobbs & Mitchell, Inc., offer at this establishment a market for everything the farmers of that section wish to sell—eggs, cedar ties, logs, hay, vegetables, grain of all varieties, and they can buy goods at reasonable prices.

Across the road from the store, the company has constructed a sixteen-room tavern, which is as good a country hotel as can be found. It is steam-heated, lighted by gas and finished in gray elm, with hard maple floors. The bedrooms are supplied with excellent furniture and rugs. Near the hotel is a little park which has been reserved from logging operations, and in the summer time it is filled with flower beds and shade trees.

As before noted, the woods operations of Cobbs & Mitchell, Inc., are model in character. The camps are comfortable and cleanly. The men are provided with good clean beds and 7 $\frac{1}{2}$ -pound regulation army blankets. The beds have springs and mattresses, and sheets and pillow cases which are washed once a week. A washerwoman is one of the regular employees of every camp. Each man is assessed eighty cents a month to have his clothes kept thoroughly laundered. No vermin are found in any of the camps, as at regular intervals all bunk shanties, cook houses, and other buildings

CORNER OF A BUNK-HOUSE. MITCHELL BROTHERS' OPERATIONS.

General View Williams Brothers Company Sawmill, Las

LAST BLOCK AND TEN-PIN PRODUCT OF FACTORY.

are thoroughly fumigated with steam jets from the locomotives. Above all, the men are well fed. The bill of fare at one of these camps is far better than the traveler will find at the average \$2 a day hotel.

Logging operations are carried on the year around. The logs are loaded upon standard flat cars with the aid of McGiffert log loaders, as fast as they are skidded out to the

tracks, and are promptly manufactured into lumber after arriving at Cadillac; thus no logs are left in the woods during warm weather, to rot and stain. One of the most interesting and economic appliances used in these woods operations is the McGiffert log loader, of which the company employs two. An average load of logs, as depicted in the accompanying illustration, may be loaded

within ten minutes. The machine propels itself on its own wheels, disposes of the loaded cars, pulls other empties underneath its own framework, and spots them for loading.

At Boyne Falls, Cobbs & Mitchell, Inc., maintain a roundhouse and repair shop, where all the railroad machinery and logging appliances are kept in repair. At Cadillac, as the pictures show, the company operates two band mills. The maple logs are manufactured at mill No. 1; the hemlock and minor quantities of hardwood at mill No. 2. This lumber is all sold to the jobbing trade, retail yards, or wholesale consuming element, save the maple, which is very largely retained for the company's big flooring factory. The model character of these mills and the manufacturing methods employed are well set forth in the illustra-

tions.

The officers of Cobbs & Mitchell, Inc., are W. W. Mitchell, president and treasurer; F. J. Cobbs, vice president and secretary. Henry Ballou is superintendent of the company's operations and M. E. Thomas is sales manager.

"ELECTRIC" FLOORING.

One of the great maple flooring plants of this section is that of Cobbs & Mitchell, Inc., at Cadillac, producers of the "Electric" brand. This plant covers a ground area of nearly 200 by 600 feet, and is two stories in height. Every detail of construction and equipment has been attended to with a view to long years of hard service, and is up-to-date in every respect. A big battery of boilers, with the fuel obtained from the refuse of the plant, furnishes the

SLEIGHLOADS OF MAPLE LOGS 2529 AND 2626 FEET RESPECTIVELY.

steam power. A fine Corliss engine drives the main shaft and the eight flooring machines, while a giant electric generator furnishes the power for all the minor machinery and incidentally supplies the lighting. The pictures accompanying this story show

the details of maple flooring manufacture as carried on here. One picture exhibits the air-dried maple lumber at the kilns. This lumber was open cross-piled for a full year before being kiln-dried. Kiln trucks are loaded from an elevator, and as fast as

loaded are gradually dropped and kept in line with the truck loads of lumber coming from the yards.

The dry kilns of this company have been a special care of the management; they are the most modern to be had and accomplish the very acme of good drying. After the lumber is thoroughly dried, it is removed from the delivery end of the kiln and allowed to cool. Another elevator lifts the truck loads of kiln dried stock to the level of the transfer tables, which convey it to the various band-edgers and gang-rip saws that reduce it to strips, and joint it with accuracy.

The chief machines employed for manufacturing flooring were built by the American Woodworking Machinery Company and are eight in number. They are the largest and strongest ever made for this purpose. They not only surface the face of the flooring but hollow-back it and tongue and groove it. A boring machine is attached to each one of these flooring machines, which drives a hole for blind nailing every four inches, the length of the piece. As the strips of flooring are delivered from these machines, they pass across saw-tables where defects are cut out, and the flooring is cross-cut in lengths from two feet up. The pieces

of flooring drop upon endless chains and are carried to the Whitney scraping machine. This machine removes a thin shaving from the surface of the flooring by means of a fixed knife, eliminates the marks of the rotary-cutters, and leaves the surface absolutely smooth and perfect. The next and last process consists in end-matching, a tongue being put on one end and a groove on the opposite end of each piece. This process enables the user to employ miscellaneous lengths of flooring and even make a floor entirely of short pieces equal to one made exclusively of long ones.

Several views are herewith given, showing the racks where the various grades and widths of flooring are assorted before bundling, into packages consisting of six pieces each. Other pictures show the great warehouses which will accommodate nearly 3,000,000 feet of the finished product at one time. Great care is exercised in loading the flooring into cars without exposing it to dampness. Thus the possibility of any bad atmospheric conditions affecting in any way the quality of the product is precluded.

CUMMER-DIGGINS COMPANY.

One of the foremost lumber and flooring manufacturing houses of Cadillac is that of Cummer-Diggins Company. The history of this house dates back to the very beginning of lumber operations in the district. It was founded by the late Jacob Cummer and

his son, W. W. Cummer, and has passed through various changes of name, being known from time to time as the Cummer Lumber Company; Blodgett, Cummer & Diggins; Cummer, Diggins & Co., and now as the Cummer-Diggins Company. Of this company the late D. F. Diggins was president; W. L. Saunders is vice president and general manager; W. W. Cummer, treasurer, and F. A. Diggins, secretary and assistant treasurer.

For many years this house was interested exclusively in the manufacture of white and Norway pine, but before their pine holdings were exhausted they secured a large area of hardwood and hemlock timber lands lying northwest of the city, largely in Wexford county. This timber possesses prime physical characteristics, as the several specimen pictures of timber growth will amply testify. The company has some forty miles of main line and branch railroad from Cadillac into its timber properties to transport logs to its Cadillac mills. The woods operations are models of their kind, and every detail of the work is carried on with systematic accuracy and economy. Cummer-Diggins Company also transports the logs of

FOLDING FRUIT AND VEGETABLE CRATE MADE BY CUMMER MANUFACTURING COMPANY.

SAME CRATE COLLAPSED FOR SHIPMENT OR STORAGE

FAMOUS "HUMPTY-DUMPTY" FOLDING EGG CRATE MADE BY CUMMER MANUFACTURING COMPANY.

TRAIN OF CHEMICAL WOOD AT PLANT NO. 2, CADILLAC CHEMICAL COMPANY.

Murphy & Diggins, who have a considerable quantity of timber adjoining their own, to Cadillac. McGiffert loaders and skidders are employed in their woods work, and these machines are handled with accuracy and dispatch.

The camps of this company are particularly attractive. They are perhaps the only camp buildings in the United States that are painted both inside and out. The men's sleeping quarters are provided with triple deck iron bedsteads, and are neat and comfortable; the surroundings are pleasant, the cooks high-class and the food provided of exceptional excellence.

The company's sawmill at Cadillac is one of the largest plants in that city. Close by is its big chemical plant, which is provided with wood from their timber holdings and sawmill.

This company also has a large hardwood flooring plant, the details of which are very similar to those of the Cobbs & Mitchell, Inc., institution, described elsewhere. Its output is equal to any produced in the United States. While Cummer-Diggins Company manufactures a considerable quantity of hemlock lumber, its chief output is high-class hardwoods. The company is the owner of some 30,000 acres of choice timber land, enough to keep its big plants in operation for more than twenty years.

MITCHELL BROTHERS COMPANY.

One of the chief Cadillac houses has its big manufacturing plant located at Jennings, the terminus of a branch of the Grand Rapids and Indiana Railroad, twelve miles east of the city. This pretty little manufacturing town has a population of about 1,200 and is a model sawmill village. It is located on the bank of a lake which affords storage for logs. Jennings is practically owned by Mitchell Brothers Company. This concern conducts the great general merchandise establishment there and owns the larger number of houses, all of which are tidy, well painted structures.

The company's plant is the largest one in this district. Its equipment consists of one double cutting band mill, two single band mills and a band resaw, with a wood mill for cutting chemical wood, all within one structure. The power for this plant and for the neighboring Cadillac Chemical Company is supplied by six immense Wickes Brothers' vertical tubular boilers and a great Allis-Chalmers engine. Recently the company's sawmill was entirely reconstructed so that it now has a practically new outfit. The chemical plant is also new, and is the second of the big plants belonging to the Cadillac Chemical Company.

In addition to the sawmill and chemical plants at Jennings there is located the im-

CHARCOAL AS IT COMES FROM COOLERS, PLANT NO. 2, CADILLAC CHEMICAL COMPANY.

mense flooring factory of Mitchell Brothers Company, which is operated on the same general lines as the plant of Cobbs & Mitchell, Inc. Mitchell Brothers Company is a large producer of winter-sawed, end piled white maple lumber; a picture of the storage sheds is shown. The various features of Jennings and its manufacturing enterprises are fully illustrated in connection with this article.

The timber holdings of Mitchell Brothers Company are located from twenty to forty miles northeast of Jennings, in Missaukee county, and are reached by the Jennings & Northeastern railroad, a splendidly built narrow-gauge road some sixty miles in length. They correspond very closely in character with those of Cummer-Diggins Company, and Cobbs & Mitchell, Inc., being a mixed hemlock and hardwood growth of the very highest type. They consist of about 25,000 acres—enough to keep their plants running for fully a quarter of a century. The company employs direct connected locomotives on its main track, to pull its loaded trains of logs into Jennings, and on its woods spurs in making up these trains. McGiffert log loaders are employed in the woods work. Several of the pictures show the character of Mitchell Brothers' timber and woods operations. The company's camps are well maintained, like others in

WOOD YARD CADILLAC CHEMICAL COMPANY, PLANT NO. 1.

PLANT NO. 1 CADILLAC CHEMICAL COMPANY

this district. Camp 22, here pictured, is one of the best of its kind in the country. Cleanliness and neatness prevail in every structure and surroundings. The men are well and comfortably housed and fed.

The officers of Mitchell Brothers Company are W. W. Mitchell, president and treasurer; C. T. Mitchell, vice president; E. Fitzgerald, secretary and general manager. M. E. Thomas is sales manager of this company also.

MURPHY & DIGGINS.

One of the best-known lumber manufacturing houses in the state is that of Murphy & Diggins. This house has extensive timber holdings contiguous to those of the Cummer-Diggins Company in Wexford county, and conducts its logging operations in practically the same way as do the other large operators of the Cadillac district. The logs are transported to their Cadillac mill over the railroad of the Cummer-Diggins Company. This firm manufactures hardwood

a boot and shoe merchant at Cadillac, but became convinced that timber and lumber operations would offer him a wider field, so disposed of his business and commenced buying timber. He started in a comparatively small way, and year by year increased his timber holdings until he is now one of the important operators of the state. His band sawmill at South Boardman was erected in 1902, and in 1905 he added a band resaw and planing mill. He has since built a railroad into his timber properties, on which he employs several locomotives. In his woods work he skids and loads with steam, using the McGiffert system.

In 1906 Mr. Anderson organized the Wexford Lumber Company which owns a circular mill at Buckley, and about 30,000,000 feet of hardwood timber in that vicinity. Recently he purchased a half interest in 700,000,000 feet of fir and cedar timber in Whatcom county, Washington, which he will eventually manufacture.

company specializes in birdseye maple and basswood. In its panel factory it makes a great variety of laminated work for the furniture, car, piano and other trades. The several pictures accompanying this article give a general idea of the plant, with its surrounding dry kilns, storage sheds and warehouses, and the interior views depict the method of producing veneers and making panels.

The officers of the company are H. W. Ingersoll, of Elyria, Ohio, president; E. F. Sawyer, vice president; and E. W. Benjamin, secretary and treasurer. Charles Thompson is the general manager and practical veneer manufacturer of the institution.

CADILLAC HANDLE COMPANY.

Another of Cadillac's great manufacturing plants is that of the Cadillac Handle Company, a combined sawmill and handle factory, which is under the general direction of A. W. Newark. This company has extensive timber holdings in Emmet county

FURNACE MITCHELL-DIGGINS IRON COMPANY, CADILLAC.

MAKING CAST AT NIGHT, MITCHELL-DIGGINS IRON COMPANY.

and hemlock lumber and is still producing some white pine. The pictures show that the sawmill enterprise and lumber operations are far above the ordinary, both in equipment and extent.

The house of Murphy & Diggins is made up of Joseph Murphy and Fred A. Diggins. Mr. Diggins is the efficient president of the Michigan Hardwood Manufacturers' Association, and secretary and assistant treasurer of the Cummer-Diggins Company.

OPERATIONS OF A. F. ANDERSON AND THE WEXFORD LUMBER COMPANY.

One of the foremost lumber operators of Cadillac is Aaron Frederick Anderson. Mr. Anderson's enterprises are two in number: one conducted under his name at South Boardman, thirty-two miles north of Cadillac, with timber holdings lying southeast of that town; the second, known as the Wexford Lumber Company, with seat of mill operations at Buckley, on the line of the Manistee and Northeastern Railroad, some thirty-five miles northwest of Cadillac.

Mr. Anderson entered the lumber business as late as 1901, and has been eminently successful in his venture. He was originally

The specialty of the Anderson houses is the production of winter-sawed, end-piled under sheds white maple lumber. Mr. Anderson probably has more shed capacity and produces more strictly white maple than all the other manufacturers in Michigan combined. He has an estimated lumber cut of 45,000,000 feet remaining at South Boardman. He is a tireless worker and has indomitable pluck, through which he has forged to the front within a few years.

The illustrations accompanying this article depict more fully than the text Mr. Anderson's timber holdings and methods of operation. Associated with Mr. Anderson in the Wexford Lumber Company, of which he is president, are Joseph S. Campbell, vice president, and William P. Gustine, secretary and treasurer. The business of both the Anderson houses is conducted from general offices in the Granite building, at Cadillac.

CADILLAC VENEER COMPANY.

An important Cadillac institution is that of the Cadillac Veneer Company, which operates a modern veneer-cutting institution, as well as a panel factory. The principal woods used in this institution, all manufactured by the rotary process, are hard maple, birch, elm, ash and basswood. The

and others in the vicinity of Cadillac. The logs come in over the Ann Arbor and Grand Rapids and Indiana Railways. About 20,000 feet of lumber and about 25,000 broom handles are produced daily. The institution is well equipped and splendidly organized and has the reputation of turning out a very high-class product.

The process of broom handle manufacture is very interesting. The logs are flitched on the sawmill and by specially designed machinery cut to broom handle dimension stock and turned by automatic lathes which work with great rapidity. By the aid of carriers, the green handles are forwarded to rotating steam heated rattlers which both season the pieces and polish them at one operation. The handles are kept in these perforated cylinders for twenty-four hours, when they are dumped out upon trucks and sorted and bundled for shipment.

The timber owned by the Cadillac Handle Company consists of the usual variety of northern hardwoods and hemlock, and as only high-class, straight-grained maple and beech timber is used in the manufacture of handles, the residue and all other varieties of timber are manufactured into lumber. The company has one of the best appointed lumber yards in this district and the stock

is manufactured and assorted with the greatest accuracy. In addition to lumber, the company produces a considerable quantity of dimension stock which is sold to the furniture and kindred trades.

The officers of this company are W. W. Mitchell, president; F. J. Cobbs, vice president and treasurer; A. W. Newark, secretary.

CUMMER MANUFACTURING COMPANY.

In 1894 the Cummer Manufacturing Company began in a small way to make Cummer patent folding crates for fruit and vegetables, and the following year added the "Humpty Dumpty" egg carriers.

Its goods have steadily grown in favor with growers and shippers of fruit and produce since they were first put upon the market. This year 1,000,000 crates have been furnished the onion growers alone.

The plant is well equipped with special and up-to-date machinery and appliances, is steam heated and electric lighted; power is furnished by a 250-horse-power Corliss engine. Steady employment is given to about

and were known as Williams Brothers Company. Four years later the capital was increased to \$75,000, and Clarence F. Williams, son of George F. Williams, and Mark L. Williams, son of Walter S. Williams, Bruce Green and Henry M. Billings were taken into the enterprise. Since that time the capital stock of the company has largely increased through accumulated earnings which have been left in the business.

At Cadillac the company has an up-to-date sawmill, a last and ten-pin block factory, numerous and spacious sheds and kilns for the seasoning of their product, and an extensive lumber yard. At Manton is maintained practically a duplicate of the Cadillac plant, save that no lumber is manufactured there. The interesting feature of the operation, outside the manufacture of hardwoods and hemlock lumber, is the last-block and ten-pin department. This is conceded to be the largest institution of the kind in the United States. The plant at Manton covers five acres and has a storage capacity of 1,500,000 last-blocks. The Cadillac plant covers about seven acres and can accommodate about 2,000,000 last-blocks. The pic-

in the world. It is transported from the woods by rail and logging sleighs to the company's two plants, and under the careful and improved processes evolved by years of experience in this line, is made into perfect last-blocks. These blocks are made from select logs, cross-grained and defective ones being cut into lumber. After being turned into the various shapes shown in one of the engravings, they are stored for at least a year in air-drying sheds of special construction, and afterwards placed in steam-heated dry-kilns where they remain for three or four months longer. The entire seasoning of these blocks is done in such a manner as to render the vitality and strength of the timber unimpaired and leave the blocks entirely free from checks. This system of drying, which has proven very successful, is also the result of long years of careful study and has cost many thousands of dollars for experimentation.

Incident to the manufacture of maple last-blocks, the company produces a considerable quantity of basswood blocks which are used for fillers in shoe samples in show windows; and for the sample cases of trav-

PILE OF HEADING BOLTS, PLANT CADILLAC MANUFACTURING COMPANY.

eighty men. H. H. Cummer is president and manager.

The members of the Cummer Manufacturing Company have a second plant, practically a duplicate of the Cadillac factory, at Paris, Texas. The accompanying pictures show not only the Cadillac institution but also specimens of the fruit and vegetable crates both open and collapsed, as well as one of the patent egg carriers.

WILLIAMS BROTHERS COMPANY.

In the front ranks of the large industries of Cadillac and vicinity, is Williams Brothers Company, engaged in the manufacture of lumber and last blocks at Cadillac and at Manton, twelve miles north. The history of this old established and highly reputable concern is an interesting one, and well worth representation in this trade exposition of Cadillac.

George F. Williams first established the business in 1883 at Manton, and later took into partnership Walter S. Williams, forming the firm of Williams Brothers. In 1897, when the enterprise had grown extensively, they took in Albert E. Williams, another brother, and William A. Hall, a nephew, incorporated with a capital stock of \$35,000

tures accompanying this article show something of the extent of this enterprise and one depicts the variety of blocks manufactured for lasts, ten-pins, etc.

The members of this company are all active and practical in their different lines of work. The three Williams Brothers and Mr. Hall are the last-block experts. This is their distinct specialty, and the house has the reputation among users of producing the best that are made. The combined capacity of the two last-block plants is about 15,000 per day. These plants are run at their full capacity six or eight months of the year, during the fall, winter and early spring. During the late spring and summer months they are comparatively idle, running only sufficient to keep up steam in the dry kilns. It requires a whole year's time to dry last-blocks and thus it is that at all times the company has a year's stock in process of seasoning, stored in their great sheds and kilns.

The company now owns maple timber enough in the vicinity of the plants to run at their present capacity and supply their regular trade for fully ten years. This maple timber is located in Wexford and Missaukee counties, which contain the best

elug shoe salesmen. As is well known, this territory furnishes a superior quality of basswood, very desirable for this work, being clear, light and tough. In addition to this immense number of last-blocks turned out by the Williams Brothers Company, the concern makes large quantities of ten-pins and duck and candle-pin-blocks for bowling alleys, which are seasoned by the same process.

The capacity of the Cadillac plant is from 25,000 to 30,000 feet of hardwood, or 40,000 feet of hemlock lumber per day. The lumber yards are well filled with stock carefully graded, and piled in the best possible manner. The home office of Williams Brothers Company is located at Manton, where the manager and head of the concern, George F. Williams, resides. From forty to fifty men are employed at the Manton plant, and about seventy-five at the Cadillac institution. The several woods camps operated by the company employ at different seasons of the year from 100 to 200 men.

THE CADILLAC MANUFACTURING COMPANY.

Under the title of the Cadillac Manufacturing Company, John P. Wilcox and Chas.

FOUNDRY CADILLAC MACHINE COMPANY

MACHINE SHOP CADILLAC MACHINE COMPANY

L. Dolph operate a factory at Cadillac, Mich., which produces slack barrel heading. A few months ago the Cadillac Manufacturing Company lost its dry kilns and storage rooms by fire and one of the accompanying pictures shows the new concrete kilns in process of construction.

These kilns when completed will have a capacity for drying 20,000 feet of green lumber daily, a sufficient amount to produce 10,000 sets of 17½ inch heading, or 15,000 sets of keg heading. This company is adding new machinery, increasing the capacity of its plant, and will produce the above amount daily after October 1.

The Cadillac Manufacturing Company is one of the foremost heading producers in the country, and has its manufacture down to a fine art, making all sizes of heading from the smallest keg to the largest hog-head. The capacity of plant and variety of sizes produced are not equalled by any other mill in the state of Michigan.

CADILLAC MACHINE COMPANY.

In enumerating the industries allied with lumbering in this section, reference must needs be made to the modern machinery plant at Cadillac, known as the Cadillac Machine Company, which has been a matter of successful evolution ever since its inception twenty-five years ago, when lumbering in the Cadillac district was in its infancy. It has steadily grown to large proportions, as shown in the accompanying pictures.

The original base of the business was repair and foundry work for the numerous sawmills in that district, but during the last few years it has grown to include general foundry work, the manufacture of special machinery, the building of steel charcoal cars, and general iron work for chemical plants, in addition to a large amount of the usual repair work for sawmills, locomotives, cars, etc., and is constantly increasing.

OFFICE CADILLAC MACHINE COMPANY

Within the last year the company has been obliged to increase its capacity by the addition of a new concrete and steel machine shop, 70 by 175 feet in size, both the interior and exterior of which are herewith illustrated. This machine shop is equipped with five drill presses, two planers, one shaper, nine lathes, one hack-saw, one steam hammer, forges, punch and shears, bolt-cut

ter and wheel-press. The machinery is operated by five electric motors, distributed throughout the shop.

The entire structure and equipment is modern and substantial. A brick building, 50 by 140 feet in size, contains the foundry, pattern shop and storage room. The offices and drafting rooms are in a neat two-story frame building just erected, 20 by 50 feet in size. In remodeling and rebuilding this plant, the Cadillac Machine Company has planned for a large increase in production, is now anxious to take on a larger line of special machinery and would be glad to negotiate for the manufacture of special tools and appliances with anyone interested. Machinery for sawmills, flooring plants, broom handle factories and chemical plants, which are numerous throughout this section, a very complete line of mill supplies and power transmission appliances is carried in stock. Structural steel work is also one of the new features. One of the specialties produced by this concern is double and triple-deck iron beds, warranted bug proof, for camp use.

The principals of the Cadillac Machine Company which, incidentally, is a partnership, are Walter A. Kysor, who is the mechanical genius of the institution, and Frank L. Farrar, who handles the office work. Both these gentlemen have had long experience, are eminently successful and are highly regarded by their fellow business men.

INTERIOR OF FOUNDRY CADILLAC MACHINE COMPANY.

INTERIOR MACHINE SHOP CADILLAC MACHINE COMPANY.

(Continued from page 64.)

nessee. Mr. Guenther is largely interested in this section.

E. H. Mortimer, who has charge of the West Virginia and North Carolina operations of the W. M. Ritter Lumber Company, Columbus, Ohio, was quietly married to Miss Winnie Hickey, an unusually attractive and accomplished young lady, in the parlors of Pineola Inn, Pineola, N. C., in the presence of a number of friends, last week. They have gone on a two weeks' honeymoon.

C. Boice of Abingdon and others have organized and will shortly incorporate the Westmoreland Lumber Corporation, with a capital, it is said, of \$1,000,000 and with general offices in Richmond, Va. Mr. Boice is also at the head of the Boice Lumber Company, Philadelphia, and besides being a prominent factor in the hardwood industry is well known as a banker and capitalist.

There is no improvement in the car supply. The amount of available transportation equipment is still far below the demand and the manufacturers are suffering already from what promises to be the most serious car famine in the history of this section of the country.

G. L. Wood of Baltimore, general manager of the R. E. Wood Lumber Company, which operates extensively in this section and North Carolina, South Carolina and West Virginia, was here last week in conference with J. H. McCue, superintendent of the Virginia and Southwestern, on the subject of car shortage, but did not get any assurance of early relief.

M. N. Offutt of the Tug River Lumber Company is back from a visit to the East, during which he attended the Hoo-Hoo annual at Atlantic City. He reports a delightful trip and encouraging prospects in the East.

Cincinnati.

In the United States court of Covington involuntary bankruptcy proceedings were instituted against the Cypress Lumber and Veneer Company, which has its principal place of business in that city. The action is similar to the one filed in Cincinnati a week ago against the Cypress Lumber Company, with headquarters in the Queen City. The charges are almost similar. The material difference is in the names of the petitioners. Those in the Covington court are the Boice & Grogan Company, William Woodward and Ernest Forsythe. It is averred that the Cypress Lumber & Veneer Company has taken over several smaller concerns, one of which is the Cypress Lumber Company of Cincinnati. A number of the creditors accepted a certain percentage of their debts in full payment of their claims against the smaller concerns, while other creditors agreed to accept notes on the Covington company; a number of the others charge that the transfers of the assets of the smaller companies to the Covington corporation was done for the purpose of defrauding them.

Charles Barr, a prominent lumber dealer, with offices in the Atlas National Bank building, was drowned in the Ohio river at the Laughery Club. In company with many other business men Mr. Barr attended the Bowlers' Day celebration at the well known club, and after luncheon was finished he suggested a plunge in the river. He was warned against it, because the river between Laughery Island and the club grounds proper, on the Indiana side, sweeps through the channel in a very swift current. Mr. Barr answered that he would take care of himself and rowed out to the middle of the channel. He was seen to jump from the skiff into the water, and to those who were witnesses it seemed that he became helpless almost at the start. He was swept a short distance down the river, then disappeared. An immediate search was made for his body, but it was not discovered until three days after, when it was found near Madison, Ind. He was

brought to Fromley, Ky., where he and his wife and three children resided, and was buried from that place. Mr. Barr's business will be looked after by his two brothers, James H. and Clarence W. Barr, who are also in the lumber business, in the Traction building.

John Hawkes, president of the Burton Lumber Company, is preparing to embark on the big new steamship Lusitania, of the Cunard Line, as the guest of Cunard officials. Hawkes makes four trips each year and has been doing this for a number of years; all told he has crossed the briny deep 150 times. His wife and daughter will accompany him.

F. T. Egan, vice president of the J. A. Fay & Egan Company, manufacturers of wood-working machinery, gave a dinner last week to the officials of the company at the Stag Cafe. The dinner was promised the employees if they exceeded shipments of a certain amount. The amount was exceeded by \$18,000. The event also commemorated the birthdays of S. P. and F. T. Egan, as well as the return of A. W. Feuss, the South American representative of the company. Clifford Egan, who has been representing the company in Paris, was to have returned to participate in the festivities, but was delayed en route from New York.

C. W. Sowles, doing business as the C. W. Sowles Lumber Company, has filed suit in the common pleas court against the Blue Jay Lumber Company of West Virginia on a claim of \$5,545 for alleged breach of contract.

J. Watt Graham of the Graham Lumber Company has gone out of town to look after the interests of his concern. He will travel South and West and will not return for several weeks.

The Ruby Lumber and Mining Company of Springfield, Ohio, has been incorporated with a capital stock of \$25,000 by H. W. Ruby, E. G. Byrne, W. J. Grim, L. O. Singer and W. H. Rayner. The company expects to devote most of its interest to the lumber business.

The United States Timber Company of Cincinnati has increased its capital in the state of Ohio from \$150,000 to \$200,000. This was done to allow the company to extend their already large business and to allow them to equip themselves with more machinery to meet the increase. The concern has picked up wonderfully in the last year. The offices, which were formerly located in the West End, have been removed to the Mercantile Library building, and they are employing more men now than ever before. They are dealers in all grades of hardwoods, and are expecting a big fall trade.

St. Louis.

The Henry Quellmalz Lumber Company has finished constructing three miles of standard gauge railroad to transport its logs to the Brookings, Ark., mill.

Thomas W. Powe, of the Plummer Lumber Company is making a northern trip in the interests of business. Theodore Plummer says that he looks for increased trade within a very few days, or as soon as crop reports are satisfactorily adjusted.

George Hibbard, who has been in the North for some weeks, quite agrees with Mr. Plummer, and says that he noted the excellent condition of corn and other crops, which can not fail to influence the lumber business favorably.

F. A. Garetson has returned to the West. J. S. Garetson is making a trip among the company's mills. W. W. Dings is expected every day from his European trip, and his friends hope to find him greatly benefited by the delightful voyage. J. G. Griffith, southern representative for the Garetson-Greaser Lumber Company, has been occupying Mr. Dings' desk during his absence.

S. B. O'Leary of the American Hardwood Lumber Company is soon to marry Miss Mary Calhoun of Covington, Tenn. They will reside in New Orleans, where Mr. O'Leary manages a

branch office. C. D. Borrowman of the same concern is making a northern trip.

E. W. Blumer of the Lothman Cypress Company is making a tour of the company's mills in the South.

Among the visitors to this market last week was D. S. Hutchinson of the Arthur Hardwood Flooring Company, Memphis.

Nashville.

One of the visitors in the city during the past week was D. S. Hutchinson, formerly sales manager of the Nashville Hardwood Flooring Company, but now holding a similar position with the Arthur Hardwood Flooring Company, of Memphis. Mr. Hutchinson is just back from a trip to the Pacific coast, and he talks interestingly of it. In this connection he makes an observation that will no doubt be of interest to all lumbermen who have been doing business in the West, or who hope to do so. He says the Japanese are gaining quite a foothold on the Pacific coast trade with their white oak, which is of good quality, but not so good as the Tennessee woods. Mr. Hutchinson believes that if the lumbermen of the Southeast and other hardwood sections of the country do not bestir themselves they will lose a great deal of business in the West that could be theirs for the asking.

A special from Dyersburg, Tenn., announces a big lumber transaction just closed there, in which the A. M. Stevens Lumber Company sold to a number of Wisconsin capitalists a tract of timber containing some 12,110 acres. The price realized was \$13.50 per acre, or a total of \$163,485 for the entire tract. Just four and a half years ago the A. M. Stevens Lumber Company paid only \$3.50 per acre for the same tract.

A famous grove of giant trees at Sawdust Valley, in Maury county, will soon be only a memory, as it has been sold and consigned to the ax and saw of the lumberman. One hundred and eleven poplar trees in the grove of Mrs. A. F. Brown have brought the sum of \$4,000. They were bought by G. P. Mayberry, and so fine is the timber that he intends exporting most of it. The grove also contains many giant oaks which Mrs. Brown will sell in the near future.

A number of fine logs loaded on a big four-horse wagon belonging to the L. E. Rooks Lumber Company, were the only things about the outfit that were not damaged by a north-bound Mobile and Ohio passenger train at Humboldt, Tenn. The wagon was torn to pieces, the horses killed and the lumber thrown in every direction. The driver miraculously escaped by jumping.

G. C. Baker, of McEwen, Tenn., has gone to Shaw, Miss., where he takes charge of the lumber plant of his father. The Bakers have several hundred feet of timber in logs that are ready to be converted into marketable lumber, and it is estimated that they also have 10,000,000 feet of standing timber. L. D. Baker has fifteen saw mills in operation in and around McEwen, Tenn., in addition to the big ones he will run in Mississippi.

The Rock City Lumber Company has effected a consolidation with the contracting firm of Patrick & Holt. The new firm will be known as the Central Construction Company and will do a general contracting and building business. The following officers have been elected: A. W. McDonald, president; I. L. Pendleton, vice-president; J. B. McDonald, secretary and treasurer, and J. W. Patrick, general manager. The firm already has two big contracts, one being the construction of a new jail for Davidson county and the other being the rebuilding of McKendree Church.

James D. Chronister, a lumberman of McEwen, Tenn., died recently from the effects of disease contracted in the swamps of Arkansas. He was thirty-five years old and leaves a wife and two children.

A special announces that F. E. Moore, of Cincinnati, representing eastern capitalists, has closed a deal whereby 85,000 acres of timber land

in White, Warren and other counties have been sold them. The consideration was a handsome one. The property will be developed at once. Two railroads will tap the big tract, one being a fifteen-mile branch to be built from the Queen and Crescent and the other being a spur that will be built by the N. and C. to the Herbert domain, a large tract recently acquired by the state of Tennessee for coal mining purposes. "We will put several saw mills on the tract," says Mr. Moore, "and later will develop the coal that is under the timber."

The contract of Montgomery & Co., furniture people, to refurnish the hall for the House of Representatives and the Senate chamber of the state capitol, has been rejected in part by an investigating committee, and the firm has been compelled to replace the desks. The chairs proved satisfactory.

The Morton-Scott-Robertson Company, one of the largest furniture houses in Nashville, and perhaps carrying the most elegant and costly goods of any, is going out of business. A big closing but sale starts this week. The firm has about \$100,000 worth of stuff on hand. Frank Stahlman, one of the members of the firm, will engage in the newspaper business. Howard Robertson, the other member, will go into the furniture business on his own account.

John W. Love, of the firm of Love, Boyd & Co., has returned from a long summer's stay in Markland, Nova Scotia. Mr. Love owns a summer hotel up there and reports a successful season as well as a most pleasant outing. He is looking fit and fine to again tackle the problems of the lumber business.

John B. Ransom is also back from a trip to Markland and other points in the East. Mr. Ransom was in Memphis last week looking after his interests in that city.

The P. G. Dodge Lumber Company of Chicago will open a lumber yard in Nashville in the near future. The company has bought the property formerly owned by the John M. Smith Lumber Company in West Nashville. A large stock will be carried. J. M. Hooper has been made yard master.

A number of Nashville lumbermen have returned from the annual meeting of Hoo-Hoo. The election of J. M. Baird as scribe was most welcome news to them. Among the Nashville lumbermen who attended the concatenation were Handeson Baker, A. B. Ransom, John M. Smith, H. C. Card, John W. Love, Edward B. Martin, Lewis Foster and Simon Lieberman.

Memphis.

The long looked for, widely heralded and much advertised ball game between the lumbermen of Memphis and those of Nashville was pulled off on schedule time at Red Elm park Saturday afternoon, and when Nashville had played the last half of the ninth inning it was found that the score was 5 to 2 in favor of Memphis, thus demonstrating the superiority of the Memphis team over that from the capital city.

Local fans turned out in goodly numbers, and there were many of the faithful from Nashville who came down to cheer the players from the lumber fraternity of that city. Cow bells and other instruments for making noise were much in evidence and the players were loudly applauded throughout the contest, regardless of the alignment of each. It was originally planned that W. H. Russe, president of the National Hardwood Lumber Association, and J. B. Ransom, president of the Hardwood Manufacturers' Association, should jointly umpire the game, but this was changed at the last moment. Following is the line up of the two teams, all players being identified in some capacity with the lumber business of their respective cities:

Memphis.	Position.	Nashville.
Du Pere	right field	Martin
Bennett	shortstop	Marshall
Pritchard	first base	Ralston
Goodwin	third base	Wolfe
Strickland	left field	Worms

Morris.....second base.....Dews
Rickets.....center field.....Doster
Linder.....catcher.....Mays
Toman.....pitcher.....Brasswell

With the closing of the game the friendly guying of the Nashville delegation began, and it did not end until the boys from the Cumberland river city had taken their train for home. It was "rubbed in" on the street cars, at the hotel, at the luncheon and smoker at the Business Men's Club, and, as a parting shot, at the station where the last good-bys were said.

The luncheon and smoker was much more elaborate than was expected. A delightful menu was served, and was enjoyed hugely by all present. Covers were laid for about one hundred and fifty, including members of the Lumbermen's Club, the Nashville delegation, the players on both teams, a number of railroad men and the directors of the Business Men's Club. The train for Nashville was due to leave at an early hour, but the festivities were so much enjoyed that arrangements were made to hold it until 10:30.

F. E. Gary, vice-president of the Lumbermen's Club, acted as toastmaster. He was flanked on either side by W. H. Russe and J. B. Ransom, presidents of the two big hardwood lumber associations. Before the repast had gotten far under way W. H. Russe arose and made a few remarks about the superiority of the Memphis team over that from Nashville and predicted an easy victory next Saturday when the two last games—if two are necessary—will be played. He said, however, that he was not much of a speaker, but that he was one of the "best singers ever," and, suiting his action to the words, he instructed the band to play "Cheer Up, Mary," to the tune of which all those present sang from copies which had been distributed the following lines, improvised for the occasion:

Oh, the Nashville crowd came to Memphis town,
With a team they thought could win;

But the Memphis team just let off their steam,

And what they did was a sin—

Oh, their bats went crack, the ball ne'er came back.

And the batters just walked home.

The poor Nashville boys, with their hopes and joys.

With a moan back home must roam.

Chorus:

Cheer up, Nashville, don't be crying, crying.

You have lots of time to learn.

You are young, so keep on trying, trying;

You may win a game in turn.

Memphis town is now a-ringing, ringing.

With the cheers for her good men:

So be good, just saw wood—

We will wallop you again.

J. W. Thompson amused all present by witty remarks made from his niche in the wall at the far end of the room. Following him there were numerous speakers called upon, including J. B. Ransom, J. H. Baird, Edward B. Martin, W. R. Anderson, J. W. Love and Lewis Foster of Nashville; W. R. Barksdale, W. A. Bickford, John A. Scott, J. N. Cornatzar, Ralph Bennett, Wick Ransom and Charley Holmes of Memphis. The various speakers were cheered to the echo and a spirit of hilarity seldom witnessed prevailed throughout the evening. Good fellowship reigned supreme and, while the Nashville delegation had to bear the brunt of the fun making, some of the speakers from the capital city painted lurid pictures of what would happen when the Memphis lumbermen appeared in the city on the Cumberland. J. H. Baird said that it was necessary to let Memphis win the first game in order to get the Memphis lumbermen over to his city. But, all the same, the Nashville delegation came down with a song to be sung during the "rubbing in" process in the event its team won the game, which may suggest that the lumber fraternity from the central part of the state really had hopes.

Lewis Foster said that the score was 5 to 3, as the team made two runs on the diamond and one on the train. He kept the house in a roar and,

in conclusion, thanked the toastmaster for allowing him "to make a bit."

Mr. Love expressed admiration for the wonderful spirit displayed by the lumbermen of Memphis and declared that it would accomplish wonders even greater than those already recorded if they had the natural advantages possessed by those from Nashville.

Special stress was laid during the evening on the forthcoming convention of the Deep Waterways Association, to be held here Oct. 4 and 5 and on its deep significance to the lumbermen of both cities participating in the festivities of the evening, as well as to every other city in the South. A large delegation from Nashville will be here and pledges have been made by the Nashville lumbermen to do all they can for the success of the movement now under way for the improvement of the Mississippi river and its tributaries. "Fourteen Feet Through the Valley," the official song of the convention, was rendered during the evening and was sung with much spirit.

Hoo-Hoo yell, three cheers for Nashville and as many for Memphis were interspersed and the festivities were brought to a close by the singing of "America."

Altogether the evening was one of the most delightful ever furnished its members or its guests by the Lumbermen's Club of Memphis at an informal affair of the kind. The Nashville delegation, however, declared that it would not be out-done in the entertainment features provided, and that it would have something very interesting for the Memphis lumbermen who go to Nashville next Friday night.

It has been definitely determined that there will be two games at Nashville Saturday if Nashville wins the first. It has therefore been arranged that the game will be called at 2 p. m. If Memphis wins the first the series will be over for the year, and, according to local "dope," it will be very difficult to ever get the lumbermen of Nashville up against those of Memphis on the diamond again.

Announcement is made of the approaching marriage of John W. McClure, secretary-treasurer of the Bellgrade Lumber Company of this city and the efficient secretary of the Lumbermen's Club of Memphis, to Miss Alline Crenshaw of Union City, Tenn., which will be solemnized at that place Oct. 2. The bride is a niece of both W. I. Crenshaw and T. M. Cathey, who are large stock holders in the Bellgrade Lumber Company. Mr. McClure is one of the most prominent of the younger lumbermen of this city, and his many friends here are showering their congratulations upon him. Miss Crenshaw is quite a favorite in Memphis, where she has been a frequent visitor.

The Norton Lumber Company has made application for a charter. The capital stock is \$75,000. It will engage in a general lumber business and will establish a plant here for the manufacture of this product. M. P. Kean, B. M. White, O. F. Ghrist, Hugh B. White and William A. Buckner are the incorporators. The company will take steps for beginning business as soon as its charter has been received.

The Finance Committee is making good progress in securing the necessary funds to defray the expenses of the forthcoming annual convention of the Deep Waterways Association at the Auditorium, but it has not yet secured sufficient money and is bending every effort to this end. Business men have contributed freely and professional interests are now sending in their contributions. There is more than \$15,000 already in hand, but this is hardly more than half enough. The sub-committees are at work under the direction of the general Executive Committee and are making rapid progress in bringing up the various ends of the entertainment to be provided here. The Decoration Committee has practically decided upon its plans and these have been accepted by the general Executive Committee. The decoration scheme will be the most elaborate ever attempted in this city. Fully \$5,000 will be spent on decorations alone.

The music will cost about \$2,000 and the Entertainment Committee will need \$3,000 to \$4,000 and the Badge Committee \$1,500. Various other small committees, incidentals, clerk hire and the like will take \$5,000 to \$6,000 more. This gives some idea of where the large amount of money will go. President Roosevelt has approved the plans arranged for his entertainment here. Enthusiasm in the convention continues to grow and the idea is current that it is to be the most important of its kind ever held in this city and perhaps in the world.

The car situation does not show any improvement and there is very little prospect of developments of this character in the near future. The congestion which has now made its appearance is earlier than usual and is in advance of the movement of cotton. This staple will begin to move freely throughout this territory within the next two or three weeks and when this happens it is certain that the shortage of cars, so pronounced now, will become even more decided. The railroads give the preference to cotton over lumber and this is another feature which tends to complicate traffic matters. Some advices from Mississippi and Arkansas regarding the scarcity of cars are discouraging and it is beginning to appear as if the traffic congestion which was such a serious feature last year will be strictly in evidence before fall business gets well under way. The railroads are doing what they can to relieve the situation. They have placed orders for large numbers of cars and other equipment to be delivered and which will be received as early as the car manufacturing plants can turn them out. In the meantime manufacturers and wholesalers are urging buyers of lumber to place their orders without delay so that the lumber may be shipped before the situation becomes more serious.

On account of the large number of "bad order" cars on the valley division of the St. Louis, Iron Mountain and Southern, which is resulting in much delay in the shipment of freight, that road has let a contract to the St. Louis Southwestern for the repair of 4,000 cars at the Pine Bluff shops of the latter. Twenty-five cars will be furnished daily until the order has been completed. The St. Louis Southwestern maintains large shops at Pine Bluff and a big car factory has recently been constructed at that point. The car repair shops have found it necessary to increase their force to about 1,000 persons.

Negotiations are under way between Memphis and Chicago capitalists for the establishment of another large woodworking plant here. The Chicago gentlemen are undecided whether to build in Memphis or Caruthersville, Mo., where many inducements have been offered. The plant will manufacture butchers' blocks, woodworking rollers for various purposes, heavy log wagons and similar lines. The company to be organized will be capitalized at from \$40,000 to \$50,000. Heibert Moore is in correspondence with the Chicago interests and he and several of his associates will take stock in the company if the plant is established in Memphis.

A veneering plant will shortly be established at Des Arc, Ark., by Indiana capitalists. It will give employment to twenty-five or thirty persons at the start and the capacity will gradually be increased. The plant was located through the efforts of Emmet Vaughan, cashier of the Des Arc Bank and Trust Company, who donated fifteen acres of land to the enterprise.

Application for a charter has been made by the Halls Box and Lumber Company, which is to have headquarters at Halls, Tenn., and which is to be capitalized at \$10,000. The incorporators are Charles H. Rieth, W. H. Tucker, Jr., and others.

The American Car and Foundry Company, which operates a car manufacturing plant at Binghampton, a suburb of Memphis, is turning out an average of 500 freight cars a month.

Among the orders on hand now is one for 500 box cars for the Nashville, Chattanooga and St. Louis railroad and 1,000 for the Missouri Pacific system. The company is employing an average of 1,200 men.

The Co-operative Mill and Lumber Company has established a yard in new South Memphis near the big plant of the McLean Lumber Company. W. C. King will be in charge. C. J. Lundberg, secretary and treasurer of the company, is identified with the Co-operative Furniture Company of Rockford, Ill.

The Chickasaw Cooperaage Company has purchased 2,300 acres of hardwood timberland near Kilburn, La.

New Orleans.

Something of a mild sensation was sprung here at the opening session of the semi-annual convention of the Retail Lumber Dealers' Association of Louisiana and Mississippi last Tuesday when a motion inviting the Attorney General of Mississippi to file suit to dissolve the organization was made and unanimously adopted. This step was taken in anticipation of the Attorney General's avowed purpose to dissolve the association on the ground that it is operating in violation of the anti-trust laws of the state. The meeting instructed the board of directors to secure counsel to investigate the legality of the association, and \$1,500 was raised among the fifty delegates present to defray the expenses of the legal action. This is the result of the repeated charges against the association that it is a trust and operating in violation of anti-trust laws.

Some business was done before final adjournment, notably the adoption of a resolution expressing confidence in the legality of the association and the ability of its by-laws and constitution to stand an anti-trust crusade.

Lumbermen generally are manifesting a great deal of interest in the enforcement of the new scale of weights on lumber which has just been provided for by the Louisiana Railroad Commission in an effort to establish some uniformity in the matter of weighing lumber. The decision of the commission was handed down in the case of the Industrial Lumber Company et al. vs. a number of lumber-carrying roads in Louisiana. After providing the scale of weights for the lumber the commission's decision says: "It is further ordered that whenever a carload shipment of lumber transported between points in Louisiana moves over two or more track scales, whether the shipment be a shipment over one railroad only or over two or more railroads, the car shall be weighed by the carrier at the first track scale over which it passes en route to its destination and the weight thus found shall be the weight upon which freight charges are assessed; provided, that in case of a dispute on the part of the consignee as to the correctness of the weight the carrier shall, whenever there are track scales at the point of destination, upon the demand of the consignee, reweigh the car, and if a difference is found in the two weights so ascertained the freight bill shall be corrected to conform with the last weight. For the service of reweighing a car the consignee shall pay the carrier performing the service \$2.50, and the shipper shall, if an additional day is required by the delivering carrier to reweigh the car, be allowed one day's free time in addition to the free time allowed under the car service rules as established by this commission for the purpose of unloading." It is provided that this order shall become effective Oct. 1, 1907.

The car service situation through this state has grown steadily worse in the last fortnight and the situation is reaching a very acute stage.

The interior demand for hardwoods is emphasizing the need for more cars and the manufacturers are doing everything they can to get the rolling stock, but are meeting with very little success. Hundreds of cars have been appropriated to help move the cotton crop, while many of the flats have been gathered in and crated to handle sugar cane. The result is that the

lumbermen stand very little chance of securing any service that is worth anything for some time to come.

Advices from Alexandria, La., state that a Norfolk, Va., firm has purchased a good tract of hardwood timber near that place and will build a big hardwood mill near Alexandria that will employ between 150 and 200 men.

The Scott Land Association at Monroe, La., has bought a quarter of a square of ground on Seventh street, at Monroe, and will very soon erect thereon a large wagon factory. The consideration was \$3,500.

The large finishing plant of the Dalton-Clark Stave Company, at Winnfield, La., and a large quantity of finished staves were destroyed by fire last week. The estimated loss is \$20,000, which is partly covered by insurance. The fire started in the shaving room, and the watchman of the plant, who was asleep, was nearly burned to death.

Cadillac.

Up to within a few weeks before the death of D. F. Diggins, the Cummer-Diggins Company carried on its affairs as a partnership. In view of the possible calamity which threatened Mr. Diggins, a stock organization of the institution was made. D. F. Diggins was elected president; W. L. Saunders, vice president and general manager; W. W. Cummer, treasurer; F. A. Diggins, secretary and assistant treasurer. This departure makes no difference in the conduct of the affairs of the concern.

The new general office building of Cobbs & Mitchell, Inc., Mitchell Brothers Company, Cadillac Chemical Company and Mitchell-Diggins Iron Company is nearing completion. It is one of the handsomest office structures in the country and bears a close resemblance to a fine library building. It is built of Bedford stone and sand brick. The floors are constructed of tiling, hard maple and white oak. The various rooms are all finished differently, in the several varieties of northern hardwoods and hemlock. The building is equipped with a private telephone system, lavatories, club rooms, dining room and a complete kitchen.

The new Mercy Hospital, the gift of the late D. F. Diggins, which will be conducted by the Little Sisters of the Poor, is under roof, and will be in readiness for occupancy within ninety days.

The work on the new Y. M. C. A. building is progressing rapidly and the walls are nearly up. It will add one more to the already large number of handsome buildings which ornament the city of Cadillac.

The general trade in hardwood and hemlock in this city is fair. There seems to be a slight falling off in large orders for maple flooring, but the aggregate of small orders is sufficient to keep three big plants here and at Jennings running for many months.

The Cummer Manufacturing Company, specialists in the manufacture of patent fruit, vegetable and egg crates, has had an immense business during the year, and their factory is still working to its utmost capacity.

The Cadillac Veneer Company reports excellent business in both veneers and panels, taxing the capacity of the plant.

The Cadillac Manufacturing Company, which suffered severely by fire some months ago, has its new concrete kilns nearly ready for use, and the entire plant rehabilitated. This company did not lose any time by reason of the fire, and has filled its orders for heading with promptness. The new plant will produce ten carloads of heading weekly.

Williams Brothers Company has been fully occupied during the season in the manufacture of lumber and last-blocks at both its Cadillac and Manton plants. The last-block trade enjoyed by this concern is a steady demand on time orders. It is gradually increasing its lumber output.

Charlotte, N. C.

A charter has been granted the Utility Manufacturing Company of Goldsboro, N. C., capitalized at \$200,000, with the privilege of beginning business with \$50,000. Incorporators are N. A. Berry, J. E. Willy, H. Weil & Brothers and others. Object: To engage in the lumber business.

A new company for the manufacture of wagons and other vehicles is being organized at White Plains, N. C., near Mount Airy, N. C. M. H. Sparger of Mount Airy will be secretary and treasurer.

North Wilkesboro, N. C., is one of the coming towns in the hardwood lumber industry. It already has two large furniture factories, several planing mills, sash, door and blind factories, one coffin factory, twenty wholesale lumber dealers and several large cross-arm, bracket and locust pin factories. North Wilkesboro probably ships more oak and poplar lumber than any other town in the state. An average of nearly 500 wagonloads of lumber, tan bark and country produce comes in daily.

Charles W. Sapp of Greensboro, N. C., has been appointed receiver for the Thompson Lumber Company of Greensboro, N. C., recently declared bankrupt. In about ten days a meeting of the creditors will be held and a trustee will be elected to wind up the affairs. The schedule of the assets and liabilities have been filed with the clerk of the United States court. Total assets are stated at \$39,642.34 and its liabilities at \$37,511.83.

The American Veneer and Box Company of Raleigh, N. C., is now in full operation, getting out plank and strips of various thickness from poplar and oak.

The sawmills of the Snow Lumber Company of High Point, N. C., in Moore and Montgomery counties, have been forced to close down for lack of cars to handle the great stock of lumber that is piled up. However, the plant in High Point, which is fed by these mills, is still running. It is stated that 800 cars are needed by this company alone. It is the sincere hope of the many lumber manufacturers of this state that the car famine, which so seriously crippled business last winter and spring, may not be experienced again.

A movement, previously mentioned, is on foot to build a thirty-foot channel to the sea from Wilmington, N. C., the idea being to make Wilmington one of the largest seaports on the Atlantic. If this scheme is successful, as it promises to be, the lumber industry will be greatly advanced. Already Wilmington does a large lumber business, and this business is growing, as may be seen from statistics just compiled. For the eight months from January 1 to August 31 this year the domestic exports of lumber and cross ties at the Wilmington port amounted to \$9,250,854 feet and the foreign exports for the same period amounted to 6,778,148 feet. The total exports for the whole of last year were: Domestic, 51,556,404 feet; foreign, 5,049,524 feet, the gain this year showing a big per cent. The exports so far, in other words, exceed those of last year by about 40,000,000 feet.

The Board of Trade of Asheville, N. C., has succeeded in landing for that city the large plant of the United States Furniture Company of Lenoir, N. C. The plant will be removed to Asheville and will be running by November 1. It is thought numerous other woodworking plants will now be established in Asheville.

The De Soto Land & Timber Company of Red Springs, N. C., has just been chartered with \$200,000 capital. J. G. Williams of Red Springs is president. The company has secured large timber tracts in De Soto county, Florida.

Carress & Corbett of Denmark, S. C., have purchased fifteen acres of land and will erect an up-to-date planing mill, dry kilns, etc.

The lumber mill of Hearn Brothers at Wilford, N. C., was destroyed by fire recently, loss

being estimated at between \$40,000 and \$50,000. There was very little insurance.

The Alexander Lumber Company of Lilesville, N. C., whose plant was recently destroyed by fire, will be rebuilt. The plant was one of the largest in Anson county.

The business of the Lindsay Chair Company of High Point, N. C., recently adjudged bankrupt, has been sold at auction. The Ford Johnson Company of High Point, N. C., purchased the property, paying \$15,025.

Probably the question of greatest interest to local lumbermen is the fight inaugurated by the Retail Merchants' Association of Charlotte and other cities of the state over freight discrimination against North Carolina points in favor of Virginia cities. A few days ago the local Merchants' Association filed a complaint which cited many instances where Charlotte merchants and manufacturers are forced to pay 50 per cent more than manufacturers and merchants in Virginia. Other cities of the state will file similar complaints, and later the corporation commission will make out a case to be carried before the Interstate Commerce Commission.

Minneapolis.

Several hardwood concerns are creditors of the Joannin-Hansen Company, a sash, door and blind concern which has gone into involuntary bankruptcy. The company's assets are estimated at \$20,000. The petition upon which the company was declared bankrupt was signed by W. C. Bailey, F. H. Lewis and N. C. Bennett of Minneapolis, all hardwood dealers, and by the United Lumber and Shingle Company, the Central Warehouse Company, Minneapolis, and E. Sondheimer Company of Memphis, and the Briggs & Cooper Company, Ltd., of Saginaw, Mich. The receivers appointed by the court are C. W. Dewey, J. B. Burkholder and Charles Oliver. The company has a large number of unfilled contracts which will be put through in order to realize upon the stocks of material held.

C. F. Osborne of Osborne & Clark, who was compelled to drop work for a while as a result of a slight attack of nervous prostration, has returned and is spending part of each day at the office. He spent some weeks on his farm near Erie, Ill., recuperating and came back home very much improved. D. F. Clark has been over in Wisconsin on a business trip.

S. H. Davis of the S. H. Davis Lumber Company, dealers in pine and hardwood, while on his recent trip to the West Coast made connections with some mills there and will pay particular attention hereafter to supplying factory trade with western pine from mills in the Inland Empire territory. Mr. Davis enjoyed the beauties of the Canadian Rockies and Yellowstone Park, besides a boat trip from Vancouver to Seattle.

A. H. Barnard, the local wholesaler, has returned from Marshfield, Wis., where he attended the annual meeting of the Wisconsin Hardwood Lumbermen's Association. He reports the demand for northern hardwoods strong in proportion to the visible supply.

The Payson Smith Lumber Company reports an increased demand from the railroads and an inquiry that betokens some heavy business among factory buyers a little later. The shipping situation in the South is beginning to give some bother again, but they are still filling orders with fair promptness. The northern hardwood situation shows a decided scarcity of oak, and while birch seems plentiful the demand for it is more general this year than ever.

Toledo.

Toledo hardwood dealers are turning their attention to the car shortage, which in certain sections is causing no end of annoyance. This is particularly true in West Virginia, from which place it seems to be impossible to secure cars.

The fact that the shortage seems to be confined to certain limited districts would not seem so bad on the face of it, but a different aspect is presented when it is understood that those are the only sections from which Toledo dealers seem to be able to secure poplar and other supplies. With plenty of these materials there, and a good strong demand for them here, it is particularly annoying to be unable to secure cars for transportation between the two points.

The new car service rules adopted by the State Railway Commission will go into effect October 1, and while they are considered a step in the right direction they are not of great value to dealers. The provision which will be of most universal benefit to shippers is that which adds an additional day to the prescribed time for loading and unloading cars. The rules also make it possible for the shipper to arrange for what is known as the average plan, which has not heretofore been within his reach. As there are several disagreeable strings attached to this plan, and as the time allowed without demurrage is ample for Toledo dealers, who are always in a hurry at loading and unloading time, it is not thought probable that any considerable number will avail themselves of the benefits of this provision.

Ashland.

The Hawkins Land Company has been recently chartered in West Virginia, its chief works to be in Fayette county, and principal business offices in Charleston.

A charter has been granted the West Virginia Timber, Coal, Land and Oil Company, which will have its chief business offices in Huntington, W. Va. The incorporators, all Huntington men, are S. M. Croft, H. C. Harvey, Thomas H. Harvey, J. C. Kiger and J. T. Graham.

The Cole-Crane Company has had special police in Ironton, Ohio, making an effort to have an investigation into the matter of log stealing by Lawrence county, Ohio, men instituted by the grand jury. This company has lost so many logs recently that it is determined to teach log thieves a lesson.

John Hugart of Vaughan, W. Va., and Miss Pearl Vencill of Charleston were recently united in marriage at the Ventura hotel in this city. Mr. Hugart is engaged as lumber inspector for the Keys-Fannin Lumber Company.

A charter has been issued by the secretary of state at Charleston, W. Va., to the Walters Timber Company, with offices at Huntington, W. Va., and chief works in Kentucky; the incorporators are W. L. Walters of Winchester, John C. C. Mayo of Paintsville, L. N. Davis, R. D. Davis, Jr., and S. S. Willis of Ashland. This company has recently closed a big deal with the Broose Company of New York City for a large boundary of virgin forest timber, consideration \$65,000.

A visit to the general office of the Licking River Lumber Company found the files filled with orders and a general air of prosperity prevailing. The general and sales offices of the company have recently been removed to Ashland from Farmers, Ky., where their large mills are located. On August 28, last, the company changed management, and the entire stock was bought in by the following parties, who are the officers: F. G. Eberhart, Jr., president; Nathan Goodman, vice president; Rollo G. Page, secretary and treasurer. The new management has had long and successful experience in the timber and lumber manufacturing business, and expects to increase the business in every way. New machinery, consisting of boilers, a band mill, carriage, etc., is being installed in the mill at Farmers, also new planing mill machinery, and when the machinery is in place and the general construction complete this will be one of the largest producing mills in Kentucky, having a capacity of 50,000 feet daily. The holdings of the Licking River Lumber Company consist of large timber interests in Kentucky, and

at their plant they have their own houses for workmen, a large hotel and store. Mr. Goodman has charge of the timber and manufacturing of lumber. The office in Ashland is in charge of Mr. Page, assisted by the general salesmanager, H. G. Irwin. The company's supply of logs is large, there being sufficient logs at the mill to insure a year's run.

Little Rock.

A. T. Boisen of the Forest Service, who has been specially detailed by the government to make a study of the hickory of this state, has been for the past several weeks engaged in inspecting the hickory sections and noting the supply. He said, in an interview recently: "Some of the far-sighted users of hickory have become uneasy as to the supply available. The cutting of the wood began first in the East. It has moved gradually west and then south. Today the bulk of the supply is in the southern states. The output from Arkansas is probably greater than from any other state. The present study will examine into the industrial uses of hickory and annual consumption, suggest means to prevent waste, and help and encourage the farmer and wood-lot owner to take the proper care of the hickory on his timber tract. In that way alone can the supply be maintained."

The foundation for the new \$50,000 factory to be erected at Fort Smith by the Southwestern Chair Company is completed and work will be pushed until the plant is ready for operation.

The Ozark Mining and Power Company has established a combination soft and hardwood mill on White river, at its confluence with Buffalo river.

The new mill at Junction is now in operation and machinery for the production of finished buggy and wagon material is being added.

H. C. Scholer of Peoria, Ill., has leased the Smith Brothers sawmill in Perry county and is operating it in cutting a supply of hardwood material for the vehicle factory of his firm at Peoria.

Suit has been filed by the St. Francis Lumber Board to recover \$135,000 from the R. E. Wilson Timber Company for timber alleged to have been cut from certain lands in Mississippi county, nearly all of which was hardwood. The board is represented by Senator Jeff Davis. Mr. Wilson will not fight the case, as he holds warranty deeds from other parties and will put the fight up to them.

The proprietors of the Agee Wagon Works, at Camden, have just expended \$10,000 in plant improvements. They now have a capacity of 5,000 vehicles yearly.

A large lumber plant belonging to R. E. L. Wilson at Amorel was completely destroyed by fire last week, the loss being \$20,000. The yard contained 15,000,000 feet of lumber, but most of this was saved. The mill will be rebuilt at once.

Indicating the rapid advance in the price of timberlands in the state, it is interesting to note that the sale of a 28,000 acre tract near Harrisburg was made recently at \$30 per acre, whereas five years ago a smaller tract adjoining the one just sold brought only one sixth as much per acre.

The J. G. Nivens Lumber Company has erected a hardwood sawmill in the vicinity of Wallaceburg to work up the timber supply in that section of the Little Missouri lowlands.

The new hub factory at Jonesboro began work last week. Twenty-five men are employed.

The Western Tie Company has established a grading yard at Cave City.

A shipment of fifteen cars of walnut was recently made from Imboden consigned to the Sincer Sewing Machine Company, at South Bend, Ind.

Work is progressing on the new hardwood plant to be erected at Dardanelle by the Dardanelle Hardwood Manufacturing Company. The plant is to cost \$25,000.

The hardwood mill at Lockesburg shipped its first carload of finished material last week.

A representative of the Studebaker Wagon Company has been purchasing considerable material for his company from the dealers at Perry, Aplin and other points in the Fourche River valley.

Nathan Patchen of the Fee-Creighton Lumber Company, at Newport, is spending his vacation with relatives in Lima, Ohio.

C. S. Jackson, manager of the Eldorado hardwood factory, was a visitor in the city the past

week. Mr. Jackson reports a fine business.

J. W. Black of Corning has secured a large tract of hickory timber at Blackwell and will place a mill there at once.

A party of officials of the Crossett Lumber Company spent Sunday here en route from Lansing, Mich., to their plant at Crossett, Ark. From here they proceeded to Crossett in their automobiles, which had been shipped to this point.

W. D. Massey of the Martin-Massey Lumber Company of Batesville is superintending the location of a new mill near Black Rock.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

The local demand for hardwoods is not brisk, but desultory trading is going on to a considerable extent. Poplar is in strongest demand, with oak a fair second. Northern hardwoods are only in moderate call. That there is a slight slackening in general demand is evident from the fact that a large number of salesmen from both the northern and southern country have been in the city during the last fortnight. There is nothing in the situation that would indicate that there will not be a good fall trade, but the buying season will be later than last year. Prices very generally are being well maintained.

Boston.

The market for hardwoods continues firm, with a demand of moderate proportions. Many of the large consumers appear to have fair-sized stocks and, with prices held on their present high level, are not anxious to anticipate their future wants to any extent. In a few instances buyers are ready to take on additional supplies if prices are right, as they believe it will be harder in a few weeks' time to get shipments through with any degree of promptness because of the threatened car shortage. Furniture manufacturers are busy. Interior house finishers are not as actively employed as usual at this season. This is due in part to the fact that building operations have been conducted on a much smaller scale. The export demand for hardwoods is not active.

Offerings of plain oak are large. One of the leading dealers states he has received letters within the past week in which over 5,000,000 feet of plain oak is offered him. One-inch stock is quoted at \$56 to \$58. With quartered oak the situation is entirely different. Offerings are limited and prices held decidedly firm. Some of the best stock is held by mills at prices that do not permit dealers to sell under \$85, although stock is offered here in some instances at \$83. The outside asking price is \$87. The call for whitewood is moderate. Present indications do not warrant any reduction in asking prices, and, in fact, some dealers state that they will have to mark values up rather than down. Ruling quotations for one-inch are \$59 to \$60, but sales have been made in a small way at \$61. The call for cypress is quiet. Advices from mill points do not show that manufacturers are willing to make concessions. Brown ash is very firm, with offerings limited. White ash is also firmly held, but the demand for the latter is moderate only. Chestnut holds firm. Black walnut is in fairly good demand, with prices well held. Mahogany is meeting with a fair request.

New York.

The hardwood market in this district continues firm, and in many sections, in certain lines of the manufacturing trade, there has been a marked increase in activity during the past fortnight. Yard dealers are making fair purchases for their fall and winter trade, but

the manufacturing trade is providing the largest volume of business. This is not to be wondered at when the fact is considered that the yards have been heavy buyers for a number of months, especially in the early summer, whereas the manufacturing trade has, as a general rule, been holding off in the matter of purchases in the hope that prices would ease off.

While prices have for the most part been firm throughout the summer, this increased activity in buying has stiffened the market considerably and sales of good manufactured hardwood lumber, in many instances, are bringing prices which are above the average for the past four or five months. Payments and collections are a trifle slow by reason of the heavy drain on financial centers for the movement of crops, but it is believed that such money conditions will speedily be relieved, and if business keeps up the volume it is now offering everyone will round out a good year.

Reports in the local wholesale market, as well as from returning buyers from mill points, indicate that supplies of good manufactured hardwoods in the better grades are by no means plentiful and in many instances small in comparison with the demand. Especially is this true in oak, poplar, ash and basswood, all of which are holding extremely firm in price, with only a fair offering available to supply the demand. Chestnut is fair. Maple and birch are holding their own nicely.

Philadelphia.

It is evident that the hardwood situation throughout the country is not as good as might be desired; the eastern sections, however, have experienced least decline in activity. Trading has kept up unusually well for the time of year and considerable improvement is noticeable during the last fortnight. Values have been below par, but with the advance of the fall season they show a slight tendency to become more steady. Reports from the mill districts show stocks in good hardwoods not over plentiful and from those sections obliged to rely upon only one railroad company complaints are already heard of car shortage.

Reports from the woodworking industries, taken as a whole, are satisfactory. Sash and door mills work on unimpairedly; box makers are consumers of such rejects and culls as can be obtained. Flooring makers have been busy and prosperous all summer. Veneer and cigar box concerns likewise have no complaint to make of summer trading.

Railroad ties are again selling rapidly, but are scarce and high. Trolley and electric car building goes on unabatedly. The building industry sustains its past record and though money is tight and there is very little inclination among money lenders to encourage speculative building, preparations are being made for extensive building work in the near future.

The hardwood values at this period seem to be fairly steady. Ash and poplar hold good

position. White oak is firm, especially that for exporting. Red oak is a little off. Chestnut, basswood, birch, maple and in fact all the hardwoods are steady.

Baltimore.

While the leading hardwoods have steadily held their own in the market here, prices being firm and the demand of generous proportions, a feeling of uncertainty had taken possession of the trade. During the past two weeks a distinctly better tone has manifested itself and dealers are now disposed to take the view that business will continue good. Here and there a decided increase in activity is reported. One local firm makes the statement that its sales this month are larger than those for some time past, and stocks in general are being moved more promptly. There had been considerable complaint by manufacturers along the line of the Norfolk & Western road about a shortage of cars. This has evidently been remedied, at least some of the firms most seriously affected say that during the past week or ten days they have been getting all the cars they need. As a disposition to buy also prevails the accumulations at mills are being, in a measure, reduced. An improvement is likewise noted in financial conditions, the banks lending more freely and the monetary stringency being less in evidence. All the mills are being operated whenever it is possible, and the inquiry is quite active, though the offerings are more liberal than was the case some months ago. The common grades of oak seem to be more plentiful than is compatible with firmness in prices, while high quality lumber finds ready takers and commands attractive figures. Heavy shipments abroad have made the foreign market rather quiet, and there is as yet no particular snap in the inquiry from that region. Ash and other woods are meeting with a good demand in this section and the stocks do not exceed moderate proportions, while the European buyers evince a disposition to hold back in the expectation that the quotations may drop.

Pittsburg.

Spurts in demand for several lines of hardwood lumber are being commented upon quite generally in Pittsburg. Within the past few days both railroad and traction ties have been in much better call. Maple and beech flooring are more active, showing that builders are at last getting to the point where they can do the yard men some good. Locust posts are wanted badly, and better prices are being paid than for some time. There is a general demand for white oak timbers that is hard to satisfy. Lath men are reporting much better business. For the minor hardwoods, hickory, ash, elm and walnut the inquiry has greatly increased since the first of the month and calls from manufacturers throughout the middle west indicate that they will need large additions to their present contracts before Jan. 1.

The price situation is, on the whole, more favorable. Firm demand in many lines is keeping quotations right up to list. Some cutting is in practice among the smaller concerns, especially where lots are broken or where a threatened car shortage is making it hard work to get lumber started from the mills. The most conspicuous example of a weakness in local prices is in chestnut, which is not gaining strength any, according to general reports. Sound wormy keeps in fair demand, but the poorer grades are offered at considerable concessions.

The worst complaint from the wholesalers is the difficulty of getting cash for their lumber. Collections for two months past have been slow, and the fact that the banks have practically refused to discount ordinary paper has made it necessary to put much more money into the wholesale business. Local firms are also making heavy expenditures in the way of new timber tracts, new plants and machinery and are preparing to make a very large winter's cut of hardwood in Pennsylvania, West Virginia and states farther south.

Buffalo.

In the general lumber trade the movement is rather light, though most hardwoods are doing well. Consumers do not buy any more than they need and are eager for shipment as soon as they give their orders. Oak is plenty, but is selling readily. Chestnut and ash are going fast and are in better supply than they were. They do not promise to return to full assortments again. There is no increase in the supply of poplar and the price is very high. Elm and basswood are selling moderately, the supply is not large and jobbers find it hard to buy so that they can make a fair profit.

There is the usual looking toward southern pine and Pacific coast lumber for filling in the gaps caused by the scarcity of many hardwoods and the high price of white pine.

Bay City and Saginaw.

The market is improving according to operators. It was the conviction of lumbermen during the summer dulness that the letting up would be only temporary, and that this view was correct is already being demonstrated. Despite the high rate of wages paid for woods work and the cost of supplies, so far as ascertained the loggers and mill firms are calculating upon putting in the usual stocks this fall and winter. The active demand last winter for all kinds of hardwood lumber and the fact that large quantities of stock had been contracted for from the mills for future delivery has placed the market in good condition, as so much of this season's cut was sold last winter and taken out of the market that there hasn't been the accumulation of stock that would otherwise have resulted. Prices are well maintained. The limited quantities of ash, oak and basswood in stock have made a strong market for those commodities. Dealers are expecting a fair winter's business and their expectations appear to be justified by indications. Yard dealers as well as manufacturers are in good spirits and all are confident. In a word there isn't a streak of weakness anywhere in the business.

Indianapolis.

Hardwood lumber dealers are particularly optimistic, and prospects seem to be bright for a heavy fall and early winter business. All of the local concerns are well stocked and lumber seems to be arriving as needed. There has been a slight increase in the demand during the last two weeks and the market is more promising than it has been for several weeks.

The car shortage which was predicted last month by railroad officials has not arrived, nor does it seem imminent for some time. The recent shippers' law compelling railroads to fill orders for cars in the order received is having a tendency to give lumbermen a better opportunity to ship their stock.

Prices remain practically the same as they have been since June, when there was a slight advance.

Bristol, Va.-Tenn.

The lumber business in this section is gradually recovering from a period of dulness and prices are slowly recovering. Demand for certain stocks which relaxed some weeks ago is stiffening and it is the unanimous opinion in the best informed hardwood circles that the prospects for fall and winter business are now much brighter than they were a few weeks ago.

A better call for oak is noted, while poplar is more than holding its own, as it has done even through the dull season. The demand for chestnut, especially thick stock, is better.

Local exporters report an appreciable improvement in the foreign markets. "The outlook is much brighter for exporters," said H. M. Hoskins of the H. M. Hoskins Lumber Company to the *Hardwood Record* correspondent. This is the unanimous sentiment of all of those engaged in that business.

Cincinnati.

No material changes have been noted in the local hardwood situation during the last fortnight, with the exception that poplar and quartered oak have shown a little added strength. The Indian summer, which has set in here, has lent some strength to the purchase of these two items of wood. The others have been in fair request and, considering the fact that the fall trade has not set in, they are doing well. A big boom is looked for in all grades of hardwoods within the next two weeks, as dealers are anticipating the start of the fall trade, which, according to large dealers, will be good, providing there is a change in the money situation. The scarcity of money has figured materially in the demand. The retail dealers have come into the market and are buying, but on a small scale. Their contemplated depreciation in the prices of hardwoods was not forthcoming and now they are forced to pay the standard prices. White oak has not been doing any better, but mahogany, cypress, hickory and walnut have kept on a par with the pace set some weeks ago.

St. Louis.

While the fall season has been remarkably slow in advancing in this market, orders are coming in a little more freely, with every indication that they will be exceedingly brisk within a few days. The crop situation seems to be satisfactory, and it will have its effect upon the lumber business in the near future. There is no cutting of prices, on the contrary, certain items have advanced considerably. A week or ten days should see things booming. However, the car shortage is going to be a serious drawback, as from many mill points come the report of delayed shipping and consequent curtailment of operations.

Nashville.

The past week was a good one with the lumbermen. Not much business was transacted during Friday and Saturday, however, as practically all the little lumber world went over to Memphis, where the Nashville team was defeated and Memphis helped clinch her claim on the "hardwood championship of the South." Dry stocks are still low in poplar, ash and chestnut, in spite of liberal receipts from the country mills. Oak is plentiful, however. Little change is noted in prices. The principal thing that is worrying the local dealers just now is the prospect of a considerable car shortage. The outlook for business is bright, however. Little change in prices is anticipated.

Memphis.

There is some improvement in the demand for hardwood lumber and the market is gradually working into more satisfactory shape. There is a decided increase in the number of inquiries and this is accepted by the trade as an augury of excellent business within a short time. This prevailing optimism regarding the outlook is largely responsible for the manner in which prices are maintained. Moreover, there is only a moderate stock of dry lumber on hand and it would be difficult for consumers to secure large quantities for immediate shipment. There is a great deal of lumber on sticks as a result of the excellent weather which has prevailed for the past few months, but there will probably be no surplus. Furthermore, the time is approaching for bad weather and curtailed production and it is felt that there will be an outlet for all the hardwood lumber available during the fall and winter. The export trade is very slow and most of the exporters here express the view that this condition will probably continue for a while. But even exporters are not discouraged over the outlook, believing that in due course of time there will be a resumption of active buying on the part of the foreign trade.

The relative position of the various items here has shown little change. The demand for

quarter sawn oak is good in all grades and there is comparatively little of either red or white for sale. Plain oak is rather slow in the lower grades, but there is no indication that either manufacturers or wholesalers are pressing this for sale. Red gum in the higher grades is being shaded to some extent and this is also true of certain kinds of cottonwood. Narrow widths of the latter are in rather poor request and holders are making some concessions thereon. Wide firsts and seconds as well as box boards are in very good demand and are well maintained as to price. Cottonwood in the lower grades is in excellent demand and values are close to the highest of the season. There is very little of this low grade lumber for sale, while box manufacturers are consuming enormous quantities. Most of these produce a portion of their own wants, but the majority of them are in the market for what is available. Low grade gum is not quite so active as a short time ago and prices are a bit lower. However, the market has held up well in view of the increased amount of low grade lumber manufactured during the past few months. Cypress shows some improvement and the demand for poplar is quite up to the average for this time of the year. Offerings of both cypress and poplar are limited.

Charlotte, N. C.

There has been no appreciable change in the local hardwood market during the past few weeks. Good prices have prevailed throughout the summer, and even fancy prices have been demanded for certain grades of hardwood. Local manufacturers have had plenty to do and have received good prices for all their manufactured products. There has been no notion in Charlotte of closing down the plants.

Minneapolis.

There is unusual quiet in the market for this season of year, but it is not causing dealers any uneasiness. They know that the principal

consumers are all using hardwood stocks in good quantities but, having some still on hand, have postponed buying with the idea that prices may get a little easier. As northern stocks with the exception of birch and maple are well sold, prices are holding up well. No weakness is developing in southern hardwoods, which are now cut off to a large extent by car shortage. Birch is holding up well and the lower grades are moving rapidly. The prices which have been maintained on birch right along are not cut, and in time the uppers will undoubtedly be moved on the same basis. Basswood in the upper grades, especially long boards, is a trifle week, but the lower grade stock is scarce and stiffer than ever. Nearly everything is in strong hands and there is very little prospect of unloading sales to raise funds. Northern oak and rock elm are taken whenever offered, and the market for southern stock is expanding. Oak for timbers and switch ties is being ordered extensively from the South.

Country trade is quiet, as the yards have not begun ordering for fall trade even in pine. The furniture business is good and the numerous plants making cheap furniture in the Twin Cities have been active buyers of late. They report a good many orders for their product in sight. Sash and door factories still have all they want to do, and building activity continues at a rate which promises a good local demand for some time.

Toledo.

Hardwood conditions here are improving slightly. There has been considerable activity in some lines, and the demand has been fairly strong in nearly every direction. The largest cargo of oak which this port has known for many years cleared a few days ago for Kingston, Ont., where it will be reloaded and shipped to London, England. The cargo consisted of 50,000 cubic feet and was valued at \$20,000. Local demand for oak has also been good, with only a limited supply on hand. While the price has not advanced, it is very firm.

Chestnut is a scarce article on this market at the present time, and prices are quoted correspondingly high. Sound wormy grades are priced at about \$24, nearly \$5 higher than at this time last year. The call from furniture factories and other manufacturing institutions has been very strong for all kinds of chestnut. A car shortage in the sections where most of the supply is to be had for this market is adding to the scarcity.

Ash is also difficult to secure and prices are up. One wholesale firm having an order for two-inch strips found it impossible to fill the order after several days of fruitless search. Poplar also seems to be almost among the impossibilities here at this time. Little poplar is to be had outside of the West Virginia fields, and while the supply there seems to be fairly liberal it is impossible to secure any cars for service. Orders for poplar which were placed about the middle of July have been waiting ever since for cars and are seemingly no nearer to shipment than they were when the order was placed.

Other hardwoods are in about the same condition that they have been for some time. The manufacturers are running exceptionally strong and are in a sense making up for the shortage in demand from other sources. Prices, supplies and demand seem to be otherwise unchanged.

Little Rock.

Never, perhaps, in the history of the state was the movement of lumber heavier than it is at present, and the traffic is increasing, despite a somewhat easy market on some products. It is evident that the mills are endeavoring to dispose of stocks before the transportation situation becomes more complicated, as will certainly result when the crop movement begins, especially the movement of cotton. The lumber concerns are becoming much disturbed over the situation and are rushing their material on the market. A

traffic official recently observed that the export of lumber from Arkansas this year is many times greater than last year. Indeed the only limit set this season upon the output of the mills and hardwood factories of the state is the ability of the railroads to handle it. A carload of building material ordered from this city for Des Arc, a small point not over seventy-five miles east of here, was shipped two months ago, but the consignee has never been able to locate it. When to this congested condition is added the movement of the 10,000,000 or more bales of cotton and the increased fuel and grain movement of the fall the outlook becomes anything but bright.

London.

There have been still greater arrivals of lumber at this port during the past few weeks, and as most of the buyers are away making holiday, very little has been sold. Whether this glut has been caused by financial conditions in the States or by stocks having been shipped so as to maintain the market prices, it is difficult for us here to determine; but the fact remains that this market is flooded with lumber, especially cheap plain oak; buyers have taken their fill, and as stocks move into consumption very slowly at this time of the year, most of the arrivals are being stored in the docks. There is little doing in prime oak, and only a fair call for 3 and 4 inch planks. The demand for quartered oak boards is slightly better. There is still a good market here for prime grade of dressed whitewood boards, which are realizing full prices. Thick planks are inquired for, but the stock is very low. In the lower grades the supply is quite equal to the demand. New Zealand white pine is finding favor among users who have been working American whitewood, and in the thicker stocks can be put on the market to compete with same. It is expected that boards—on which there is some export tax which will shortly be removed—will soon arrive here dressed so as to take the place, as far as possible, of poplar. For black walnut there is a much better demand at present, and it is to be hoped that the public has again taken a fancy to this high-class wood. The demand is mostly for good medium boards and planks. The market is well supplied with satin walnut, medium grades only being asked for.

Ash and hickory logs are in good supply, with no demand for planks and boards.

Liverpool.

The trade of the country northwest of Liverpool, so far as timber is concerned, is anything but good. "Very quiet" is the reply one receives from nine out of every ten asked as to how they find trade. The only items that one receives any inquiries about are hickory logs and mahogany, which are really the only two items being sold to any extent. Poplar is still very firm, but we do not hear of any large quantity being sold. Consumers can not afford to pay the exorbitant prices now being asked by shippers. Substitutes are everywhere being searched for, and such lumber as bay, cottonwood and satin walnut are being asked for for this purpose. We feel confident that it is the lack of supply rather than increase of demand which has sent poplar to its present level. We heard of good prices ruling for a parcel of first growth ash logs which arrived on consignment at this port, and we have no doubt large-sized wood is badly wanted. Shippers should not ship any second growth ash logs, as this has been rather overdone and lower values are ruling. We hear that one of the largest shippers of this wood has been unable to obtain an offer for his next year's shipment within 2 per cent of his last year's contract. We look for still higher values for mahogany, which is very firm.

HARDWOOD RECORD

- Reaches more manufacturers, jobbers and consumers of Hardwood Lumber than all the remainder of the lumber trade press combined.
- Prints more hardwood news than all the remainder of the lumber trade press combined.
- Is not only the only hardwood paper, but the best lumber paper printed.

It's ready for you---we mean our new catalogue on steam logging machinery on which we've been at work over a year.

Our expert photographer covered 20 states selecting just such views as would best illustrate what our several machines can do, are doing, and how they do it.

It shows scores of operations in the north, south, east and west, in heavy and light timber, dry and swampy ground, level and mountainous country, in fact all kinds of conditions under which logs are handled.

The book is
printed in natural
colors. It's a work of art.

The pictures tell the story and if you
want an authority on CHEAPER LOGGING simply ask for it.

CLYDE IRON WORKS, - - DULUTH, MINN.

Matterson

MERSHON

New 1907 Models

Built in two sizes with eight different arrangements of feed works. Adapted to all requirements in modern hardwood saw mills and unexcelled for accuracy, efficiency, capacity, durability and convenience.

WHO BUYS HARDWOODS?

Do You Want the List?

The Hardwood Record supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock veneers and panels of consumers of those materials throughout the United States and Canada.

Specifically, the items of the bulletins recite:

Name of state and town

Name of concern

Name of buyer

Line manufactured

Kinds, grades and thicknesses of Lumber

Kinds and sizes of dimension stocks

Kinds and thicknesses of veneers

Kinds, thicknesses and sizes of panels.

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber **not** used are removed, and the cards are filed in alphabetical order between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete roster of the hardwood requirements of all users, and is an invaluable adjunct to the sales department of every manufacturer and jobber.

This service is free to all advertisers, save the patent index cards which show at a glance the kinds of lumber used by each concern, and which are sold at \$3.50 a thousand, the state guide cards costing 75 cts. a set.

Write us about this service.

No. 53 Double Surfacers—Works 30" wide by 6" thick. Six Feed Rolls

A machine of large capacity, especially suited to dressing boards in quantity. Equipped with broken rolls or our patent sectional rolls for feeding a number of pieces of varying thickness simultaneously. Relative positions of heads insures best planing. Patent adjustable wedge platen means a saving in stock. The belt release saves time and belts. Usual gear train eliminated.

A cordial invitation is extended to visit our exhibit at JAMESTOWN EXPOSITION, Norfolk, Va., Machinery Building, Section 15.

PLANERS and MOULDERS

SEATTLE

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17½ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

**A CONSERVATIVE
INVESTMENT****Yielding 1200% per year, indefinitely**

According to the testimony of users, the Gordon Hollow Blast Grate saves or earns its own cost every thirty days, which means a profit of 100% per month, or 1200% per year.

Your profits depend on your output, your output on your machinery, your machinery on your engine, your engine on your boilers and your boilers on the fire on your grate.

Governments all over the world use forced draft on their war vessels; and all workers in iron use a blast to melt the metal.

In like manner progressive saw mill operators everywhere use the Gordon Hollow Blast Grate to force their fires and crowd their boilers. It enables them to burn wet or green sawdust or slabs, and to make from 25 to 50% more steam than with an ordinary grate.

The next time you are near a blacksmith shop, step in and note how wonderfully the blast that issues from the tuyere quickens combustion. The Gordon Hollow Blast Grate is the same thing exactly multiplied a hundred fold.

Such is our unbounded confidence in the great—a faith based on sixteen years of practical experience—that we will ship you an outfit on thirty day's trial, you to test the apparatus in any manner you may see fit, and if for any reason you conclude you do not care to keep it, we will pay the freight both ways.

Does this not look as though we were acting in good faith?

**The Gordon Hollow Blast Grate Co.****GREENVILLE, MICHIGAN**

The Largest Manufacturer of Grates, Edgers and Trimmers in the World.

**READ
THIS LETTER**

GRAND RAPIDS VENEER WORKS,

Grand Rapids, Mich.

Gentlemen: It is now two months since we remodeled our kilns and added your patent process, and we want to say to you that we are glad we made the change. We can now dry our lumber in about half the time it formerly took, and the saving in time is but a small part of the advantage, as the lumber dried under the new process comes out in much finer condition. It is entirely freed of all sap and none of it is warped or checked.

We can cheerfully recommend your system to parties needing an up-to-date system. Yours truly,

SCHILLER PIANO COMPANY.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

General Market Conditions.

There is no marked change in the features of the hardwood market the last two weeks. Trade the country over is fair, although in the eastern sections there seems to be a diminution of urgent buying, which condition is probably attributable to the rather close money market. There is some complaint of slow collections, but on the whole the situation is very good, with every prospect of increasing demand as the season advances.

Doubtless poplar is the strongest seller of the entire range of hardwoods. Oak in most sections of the country is doing well. The general range of southern hardwoods is in fair demand, except that there seems to be a hesitancy in the purchase of gum. In quite a number of cases gum producers have been making offerings at cut prices, which in place of stimulating demand, has succeeded in demoralizing trade. The prices on gum recently quoted by a good many producers will perforce necessitate the restriction of the gum output, as the prices of even a month ago afforded little profit to manufacturers. The wise owner of gum stumpage will leave his timber growing in the woods for some time to come. This most excellent of woods seems to have been the target of attack from buyers, and it will be the fault of producers if the present condition of values continues, as in relative value gum certainly is worth much more than present list prices.

Northern hardwoods of every variety are in short supply, and sold close up to green stock. The volume of trade is limited to the small amount of lumber in sight. There is a diminution in large flooring orders, especially in metropolitan districts, but the aggregate of small orders is still large and the factories producing both maple and oak flooring are all busy.

With the advancing season there is a growing demand for both veneers and panels, and conditions in this branch of the industry are very promising. It seems to be the consensus of opinion among manufacturers that business during the latter part of the present summer was far better than during the corresponding period last year.

The Handle Meeting.

In this issue of the HARDWOOD RECORD will be found a report of the meeting at which were taken initial steps looking toward the organization of the various elements of the handle industry of the United States and Canada into an association for the mutual benefit of the manufacturers and dealers in these great and varied commodities. It was decided to form one general organization, with subsidiary branches to cover specific lines of production, under the guidance of those interested in each particular division of the trade.

The meeting was attended by the greater number of the larger manufacturers of the country, and was harmonious. Initial steps were taken to organize an association which should be of great benefit to the 650 or more handle makers of America as well as the buyers of the product.

The Great Corn Exhibition.

For weeks the choicest specimens from the rich corn fields of twenty-four states have been garnered for the great corn exposition which opened in Chicago Oct. 5. The attendance was enormous, exceeding 200,000 from out of the city alone, while the exhibits numbered 20,000. It is the opinion of many successful farmers that unless the present system as practiced by a large percentage of their number is changed, the great Mississippi Valley will lack bread within the next two decades. The great exposition will help educate the farmer how to maintain the fertility of the soil and keep up the vast yield of corn, producing the maximum amount to the acre.

Pessimists who have been howling about poor crops will be somewhat taken back by the statement of experts that never has a finer or larger display of corn been seen, and that the value of the crop this year will be the greatest in the history of the world, amounting to more than that of the wheat and cotton crops combined, and they are not behind the average yield.

For years the children of our farmers have been migrating to the large cities, and neglecting what seemed to them a narrow and unprofitable field, but at the exposition a noticeable feature was the scores of young men—brilliant thinkers, fluent speakers, many of them college bred, full of knowledge of their subject—who are taking up farming in a logical and scientific way, so that this great profession, upon the success of which so many other lines depend, is at last coming into its own.

Greatest Transportation Movement of the World.

With the passing of resolutions endorsing the project of a fourteen-foot ship channel from the Great Lakes to the Gulf of Mexico, a petition to Congress for an appropriation sufficient to carry it to a successful issue, and the appointment of a committee of fifty to influence such action, one of the most notable gatherings ever held in the interests of good transportation and general expansion of a country's resources was adjourned.

The Deep Waterways Convention at Memphis Oct. 5 was a tangible expression of one of the great forward movements of the age, and the presence of President Roosevelt and the governors of fourteen states lent to the project a prestige and publicity that have undoubtedly given it the impetus necessary to lift it out of its erstwhile obscurity and misconception on the part of the masses and carry it through, over the heads of indifferent, grafting and short-sighted

politicians. It has suddenly become a matter of widespread public interest and common knowledge, while its feasibility and the benefits to be derived are so obvious that they need only be set forth to become apparent to the simplest mind. This movement will mark an era of improvement which it is hoped will eventually embrace 16,000 miles of inland waterways. It is doubtful if any other national expenditure could be suggested which would yield such rich returns if rightly managed.

Aside from the presence and stirring endorsement of President Roosevelt, the attendance of well-known railroad officials at the convention was considered of paramount significance. It meant that the great and far-reaching influence of the railroads is no longer against the development of the internal waterways of the United States; it meant that instead of opposing the movement, with its resultant accretion of river traffic, the more far-sighted officials are desirous of seeing it forwarded with all possible dispatch, and will lend their aid to expedite it.

The country has reached a stage of prosperity and commercial development where all phases of the transportation problem are becoming appalling, from the shipping of all classes of freight down to the carrying of passengers in congested districts. This has brought many of the roads out of their former attitude of selfishness to a point where they are glad to grasp a helping hand and sue for assistance in solving the troublesome question. Not only are they unable to handle their enormous business with satisfaction to patrons, at certain seasons of the year particularly, but the development of river traffic would be an actual monetary gain, in that it would leave them free to handle higher-class, better-paying passenger and freight trade, since much of their most bulky and least remunerative business would be handled by water.

President Roosevelt in his speech pursued his usual "buck-the-line-hard" policy and showed in his wonderfully forceful manner the advantages and necessities of the deep waterways proposition. He referred to the river and harbor bill as a great annual drain upon the treasury of the country, and admitted that in spite of the enormous expenditure, results are anything but satisfactory. He explained that the reason for this is because the work done up to date has not been based upon a definite and continuous plan, and urged that in future it be entered upon only under conditions which will insure results and guarantee the nation against waste of money, with a definite policy and resolute purpose to keep in mind, above all, that the only improvements made should be those really national in their character. It is undoubtedly true that many congressmen have tried to secure appropriations within the limits of their own districts, utterly disregarding national interests, as evidenced by the fact that they have been substantially remembered in the rivers and harbors bill, although the topography of their sections showed nothing more than "a dewdrop and a depression" to warrant it, to use the words of Governor Cummins.

The president devoted the early part of his speech to a review of the industrial history of the great Mississippi Valley, its immeasurable resources, and the astonishing growth of its numerous industries, and continued by saying:

The valley of the Mississippi is politically and commercially more important than any other valley on the face of the globe. There more than anywhere else will be determined the future of the United States, and indeed, of the whole western world; and the type of civilization reached in this mighty valley, in this vast stretch of country lying between the Alleghanies and the Rockies, the Great Lakes and the Gulf, will largely fix the type of civilization for the whole western hemisphere.

The wonderful variety of resources in different portions of the valley make the demand for transportation altogether exceptional. Coal, lumber, corn, wheat, cotton, cattle, on the surface of the soil and beneath the soil the riches are great. There are already evident strong tendencies to increase the carrying of freight from the northern part of the valley to the gulf. Throughout the valley the land is so fertile as to make the field for the farmer peculiarly attractive; and where in the west the climate becomes dryer we enter upon the ranching country; while in addition to the products of the soil there are also the manufactures supplied in innumerable manufacturing centers, great and small.

Such being the case, and this valley being literally the heart of the United States, all that concerns its welfare must concern likewise the whole country. Therefore the Mississippi river and its tributaries ought by all means to be utilized to their utmost possibility. Facility of cheap transportation is an essential in our modern civilization, and we cannot afford any longer to neglect the great highways which nature has provided for us.

These natural highways, the waterways, can never be monopolized by any corporation. They belong to all the people, and it is in the power of no one to take them away. Wherever a navigable river runs beside railroads the problem of regulating the rates on the railroads becomes far easier, because river regulation is rate regulation. Year by year transportation problems become more acute, and the time has come when the rivers really fit to serve as arteries of trade should be provided with channels deep enough and wide enough to make the investment of the necessary money profitable to the public.

The national government should undertake this work. Where the immediately abutting land is markedly benefited, and this benefit can be definitely localized, I trust that there will be careful investigation to see whether some way can be devised by which the immediate beneficiaries may pay a portion of the expenses—as is now the custom as regards certain classes of improvements in our municipalities: and measures should be taken to secure from the localities specially benefited proper terminal facilities.

Planned and orderly development is essential to the best use of every natural resource, and to none more than to the best use of our inland waterways. In the case of the waterways it has been conspicuously absent. It is evident that the most urgent need is a farsighted and comprehensive plan, dealing not with navigation alone, nor with irrigation alone, but considering our inland waterways as a whole, and with reference to every use to which they can be put. The central motive of such a plan should be to get from the streams of the United States not only the fullest but also the most permanent service they are capable of rendering to the nation as a whole.

Though President Roosevelt's speech was the feature of the opening session of the convention, other notable ones were delivered by governors of various Mississippi Valley states during the convention, all advocating the deep waterways project. Gov. Cummins urged that too much attention has heretofore been given to Congress and too little to the voters, and appealed to a patriotism which demands appropriations to be made for those improvements which most vitally concern the commerce of the country as a whole.

Editorial Notes.

Sad to relate, the great interurban baseball games, recently played between the lumbermen of Memphis and Nashville to decide which is the greatest lumber market, have resulted in a tie; therefore, the question is still unsettled. As a suggestion for solving this momentous question, how would it do to have President Russe of Memphis, and President Ransom of Nashville, turn over the box? This matter should be settled once and for all.

The beautiful little prose poem appearing on page 15 of this issue of *HARDWOOD RECORD*, entitled "The Mystery of the Forest," is an excerpt from a sketch forwarded by A. Patriarche of Detroit, traffic manager of the Pere Marquette Railway. Of this beautiful little sketch Mr. Patriarche says: "I notice in your issue of September 10, you have entered another domain and have sounded a trumpet announcing 'The Awakening of the Forest,' and in line with that sentiment I enclose a symposium entitled 'The Mystery of the Forest.' It is culled from writings of Fiona MacDonald, Bryant and others, and was put together by myself to meet a certain occasion. I think it follows out a line of thought and sentiment that fits and I take great pleasure in sending it to you."

The *HARDWOOD RECORD* is indebted to E. F. Perry, secretary of the National Wholesale Lumber Dealers' Association, for a 400-page book covering the evidence before the Interstate Commerce Commission of the National Wholesale and other associations vs. sundry railroads, in the flat and gondola lumber car equipment case. When this document is presented to the average railroad man, it is doubtful if he will stand out for a minute against the justice of the contention. If he had not rather supply ear stakes than to read this book, the *HARDWOOD RECORD* loses its guess.

THE MYSTERY OF THE FOREST.

Mystery ever pervades the forest! Silence and whispers—still glooms—sudden radiances—zephyrs and idle airs—all these haunt the woodland at every season. But it is not in their amplitude that great forests reveal their secret life. In the first vernal weeks the wave of green creates a shimmering veil of delicate beauty, through which the missel-thrush calls, and the loud screech of the jay is heard like a savage trumpet cry.

The woods then are full of virginal beauty. There is intoxication in the light air. The cold azure among the beech spaces, or where the tall elms sway in the east wind is like the sea, enchanting, exquisitely unfamiliar.

Then follow days when the violet creeps through the mosses at the base of great oaks—when the fading snow-bloom or the black thorn gives way to the trailing dogrose—when the myriads of bees among the chestnut blossoms fill the air with a continuous drowsy unrest—when the cushat calls from the heart of the fir—when beyond the green billowy roof of the elm, the oak, the beech, the sycamore, the tardy ash—silver voices of the South fall through leagues of warm air as unseen birds sail on the long tides of the wind.

Then in truth is there magic in the woods! The forest is alive in its divine youth! Every bough is a vast plume of joy! On every branch a sunray falls or a thrush sways in song! There is not a spot where fragrance, beauty, life, are lacking.

But the forest wearies of this interminable exuberance, this daily and nightly charm of exultant life. It desires the enchantment of silence, of dreams. One day the songs cease; the nests are cold. In the meadows the hare sleeps and the corncrake calls; by the brook the cattle stand motionless. In the green glooms of the forest a sigh is heard. Now may be seen and felt that secret presence which in the spring hid behind songs and blossom and later clothed itself in dense veils of green and all the magic of June. The leaves know it, the bracken know it. The secret is in every thicket, is palpable in every glade, is abroad in every shadow! It is not a rumor, for that might be the wind stealthily lifting its long wings from glade to glade. It is not a whisper, for that might be the secret passage of unquiet airs, furtive heralds of unloosing thunder. It is not a sigh, for that might be the breath of branch and bough, of fern frond and grass. It is an ineffable communication, coming along the ways of silence, the ways of sound—mysteriously gathered from below, from on high, from everywhere!

But the hush is dispelled at last! The long lancets of the rain come slanting through the branches. They break and fall with pattering rush. The hoarse mutterings and sudden crashing roar of thunder possess the whole forest! The secret spirit that dwells within it recedes inaudibly all through the hot noons, warm midnights and long days of July and August.

In the September woods the forest soul still eludes, with the unhurried but sure withdrawal of the shadow! In that month the sweet incessant toil of bird and beast lessens; there is a silence while the birch takes on her mantle of pale gold, and oak and ash are newly clad in russet. In

the dusky ways faint azure mists gather. The fawn no longer leaps noiselessly through the fern—there is a thin dry rustle as of a dove brushing swiftly by. The woodpecker still taps at the bole of the oak—the squirrel is more gay than ever. On frosty mornings when the gossamer webs are woven across every bramble one may pass from covert to covert, from glade to glade, and find the secret just about to be revealed. Somewhere beyond the group of birches, beside that oak it may be! Or just beyond that thorn! But it is never overtaken. 'Tis as evasive as moonlight in the hollow of a wave.

In October with the nocturnal advent of the blighting frosts, disclosure seems inevitable. When the leaves grow sear and wan and falling, strew every billowy breeze, fluttering from the branches like tired, starving swallows left behind in the great procession of migration—surely the surprise is imminent—yet something is withheld!

The subtle charm of November woods is the deep blue spaces which lie so close together along every avenue of meeting boughs. The azure mist which lies below like thin, faint smoke, has the spell of silent moonlight—a light all its own, as mysterious as the flame which burns in the heart of the rainbow! The earth breathes the breath of fallen leaves, of moss, of tangled fern, of undergrowth, of trees. The windless gray-blue sky leans so low that one may almost penetrate that other world!

In the dead months of late winter the forest lives its own peculiar life. The spirit is not asleep, as poets feign. Slumber has entered into the woods, has made the deep silences its habitation, but the forest itself is awake, mysterious, omnipresent, splendid in its naked majesty. One says lightly that there is no green thing left—but there is always green fern somewhere—there is always moss hidden among the roofs of the beeches. On the ash and elm the wood ivy hangs its spiked leaves. On the oaks the dull green of the mistletoe droops in graceful clusters, but its glistening cream-white berries are lost in the immense uniformity of desolation.

To pass through those winter aisles of the forest is to know an elation foreign to the melancholy of November and the first fall of the leaf. It is then one loves the mystery but furtively divined. In the murmur of the trees there is music, ancient, everlasting.

Listen, watch—and soon the quiet months will show you a subtler secret than any you have yet found in the forest! In that still ecstasy of Nature every spray, every blade of grass, every spire of reed, every intricate twig is clad with radiance, and myriad forms arise under the magic hand of the great white Artificer!

The groves were God's first temples. Ere man learned to hew the shaft, lay the architrave and spread the roof above it, ere he framed the lofty vault to gather and roll back the sounds of anthems, he knelt down in the darkling wood, amidst the cool and silence, and offered to the Mightiest his solemn thanks and supplication! His simple heart could not resist the sacred influence which from the stilly twilight of the place and from the gray old trunks that mingled their mossy boughs high in the heaven, stole over him and bowed his spirit with the thought of boundless power and inaccessible majesty!

AMERICAN FOREST TREES.

SIXTY-SECOND PAPER.

Dogwood.

Cornus Florida—Linn.

Dogwood grows from eastern Massachusetts south to central Florida; west through the southern states, lower Ontario and southern Michigan; down into southwestern Missouri and the vicinity of the Brazos river in Texas; in Mexico it is found along the Sierra Madre mountains.

It is called flowering dogwood in Massachusetts, Rhode Island, New York, New Jersey, Delaware, Pennsylvania, Virginia, North Carolina, South Carolina, Mississippi, Louisiana, Arkansas, Missouri, Illinois, Kansas, Michigan, Ontario, Ohio and Indiana; dogwood in New Jersey, Pennsylvania, Delaware, West Virginia, North Carolina, South Carolina, Alabama, Florida, Louisiana, Kentucky, Ohio, Indiana and Michigan; boxwood in Connecticut, Rhode Island, New York, Mississippi, Michigan, Kentucky, Indiana and Ontario; false box dogwood in Kentucky; New England boxwood in Tennessee; flowering cornel in Rhode Island; cornel in Texas; Cornel-wood in scattering sections throughout the South.

Common names are not always easy to account for; the name of the genus to which this tree belongs, *Cornus*, signifies horny, and is applicable to the tough, hard qualities of the wood. Why the name "dogwood" should have been adopted is more or less of a mystery. One writer offers this explanation: "Dogwood is one of those unfortunate popular names fastened without reason upon a family of beautiful trees and shrubs. In the good old times it was the practice in England to steep the bark of a certain species and wash mangy dogs with the astringent decoction. Perhaps the dogs were as indignant at this treatment as we are to be persistently reminded of it."

The dogwoods include about thirty species distributed over the northern hemisphere, and one growing in Peru; they are mostly shrubs, although a very few species, notably the *Florida*, reach the proportions of a tree. All are hardy and decidedly ornamental because of their attractive blossoms and autumn foliage. The *Florida* and one other species, which thrives along the Pacific coast and among the redwood forests of California, are about the only varieties which enter into lumber manufacture to any extent.

The leaves of *Cornus Florida* are simple, growing opposite each other on petioles, and clustered at the ends of branchlets; in shape they are elliptical with pointed apex and

base; three to five inches long, with distinct white ribs and veins; they are bright green above and glabrous; pubescent and paler below.

The flowers bloom in April or May, and grow in a rounded cluster; they are green and very tiny, surrounded by a conspicuous involucre of four white, petal-like bracts,

and roughly ridged, broken into plates. In winter the tree may be readily distinguished in a large forest of many varieties by the grayish-brown, checkered appearance of the bark, resembling quite strikingly the skin of an alligator. The bark of the roots yields a bitter drug similar to quinine, which was formerly used as a powerful tonic.

The fruit of this tree is an oval bunch of bright scarlet berries, about half an inch long, few in each cluster; they ripen in October.

In general appearance the dogwood is rounded, with spreading branches, flat-topped and bushy. It grows from fifteen to forty feet high, and attains a diameter of from one to one and a half feet. The tree is often found growing beneath the spreading branches of the larger inhabitants of the forest, and "has a picturesque waywardness of habit in the woods; it crouches in the shadows of all trees and leans out to reach the sunshine that sifts through the forest cover." In olden times when spinning was one of the regular occupations of farmers' households the stem of the young dogwood usually furnished the distaff.

The wood of dogwood is close-grained; the heartwood rich brown, changing to green and red, the sapwood lighter. It is strong, tough, hard and heavy, a cubic foot of seasoned wood weighing approximately fifty pounds. It takes a beautiful, satiny polish, and is valued in wood-carving and for engraving blocks, aside from being very desirable for turnery, bearings of machinery, small hubs, tool handles, etc.

The wood is always in demand with the export trade, particularly English buyers, who use it along with persimmon for golf-heads and shuttle-blocks. The flowering dogwood does not grow wild in any country but the United States, and it is being exterminated in many places. One writer says: "They are being cut for the paltry bit of lumber yielded by their spindling trunks. It ought to be a capital crime to cut a single one. They are destroyed for even less cause. A hermit lived alone in a strip of woods along a little Michigan lake. He loved trees and plants and kept this area a veritable Nature's garden and willed it to the nearby city on his death. The park commissioners, when they had spread their thanks upon the records, took immediate steps 'to put the grounds in shape.' Two strong laborers were sent in to clear it up. They cut out all the dog-

TYPICAL GROWTH DOGWOOD, ALABAMA.

notched at the tip and tinged with delicate pink. In the inflorescence of the rose and other familiar flowers, the bracts are not readily seen, the corolla with its larger size and finer coloring, obscuring them. In the dogwood this is reversed—in the center of the handsome cluster of bracts may be found the tiny flower, complete with its minute petals, stigma and stamens.

The bark of dogwood is very dark colored

WALTER N. KELLEY

TRAVERSE CITY, MICH.

woods—"because they didn't trim up straight"! Lower limbs, small trees and underbrush were all sacrificed to make straight the paths of picnic parties; and to get a nice sod started and have a park! The gentle donor of this tract would have broken his heart over the looks of it when these improvements (?) were completed, and have hurled imprecations down upon the stupidity which undid all he had so lovingly and intelligently done, but chiefly upon the slothful and incompetent commissioners who trusted such work to such hands," instead of saving from destruction the remarkable natural beauty of the little plot.

Rogers, in *The Tree Book*, pays a graceful and sympathetic tribute to the flowering dogwood, a tree which must be known to be appreciated: "The grace and beauty of the leaves, with their channelled, curving, parallel veins, must strike one in summertime. Before they change color the clustered fruits, standing where the flowers stood, burn bright against the leafy background. These shining, waxy berries are never lost to view, even when the foliage takes on shades of crimson and scarlet. They deepen and intensify these royal colors until the hungry birds have taken the last one. The leaves fall and leave behind a bare gray tree, set with multitudes of buds, pledge of next year's flowers and leaves and fruit. The artist will tell you that the dogwood wears its finest colors in the wintertime! Go out into the woods in late February or early March, just when the willows and aspens show green—just a hint of it—through their telltale bark. All the other

early trees wear that rapt, expectant look that precedes the bold casting off of bud scales. The silky twigs and velvety buds of the dogwood, alive and thrilling with the stir of the sap, show marvelous tones of olive

PRINT OF DOGWOOD LEAF.

and gray and lavender, with deeper purple shadows and warm hints of red—the colors Japanese artists revel in."

The photograph accompanying this article was furnished by P. K. Villadsen of Thorsby, Ala., and shows the tree in its natural forest environment in that region.

Builders of Lumber History.

NUMBER LIII.

Walter Nathaniel Kelley.

(See Portrait Supplement.)

Walter Nathaniel Kelley of Traverse City, Mich., whose portrait appears as supplement to this issue of the *HARDWOOD RECORD*, is one of the best-known lumbermen in the state of Michigan, and especially in that section known as the "Traverse Bay country."

Mr. Kelley was born at Maybee, Monroe county, Mich., May 4, 1866. His father was a native of Scotland; his mother was Holland Dutch. The boy received a common school education at Maybee, and at the early age of fifteen left the parental roof to shift for himself.

His first position was as telegraph operator for the Wabash railroad at Whittaker, Mich., and he continued in it until he was twenty, when he was able to turn the little capital and business training he had accumulated to much better account. He went to Slights, Grand Traverse county, nine miles from Traverse City, and entered the lumber business, becoming a partner in the firm of J. A. Doty & Co., under which title operations were conducted for two years. At the end of that time Mr. Kelley purchased Mr. Doty's inter-

est and operated as Walter N. Kelley until the year 1891. The enterprise included the manufacture of shingles, as well as lumber; also charcoal and other by-products. The company owned considerable hardwood and hemlock stumpage, which kept it well supplied with material.

In 1891 Mr. Kelley took in another partner—C. T. Covell of Whitehall, Mich., and together they operated as Kelley & Covell until 1898, when affairs were readjusted once more and Mr. Kelley engaged alone in the manufacture and wholesaling of lumber at Traverse City, forming the Kelley Lumber & Shingle Company, of which he is president and manager at the present time. W. L. De Witt is vice-president; George R. Becker, treasurer, and A. W. Overholt, secretary. The company makes and wholesales hemlock and all kinds of Michigan hardwood lumber, lath and shingles; it operates two saw and shingle mills at Frankfort, Mich.; one saw mill and a shingle mill at the head of East Bay, three miles from Traverse City, and a saw mill and shingle mill at Atlanta. During the current year it has manufactured 25,000,000 feet of hardwoods and hemlock, and about 30,000,000 shingles.

A well-assorted stock of all kinds of Michigan hardwoods and hemlock is carried in the Traverse City and neighboring yards at all times, and the company owns sufficient timber tributary to its several mills to last ten years or more. It also controls a logging railroad which strikes the Pere Marquette at Moorestown Junction.

The Kelley Lumber & Shingle Company operates a wholesale yard in Grand Rapids, Mich., having as its agent there J. F. Quigley; there also a fine assortment of Michigan hardwoods and hemlock is kept on hand—usually about 2,000,000 feet. Birch is a specialty, and all kinds and grades are carried. Two lumber barges are kept in commission, the Emma E. Thompson and the Isabel Sands, which ply between the various lake ports.

Mr. Kelley is also president of the South Side Lumber Company of Traverse City, which operates a saw mill and maintains a yard at Hiawatha, near Manistique, and is interested in retail yards at various points—Detroit, Toledo, Hillsdale and St. Johns—and in the Buffalo Maple Flooring Company of Buffalo, N. Y.

He is a member of the Fellowcraft Club of Detroit, and is affiliated with numerous lodges, being a thirty-second degree Mason, a Shriner, a Hoo-Hoo and an Elk. In politics he is a Republican, while in religion he frankly brands himself "a heathen," which may stand as far as creeds and dogmas go, but which his good works and sterling character belie.

At the age of eighteen Mr. Kelley married Miss Nellie L. Van Liew, and they have a family of five attractive children—four girls, the eldest of whom is Mrs. Herbert Montague of Traverse City, and one boy.

Walter N. Kelley is a "good fellow" in the truest sense of the word—genial, good-natured, a staunch friend. His calm, deliberate manner, a heritage from the maternal stock, does not in any wise convey an impression of indecision, but on the contrary of reasonable deliberation and sane, unhurried judgment; beneath the unruffled exterior and easy-going, almost indifferent manner is felt the certain penetration, clarity of foresight and executive ability which have made it possible for the man to know opportunities when they presented, and to carry them to successful issues.

In Temporary Difficulty.

Judges McMichael and Ferguson on Oct. 4 appointed Chas. H. Thompson of Lewis Thompson & Co., Inc., receiver for the Rumbarger Lumber Company of Philadelphia, a corporation under Virginia laws, upon the petition of creditors and stockholders that the concern be declared temporarily insolvent. The Janney Whiting Lumber Company and other creditors with claims representing \$60,000, instituted the receivership proceedings through J. Howard Reber, attorney, and an affidavit was also filed by J. J. Rumbarger, president of the company, admitting insolvency.

The total liabilities of the concern were said to amount to \$280,000, covering unpaid accounts and money borrowed. The company has assets aggregating \$375,000, which include bills and accounts, \$200,000; lumber, \$100,000; planing mill, \$25,000, and timber lands, \$50,000. Under the management of Mr. Thompson the company expects to meet all its obligations.

Galveston.

To those who hard are striving,
For gain of wealth conniving,
Yet find that making money's quite a trouble—
I say, take cheer; invest some
Way down in fair Galveston.
For dollars planted there are sure to double.

No one that has not visited Galveston can have any idea what rapid strides toward higher development are being made in this city which is progressing by leaps and bounds as its inhabitants are beginning to feel the confidence and security afforded them by the sheltering protection of the great sea-wall, which has just been completed and which has earned for Galveston the name of the Sea-wall City. This wall is a stupendous work, a marvel of modern engineering, and reflects the energy, determination and undaunted spirit of the people whom the sea has scourged but conquered not.

While cities strive for the mastery of the Pacific others strive for the mastery of the Gulf as well, and Galveston will be the winner. It is the greatest cotton shipping port in the world, there being nearly 4,000,000 bales shipped from there last year. As to the total wealth of export and import trade it ranks second of all the ports in the United States, as proven by government statistics. It has five grain elevators of from 1,000,000 to 1,500,000 bushels' capacity each. They are so equipped with the most modern grain-handling devices that a large steamer can be loaded in a few hours. Everywhere the arrangements for handling heavy freight are complete. There are eighty-three docks or piers, handling vast quantities of all kinds of freight that contributes to the increasing commerce of that part of the country.

One day recently there were three ships discharging cargoes of steel rails for Mexico, one a five-masted schooner and two steamships; in all there were thirty-four ships tak-

ing on and unloading their cargoes at the Galveston wharves.

Timber men are much interested in the tremendous business that is being transacted along that line. There are oak logs, walnut logs and mahogany logs, ties, staves and lumber of all kinds, piling, poles and creosoted timbers of all sizes and descriptions changing hands. The writer noticed some round pine logs or spars two of which measured 80 feet long, 36 inches in diameter at the butt, and 23 feet at the top end. There were others almost as large, which was a great surprise, as the majority of such large trees are extinct in the United States except in the far Northwest. There was also a bunch of 139 walnut logs being loaded on the steamship Inchmarlow of Liverpool, the largest was 12 feet long and 39 inches in diameter at the top; none were less than 16 inches in diameter. They would average about 10x21 and were a good lot of walnut. There is not much of this timber going into Galveston now, but it usually begins to come more rapidly about the first of the year.

An item of timber that attracted particular attention was a lot of mahogany logs from southern Mexico, as fine a lot as will be seen in a long time, both as to size and length; they appeared to be such as would yield a large per cent of very fine figured wood. A great many of the logs had one fan each, and a number of them had two; taking them all together the writer has never seen a bunch of logs, according to its size, in which there were as many large fans. It must necessarily be a very large tree that will have two forks large enough to produce two commercial fans. There were ninety-eight pieces in this shipment, the longest being 26 and the shortest 5 feet long. The largest log was 40 inches square at either end and 16 feet long; the

smallest, 20 inches square at the butt, 17 by 20 at top, and 14 feet long. There were some smaller pieces, but they were single fans. The ninety-eight logs weighed 148 tons. They were brought up from Vera Cruz, Mexico, on one of the small Cuban steamers, transferred at Galveston to one of the large English boats, the steamer Boniface, September 25, 1907, and reshipped to Liverpool.

It seems rather odd that such commercial transactions as this are being made; it is possible that these very logs, or a part of them at least, will go to England and then be brought back to the United States. They were doubtless a choice lot of very fine wood, such as is being sought after by the cabinet wood dealers of this country. In a report sent out recently it was stated that at one of the regular mahogany sales in Liverpool about 95 per cent of the entire lot of mahogany disposed of was bought by Americans to be consumed in the United States. Of course the greater part of this was African wood, but there was doubtless considerable of it from Mexico, Central America and Cuba, and it is safe to say that some of it had passed through our own ports, just as this shipment did.

The sketches or drawings which accompany this article were made from four of the logs in the lot; the shapes are not exaggerated in the least. They are exact representations, however, of the most peculiarly hewn sticks in the lot. The fact that they are fan logs adds greatly to their peculiar appearance, and the manner of hewing or dressing them is certainly an extravagant way of handling valuable timber. They are sawed into, boxed or notched down, and the log divided into different sections of increased or decreased measurement, so that it is quite a mathematical problem to figure out their contents. Scribner's rule will not apply to the log as a whole, for each section has a different caliper, or measurement, and the flare of the

ING THIS TIMBER.

fans must be taken into consideration. In fact they are cut and sawed into at various depths and angles and chopped and skelped by the adz and broad ax until they have no resemblance whatever to logs, and but little to hewn timbers. Some of these logs looked as though they had been hewn recently, and it seems strange that this ancient way of cutting mahogany should be persisted in to this late day. It must have originated at a time when ships were smaller and their storage capacity much more limited than now, and freight rates correspondingly higher. On the other hand mahogany was then less in demand and more plentiful than now.

For these reasons it became customary to cut away every pound of surplus wood and square up the logs so as to more completely fill the space in a vessel. Such a policy may have been a practical one then, but is a

different proposition now. What was economy then is wilful waste today and has been continued much too long. Old conditions are outgrown and new and more economical methods should be adopted in cutting mahogany, such as are being followed in the cutting of other precious woods. The mahogany and cedar of the south countries will soon become as scarce as the oak and walnut of the North.

Lumbermen should favor rigid economy in cutting, as a means of prolonging the needed supply of mahogany, which is already scarce, save in remote and almost inaccessible regions from which it is expensive to bring it out to the markets of the world. The American plan of handling the logs in the round is a good one, and the bark is worth its transportation as a protection to the log.

J. V. HAMILTON.

Conditions in the Veneer Trade.

In response to inquiries concerning the condition of the veneer trade addressed to manufacturers in all parts of the United States, the **HARDWOOD RECORD** has received numerous responses. Excerpts from these letters are printed below. A very good idea of the conditions prevailing in the industry may be gained from a perusal of them. On the whole the outlook is much brighter than it ever has been in this line of production.

From Michigan Manufacturers.

While July and August were a little quiet, they were about the same as last year, and we believe the entire year will balance up considerably better than 1906. The cost of material, logs, labor, etc., is constantly increasing.

We have heard quite a little complaint relative to a let up of business, but have not noticed it ourselves. We are very busy and orders seem to be coming along quite freely. Our trade for July and August was much better than the same months last year. Our trade has been better this year than last, and more satisfactory in every way. We have no reason to think the outlook for fall business is anything but good. Our logs are costing us considerably more compared with former years, and our manufactured product is bringing us a little bit more, but not enough to offset the difference in the price of logs.

Reports from North Carolina.

We find the market duller than last year. Furniture men are not buying as much as they did last year and are disposed to figure closer. However, we have plenty of orders and are running full time but selling our stock at a closer margin than last year. The trade in July and August this year was not nearly so good as last. The outlook for fall business is very good indeed, but we find collections very slow and are forced to sell on long time. We are not paying quite as much for logs as last year. There is an abundance on the market at present, but the quality is getting poorer all the time.

We will say that our trade for July and August was better by twenty per cent than the same months of last year, and we had more orders booked for September than for last September, and anticipate more business this fall than we have ever had. Our only trouble is that money matters seem to be a little tight; our people are not meeting their bills as promptly as in the past and we are asked to take more notes at thirty, sixty and ninety days than before. However, we believe this will pass and money get easy after a bit. As to cost of material, all we can say is that it has advanced steadily with us, but not rapidly, and so far we have been able to advance our manufactured stuff fully as much as the advance on logs. We are making a better profit on what we sell than we did three or four years ago, when we got logs very cheap and sold our stock the same way. Summing up the whole matter, will say we are doing well and have no complaint to offer or suggestions, except that manufacturers should stand together and not allow a little lull in business cause us to cut prices.

There has been some falling off in the quantity of veneers used by the furniture factories in this state, especially in some parts, for the past three months. Our shipments for July and August are at least twenty per cent ahead of last year for the same time. We do not consider the outlook for fall business as good as last year, but believe it will be fair, healthy business. We think it will be difficult to advance or even maintain prices, on account of some little dullness and overproduction of some classes of stock. Logs and labor are both higher, but the furniture people seem to think that because lumber has been off a little, veneers should be likewise, while everything is tending the other way. We would rather store part of our output than to accept lower prices.

From Kentucky.

Our business dropped off very materially in July and August, but general indications point to a good fall business, so would not be surprised to see veneers pick up also. The cost of logs is fully as high as ever, timber is harder to secure, being located in very undesirable places to log, so handling expenses are greater. Labor does not seem to be any cheaper, although a little easier to secure.

There has been little or no falling off in our business. There was a perceptible decrease in orders commencing in June, but having on file a considerable number which have kept us busy, we have not felt any loss in volume. Our business for July and August exceeded that of 1906, and unless there should be a sudden slump we anticipate that the fall business will exceed that of last year. The cost of logs and manufactured material is very considerably increased over 1906. Logs have advanced rapidly. We are paying from twenty to thirty-three per cent more for any sort of domestic timber this year than we did last. The absolute necessity of advance in finished product is therefore apparent, and we doubt that but for association work this advance could have been obtained.

The Status in Indiana.

Trade during the months of July and August was the dullest we have experienced in our more than seven years of veneer business. The outlook for fall business is reasonably good, more inquiries coming in the early part of September than for the two preceding months. We are not paying as much for logs by ten per cent as we did four months ago, and there are more being offered than at any time in three years. We think personally that there is an overproduction of veneers and if we maintain prices there should be united effort to curtail production. To the writer's knowledge there are several veneer manufacturers' warehouses that are practically filled with veneers, and it will not be long until some of them get "cold feet" and put it on the market, regardless of price.

Some branches of the furniture trade are slower than usual, but July and August generally were fairly good and the outlook satisfactory, although prices are higher.

Our experience with the furniture trade is that there is a general easing up of business; this is not a panicky feeling; simply a conservative move on the part of a few of the manufacturers. We think that with good crops this will not last long. The outlook for fall

business is very good. We have orders booked for seven cars and this will carry us well into the fall. Regarding cost of logs, will say it has increased considerably. We are now paying from \$5 to \$10 more for logs than at any time previous. Not only are we paying more money for logs, but their grade is deteriorating. With us it is not a question of finding a market for our goods, but it is the more serious question of paying the price we are compelled to for an inferior grade of stock. The outcome of receiving this kind of logs is that we are manufacturing a lower grade of veneers. In other words, both our raw materials and our finished product have deteriorated to such an extent that it is almost impossible to cut a high grade of stock. Still, with this serious condition confronting us, the manufacturers over the country are cutting prices wherever they have accumulated a little surplus stock. Probably in years to come, when it is too late, they will see the folly of their ways and try to mend them. Too many veneer manufacturers seem to be afraid of neighbors and have no faith in mankind.

There was some falling off of business, though not any more than we would expect, during July and August. We see nothing to interfere with its being good all through the fall. We are having considerable inquiries for stock and making some sales at advanced prices. Logs are fully ten per cent higher than at this time last year. There are very few good logs offered and what few there are are bought at high prices.

In quartered oak veneer there seems to have been some falling off in business. Our customers are still loyal to us, but they are buying in smaller quantities than at this time last year. The outlook for fall business is fairly good and orders are coming in, indicating that we will have a pretty good season. The cost of both logs and manufacturers' material is considerably higher than it has ever been.

July and August compared favorably with last year's business, although we are inclined to note a slight difference. There are not quite the active demands for veneer and lumber that there were a year ago, although our sales are practically the same. We anticipate a good, fair, steady fall business. There is a shrinkage in the valuations of a few of the staple articles, but not enough to affect the general results very much. The logs have cost entirely too much the last six months. We are inclined to believe they will not be of a greater value this coming fall and winter, as we are offered logs and timber quite freely. We are also inclined to think that labor has reached the highest point for the next year or two.

New York's Attitude.

While there has been a falling off in the trade for the last two or three months, it is nothing to cause agitation or worry. It probably appears to be a heavier falling off than usually takes place in summer, by reason of the fact that so much business was done last winter that in comparison the summer months suffer, but by comparison with last year we find we are still ahead of July and August of 1906. We have had considerable conversation with the trade in general during the last two or three weeks, and the lull in business has been accepted more as a joke and an opportunity for a vacation, as everyone feels there will be ample business this fall and winter to satisfy everyone; while the volume may be a little reduced under last year, yet the amount of business accomplished will be very interesting. In the mahogany line, from present indications, trade will be active, with a scarcity of logs.

There is a falling off in business over last season to a certain extent, but our sales for the months of July and August are about the same as last year. At the present time we have orders on our books for all we can possibly turn out during the coming fall. Our logs in raw material are costing considerably more than they ever did before, but with very few exceptions we are getting a considerably higher price for our stock than we were even three months ago. It seems to us that, all things considered, this fall's business should be as good as any we ever had.

We have had a very good season, have no complaint to make, and believe that instead of trade diminishing it will increase from this time on.

There is a noticeable falling off in the amount of orders we are getting over any other two months since we can remember. We think this is on account of the dull trade in the furniture line. We did not get nearly as many orders as during the months of July and August, 1906. We think the outlook for fall business is not what it should be. As to prices of logs, glue, etc., they are higher than ever before.

We found it rather dull through the latter part of July and up to about the 25th of August, but it has begun to mend and trade is good at the present time. We have made great preparations and are looking for a large amount of fall business. We find that the cost of logs has

terially advanced in price above that paid in former years. We also find that labor has advanced to quite an extent, and think we have just about been able to keep pace by advances on the manufactured product.

Alabama Trade.

We have more orders than we can comfortably handle. The trade for July and August was much better than for last year, although this is hardly a just comparison, as we were shut down in August, 1906, on account of a boiler explosion. We own timber and log it ourselves; therefore the cost of our logs varies with the cost of labor, which is higher.

We are having fair demand for furniture veneer, in fact in excess of last year. General veneer trade was better with us in the months of July and August this season than the corresponding months of 1906. The outlook for fall business is fair. The cost of logs is from ten to twenty per cent more than in years prior to 1906; however, there is no appreciable advance over 1906. The cost of labor remains about the same as during 1906, which is an increase over previous years of from ten to twenty per cent. In view of all conditions we are determined to advance prices on practically our entire line, especially veneers, to a degree in keeping with the increased cost of materials and production.

From Vermont.

The furniture trade is a little dull, but July and August this year were about the same as last year. We believe the outlook for fall business is good and our material costs about the same as for several years past.

Georgia's Report.

Our business for July of this year, as compared to last year, was considerably in excess. However, we did not fare so well in the month of August. We consider the outlook for fall business more than up to the average. We appreciate the fact that the cost of all manufactured goods is considerably in excess of previous years.

Wisconsin Business.

Our trade in July and August was a little ahead of what it was in previous years. The figures, however, have not been in keeping with the figures of other manufacturers over last year's business. We do not expect the fall business to be up to what it was a year ago. Our reason for thinking so is that we made an advance in March, and we believe a great many of our customers placed large orders after the second advance with the expectation that there might possibly be another, and desired to cover themselves in this respect. It is very evident from the fact that a number of our customers have recently requested us not to ship any more until further advised. We expect to pay from fifteen to twenty-five per cent more for logs this year than last. Our labor has also advanced ten per cent, consequently veneers will not be sold for any less money during the balance of 1907 than they are now. Notwithstanding there might be a lull in the demand, anyone who has to cut up valuable timber had better hold it until they can get a good price for their stock, because they can not replace it for the same money. The year 1907, thus far, has been the biggest year in the history of our business. We do not expect to do nearly as much business in 1908, but what business we get will be at a price that will make a difference in the footings on the profit side of the ledger.

Our business with furniture companies for July and August does not compare favorably with corresponding months of the last few years. Regarding the outlook for fall business, we do not anticipate any large falling off in business. In fact we see no reason why trade for the next three months should not be up to the average. Regarding cost of logs, would say our logging season for 1906-7 was about thirty-five per cent more than any previous year. This was due to the increased cost of lumber, as well as supplies of all kinds, and while we have been able to make up a proportion of this, the increase in the selling price of manufactured articles will not entirely compensate us.

Trade with us during July and August is about the same as a year ago and fully as good. The outlook for fall business we regard as exceptionally good. We have all we can possibly do. The cost of logs this year has been ten to twelve and a half per cent higher than a year ago, and in many cases about fifteen per cent advance has been paid by us. Prices for manufactured material with us are fully ten per cent higher than a year ago.

From Ohio.

Trade is somewhat slower than usual, but the outlook for fall business is good; material seems to be much higher compared with former years.

There seems to be a little falling off in orders for veneer at present. The outlook for fall business is not so good, slow, but it is not

too early to tell. Logs are very high around here at present; in fact too high for much profit at the present price of veneer. We think it best not to work the trade too hard just now, so as to keep prices up as much as possible.

Virginia.

Our sales during the months of July and August of this year exceeded our sales of last year for the same period by \$8,035.69. The outlook for our fall trade is good, as we have orders booked to keep us running until January 1, 1908. Prices of logs are soaring all the time, both poplar and oak costing from \$5 to \$10 a thousand more than they did a year ago. On account of conditions on Wall street for the last six months, people have been trying to hedge, expecting an uneasy stock market to affect business as in "ye olden time," but have found out that business and speculation do not necessarily go hand in hand. Business is, in our opinion, on a better foundation than it has been for a number of months, and if the banks do not get alarmed and call in their loans there is no reason why conditions should not keep improving.

Arkansas.

Trade has not been as brisk with us as in July and August last year. At the present time the outlook for fall business is very discouraging. The cost of logs is about the same as last year. There is an increased expense for supplies; good labor is very scarce. We have been able to keep our mill running but have only the orders on hand that we are working on at the present time. It seems to us that during the last three months prices have been cut by a great many manufacturers. The great majority of our quotations have been turned down, same being too high. However, we have not cut the prices we have been getting.

West Virginia.

There is no falling off in the furniture trade and we have more orders than ever before in our history, with good prices. July and August showed more business than last year for the same months and the outlook is good for fall business, although raw material is of higher value.

Tennessee.

There is a considerable falling off of business; July and August were not as good as last year; the outlook for fall business is fair, with raw materials higher.

Pennsylvania.

Our trade seems to be holding up all right and is very satisfactory. Our July and August

trade was about the same as last year. So far as we can see, the outlook for fall business is very good. The price of raw material, however, is considerably higher than in former years.

Missouri.

We have had sufficient work to keep our mills fairly busy, but do not find trade as good as last year. Some of the furniture manufacturers are complaining, but in some cases they have plenty to do. They are not buying any lumber, but several have made the statement that they intend to clean up and take chances on the price going up or down. However, we expect a good fall business, as we think conditions throughout the country are too prosperous to permit a continuance of the present lull. Logs are still very scarce and what has so often been said, the quality is deteriorating each day, while the price is still away up, notwithstanding a slight decline in the lumber market. Good help is exceedingly scarce and as a result it continues to cost more to turn out our wares. Notwithstanding everything that has been said, we are optimists and are putting in improvements right along in order to keep pace with the times.

Minnesota.

With reference to our veneer business, beg to say this is a small part of our manufactured product and we do not know that we are qualified to state as to just what trade conditions are. What we made we sold at a better figure than ever before and could duplicate orders now if we had the material on hand. We certainly had no trouble in selling all we could make. Our general trade for July was larger than any month in our history. August, as usual, was light, though fully up to last year. The outlook for business generally through the Northwest we do not believe was ever better; while in some localities crops were damaged by hail, it was to only a limited extent.

Washington.

Business has been a little less active with us for the past three months than at any time within the last year, but it may be because we are keeping up our price and not making any cuts to secure business. Also, we have taken into consideration the fact that along at this time we have quite a scarcity of cars, so we do not try to load up with business quite as heavily as we do at other times in the year. We believe that owing to agitation over increased freight rates by railway lines buyers are holding off until there is something definite. Both logs and manufactured material are costing more than they did a year ago, owing to the increase in the cost of labor, etc.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

How Do You Steam Your Hubs?

HIGH POINT, N. C., Sept. 26. Editor HARDWOOD RECORD: As you are in line with the people that steam their product, we write you for some particulars about it. We would like to know the best way to steam hubs of birch and oak to prevent them from cracking whether to use dry steam or exhaust steam, how long to continue the process, etc. Any information you can give us will be appreciated. HIGH POINT HUB & HANDLE COMPANY.

Anyone who has perfected a satisfactory process would confer a great favor by writing the correspondent direct, or communicating anything he may have to say through this office. EDITOR.

About "Willow Oak."

CINCINNATI, O., Oct. 1. Editor HARDWOOD RECORD: What can you tell us with reference to the species of oak found in Alabama and known there as the "willow oak"? It is a hard, white, straight grained wood. The trees grow to quite a good size and the trunks are long and straight, with limbs high from the ground. We are under the impression that this wood

classifies and is used the same as white oak, and will make fine wagon stock. Any information you can give will be appreciated. -H. K. B.

This tree does not come under either the white or red oaks botanically, but is an entirely separate species. However, in the lumber markets of the South it no doubt masquerades under one of the above titles. The tree is classified as *Quercus phellos*, or willow oak, by Sargent and other botanists, and is sometimes known as peach oak or swamp willow oak—or, incorrectly, as water oak. It grows from Staten Island down to Florida, usually in the low maritime plain, and through the Gulf region to the Sabine river in Texas, including southern Arkansas, Missouri, Mississippi, central Tennessee and southern Kentucky. It is occasionally used in construction work and for felloes. A prominent Mississippi manufacturer writes:

"Willow oak, turkey oak and water oak are practically the same with us. All three of these oaks are placed in the red oak class on account of their grain, and our experience with them in this section is anything but profitable, as it is by far the poorest oak we have. There are some mills that put this class of oak into wagon stock, but in my opinion it is worthless for this purpose. I have always found this oak to be filled with

grubs, and a few days since had three of these logs on the deck which measured 1,928 feet, being 16-foot cuts. There were no visible defects on same. However, when we opened them up with the saw there was hardly a place you could put your hand without touching grub holes, and we only got 232 feet 1s and 2s lumber out of them. I would advise everyone to steer clear of willow oak if it is anything like that we have in this section."

Wants to Market Oak.

ST. CROIX, IND., Oct. 1. Editor HARDWOOD RECORD: I saw beer keg heading and have any amount of waste that would make 1 inch squares, 15 inches long, fine white oak timber. If not asking too much would like you to tell me the most profitable way to work this up and where I could market it. COMPANY

No doubt many buyers would be glad to contract for this stock, and they may communicate with this correspondent through the RECORD.—EDITOR.

Gum Moulding.

MEMPHIS, TENN., Oct. 2. Editor HARDWOOD RECORD: We want to get in touch with the gum moulding, carload trade. We presume Pittsburgh and the East generally are the largest consumers, but thought you could likely tell us as to the best field and give us the names of some users. Any information you can give us will be appreciated. & Co.

Buyers of this material in carload lots are requested to send their names and addresses

to this office, that they may be passed on to above correspondents.—EDITOR.

Who Manufactures Magnolia?

CINCINNATI, O., Oct. 1. Editor HARDWOOD RECORD: We would like some information regarding a kind of wood known in Alabama as magnolia or "bull bay." It is a smooth bark tree, with a leaf something like a rubber tree, grows to considerable size and the trunks are frequently long and straight, 40 feet to the first limb. The wood is of very clear white color, almost as white as buckeye, and in texture appears to be a cross between poplar and basswood. The timber seems to grow in considerable quantity throughout the South. When sawed it shows a good deal of sap which runs out ahead of the saw. Our mills have sent us a board of this wood and we are experimenting with it to see whether or not it shows a tendency to warp and to what extent. We would like to know the general characteristics of the wood after it is cut; for what purposes it is or can be used, and its value as compared with other standard woods. & Co.

The lumber tree of the entire magnolia family is the cucumber, but the description would seem to indicate the true "bull bay," as the correspondent believes the sample to be. The magnolias are principally used for cultivation and fuel, with the sole exception above noted, and we do not believe the experiment of manufacturing the other species has ever been tried to any extent. Anyone who has had experience in this line, or who knows anything about the wood, will confer a favor by giving us the benefit of his observation.—EDITOR.

A New Tree Book.

One of the most comprehensive and attractive books on the subject of trees that has ever been issued is the new "Handbook of the Trees of the Northern States and Canada," just brought out by Romeyn B. Hough, B. A., of Lowville, N. Y. Mr. Hough has long been a recognized authority on trees and timbers, and his new work will be received with enthusiasm by botanists, as well as the laity who are interested in these subjects.

The region covered by the handbook is that lying north of the northern boundaries of North Carolina, Tennessee, Arkansas and Oklahoma, and east of the Rocky Mountains, extending southward in the Appalachian region to northern Alabama and Georgia. The work represents years of study in the field and by experiment. Nothing but Mr. Hough's love of his subject and the unusual opportunities he has had for compiling such a work would enable him to cover the ground so carefully and authentically.

With each species described two pages of handsome half-tone illustrations are presented showing the foliage, twigs and fruit photographed against a measured background, which indicates at a glance the actual size of the parts. The pictures of leafless twigs in winter are specially valuable as an aid to the identification of various species when denuded of all foliage. The photographs of the holes of trees show the bark plainly, and a one-foot rule was attached to each tree before the photograph was taken, thus relative size of trunk is clearly shown.

The wood structure of at least one species of each genus is shown by a series of photomicrographs of transverse sections magnified fifteen diameters. Thus actual specimens of wood may, by the use of a small magnifying glass, be compared with the illustrations and identified correctly. This feature alone is worth a great deal to wood-workers, lumbermen and anyone, in fact, who has occasion to classify timbers of various

kinds. The illustrations are remarkably clear and the practicality of their introduction and use is at once apparent. Mr. Hough himself considers this perhaps the most striking feature of the work.

The practical character of the entire book and illustrations is so evident that a school child may learn to know the trees from it without studying the text. Information as to technical terms, botanical names, etc., is fully covered in one section of the book. For completeness and accuracy it has probably never been surpassed. The author will furnish prices and specimen pages on application.

C. L. Willey Presents Cross to Commemorate Historical Event.

Chicago and the state of Illinois recently did honor to the achievements of Pere Marquette, the French Jesuit missionary, and Joliet, the explorer, in elaborate ceremonies, including the erection of a mahogany cross, which took place under the auspices of the Association of Commerce, on the afternoon of September 28.

Invited guests left the Clark street bridge at 2:40 p. m. on the United States steamer Dorothea and the Pere Marquette. Many prominent citizens were in attendance. As the steamers slowly made their way down the river national airs were played by the band of the local battalion of Illinois naval reserves, which took up a position on the deck of the Dorothea. When the steamers arrived at the foot of Robey street a salute of seventeen guns was fired by the Dorothea to Governor Deneen, followed by a salute of twenty-one guns in honor of Baron Housson de Saint-Laurent, French consul at Chicago.

When the company had disembarked Edwin S. Conway delivered the opening address, reviewing the history of the Marquette-Joliet expedition, and showing that historical research had

resulted in fixing the spot where they established their camp in September, 1673, near the junction of the Chicago river and the drainage canal at Robey street, where the cross had been erected. Valentine Smith unveiled the monument and presented it to the state of Illinois, Governor Deneen accepting. Edward J. Brundage acknowledged the tribute in the name of the city of Chicago, and Baron de Saint-Laurent replied. One of the principal addresses was delivered by Rev. Francis B. Cassilly, S. J., of the religious order to which Pere Marquette belonged. Robert R. McCormick, president of the sanitary district; R. R. Bourland, member of the executive committee of the Lakes-to-Gulf Deep Waterway Association, and B. M. Chipper-

HANDSOME MEMORIAL TO MARQUETTE AND JOLIET

held of the Illinois legislature made fitting remarks.

The magnificent cross which now marks the spot is the gift of Cameron L. Willey, one of the largest importers of fancy woods in the United States. It is more than twelve feet tall, of solid mahogany, set in a concrete base. Mr. Willey's operations are but a short distance from the historical spot. The discovery of an old French iron cross at this point led various students to take up the legend of its having been planted there by the great explorers in a past century, and sift it thoroughly, resulting in fixing the location of the famous camp to a certainty. The little iron cross stands beside the new one, and in a corner of the enclosure a flag pole in a concrete foundation bears the flags of the United States and of France.

An effort is being made to introduce the remarkably fine hardwood grown on the Tati Concessions at Francetown to the Capetown and Kimberly, South African markets. Railway rates are a heavy drawback.

Handle Manufacturers' Association.

Agreeable to previous notice, handle manufacturers representing about seventy-five per cent of the total output of hickory handles and quite a number of others engaged in the manufacture of ash, oak, maple and other handles, met in Club Room L-38, Great Northern Hotel, at ten o'clock on Tuesday, Oct. 8.

The meeting was addressed by several gentlemen prominent in association work, after which a general discussion over the advisability of forming a general handle association with subsidiary organizations covering:

(1) Hickory Division: Consisting of manufacturers of handles for edge tools; railroad and mining trade; picker sticks; dowels.

(2) Ash and Oak Division: Consisting of manufacturers of rake, fork and other agricultural and domestic implement and tool handles; logging tool handles; plow handles.

(3) Maple and Minor Woods Division: Consisting of manufacturers of broom and mop handles and dowel rods.

A committee on permanent organization was appointed to report at a meeting to be held at the New Grand Hotel, Indianapolis, on Wednesday, Nov. 20.

A full report of the proceedings follows:

Details of the Meeting.

The meeting was called to order by Henry H. Gibson, editor of the *HARDWOOD RECORD*. Mr. Gibson addressed the gathering as follows:

I do not think I need any excuse for calling this meeting. If I do, I will say to you that it was called at the suggestion and request of some half dozen handle manufacturers, partially hickory and partially ash people. I published their suggestions in the *HARDWOOD RECORD* and followed it up by numerous letters, which elicited many replies, so that it was finally thought wise to organize a handle association divided into separate divisions, according to the nature of the product. I think most of you have seen quite a number of these letters printed in the *HARDWOOD RECORD*. I have had considerable experience in association work, and from the tenor of the letters referred to, I find that certain people say we are getting short of raw material and prices are not commensurate with labor, manufacturing, and material costs. I find other people who say that the inspection of handles has not been modified to meet the current needs of the trade. That material is growing coarser and still you are making the same high grade handles you always have, and think that changes might be made to better these conditions. An analysis of the whole proposition is that you are up against what a great many other manufacturers have been in the past, that is unintelligent competition.

In this association work with which I have been allied for a good many years, I have never

found any particular value in a lot of people getting together and making a price list. I think it is one of the last things they should do. My experience tells me that the value of association work is to educate each other in the various lines of production and especially up to cost, on the principle that the man who does not know cost ought not to be in any business. If you will eliminate this unintelligent competition, you will better your industry and yourselves. Association work is for acquaintanceship, better trade relations, estimating cost and figuring economy. I have had experience with a number of lumber associations and they have all had good fortune and made money for their members; the flooring manufacturer, whose business a few years ago was fearfully demoralized; the dimension stock people, who two years ago were in utter chaos, selling clear stock for less than the price of No. 1 common; and a year and a half ago we found the veneer and panel people in about the same condition, as far as making money out of their business was considered. I have a lot of faith in association work and I believe this nucleus here, which represents quite a proportion of the output of handles, can do something for all that will better the trade, and adopt measures that will be generally accepted. My personal interest in this association is not a very large one. I want to do everything I can through my newspaper and personally for the interests of the totality of the hardwood industry. I am glad to see so many here and hope we can accomplish something definite. The first thing we must do is to appoint a temporary chairman and I am going to ask Mr. Clendenin to take the chair and perfect a little organization.

REPRESENTATIVE GATHERING OF HANDLE MANUFACTURERS IN SESSION AT THE GREAT NORTHERN HOTEL, CHICAGO, OCT. 8

Mr. Clendenin: I beg to be excused from that honor, as I came here particularly to learn and to listen. I am not competent to occupy the chair.

Mr. Gibson: If that was your object, Mr. Clendenin, in attending this meeting, the chair is just the place for you, as there you can learn and listen to the best possible advantage without having to say a word yourself.

Mr. Clendenin was chosen chairman by acclaim and upon taking his seat introduced E. W. McCullough, secretary of the National Wagon Manufacturers' Association, who had promised to address the meeting on the value of association work.

Association Work as Handled by Wagon-makers.

Mr. McCullough: Mr. Chairman and Gentlemen: You have heard the suggestion of the chair that I speak to you for a few minutes and I certainly will make my remarks as brief as possible. Perhaps the best way to arrive at this matter of beneficial association work is to give you a little inside history of the National Wagon Manufacturers' Association, which represents today between eighty seven and one half and ninety

to only a part of them, and others not at all—but education was going on just the same, and they realized more and more the value of it and of keeping together. They finally got to the point where they realized fully that all men are not alike and that you can never expect to get into a room like this and positively make all men moral, honest or good. You will always have to reckon with the fellow that is timid, the one that will evade his obligation, etc., but we have found that there are many honest men in the manufacturing business and you will always find a majority that will stand for the thing you want to perform and that with that majority you can win the battle. I have men on my list all the time who are forever writing me hard luck stories about this, that or the other, or what somebody else is doing, but the majority are working along right lines. I want to say that in the work of forming an organization, the value of social intercourse must not be underestimated. If you people got nothing else out of it but this, you would have accomplished something. However, in this day and age of hustling, we want to go still further and accomplish something practical. Unintelligent competition, as brother Gibson said, is indeed a great difficulty, and the hardest part of it is that everyone will declare it originates entirely with "the other fellow." It originates from one cause and one only, and I cannot lay too much stress upon this point, which is lack of knowledge of cost. You may be able to watch your manufacture through the different stages from the forest to the finished product, add a certain percentage for profit, etc., and then feel that you have arrived at cost. But there is always a certain undefined expense that is seldom taken into consideration. Until 1904 there was not one wagon factory in the country of any note that had an adequate cost finding system. Every one knew how many feet of stock, how much labor, etc., went into a wagon. But that is not cost—not nearly cost—and until we took up the subject of cost finding, we arrived at nothing as far as preventing this unintelligent competition. The prime factor of all our work is to get each man to figure his cost and figure it right. In my position as secretary, I have access to all the factories and their private books and records, and I gather information right from these manufacturers so that I can furnish to our members the average cost of a standard wagon every so often. But it must be remembered that this is only a guide and only gives them a proof figure to prove their own figures by. It is of no value for the fellow who manufactures 5,000 wagons to know what it costs somebody else to manufacture 30,000 or 40,000 in a plant away off from where he is located. But it furnishes an incentive for him to figure out the same plan for himself, and when he does actually figure it out, I will trust to his good sense to add a proper amount of profit. This is all the price regulation that the National Wagon Manufacturers' Association has.

Since 1904 wagon prices have advanced somewhat and the business is in so much better condition than before we organized and got together on a practical basis that there is nobody who wants to go back to the old status. The new plan we started in 1904 was this: Previously we had selected a secretary and officers from the rank and file but when we attempted to cover inside information, it was not given because manufacturers did not like to put it into the hands of other members of the trade, so we found a permanent secretary, put him into office and made him the confidential agent of each factory. For instance, I am considered a confidential agent and act in that capacity for every member, so that instead of turning the information into the hands of the competitor who might not be scrupulously honest, it is known to me only.

I have been in the wagon business for twenty-five years, and of course there is a chance that I might tell what I know to some one or other, but it is safe to say that if I did such things there wouldn't be a place for me in the wagon

business in this country. When I took up this work I selected a small item of wagon stock to start a cost basis on—the top box. These top boxes were being manufactured and sold at \$1.50 and sometimes even thrown in with a wagon. When we got through estimating cost, we found that it was actually \$2.35. We immediately said: Can't we reform some of these people and not give these things away? So a resolution was passed that everybody sell these parts for what they ought to bring. A report within six months developed the fact that there was not a factory which had not raised the price. Now they are not all charging the same price, but they are charging a profitable one. From this beginning we took other parts of a wagon and followed out the same idea.

But we have done other work that is even more valuable. We have saved in the cost of manufacture. In 1905 we undertook the standardization of farm wagon wheels. Prior to that time there were forty-three different heights of wheels. Nobody seemed to know why—they were largely matters of tradition—somebody's father made them that way and they followed suit. Thus it was that some concerns furnished as many as fifteen different heights of the same wheel and same tires. When we got through with our standardization, we fixed on just three heights, utterly abolishing forty. We adopted a low wheel, a medium and a high one, which

T. R. CLENDINEN, ATCHISON, KAN., CHAIRMAN AND MEMBER PERMANENT ORGANIZATION COMMITTEE.

P. C. SCOTT, ST. LOUIS, MO., CHAIRMAN PERMANENT ORGANIZATION COMMITTEE.

seemed to satisfy as well as the forty-three different heights. But it took three years and lots of work to convince some manufacturers that their particular way wasn't the only one; still we did it eventually.

From this I will pass to the meeting we had about two weeks ago when the buyers of our wood material got together and adopted standard sizes of rough dimensions of wagon stock—on all parts common to all wagons. Heretofore mills have cut our material on special orders, owing to the different specifications of wagon manufacturers. Thus few mills could afford to accumulate stock on hand, or hold it, because of lack of uniformity in requirements, but this will establish sizes that will be salable and in demand everywhere. All this work has been handled through the secretary's office. Matters first come to him and are then passed on to the executive committee, composed of twelve of the largest manufacturers. You will ask why we choose these large dealers—because the cost finding system in such factories has arrived at a higher stage of proficiency than at almost any others.

per cent of the total output of the country. This association was formed in 1879, at a meeting held in the old Palmer House, and there were present nineteen at that time and my records show that all but two of that number have passed to the great beyond. For three years they had what might be called a social organization—they got acquainted and met together frequently, but they finally fell out over the matter of getting better prices for their goods. There was a lack of confidence among them, a certain amount of jealousy and not very much progress was made. In 1882 they drifted apart, but in 1886 another meeting was held and they came together again on account of the same conditions, which continued to prevail. Some of them realized where they had failed before and they made some improvement. They began to get a great deal better acquainted with each other and each and every one found that the other fellow wasn't such a black devil after all. So it went along from 1886 to 1893 in better shape. They selected their officers from the rank and file of the manufacturers, passing numerous resolutions, living up

So this committee meets probably three times a year aside from the regular meeting of the association, when the committee always convenes, and they go over various measures which they then present to the general association, so that it saves hashing and re-hashing a lot of material at the meeting of the association, but nothing definite is passed without a two-thirds majority vote of the entire organization. We believe that every fellow should have a fair deal, but that we are only entitled to our measure of any square deal, and you will have to arrive at that point in any organization. When you form an organization for the purpose of taking advantage of the other fellow, you will fare pretty hard. I have seen a number of instances of that in my work. One thing more I want to impress upon you and that is, you should not make the mistake of trying to start a cheap organization. You understand what I mean by that. We do not attempt to conduct the business of our members, but simply to improve the conditions surrounding them. They must go on their own line, working out their own problem and succeed or fail according to their own conduct of their own affairs. We have absolutely no price list. Our

H. B. ALEXANDER, HILLSBORO, IND., MEMBER PERMANENT ORGANIZATION COMMITTEE

plan is simple. There is no even price in farm wagons. Of forty odd factories, I venture to say there are not more than two or three that have an even price on their wagons. When we have a meeting and find that the increase in cost of production is so much, we want that increase if we can get it, so we pass a recommendation that we get that five or ten per cent advance if possible. We have gotten to a point where we know there is a majority that will live up to the advanced price. I have the right to advise you what you shall sell for, but you can do just as you please in carrying it out and that is the privilege our members have, but with the distinct feeling that they need the increased price. Now, when our association recommends anything of this kind, we have several large competitors outside of it who are on the watch and they follow those recommendations pretty quickly every time. All we are after is a legitimate profit over manufacturing cost.

The chairman then introduced Lewis Doster, the Secretary of the Hardwood Manufacturers' Association of the United States, another gentleman who has been remarkably successful in association work, and who had expressed his willingness to give the handlers the benefit of his experience.

Address of Secretary Doster.

Mr. Doster: I have been called upon to talk on organized work and I am going to confine myself to what our association has accomplished. It will be in detail and may not cover some of your wants, but I am going to give you all I can in hopes that your organization may be able to benefit itself as we have. We were one of the latest associations in the lumber manufacturing industry to organize and represent the manufactured product from the timber up, and I believe you have all heard of the success we have made and realize its benefits. Prior to 1902 the hardwood manufacturers I speak of them now as Southern producers—were in very bad shape. It was such that their credit at the banks was in proportion to the capacity of their mills—the larger the capacity, the greater the credit at the bank, and vice versa. Today I consider that the banking interests look upon the hardwood manufacturer as a very good customer. Our organization was formed and its membership composed of men who attributed their losses to the fact that the grading of lumber was not satisfactory. There was a feeling existing that a grade might be so and so in one section—in the East one thing, in the West another, etc., with the result that values of lumber were according to grades, and ordinarily no man knew exactly where he stood. We found we could unify the values of lumber, not make prices but educate the men who were out of touch with conditions existing in the large consuming markets. Our plan of organizing to cover the large area we represented was by holding sectional meetings where production was largest. The result was that the meetings all practically agreed to consolidate in a national body, and semi-yearly meetings were then held at certain central points. After organizing we adopted objects which I will read to you from our constitution and by-laws and which are familiar to some present. [Mr. Doster read extracts from the rules of his association.] You will see that these cover a multitude of conditions. We also established a set of grading rules which was very hard work, because conditions in different sections were in a rather chaotic state, but we finally established some in the face of strong opposition, for New York, Baltimore, Philadelphia, Buffalo, St. Louis and Chicago all had their own system. The result was that when a man stacked up his lumber he never knew where it was going to or how it would be inspected. You all know that the inspectors of lumber in those days were a lower class than today, and, in my opinion, they are beneath what they should be still, and we have paid special attention to raising the standard of this class of work. Many manufacturers tell me that an extra expense of 50 cents a thousand in inspection properly conducted will mean an increase to them of \$2 a thousand in the price they get for their stock.

After our rules became effective we naturally made other necessary additions to the association. Our first was a department of market values. At no time did we ever have an iron clad agreement as to the question of prices. They were based upon market values, stumpage value, cost of manufacture, demand, etc., and prices made accordingly. There never was a bona fide price agreement. Our list was merely a target to shoot at. Every one was privileged to try for it and to hit the mark if he could. We realized the fact that organizations who organize for values only never make a success. We never try to run a man's business for him, but I can show you how we help him out by placing his stock on the market in a legitimate manner without so much loss to him self. Nor did we ever try to make an agreement as to the prices of purchasing raw material. Our stock reports which we send out semi-monthly help members to unload surplus stocks. We make a thorough canvass of the entire membership regularly, asking each firm if they have

any accumulation of certain stock. This allows us to find out what is in overproduction. We find what stock there is an accumulation of. People who have this item on hand stop manufacturing it and manufacture other stock which will go upon the market more easily. We likewise ask members what they are short on, what they are oversold on, etc. When they find out what is in short supply they go to manufacturing it, so that the purchasers of lumber are all the time getting a reasonably even supply. It helps the manufacturer and the buyer. In fact, all we have tried to do has been to create a smooth track for lumber to run over from the forest right into the consumers' hands. After the lumber is sold all of us will sometimes find difficulty with people who are unjust. We all know how hard it is to grade lumber and what different interpretations can be put upon the same principles. To protect our members we created a commercial report department. We sent it to all members. When one wants to know the standing of any man he writes us and we send his inquiry to all members of the association. Of course, we leave exact financial standing to the commercial agencies, but we get

CHARLES D. GATES, LOUISVILLE, KY., MEMBER PERMANENT ORGANIZATION COMMITTEE

the moral standing of that individual and report on his dealings with our members. Each reports to us his knowledge of the person in question, and the report in general is then sent to every member of the association as well as to the inquirer. Though they may not need it at the time, they file the report away for future use. The result of that report system has made a great many people good—that is to say, bad people good. It has taught them that they cannot use unjust methods in settling for lumber several thousand miles away from our sawmills, for their unjust dealings are invariably reported faithfully. Then we have special reports which are what we call our information bureau. Members write us regarding cost of manufacture, labor problems, etc. The former is hard to determine in the hardwood lumber business.

We could not cover the entire industry very satisfactorily in that respect because we have members who are close to large cities where labor is plentiful, who have good transportation facilities, who are located close to their source of supply. In the labor problem I will say we had a confidential correspondence with members a few years ago when the unions attempted to organize the handlers of lumber. The result of our reports to each other was that that set of men started from the north

and were followed up all down through the entire hardwood belt, until they were forced to quit the sawmill game as a pretty hard proposition. With regard to the trust laws we followed the idea that no restriction of trade should be maintained, no territory outlined for a certain class of production. We followed the idea that no ironclad agreements should be made along any lines. We worked more on the education of members and we didn't stop there—we tried to educate the trade at large. The hard competitors we had at one time were not in the association work and we spent a lot of money educating them up to our ideas, and finally made members of them, when they came to see the results we were getting. You will find you will have the same class of work to do. You must educate the industry at large. You must tell them the value of your product based on raw material, cost of production and labor and conditions in consuming markets. When they learn those things they will gradually fall into the associations, and I think your organization will be larger on the strength of educating the entire trade than if confined to the few that may be in it at first. Owing to the fact that our association was a young one in 1902, we were laughed at by a

tion, for, of course, all these departments are expensive and must be conducted along right lines.

We employ a set of grading inspectors who travel about not only reinspecting lumber on demand but teaching local inspectors at plants the proper way to handle their output; we rotate these men from place to place so that there is no danger of their being prejudiced in favor of any one locality. In organizing you will find that you cover a great deal of territory and manufacturers will not attend every meeting, so it is a good idea to hold them often and have them scattered over a wide range of country, so that those in that section will be on hand when the meetings are held near them. Never forget to educate the men in the business who are not in the association. They will eventually come with you. We have made more members by that kind of work than we would by having a close association and keeping the information which we compile a secret. Most of our literature is for the inspection of any one who cares to use it. I will be glad to answer any questions any of you gentlemen wish to put to me.

E. H. Defebaugh, who is one of the most prominent workers along these lines, was introduced. The handle people were informed that as Mr. Defebaugh organized an association every ninety days he was more than ordinarily competent to give instruction and ideas.

Mr. Defebaugh—I hesitate to say anything on association work after the learned gentlemen in the lumber trade, but particularly because I have said my set speech so often to some I see right in the house, that I am afraid I will be repeating. There is one thing I might say in regard to associations in the wood package trade. With one exception they have been in existence from eight to twelve years. They have never missed a meeting and they have accomplished something every year. The success has varied with the amount of work done. There has always been more or less interest. We always have good meetings. Some do not bring out as many as others, but we have succeeded. We started in the early days by trying to get acquainted, and the first thing we put on the program was "Find out how much it costs to do business, and then you are in a position to talk values and get closer together." On the program of the first meeting we had these addresses on cost, and every meeting since we have had something about cost, and I believe that it is a good policy to keep that one subject before every manufacturer in the business. I was very glad to hear Mr. Doster and Mr. McCullough tell of their work this morning, because I want to bring out one point they mentioned. The handle makers of the United States have had more or less associations. They have succeeded at all times. They have accomplished things and got closer together. There are some in existence today in a local way and they have succeeded. But it is my thought and I believe you will bear me out—that if the handle manufacturers had one man to look after their interests, adjust conditions, get information as to the manufacturing end of the business, give them ideas as to sales, markets, stocks, possibilities of prices, etc.—they would accomplish as much as has been accomplished in the lumber trade and in the box trade, stave trade, cooperage lines, etc. I am sure the interest of the old workers—the men who have been connected with association work in the past—is evidenced by their attendance here. As we have always noted in box lines, they will always continue to believe in the possibilities of organization; so the question then is if a special man is a good thing to have in the hardwood trade, if he accomplishes things for the box trade, why can one not accomplish something for the handle

trade? We had this question up in two or three lines in the box trade, and the first question was how to raise the money. The successful way has been on the lines suggested by Mr. Doster—an assessment of so much per thousand output. The box makers have adopted this system, and so have other lines. Some large concerns pay \$1,000 a year and they are glad to pay it. Why? Because they have taught men who never figure cost how to get at a right base for it. They have educated men that the buyer is not the only man who tells the truth. They come together often enough to discover that their competitor makes a good partner, and the exchange of information makes it possible to get the prices they are entitled to. In no case is there a price list. Reciprocity is generally put on the banner of these associations and as men get closer together and are better friends they know what this work means and appreciate and help each other. The result is they get better prices. One association recounts that the cost on certain boxes is so much, giving all the details, and when this list goes out we know that out of ninety men, sixty-five will live up to it. We know there are always thirty-five who may and may not ask it, but it does not make any difference. The others

LEWIS DOSTER, NASHVILLE, TENN., SECRETARY H. M. A., WHO ADDRESSED THE MEETING ON ASSOCIATION WORK.

good many people, who said we made prices and then went right out and sold under the list. Of course, that might have been so in some few cases, but we grew rapidly and now cover an extensive field in more ways than one. For instance, we have found a market for heretofore comparatively unknown woods; we have put a lot of people into the business of manufacturing dimension material from the offal of their mills which they formerly burned, not realizing that there was any market for such material. We have done considerable work in cooperation with the Forestry Bureau by aiding them in compiling statistics on standing timber, lumber output, etc. In this connection I may say that the secretary's position is a confidential one in many respects. When statistics are being compiled the information received is much more accurate than might be expected, owing to the fact that it never comes under the inspection of anyone but himself inside information is never given to any member regarding shipment or production of another, and in this way protection to all is assured and good results obtained. I would repeat what Mr. McCullough said regarding a cheap organiza-

HENRY H. GIBSON, EDITOR HARDWOOD RECORD, TEMPORARY SECRETARY.

immediately send out theirs in accordance with suggestions, and that association is on its eleventh year and is doing good. We had a meeting only a few weeks ago, and the same old question of cost and waste came up again. Each man came with his own ideas of cost in his pocket, and we fought for two days to get a little advance. The reason we fought to get it was because some of the manufacturers thought it was not a good time. So we compromised. A year ago we had difficulty with this same price list, when we tried to put it into effect, although lumber had gone up eighty per cent, because they were a little backward and afraid, but they were the happiest lot of fellows in town after they had gone home, discovered real values for themselves, and saw where it was all right. It seems to me there are enough men here in the handle business to start a movement that will employ a man who will give all his time to their affairs. You cannot do this in a day—it will take time. My experience is you get letters from people who say they would do anything they can for you, but the next thing is to get their Johnny Hancock on an agreement to pay so much to something which will be for the interests of all concerned. It is seen to mean all right, but

it is a mighty hard proposition to get them lined up definitely. This takes a great deal of canvassing among people who you know will be backward about taking hold. The handle manufacturers, owing to the various lines, should perhaps be a national organization under the management of a secretary who would take up the different branches of the business and co-operate with them in monthly meetings. The national association should be practically the hub of the wheel, to educate men to come closer together for the dissemination of information in the way of timber values, sales conditions, trade—as to what prices are being secured by certain manufacturers in certain districts, foreign trade, etc., but the whole proposition I think will be best handled in a local way, and confined to particular trades. That has been tried and is successful. It is successful today in the wooden package business, but we do not make prices. There is just a comparison of things that are done, which gives every man the idea that he can do the same things if he will. You find men who will say, "I can sell my stuff cheaper because it does not cost me as much," and all that, but there is necessity for getting more money in many lines, because timber and labor have advanced so that it is necessary to gain this information and get closer together. Gentlemen, the representation is not as large as I hoped to see it today, but there was never any organization formed where all the trade was present, nor all the interests represented, and I hope from the fact that so many are here from various lines you will not leave this town before you work out your problem and I will be glad to give you any data I have in reference to the various plans to work upon.

General Discussion.

Mr. Gibson then read excerpts from numerous letters from handle manufacturers favoring the formation of an association.

The chairman called for general discussion, and several manufacturers responded, giving their views on the organization of a permanent association.

Mr. Hartwell: I do not know as I have very much to say. I am glad to meet all the gentlemen and if my house can do anything to further the organization of hickory handle manufacturers and put the business on a good basis, we will be willing to do so. As to suggestions along this line I do not know that I can go into them in detail, but there are many things that can be done to help the situation very many.

Mr. Alexander: I have nothing much to say, but I am sorry our crowd is not as well represented as it should be. Speaking of us as the ash people may be somewhat of a misnomer, as we manufacture more maple than ash. I know of at least fifteen or twenty in my section that would be glad to join this movement and I do not believe we ought to go away from here without making at least some sort of organization so that it can be perfected by mail or at future meetings.

Mr. Rugg: I am too far away, perhaps, to be very actively identified with this movement. At the same time I am interested in it. I have had experience in association work and in other lines, and have always found them helpful and in good measure, successful. While interests among handle makers are so varied as an association we would have to be organized along somewhat different lines than those outlined probably, yet it does seem as though some kind of patent body, reaching out in different directions, embracing various branches of the trade, could be organized here. I am a firm believer in co-operation and association if conducted intelligently and right, and we all need information which we cannot get alone. Yesterday I stopped on the way from Canada to see a competitor who I

had been trying to get to make different prices, and had failed utterly. After I had had a conversation with him and pointed out my ideas, he admitted frankly that he had been afraid of us and thought we would get his business, but I showed him where he could very easily get an advance in prices and a better profit. I believe something should be done and a movement can be put on foot that will result in accomplishing some good. Perhaps we cannot do very much within this present year but keep the ball rolling, and soon we will begin to see a growing attendance on our meetings. I presume the plans as outlined here are the ones to work along. At the same time, in the matter of prices I thoroughly agree with Secretary Taft, who intimated in a recent address that it was just as proper for manufacturers to get together and establish prices for goods, as for the labor unions to gather employees together and establish prices at which all shall work. I am sure we need have no fear of government interference if we do nothing that conflicts with freedom of trade. That, I understand, is the pith of the trust law, but we can certainly get together as individuals and establish prices which we agree are just, according to cost. More is to be gained, I believe, from working along lines of information and education than simply making prices. Those will adjust themselves when we know where we stand.

Mr. Gregory: I am from Pennsylvania and I would like to see an association formed. I

H. DEFEBAGH, CHICAGO, SECRETARY NATIONAL VENEER AND PANEL MANUFACTURERS' ASSOCIATION, WHO SPOKE ON ASSOCIATION WORK.

have made more money in the last four years than in ten years before from a little association I joined then, but there has been no meeting in the last year or two, I believe.

Mr. Gates: I suppose that with our small attendance today, there is between seventy-five and eighty per cent of the hickory handle product represented in this meeting. We are about where we left off when the old association dissolved. A few of us met at different places on different occasions and we few had to carry all the balance along with us. Plenty of them had interest enough to write nice letters about the association—but not to attend and do anything; some of them had interest enough to join the association—and not pay their dues; others had interest enough to join it and help us pass resolutions which they never kept and never intended to. Now quite a large portion have gone out of the business. Those who didn't help us to maintain prices and undertook to sell goods under cost have failed, of course. Now we listen to another set of men who would like to have us form an association here in Chicago, tell them what to do, explain to them how we conduct our business to make it pay well, etc., and give them the benefit of our experience, while they have no intention of even attend-

ing the meetings, much less joining an association and helping us work it up. If we are going to organize we ought to organize it along business principles—with the intention of having it strong, putting our money into it, and making a success of it. It is a question whether we can derive enough benefit from it to justify us in such a movement. That is a question we will have to settle here today or else go home without having formed an organization. The price on hickory handles today is high enough. We believe the prices we are getting leave us good profits, and under existing conditions we have advanced fifteen or twenty per cent the last year or so, but I quite agree that there ought to be some arrangement made whereby a uniform grade can be put on the market; where there can be an inspector appointed by the association to see that all companies belonging to it put out a uniform grade of goods—and other details of that kind which we could probably outline a policy for that would be of great benefit to us. There are four or five strong companies today that put their handles on the market at about the same price, but a large number of them are cutting fifteen or twenty per cent. To do that they have had to cut grades. The large buyers won't buy them, so they call upon us to come and help them out of the mire in which they have placed themselves. They are competitors in prices but in the goods themselves, they are not competitors. I hardly know whether I am in strong favor of an organization or not because I am afraid it will resolve itself into the same kind we had before. Our company is stronger today for being out of the association than we would be in another organization along the old lines. I know we have been called a "trust" and all that sort of thing so for that reason we hesitate about taking any part in an organization of this kind because there are competitors that will notify the trade at once that it is a Turner, Day & Woolworth association, etc., etc. However, we stand ready if there is one formed along proper lines and just limits, to do all we can to further it, but if not, we will certainly do all we can to break it up!

Mr. Peters: I have been in the handle business for the last forty years. We have had many associations, we have made agreements, and sometimes we even used to go to a notary public and swear to sales, but in spite of this there were always mean little tricks and dirty work going on. I am favorable enough to the right kind of an association, but with the handle business it only takes about \$2,000 or \$3,000 for some one to start into it, and when you take such people into an association it is no time at all until they are hard up, can't meet their obligations, and don't live up to agreements—so it goes. I think the handle business is better today than it has been for many years. Some of us in the old association have sort of held together in spite of the fact that it disbanded.

Mr. Scott: We were members of the old association and it certainly made money for it and for the others that came in, but many came in and derived the benefit by learning what others were doing, went out and raised their prices a little, but with no idea of real co-operation, virtually squeezed the orange dry, as it were, and then dropped out and went back to their old way of doing business. Prices are now where we are making a profit and I don't think they should go any higher.

Mr. Clendinen: Isn't it a fact that those here are those who have profited by the old association? People who joined for the information they could get which would be of advantage to them and used it outside cared nothing for the work the association intended to accomplish. They enjoyed their member-

ship for twelve months and nearly all of them withdrew. Some could not dig up any real excuse for severing their connection than that they were afraid of the trust law.

Mr. Gregory: I do not know that I can say anything just now, as I am not acquainted very much with association work and I prefer to hear from the other people. I do not belong to the other association. I did not need to belong to it, but I can see it did the business some good. I think it should have been kept up. But now if there should be another association formed I am with it, and if we can do any work by associating together, which I believe could be done, I am for it. The secretary of the wagon association was very forceful in his remarks. It seems that the prime object in that association is to teach manufacturers the actual cost of their goods, and that is very important. You teach the manufacturer the cost of his goods and the prices will take care of themselves, because no man is going to sell below the cost of production unless he is financially embarrassed. While we are small in the business we find a market for all the handles we can produce and are generally behind with orders. But we try to get the most we can out of it. We try to get cost of production and a little more. If we cannot sell our handles above the cost of production we have not yet been forced to put them on the market. We hold them until we can get a price that will justify us to sell them. The actual cost of production is the hardest thing we have to figure on. If this association can do any good, which I think it can, I am willing to do anything I can along that line. Of course I know there are a few of these older manufacturers and larger concerns that have already an established trade, and it would not matter to them as much as to some others whether there was or was not an association. But I believe it will do us all good.

Mr. Gibson: Of course this is practically a hickory crowd, but my idea was to get together a national organization, with divisions of course, but with one strong organization from which much more can be gained in matters of securing a hearing on freights, for instance, and other matters of importance which are continually coming up. There are between six and seven hundred concerns in the United States—large and small—engaged in the manufacture of handles of one kind and another, and should pull together for the general good of all.

It was decided to leave further discussion and any decisive action on the question of an organization until afternoon, and upon motion the meeting adjourned for luncheon. Before it was served the delegates were grouped and photographed.

AFTERNOON SESSION.

The second session was called to order at 3 p. m. Mr. Gregory moved that a vote of thanks be extended to Henry H. Gibson, editor of the *HARDWOOD RECORD*, for his efforts on behalf of the proposed association. On account of the small number of ash people represented no divisions were made, but all assembled in one body and a large part of the time was spent in informal discussion of the proposed association, the benefits to be derived from it, the drawbacks to be reckoned with, etc.

Mr. Clendinen: Gentlemen, what is your pleasure along the line of forming an organization that shall be permanent in its character?

Mr. McLaughlin: I would like to have some one outline just about what kind of an or-

ganization we ought to have.

Mr. Clendinen: I think the proper thing to do would be to have a motion whether you want the organization or not. Then we can formulate plans on which it should be organized. The first thing to know is whether you want an association or not.

Mr. Gibson: There seems to be a small representation of hickory handle people so far—though a large percentage of output is represented, I know. Can you not appoint a committee on organization and find out whether these other people who have written these enthusiastic letters will attend and support an organization or not? If you appoint a committee on permanent organization to report on a meeting to be called in the future, we could have some one correspond with all these people and find out their attitude and see what we can depend upon them to do.

Mr. Scott: When you write letters to people, as Mr. Gibson has, they have to make some answer—they have to give a polite reply, and they don't care just what they do say, but naturally answer in the same vein in which the letter was written. At the same time they have no real idea of actually joining even if an organization is made. Now, as Mr. Gibson has said, it would be a good idea to appoint a committee and if they do join, let their check for dues accompany their letter—something bona fide—something tangible, to show they are in earnest. They will all wish us well, and say they will join, and all that. If we could effect something this afternoon and state that the association will be formed provided we can get enough into it to perfect it I would be in favor of doing so, and let them accompany their reply with a check for dues for the year, dating from the date of actual organization. Then if the association is not formed their check will of course be returned intact. In that way we will have some basis to work upon, for a man won't send his check unless he follows it up by some action.

Mr. Gibson: It occurs to me that first you want to pass a motion indicative of whether you do or do not want to form an organization. Second, you should, if the motion be passed, appoint a committee on permanent organization, constitution and by-laws. Then you have something to present to these people and can say to them, "Here is this proposition; do you want to get in on it or not?"

Mr. Gates: As to the former suggestion, I do not think there is any question but we are willing to form an association if we can get outsiders to come in. Our presence here is reasonably indicative of that.

Mr. Scott: I will move that a committee of five on permanent organization be appointed by the chair to report at a general meeting to be held at the Grand Hotel, Indianapolis, on Wednesday, Nov. 20.

The chair put the motion, after being seconded, and it was unanimously carried.

Further Discussion.

Mr. Peters: I favor the idea of a general association of handle manufacturers, arranged in subdivisions, and think it will make a stronger organization than taking any one branch alone. We need various departments to give the association the proper amount of backbone.

Mr. Alexander: I venture to say that the broom handle men will be there full force, and I will do all I can to get them out.

Mr. Scott: If we could form on a sound basis the Michigan faction would come in with us, I believe, and thus we could form a National Association of Handle Manufacturers.

It was brought out that the three great classes of the handle trade may be said to consist, in a general way, of hickory handles,

including picker sticks; broom handles, including dowel rods; and ash handles.

Committee on Permanent Organization.

Mr. Clendinen: In appointing this committee a great deal of care should be used. There is considerable responsibility devolving upon it, and in fact the entire future of the association; not being very well acquainted with handle people outside of the hickory business. I do not feel that I am in a position to appoint that committee. However, from what information I have secured, I have tried to appoint a representative one, and will name the following gentlemen to act as such committee: P. C. Scott of St. Louis, Wm. Cook Rogers of Piqua, O.; H. R. Alexander of Hulsboro, Ind.; A. W. Newark of Cadillac, Mich., and Chas. D. Gates of Louisville, Ky.

Upon motion it was decided that the chairman should be considered an honorary and advisory member of the above committee, and that Henry H. Gibson should act as temporary secretary.

A vote of thanks was tendered the press for their assistance in promoting the measure and giving it publicity.

The members of the committee and the secretary voiced their willingness to bear the expense involved by their respective duties until such time as the organization was completed.

Upon motion the convention adjourned, to meet at Indianapolis, Nov. 20.

Attendance.

Clendinen, T. R., Jackson, W. W., Company, Atchinson, Kan. (hickory).

Rugg, F. A., Rugg Manufacturing Company, Greenfield, Mass. (ash and broom).

Toner, A. D., F. A. Hoffman, Kewanee, Ind. (hickory and ash).

Gregory, T. J., Gregory-Maxwell Handle Company, Cookeville, Tenn. (hickory).

Representative Frankfort Handle Manufacturing Company, Frankfort, Ind. (hickory).

Scott, P. C., Keller & Tamm Manufacturing Company, St. Louis, Mo. (hickory).

Hartwell, C. L., Hartwell Brothers, Chicago Heights, Ill. (hickory).

Peters, F. W., I. F. Force Handle Company, New Albany, Ind. (hickory).

Arnett, R. F., Hartwell Brothers, Chicago Heights, Ill. (hickory).

Gates, Robt. H., Turner, Day & Woolworth Handle Company, Louisville, Ky. (hickory).

Alexander, H. B., Hillsboro Novelty Works, Hillsboro, Ind. (broom).

McLaughlin, John L., J. L. McLaughlin & Sons, Bedford, Pa. (hickory).

Holsapple, T. W., Davis Handle Company, La Fontaine, Ind. (ash).

Gates, Chas. D., Turner, Day & Woolworth Handle Company, Louisville, Ky. (hickory).

Gibson, Henry H., *HARDWOOD RECORD*, Chicago.

Defebaugh, E. H., The Barrel & Box, Chicago.

Howe, W. C., American Lumberman, Chicago.

Smith, Franklin H., Lumber World, Chicago.

Gordon, A. E., *HARDWOOD RECORD*, Chicago.

At a meeting of the Board of Directors of the General Lumber Company of Columbus, O., held on Sept. 28, a semi-annual dividend of three and one-half per cent was declared on the preferred stock of the company, and five per cent on common. The company has been doing a good business since its organization, and recently authorized an increase in its capital stock to provide for enlarged trade.

News Miscellany.

Hoo-Hoo Abroad.

At a recent meeting of the few British members of Hoo-Hoo it was decided to establish a branch in Great Britain, since the society has among its members the majority of important lumbermen in the United States and Canada, and is so efficient in promoting good feeling among the members of the various branches of the lumber trade. The British members, having seen the advantages and excellent work accomplished by the organization in America, believe this will fill a long-felt want in the United Kingdom, and feel sure that when the society is started and fully understood, it will take root and grow rapidly.

It is the desire to induce gentlemen prominent in the trade to get together and finally establish branches and clubs in other centers than London. The first concatenation was held Oct. 4, and was presided over by Max Sondheimer, of Memphis, Tenn. While a full report of it has not yet been received, it was undoubtedly a large and lively one, as many prominent members of the trade abroad have entered into the project enthusiastically.

Large Virginia Operation.

The Stonega Coke & Coal Company of Roda, Va., has recently installed a new up-to-date band sawmill with all the latest improved machinery, and is running two circular mills. The company owns a large boundary of the finest poplar in the state and is working about 200 men in the lumber department daily, with about fifty head of horses and mules. Their timber is taken out by contract. J. R. Legg is superintendent of the lumber operations of this concern.

Michigan Saw Company.

The Michigan Saw Company of Saginaw is making some extensive improvements in its plant, by way of placing new grinding machines and improved furnaces in commission. The company's product is used throughout the United States and Canada with excellent success and the demand for its high grade saws is such that the proprietors are continually obliged to rearrange and improve their plant.

The Michigan Saw Company is an old established house. It commenced business in 1881, and at the present time the principals are W. H. Presser and his two sons, W. R. and C. H. Presser, all of whom are experts in every detail of the saw business.

Veneer Concern Prosperous.

The annual meeting of the Wisconsin Veneer Company of Rhineland was held last week. Reports showed a very prosperous season just closed, but a still greater business is anticipated for the coming year. The company's hardwood holdings are conveniently located in the Wisconsin birch belt, and the fact that it has excellent railroad facilities aids greatly in transporting the logs to the mill and marketing the finished product. The holdings of the Wisconsin Veneer Company are sufficient to permit cutting for seven or eight years to come. They contain quantities of fine maple, oak, elm, birch and basswood.

R. C. Dayton of the above concern and the Choctaw Lumber Company says the southern business of the latter concern is most prosperous. A seven-mile spur tapping the Frisco System at Garvin, I. T., and leading into the Red River district, has just been completed. The large quantity of hardwood timber in that vicinity and in the Little River territory will be easily handled with the aid of this spur and the company's excellent railroad equipment. More than 1,500,000 feet of hardwood timber, mostly oak, will be cut this season.

Death of Foremost Pioneer Manufacturer of Woodworking Machinery.

S. A. Woods, president of S. A. Woods Machine Company, manufacturer of woodworking machinery, died suddenly at his home in Brookline, Mass., October 1. Mr. Woods' death was wholly unexpected, as he was apparently in good health and able to be about on the day of his death. He was about eighty years of age.

Mr. Woods' first business connection was with Solomon S. Gray, a manufacturer of sash, doors and blinds. In 1852 he purchased this business and two years later Mr. Gray came back as partner, the firm operating under the name of Gray & Woods. About 1860 Mr. Gray retired and Mr. Woods became sole owner. In 1873 the present corporation, the S. A. Woods Machine Company of Boston was formed, with a capital stock of \$300,000, with Mr. Woods as president. He is survived by two sons and a daughter. The funeral was held at his late home Friday, October 4.

Mr. Woods' death marks the passing of the

THE LATE S. A. WOODS OF BOSTON, MASS.

last pioneer manufacturer of woodworking machinery in this country. He has always stood for the production of the highest class tools that money, expert talent and diligence would produce. The debt that woodworkers of the world owe to this conscientious, painstaking and remarkable man is beyond estimate.

While president of the great machinery house of S. A. Woods Machine Company, the management of the concern has for some years past devolved on his son, Frank F. Woods, who is the active head of the house.

Barney & Hines in New Field.

Barney & Hines of Memphis have been in the timber and lumber business there for a number of years, and have been eminently successful. For a long time they have employed a crew of capable timber estimators, who are well versed in all kinds of southern woods, to estimate stumpage in which they were interested. Their employees have confined their work to the firm's affairs up to the present time, but Barney & Hines have now decided to take up such work as cruising, furnishing estimates, etc., for the general public, believing that a reliable house of this kind is much needed in the Memphis territory and will be well patronized. They will conduct the business in such a way as to positively guarantee reliability and accuracy.

Official Weight List.

The National Wholesale Lumber Dealers' Association, through a special committee authorized by the Board of Trustees, is at work on an official list of weights of the various kinds of lumber and is asking the cooperation of the trade in endeavoring to make these estimated weights as accurate as possible.

For some time the Railroad and Transportation Committee of the association, of which F. R. Babcock, Pittsburg, Pa., is chairman, has been working on this scheme, and has compiled a temporary list of weights after voluminous correspondence with a large number of manufacturers of different kinds of lumber in all sections of the country. This list has been submitted to the members and is now in course of revision for permanent compilation. Copies of it can be had by addressing any member of the committee or E. F. Perry, secretary, 66 Broadway, New York.

In preparing this list the Railroad and Transportation Committee has been as conservative as possible in considering the probable weights of lumber from different sections of the country and under all conditions; it is for that reason that the Board of Trustees of the National Wholesale Lumber Dealers' Association authorized the appointment of a special committee to complete the work undertaken by the Railroad and Transportation Committee. This special committee consists of: R. S. Cohn, chairman, Roanoke Railroad and Lumber Company, Norfolk, Va.; J. W. Farrior, J. W. Farrior & Co., Birmingham, Ala.; W. A. Holt, Holt Lumber Company, Oconto, Wis.; R. T. Jones, R. T. Jones Lumber Company, North Tonawanda, N. Y.; Thomas Raine, Raine, Andrews Lumber Company, Evenwood, W. Va.; C. N. Burton, Louisiana Cypress Lumber Company, Ltd., Harvey, La.; S. Burkholder, S. Burkholder Lumber Company, Crawfordsville, Ind.; W. M. Godfrey, William Godfrey & Co., Cheraw, S. C.

The association requests that criticisms or suggestions be forwarded to any of the members of the committee with a view to rendering such assistance as will make the following estimated weight list accurate:

POUNDS PER THOUSAND FEET.

	Green	Shipping	Well	Kiln
	from saw.	dry.	seasoned.	dried.
Ash, black	4,700	3,500	3,100	3,000
Ash, white	4,800	3,700	3,550	3,300
Basswood	4,400	2,800	2,500	2,100
Beech	5,500	4,400	4,000	3,700
Birch	5,400	4,200	4,000	3,600
Chestnut	4,800	3,250	2,800	2,450
Cherry	5,000	3,300	3,000	2,700
Cottonwood	4,600	3,100	2,800	2,400
Elm, rock	5,300	4,300	3,900	3,500
Elm, soft	5,000	3,300	3,150	2,900
Gum	5,300	3,600	3,300	3,050
Gum, sap	5,000	3,300	3,000	2,750
Hemlock	4,000	3,000	2,500	2,300
Maple, hard	5,300	4,150	3,900	3,400
Maple, soft	5,000	3,650	3,300	3,000
Oak, red	5,500	4,250	4,000	3,400
Oak, white	5,700	4,500	4,100	3,600
Poplar	3,900	3,000	2,800	2,400
Spruce (Adir.)	3,300	2,700	2,300	2,200
Spruce (W. Va.)	3,000	2,700	2,300	2,200
Walnut	5,000	4,000	3,750	3,500

A Forced Draft System for Sawmills.

Much depends upon the draft in furnaces. If it is sluggish it is hard to make enough steam; the engine does not develop as much power as it should; every machine in the mill lags, and the output is considerably less than it should be. The earnings suffer appreciably. It takes a certain amount of business to pay expenses. Beyond that point it is profit, except what the material costs, and so the more that can be cut per day the better the plant pays. The importance of a good draft, whether natural or artificial, is therefore great. The mere fact that a stack is of sufficient capacity does not

indicate that a good grate is superfluous. A large stack merely affords facilities for a strong draft by giving the heated air and products of combustion ample room to escape without resistance; the Gordon Hollow Blast Grate produces a strong draft by forcing the air in under pressure and making a hotter fire. The grate is far superior to an oven, which, while possessing several excellent advantages, does not increase the draft positively.

The Gordon Hollow Blast Grate materially increases the difference in pressure at the grate line, thereby accelerating the draft; means are provided for regulating this pressure to a nicety. It keeps the sawdust loose, thereby giving the natural draft, as well as the blast, a chance. It increases the quantity of oxygen in a given volume of air by compressing it. It causes the sawdust to dry more quickly.

The manufacturers advertise far and wide that the Gordon Hollow Blast Grate will add from twenty-five to fifty per cent to the power developed by a boiler; that it will produce as good results with wet, green or frozen sawdust as a draft grate produces with dry wood; that the user may have thirty days in which to make an exhaustive test, and that if, at any time during thirty days, he finds the makers have misrepresented, he to be the sole and undisputed judge—or if he does not wish to keep it, for any reason satisfactory to himself, he may return the apparatus at their expense. Yet, notwithstanding the extreme liberality of these terms, in seventeen years and out of over 5,000 sets sold all over the continent, less than twenty users have seen fit to avail themselves of the opportunity to return the outfit.

What more striking, convincing and practical proof could there be that the manufacturers' claims are all well founded, and stated without exaggeration? Those interested would do well to write the Gordon Hollow Blast Grate Company of Greenville, Mich., for further particulars.

Forestry Schools in Japan.

The first school of forestry to be started in Japan was established twenty-three years ago, and today that country has sixty-two institutions for the training of students and the directing of popular attention to the great science of forestry and its practical application. The large forests belong to the crown and are under the control of the department of agriculture. The area of forest land in Japan is about 60,000,000 acres, of which the government controls about half. In the ten years ending with 1901 Japan's exports of lumber were valued at \$25,000,000.

The climate of the Hokaido country, where the largest stands of trees are found, is favorable to forest growth. In the old wooded sections reforestation is taking place mainly on the rugged slopes of mountain ranges. However, the Japanese are not as frugal with the young forest growth as they might be. The framework of buildings is largely of rough hewn poles, and altogether too much young timber is used for charcoal, which is produced extensively in Japan. That country has been using timbers since the ages antedating the famous cedars of Lebanon, and many a grand old monarch is maintained with great care in public squares and on broad avenues.

The Forest Reserve Question.

The Department of Forestry is making strenuous attempts to interest the people of the South in the measures which are being taken to prevent the denudation of their resources in this line and the consequent destruction of great branches of commerce and sources of prosperity.

Dr. Thomas E. Will, secretary of the American Forestry Association, is presenting the Appalachian question in a series of illustrated lectures in the leading cities of the South. The itinerary includes Raleigh, Durham, Salem and Ga.; Asheville, N. C.; Greenville and Charleston,

Charlotte, N. C.; Spartansburg, S. C.; Savannah, S. C.; Augusta and Columbus, Ga., and Montgomery, Ala., with other points in prospect.

On the evening of Oct. 1 Dr. Will spoke in Charlotte, N. C., on this subject. A large and enthusiastic audience greeted the distinguished speaker. He pointed out that the Appalachian project included the questions of wood and water chiefly. Of the first two great wood areas of the United States, those of New England, the Great Lakes, the Northwest and the South, he declared the first two are practically gone, and the third and fourth are going with such alarming speed that a wood famine is almost upon us. He pointed out that the nation's supply of hardwoods in the Great Lakes region, the Ohio valley, the Lower Mississippi and the Southern Appalachian region was almost exhausted in the three first named sections, and that our reliance was in the last named.

Dr. Will then showed that our success in manufacturing depends directly or indirectly upon water power and requires equable stream flow, which is insured in a large measure by the presence of forests upon the mountain slopes. He showed the dire effect upon manufacturing and other businesses should this denudation be continued. He stated that flood damages in the South had already attained serious proportions, and referred to the fate of foreign lands whose forests were thus destroyed as a warning.

After the address the following resolution was introduced, which was adopted:

"Whereas, The American people are consuming wood three or four times as fast as they are producing it, thereby inviting a famine in wood;

"Whereas, The chief stock of hardwoods of the United States is found in the South, the destruction of which wood must menace the well being of the nation;

"Whereas, Manufacturing depending largely upon water power or electricity generated therefrom has become a leading southern industry;

"Whereas, Not only southern woods but southern water powers are threatened by the rapid denudation of southern mountain slopes;

"Whereas, Experience both at home and in foreign lands has proved that the only solution of this problem lies in government ownership and administration of forests controlling stream flow; and

"Whereas, Delay is not only dangerous but increasingly wasteful; therefore be it

"Resolved, That we strongly urge the immediate enactment of the bill providing for the establishment of national forests in the southern Appalachian mountains, and that we commend every right effort looking to this end."

Miscellaneous Notes.

The Glen Arbor Lumber Company of Glen Arbor, Mich., has finished its cut at that place and has sold its railroad, engine and other equipment to D. H. Day of Glen Haven, who will operate same between his mill on Glen Lake and the Glen Haven pier. Mr. Day's mill has a fifteen-year cut ahead of it.

Vandals in one night cut down 500 two-year-old hard maple trees on Thirteenth, Fourteenth and Fifteenth streets in Sterling, Ill. A reward of \$700 was offered for their conviction.

Newport, Ark., has acquired the mill of the Geo-Crayton Hardwood Lumber Company, formerly located at Jacksonport, and will soon be the site of a single and double-tree and neck-yoke finishing plant belonging to the same company. The company intends to put in a large band mill next Spring which will employ about 200 men, and give Newport's growth and development a big uplift.

The Talbert-Zoller Lumber and Veneer Company of Winton Place, Hamilton county, was incorporated at Columbus, O., Sept. 27 capital, \$300,000.

O. L. Bouck, president and general manager of the Miami Valley Sash and Door Company,

and one of the most substantial and highly esteemed citizens of Dayton, O., died recently in that city after a nervous breakdown and serious illness of five weeks' duration.

Paul Perrizo of Perrizo & Sons, Daggett, Mich., reports that since they have taken over the Talbot Lumber Company of Talbot, Mich., they are kept busy supplying orders. Since the middle of March they have been cutting maple, beech, birch and basswood from their own timber lands. The company's annual output is about 1,000,000 feet.

The Union Handle Manufacturing Company of Ashley, O., of which H. D. Hale is manager, is adding a new and complete wood D handle mill to their already extensive lines, with a capacity of 200 dozens per day. The new outfit will be in operation Nov. 1.

The plant of Geo. H. Kephart & Son, Ada, O., manufacturers of hand farming tool handles and wood novelties of various kinds, was totally destroyed by fire the night of Oct. 5.

C. R. Simons, the senior member of the North State Veneer Company of Statesville, N. C., died on Sept. 15.

The Holland Veneer Company of Holland, Mich., which moved into a new building recently, has found it necessary to enlarge its plant for the third time within the year on account of growing business. The new addition will be 40x50 feet, two stories high and basement.

Wm. I. Hall of the Forest Service, Washington, D. C., recently made a tour of inspection through the mountainous regions of the East, and in an interview said: "Of course should the Appalachian forest reserve be established it will not mean that none of the trees will be cut down, but that they will be cut down according to a certain system. For instance, no small trees can be cut and where trees are cut others must be planted in their places. The government has long recognized that something must be done to save the trees of the country. Aside from the material value of the trees saved in the forest preserve, it will be of untold value as an education feature. Public sentiment is being fast educated for the preservation of the trees."

The governments of Korea and Japan have entered into an agreement for the purpose of opening up the forests of the Yalu district. Of the large capital required 1,200,000 yen each government will contribute half. Reports upon the conduct of the forest operations will be made to each government every year.

Workmen engaged in excavating for a highway near Palmyra, N. Y., recently unearthed a large white oak tree twenty-five feet below the road level. Evidently the tree had been buried for hundreds of years, as it was completely petrified, resembling black marble to the very core. Scientists who examined the spot where it was found express the opinion that a forest once stood there and that the surrounding hills and overlying earth resulted from some great cataclysm.

Railway sleepers are treated by injections of creosote or sulphate of copper, in the tropics, to prevent the fierce attacks of insects which would otherwise destroy them completely.

Reports from St. Petersburg state that during the week of Sept. 20 a number of fires occurred in the great timber yards belonging to the crown. They are supposed to be of incendiary origin, due to dissatisfaction with certain prospective reforms. The timber yards are said to be seriously mismanaged, and the facts have so disgusted Prince Vassilevichoff, general director of land organization and agriculture, that he will resign.

The Clark & Gay Manufacturing Company, which has heretofore maintained headquarters at Ironton, Mo., will remove to Little Rock, Ark. It has purchased a large tract of land near the city and will erect thereon a hardwood manufacturing plant that will employ 100 men at the start. The plants at Williamsville and Ellington, Mo., are to consolidate at Little Rock. The output will be largely wagon stock, and will take all the timber manufactured, as well as some from outside sources.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

W. E. Douglass, president of the Douglass & Walkley Company, manufacturers and wholesalers of hardwood lumber at Columbus, O., called at the RECORD office Sept. 30.

Walter Müller of I. F. Müller & Sohn, Hamburg, Germany, has been spending several days in Chicago while making a tour of the hardwood markets of the United States in the especial interest of African mahogany. Mr. Müller has made several trips to this side, and is always a welcome visitor.

R. G. Page of the R. G. Page Lumber Company, Ashland, Ky., was a Chicago visitor the first of the month.

Among the guests at various Chicago hotels on the 28th ultimo were D. W. Briggs of the Briggs & Cooper Company, Ltd., Saginaw, Mich.; C. S. Curtis of the Fenwood Lumber Company, Wausau, Wis.; G. E. W. Luehrmann of St. Louis, Mo.; E. G. Cook of St. Louis; J. N. Sharp of Liverpool, England; N. A. Gladding of Indianapolis, and J. V. Stimson of Huntingburg, Ind.

Gus Kitzenger, the lumber king of Beaver Island, who lives at Manistee, Mich., when at home, dropped into Chicago for a day last week.

Earl Palmer of the Ferguson & Palmer Company, Paducah, Ky., called on the Chicago trade last week.

E. E. Skeele of the Estabrook-Skeele Lumber Company has returned from a lengthy pleasure trip in the East. Mr. Skeele was accompanied by his wife.

The Wiborg & Hanna Company of Cincinnati has found it necessary to open a Chicago office to handle its local trade.

M. E. Thomas, sales manager for Cobbs & Mitchell, Inc., and Mitchell Brothers Company, was a Chicago visitor last week, on his way west for an extended trip.

R. E. MacLean, secretary and treasurer of the I. Stephenson Company of Wells, Mich., was in the city recently while making a trip in the interests of his house.

P. A. Ryan of Ryan & McFarland is back from a trip to the company's mill near Memphis. He reports the car situation as very dark and the shortage likely to prove exceedingly troublesome in the near future.

Frank B. Stone is absent on a three months' trip to the Orient.

C. A. Flanagan and E. C. Ostrander of the Rittenhouse & Embree Company, and W. D. Hamilton and E. H. Thomas of the Edward Hines Lumber Company were among the braves who entered the Mystic Shrine at the great initiation in this city last week.

J. H. Quinlan of Charles Darling & Co. is in Mississippi in the interests of his firm.

E. J. Young of the Brittingham & Young Company, Madison, Wis., attended the Deep Waterways convention at Memphis, and stopped off in Chicago en route.

E. F. Dodge of the P. G. Dodge Lumber Company went to Memphis last week on business.

J. D. Bolton of the Hayden & Westcott Lumber Company is back from a West Virginia and Kentucky trip.

J. W. Wells of Menominee, Mich., called on friends in this city the first of the month.

Boston.

George J. Barker of the Wood-Barker Company has recently returned from a trip to Europe.

The new lumber firm of Russell & Young, which recently started in business in Clinton, Mass., plans to begin the manufacture of building material in a short time.

C. R. Palmer of the L. H. Gage Lumber Company, Providence, R. I., has been visiting in Tennessee.

The Massachusetts Wholesale Lumber Association has appointed William E. Litchfield, the well known hardwood lumber dealer of this city, treasurer of the association. This appointment was made necessary due to the resignation of Mr. Robbins who has entered the machinery business.

W. R. Chester of W. R. Chester & Co. has returned from a vacation.

Fred Sterritt, manager of the George W. Gale Lumber Company and president of the Metropolitan Lumber Exchange of Boston, has been spending his week ends at his farm in Nova Scotia.

The new chair manufacturing plant of F. L. Carey, Keene, N. H., is ready for occupancy.

Edwin B. Pratt, salesman for Wiley, Harker & Camp Company, was married late in September to Miss Marsh of Wakefield, Mass.

The New Hampshire Lumbermen's Association held a meeting September 28 in Manchester, N. H., and practically decided to bring suit against the Boston & Maine railroad for overcharges. The committee having this matter in charge are: Samuel D. Felker, Mr. Martin and Mr. Chase. The meeting was well attended.

George D. Haywood, for over thirty-five years associated with the A. T. Stearns Lumber Company, Neponset, Mass., died very suddenly September 30.

New York.

R. H. Downman, the distinguished cypress manufacturer of New Orleans, La., passed through the city last week en route home after a delightful summer vacation spent at Loon Lake in the Adirondacks. In speaking of the business situation Mr. Downman expressed the belief that cypress is in good shape and looks for a brisk fall trade.

Another prominent visitor of the cypress belt was D. W. Bubes of the Ruddock-Orleans Cypress Company, who was in town for several days, an interested attendant at the Flat Car Equipment Conference at the National Wholesalers' headquarters on Sept. 24.

Hugh McLean, the prominent Buffalo hardwood lumberman and head of the extensive Hugh McLean Lumber Company, spent several days during the fortnight visiting the local trade. He reports hardwood conditions as firm, with considerable increase in activity, and while he believes that buyers are ordering as lightly as possible he thinks this situation will speedily change when buyers begin to realize the effect of the car shortage and the scarcity of the better grades of hardwoods on the market.

Albert Steinbach, manager of the hardwood department of the Northern Lumber Company, Flatiron Building, has just returned from an extended buying trip South, on which he closed some nice deals for fall and winter trade.

J. G. Christopher of Jacksonville, Fla., and Capt. Frederic Wilbert of the A. Wilbert Lumber & Shingle Company, Plaquemine, La., were recent visitors in town in the interest of business.

Gilbert H. Shepard, cypress wholesaler of 1123 Broadway, Manhattan, has recently added a choice line of red gum doors and trim which he is pushing in the local market. This wood presents an exceedingly handsome finish and Mr. Shepard has great faith in it as a finish product.

The Christy-Moir Company, 149 Broadway, has leased offices on the twenty-ninth floor of the new Singer Building tower, without doubt the highest lumber offices in the world. The company has just closed a deal for the entire output of the Iberville Lumber Company at Iberville, Quebec, a new concern just starting at that point.

Charles Hill, treasurer of the Northern Lum-

ber Company, Flatiron Building, has just returned from an extended trip abroad, accompanied by Mrs. Hill.

W. D. Mershon of Mershon, Schuette, Parker & Co., 1 Madison avenue, has just returned from a visit to the Saginaw operations of his firm, where he found everything progressing satisfactorily.

There was a meeting of the creditors of the Brooklyn Cedar Ware Works held last week at which time a committee was appointed to investigate the company's affairs with a view to securing a withdrawal of the bankruptcy proceedings against it.

On the same date there was a meeting of the creditors of H. O'Lansky & Co., sash, door and blind manufacturers of Brooklyn, who recently became embarrassed, but no definite action was taken.

J. F. Henderson of the Henderson Lumber Company of Pittsburg, Pa., spent several days in town during the fortnight in the interest of business.

Other visitors were E. P. Slocomb, E. P. Slocomb & Co., Philadelphia; C. G. Barr, Tennessee Lumber and Manufacturing Company, Pottsville, Pa.; W. E. Terhune, W. E. Terhune Lumber Company, Pittsburg, Pa.; Lewis Dill, Lewis Dill & Co., Baltimore, Md.; Guy White, White, Frost & White, North Tonawanda, N. Y.; R. G. Kay, Philadelphia, Pa.; R. C. Lippincott, Philadelphia, Pa.; C. P. Coppock, Coppock-Warner Lumber Company, Philadelphia, Pa.

Eustace Conway, attorney of 66 Broadway, Manhattan, has been appointed receiver of Dixon & Dewey in firm dissolution proceedings to succeed Harry S. Dewey, former receiver.

Lieut.-Gov. E. J. Lake of Connecticut and active head of the Hartford Lumber Company of Hartford, was in town last week renewing acquaintances in the trade.

There was a meeting of the Eastern Sash, Door and Blind Manufacturers' Association at the Park Avenue Hotel, Manhattan, last week, at which time general market conditions were reviewed. The reports showed the market to be in fair shape and as a result of the discussion prices on all grades of blinds were advanced 1 cent and plans devised to reinforce the market on sash and door prices also.

W. A. Ruddick, who has been representing the Edward Hines Lumber Company interests in the local market for some time, has severed his connection to engage in a similar capacity with the Eastern Lumber Company of Tonawanda, N. Y. Mr. Ruddick will maintain the same offices at 1 Madison avenue as heretofore.

There was a meeting of the Executive Committee of the National Wholesale Lumber Dealers' Association at headquarters, 66 Broadway, on Sept. 25. There were present: President J. M. Hastings and George F. Craig of Philadelphia, C. S. Prescott, Jr., of Cleveland, Gordon C. Edwards of Ottawa, R. W. Higbie and Secretary E. F. Perry of New York. The committee spent a busy day reviewing the general work of the organization and planning an active winter campaign. Everything was reported in excellent shape and a successful season in the work of all departments is anticipated.

Secretary E. M. Terry of the National Lumber Exporters' Association, Baltimore, Md., was a recent visitor in town concluding a lengthy trip to New Orleans and other points in the interest of association affairs. Mr. Terry has been at work with his colleagues in an effort to amalgamate all branches in the lumber exporting trade into one National association, and prospects seem bright for an early realization of such efforts.

The Executive Committee of the Car Stake and Equipment Complaint Commission met at the headquarters of the National Wholesale Lumber Dealers' Association, 66 Broadway, Sept. 24, for a consideration of the present status of the case preparatory to the final hearing before the Interstate Commerce Commission Oct. 16. A full attendance was present, together with a

number of prominent visiting lumbermen. Most of the session was executive, but the general reports were that the committee was very well satisfied with the progress of things and will be better prepared than ever for the final fight. Expert witnesses have been arranged for, together with associate counsel to assist W. W. Ross, who has so ably conducted the case to date.

The Araho Lumber and Storage Company has been incorporated here with a capital of \$50,000 to conduct a general lumber and storage business. Its yards will be in Brooklyn, the exact location to be decided next week. F. Burke of Boston and F. D. Folsom and L. H. Strouse of Williams, Folsom & Strouse, lawyers of Manhattan, are the incorporators.

W. B. Merzhon, the distinguished Saginaw lumberman and head of W. B. Merzhon & Co., manufacturers of the celebrated "Merzhon Re-saws," was here last week for the purpose of placing his son in college. Mr. Merzhon had not been east for some time and his friends were glad to renew acquaintance.

The annual meeting of the New York Lumber Trade Association will be held at its headquarters, 18 Broadway, Oct. 9, preceded by a Delmonico luncheon. A large attendance is anticipated to hear the results of the past year's work, which has been very satisfactory. President J. S. Davis of Brooklyn is slated for reelection.

Wilson Godfrey, for many years prominent in the wholesale lumber trade of the metropolitan district, died at Ridgefield, Conn., Oct. 2, in the seventy-first year of his age.

Harry S. Dewey, formerly of the firm of Dixon & Dewey, Flatiron Building, is about to enter business with his brother—the new concern to be incorporated as Harry S. & James Dewey. They will do a general lumber business.

Philadelphia.

The Lumbermen's Exchange, after the usual attractive luncheon, held its regular monthly meeting on Oct. 3, President William L. Rice in the chair. There was a goodly attendance at this meeting, but with the exception of a resolution, unanimously carried, and of which a copy was immediately forwarded to select and common councils, requesting these bodies to report favorably on the appropriation of \$5,000,000 for public schools out of the \$10,000,000 loan, only current business was transacted. The autumnal excursion of the Lumbermen's Exchange came off on Sept. 24, 25 and 26. It comprised a visit to the Gettysburg battle field and Buena Vista Spring—baseball games, concert and dance were all indulged in at the latter place—and the outing altogether was voted the most enjoyable ever arranged by this body.

Schofield Brothers report business exceptionally good. The month of August proved the best they have ever had. The completion of the mill of the Saltkatchie Lumber Company at Ulmers, S. C., in which they are largely interested, is being pushed and it is expected that by Jan. 1 the plant will be in full working order. In sinking an artesian well on the grounds the company fortunately struck water at 368 feet, which gives them a yield on an average of 100 gallons a minute. They have built a hotel and so far have completed three and a half miles of railroad. R. W. Schofield is now at the mill looking after affairs there. John H. Schofield has just returned from a trip through the Pennsylvania lumber regions, where he secured quite a large block of excellent white pine. R. P. Ashley of the same house is making a selling trip through New Jersey. The firm recently engaged R. W. Kernochan, formerly of Buffalo and the West, as salesman to look after Pennsylvania territory as far west as Pittsburg.

Wistar, Underhill & Co. are satisfied with trade conditions for the time of year, and are looking forward to a good fall trade. T. N. Nixon of this firm is in Tennessee looking up

the stock situation and making some desirable contracts. Arthur T. Wistar, brother of R. W. Wistar and who was formerly in charge of the shipping department for this firm in Tennessee, is being shown over the coal region in Pennsylvania and the southern New Jersey territory by H. E. Bates of this house, in which fields Mr. Wistar will hereafter act as the firm's salesman. Mr. Bates will locate probably in Cincinnati, Ohio, and look after his firm's interests in that state. James W. Anderson has just returned from a successful selling trip through Canada.

W. H. Lear is rushing the completion of his new yard at East Girard avenue and Fletcher street. He reports business very good in every line and states that he has on hand 2,000,000 feet of the finest cypress, running from 4/4 up to 16/4, ever placed on the market and of which he can make quick delivery. William F. Stroud of this house has just returned from a very successful selling trip through eastern Pennsylvania.

It is announced that the copartnership heretofore existing between Joseph P. Dunwoody and Seymour Y. Warner, trading as Joseph P. Dunwoody & Co., was dissolved on Sept. 30 by mutual consent. The affairs of the firm will be liquidated by Seymour Y. Warner at 1016 Witherspoon Building.

The Forrest Lumber Company, Pittsburg, Pa., has opened an eastern office at 938 Real Estate Trust Building, which will be in charge of Joseph P. Dunwoody, formerly of Joseph P. Dunwoody & Co.; they will handle hardwoods, spruce and hemlock. Their mill is located at Konnorock, Va., which they report is being worked to full capacity. They have on hand 5,000,000 feet of excellent poplar, chestnut and oak, ready for prompt delivery. All eastern business will be handled through the Philadelphia office. Mr. Dunwoody remains treasurer of the Norva Land and Lumber Company, Wallacetown, Va., the main office of which is at 100 South Gay street, Baltimore, Md.

Horace G. Hazard & Co. are busy and report a decided improvement in the eastern field during the last few weeks. J. H. Hillman of this firm has just returned from a selling trip in Baltimore and Washington. This firm on Oct. 1 obtained a foreign attachment in common pleas court against the West Florida Hardwood Company, with bail fixed at \$2,000.

The Pennsylvania Lumbermen's Mutual Fire Insurance Company continues prosperous. Justin Peters, manager, states the company has never done such a business as is the record to date and the outlook for the rest of the year is most promising.

Watson Malone & Sons do not quarrel with the trade situation. The year's sales so far are ahead of 1906, and they consider the outlook very fair. Although the car service is beginning to give trouble they have managed to keep their stock in good shape and are in a position to supply quick demands in all building lumber.

The S. B. Vrooman Company reports that trading has kept up remarkably well for the time of year and that indications are favorable for fall business. S. B. Vrooman has just returned from a trip abroad looking the picture of health.

The Bolce Lumber Company is among the busy concerns. C. E. Lloyd, Jr., vice president, states that they are doing a good business, but have to go after it; they are confident the fall season will be good. Mr. Lloyd is on a selling trip through New York and the New England states, and J. W. Floyd of this house is making a business trip through southern New Jersey.

Charles L. Meckley reports August and September business very good and the present outlook favorable. His hardwood department is progressing. He makes a specialty of ash, oak and elm squares.

The Philadelphia Hardwood Lumber Company reports business picking up and the out-

look pleasing. H. N. Pattison of this concern is on a selling trip through Pennsylvania as far as Williamsport, where he will look up stock as well.

The Paul W. Fleck Lumber Company is receiving many inquiries, also good orders are coming in. Mr. Fleck states that they have no fault to find with trading, but that the car service is giving trouble. They are placing some excellent 4/4 to 12/4 chestnut on the market at this time.

Emil Guenther, the popular lumberman of this city, was a passenger on the Southern Railway Limited, which was wrecked at day-break near Ryans Siding about thirty miles south of Charlottesville, Va., Sept. 22. The train was going at the rate of forty miles an hour when it was derailed. The gas tank under one of the cars broke and the escaping gas ignited from a torch carried by the engineer, exploded and set fire to the cars. The passengers were thrown violently from their berths when the cars left the tracks, but fortunately no one was killed. Mr. Guenther sustained some slight bruises, but was not seriously hurt.

The J. G. Brill Company of this city has received an order for twenty-one railroad cars for Argentina. The cars will be built at the company's Wason plant at Springfield, Mass.

The local ship building plants have been fortunate in obtaining some of the contracts from the government for the building of torpedo boat destroyers. The William Cramp Ship Building Company will build two, each to cost \$585,000, and the New York Ship Building Company in Camden has contract for one, to cost \$624,000.

The Grand River Lumber Company, Pittsburg, Pa., obtained a charter under Delaware state laws on Oct. 4; capitalization \$3,500,000.

Among the recent visitors to the local trade were W. H. Harding, secretary and treasurer United Lumber Company, Maxton, N. C.; George W. Irish of the Fuller & Rice Lumber and Manufacturing Company, Grand Rapids, Mich.; B. B. Burns of the Monger Lumber Company, Asheville, N. C.; John B. Case, Flemington, N. J., and Henry M. Canby, Wilmington, Del.

Baltimore.

The inspection rules adopted at the last meeting of the National Hardwood Lumber Association, the exporters here believe, will prove a serious handicap in negotiating an agreement with foreign brokers and buyers. It is pointed out that these negotiations were about to be satisfactorily concluded, the American claims being in the main acceptable to the Liverpool receivers of lumber. The latter were to have held a meeting in September to take what would have amounted to final action, but the many changes in the rules made by the National Hardwood Lumber Association have served to cloud the outlook. The changes are so numerous that the Liverpool buyers and brokers feel the previous basis of negotiations has been removed and that it will be necessary to begin all over again. The hardwood exporters here state that at least some of the changes mean a considerable departure from old practices, and will call for new adjustments, and more or less confusion is expected for some time to come. That in the long run they may be found entirely acceptable and equitable is altogether likely, but for the present they will cause the exporters in particular extra work. The shippers take the view that it makes no difference in the end what the rules are, but that if they are to buy according to the regulations they must also be able to sell under them, and this will require that the receivers of lumber on the other side of the Atlantic recognize the changes.

The West Virginia Saw Mill Association held its annual meeting at Elkins September 20, and discussed a number of matters of interest to the trade, among them the car shortage, which occupied a prominent place in the deliberations. The association appointed a railroad committee to

take up the matter and see what could be done to afford relief. The following officers were elected:

President - E. E. Wheeler of the Wheeler Lumber Company, Gladys.

First Vice-President - P. T. Brown of Elkins & Durbin.

Second Vice-President M. M. Brown of Brown & Hill, Montes.

Secretary and Treasurer M. N. Wilson, of the Wilson Lumber Company.

Board of Directors W. O. Howard of Burner; Mr. Bittner of the Curry-Bittner Company; Julius Radeker, R. J. Clifford, of Hambleton, and C. H. Williams of Hazelwood.

Practically all the mills in West Virginia are represented at the meeting.

The Gauley and Birch River Railroad has been incorporated with a capital stock of \$300,000 to construct a timber and coal road from the mouth of the Muddlety creek, in Nicholas county, by way of Hookersville, to a point near the mouth of the Big Birch river, in Braxton county. The principal office will be at Summer ville. The road will further the development of a large area of virgin timber and coal land in Nicholas and Braxton counties.

Determined efforts are being made to increase the demand for Louisiana red cypress in this market, the special incentive to the movement being the opening of the direct line by water from Baltimore to New Orleans by the Southern Pacific Company. The all-rail rate is too high to admit of the wood entering into competition with other kinds of cypress, but the tariff by steamer makes this possible, hence the endeavors to extend the trade here. Several manufacturing companies have had representatives here for some time past, and a number of orders have been placed. If a demand is established, it is not unlikely that a full cargo will be sent here.

Mann & Parker, who are erecting a mill in South Carolina, state that rapid progress is now being made on the work. It is now thought that the mill, which will have a capacity of about 30,000 feet per day, will be put in operation by November 1. Practically all the machinery has arrived at the site.

Charles E. Williamson, chief salesman for Carter, Hughes & Co., returned ten days ago from an extended trip through southern Pennsylvania, and also called at a number of western Maryland towns. Wherever he went he found gratifying activity and he succeeded in placing a large quantity of lumber. Among the places touched at were York, Glenn Rock, Shrewsbury, Hanover and Harrisburg.

The list of visiting lumbermen during the past two weeks included E. D. Beckley of the Crosby & Beckley Company of New Haven, Conn., and T. W. Fugate of the H. Fugate Company of Richlands, Va. Both gave favorable reports of trade conditions and expressed the opinion that business would keep up. They also stated that there had been some improvement in labor conditions.

Pittsburg.

The Ruskauff Lumber Company is having an exclusive trade among several of the best planing mills and yards in the Pittsburg district. Fred W. Ruskauff, president of the company, is very optimistic over the lumber situation and believes that higher prices may prevail within a few months in several lines.

One of the biggest tracts of virgin hardwood timber near Du Bois, Pa., is to be cut off at once by John Minns under contract. It is estimated that the tract will cut nearly 7,000,000 feet, a large part of which is oak, chestnut and beech.

J. W. Cottrell is putting out a splendid lot of orders for oak. He has recently made some enviable connections in West Virginia and the South which give him special advantages in taking care of the hardwood trade.

The Prospect Lumber & Supply Company is the latest Pittsburg concern to ask for a Pennsylvania charter. Its members are J. F. Wallace, H. G. Sample and C. R. Dorland and its offices will be in Pittsburg.

The Johnstown Water Company is trying a lot of tree planting with a view to increasing and making better the municipal water supply of that city. It has used white pine, Scotch pine, red oak and chestnut largely in its experiments, which have so far been very satisfactory.

The Moxham Lumber Company has been formed at Johnstown, Pa., with a paid-up capital of \$20,000. It will operate quite extensively in that part of the state and has these officers: President and treasurer, T. W. Hamer; vice president, Jacob Ellenberger; secretary, John E. Ellenberger; director, Henry C. Smith.

James M. Miller, secretary of the recently formed Miller Brothers Lumber Company, has just returned from West Virginia, where he has been three weeks making lumber connections. This concern will furnish lumber for boxing and crating. Both J. C. Miller, its president, and J. M. Miller are thoroughly experienced lumber men and they have a very large circle of business and social acquaintances in Greater Pittsburg who are coming to their support with an encouraging lot of orders to start with.

The Pittsburg Mutual Fire Insurance Company has had the rare good fortune not to have had a loss this year. Secretary Carl C. Vandervoort is not anticipating any such good luck for an extended period, but he is nevertheless superstitious enough to hope that the off year in fires will be next year, which will give his association another twelve months' period to get more firmly rooted in the middle states.

The Maust Lumber Company has contracted to build two miles of standard gauge railroad up the Pine Run from Findlay, Pa., to a tract of timber which it owns and which will cut about 3,000,000 feet of lumber. This is mostly white pine and oak. The tract is one of the largest virgin holdings in central Pennsylvania. The lumber will be marketed from Salisbury.

Holly & Stephenson of Charleston, W. Va., have bought about 9,000 acres of poplar and oak timber on the Meadow river in Greenbrier and Fayette counties, West Virginia. An operation will be started very soon.

President W. D. Johnston of the American Lumber & Manufacturing Company has gone to Paxton, Fla., for a month. For the past six days the total of orders received at the company's offices in Publication Building has been over 5,000,000 feet. Vice President J. N. Woollett is not satisfied with this showing and will depart next week for the Southwest to be gone three weeks on a business trip.

The hardwood trade of the Willson Brothers Lumber Company is eminently satisfactory this month, according to Manager I. E. Balsley. Demand keeps very steady and prices are firm all along the line. Mr. Balsley sees no reason for fearing a decline in prices this year.

The L. L. Satter Lumber Company is very busy at its big operation at Blackstone, Va., and will have one of the best month's records in its history to show for September. Its box shoo factory is going to bring it a large amount of new business and it is leaving no stone unturned to get the largest possible production out of its plant.

The Cuth & Lytle Lumber Company has taken the lead in the poplar market for the past two years and now has enough orders ahead to keep its plants busy until Christmas. This concern has the advantage of a big steam pond which makes cutting at its Hokeomb plant possible all winter.

The Vigilant Lumber Company is quietly but steadily working its way into some mighty good business. It has remarkably strong backing for a young firm and as its members are experienced lumbermen with a wide knowledge of conditions the firm seems bound to succeed in the fullest sense of the word.

The McDonald Lumber Company is booking some very nice business in hardwoods from its offices in the Bessemer Building. Mr. McDonald spends much of his time at his plant near Elkins, W. Va., and reports conditions there very favorable, with the exception of the car shortage, which is getting worse every day.

The Henderson Lumber Company is going after the trade in mining lumber in a strenuous way. Its manager, J. F. Henderson, is young in years, but very "wise" in good, sound lumber sense. He has instilled his spirit of hustle and determination into his salesmen and few firms are better provided with lumber and lumber sellers than this one.

The Acorn Lumber Company has made some more connections in hardwood that will give it additional prestige with large Pittsburg firms. It means to take care of a good proportion of the hardwood trade that is booked from Pittsburg and its early efforts are meeting with genuine success.

The J. C. Moorhead Lumber Company spent the last few days of September in booking some very nice orders for hardwood. Its plants are running full and are turning out a lot of oak and chestnut that is hard to beat. Another salesman has been added to the force, which will make the company well equipped this winter.

Within a few days the W. E. McMillan Lumber Company expects to be located in permanent quarters in Pittsburg. Mr. McMillan divides his time between this city and Elkins, W. Va., where his mill is located. The latter is all ready for a big winter's cut, and from the way the company is booking orders in Pittsburg it will be needed.

Buffalo.

Scatcherd & Son are reminding the trade that the name has been before the Buffalo and outside public fifty years as lumber shippers. There need be no statement as to the firm's square dealing during its half century.

T. Sullivan & Co. will wait for the settlement of freight rates from the Pacific coast before ordering any more lumber from there. It is hoped that future prices can be made on a delivered basis if the advance holds.

F. W. Vetter is able to report an improvement in his trade all along the line, with quartered oak "out of sight," the only difficulty with it being that the dealer is not able to replace it for the money unless he is very lucky.

The car shortage is one of the drawbacks in the trade of the Buffalo Hardwood Lumber Company, which is shipping lumber east from Missouri as well as other points. The home yard is pretty well stocked, though, and is ready for the eastern customer.

A. Miller has been taking in a lot of various hardwoods from Canada along with southern receipts, till his yard is well stocked with all the woods that the trade will want right away. In spite of the good demand in almost all lines.

I. N. Stewart & Brother are still deep in the cherry trade and are handling a lot of very dry stock that the eastern trade is always after. It is well that the home supply is good, for there is complaint of car shortage from the South.

Beyer, Knox & Co. are getting oak out of their Missouri tract in spite of the slow movement of cars and finding good trade for it. F. A. Beyer is on the recommended list for Hoo-Hoo Vicegerent and he will no doubt take the office.

Angus McLean is back to his special work of taking care of the St. Lawrence river lumber interest of the McLean companies, but will be careful to go slow and not repeat his former experience, as illness from overwork is lasting.

The Standard Hardwood Lumber Company will also be one of the yard owners that is ahead of the car shortage for the most part, as it has kept the road hot between its southern mills and the yard here for a long time on oak, chestnut and poplar.

O. E. Yeager is still finding plenty of general hardwoods from Ohio eastward and southward and is not among those who call trade quiet, as his monthly totals are large, the sales well balancing the receipts all the season.

The mill business of G. Elias & Brother keeps up fine, as the city is doing a big lot of building and will need all the doors and finish that can be turned out for some time. The Elias mill is equipped for doing all classes of house construction.

The hardwood exchange gave up its meeting Sept. 28 and made the "seeing Buffalo" trip with the Chamber of Commerce, going the round of the city.

The lumber exchange gave a dinner Oct. 2 to Frank P. Barry, attorney for the State Utilities Commission, who outlined the aims and the powers of the commission and appears to have satisfied the shippers that much is to be done for them very soon in the line of straightening out railroad complications. Almost every lumberman in the city was present.

Saginaw and Bay City.

It was a question after the destruction of the fine plant of W. D. Young & Co., on the night of Sept. 2 last, if the firm would rebuild on the present site, even if in Bay City at all, owing to utterly inadequate water facilities for coping with fire. Mr. Young was in Europe and no one here was authorized to quote him. He came home a few days ago when it leaked out that he had contracted with the American Woodworking Machinery Company for equipment for a plant to be erected at Haakwood, Cheboygan county. The Board of Trade and Common Council, however, got after Mr. Young and by pledging such facilities as he asked for induced him to change his mind and he consented to remain in Bay City. A large force of men are at work on the grounds and the plant will be rebuilt as quickly as possible and on a larger scale than before. It will employ 450 hands. The camps up north engaged in getting out logs will be kept at work. The fire was a serious one by reason of the interruption to business at a time when the firm was very busy. About 75 per cent of the flooring put out by the firm goes abroad and they had large orders booked ahead.

Gardner, Peterman & Co. of Saginaw, operating a saw and stove mill at Onaway, have taken a contract to cut 35,000,000 feet of hardwood logs at the rate of 5,000,000 feet annually for the Laddell & Church Company. Gardner, Peterman & Co. are enlarging the capacity of their mill and installing new machinery, and have erected 1,500 feet of tramway.

J. W. McGraw of Bay City has established a large portable sawmill on the South Branch of AuSable River, some 65 miles from Bay City, to manufacture several million feet of hardwood timber into lumber. Mr. McGraw owns a number of thousand acres in that vicinity which is fairly well stocked with hard timber.

After being thoroughly overhauled the Kneeland-Bigelow Company's mill has resumed operations on a day and night schedule. It requires a train load of logs every day to keep the plant running.

The annual car famine is beginning to make its appearance in the valley. The Michigan Central Company is desperately short of cars for hauling logs and lumber products on its Mackinaw division, running north from Bay City to Mackinaw, and draining the most extensive timber area in the lower peninsula. This line does an immense business in timber. It hauls more than 100 cars loaded with logs to Bay City and Saginaw every day, besides manufactured lumber. It will have hauled by the end of the year, since Jan. 1 last, 130,000,000 feet of logs.

Railway men are expecting a shortage of cars also for moving lumber out of the Saginaw valley during the fall and winter.

The flooring plants are doing a good business with orders coming along freely and prospects for a good winter. The slight easing off in this line awhile ago has passed and the tone of busi-

ness is better. The destruction of Young & Co.'s plant will cut down the volume of flooring business materially in the valley.

Grand Rapids.

The Jones & Green flooring plant at Dighton is turning out from 18,000 to 22,000 feet per day.

D. A. Blodgett and family have returned from Mackinac Island and will spend the fall and early winter months in their Grand Rapids home.

John Hutula, fourteen years ago a miner at Ishpeming earning \$2 a day, is now one of the largest hardwood operators and farmers in upper Michigan. He has 1,500 acres of land in Baraga county under cultivation, and has some 9,000 acres of timber land, besides operating a sawmill, wagon shop, blacksmith shop and creamery.

The program that is being arranged for the coming annual meeting of the Michigan Forestry Association to be held at Saginaw Nov. 12 and 13 will include topics of special interest to lumbermen. Economies in modern logging operations will be discussed by some of the prominent lumbermen of the state, including W. C. Winchester of this city, W. H. White of Boyne City and W. B. Mershon of Saginaw. At the opening session Charles W. Garfield of this city and Prof. Roth, state forest warden, will give addresses, which will be followed by the annual message of President J. H. Bissell, Detroit. Taxation methods will then be discussed by Dr. B. E. Fernow of Toronto and others. Fire losses will be considered in the afternoon, the sub-topics including "Compelling Lumbermen to Clean Up" and "The Warden System of Minnesota, New York, Canada and Michigan." Profs. Beal and Pettit of the State Agricultural College will speak of insect enemies in the woods and other topics of special interest will be presented.

A number of improvements have been made at the McManus sawmill, Petoskey, including a new cement power house, new boiler and stack and mechanical feed for both boilers. The steam power at the mill has been doubled.

The Petoskey block factory is being operated to nearly its full capacity and Manager Broman says the outlook for the year is very bright. The company continues to buy timber land, though its present holdings are sufficient to keep the plant running for several years.

The Electric Land and Development Company, composed largely of Manistee capitalists, has plans for constructing four dams on the Manistee River, ranging from 35 to 40-foot heads. Work on the Tyler dam, in Greenwood township, Wexford county, has begun and the electricity generated will be transmitted to surrounding towns for light and power purposes.

Furniture factories in Grand Rapids and throughout the state are all busy. The chair factories at Grand Ledge and Otsego are behind orders and are operated overtime.

Grand Rapids has a new furniture concern, the Michigan Desk Company, capital \$50,000, under the management of J. Arthur Whitworth, which is manufacturing office desks at the corner of Canal and Newberry streets. Mr. Whitworth was formerly manager of the Grand Rapids Desk Company at Muskegon Heights, and has associated with him here some of the leading business men of the city.

The Hanchett Swage Works of Big Rapids, up to this time composed of Volney H. Hanchett and his son, Arthur K. Hanchett, has been reorganized by admitting Louis B. Hanchett as a member. The new member of the company came from Chicago at the time the business of Rich & Son was acquired. The capital is fixed at \$150,000.

Plato, Renwick & Co. of Barryton are fixing up their logging sleighs and equipment preparatory to removing to Green Bay, Wis., where they will again engage in lumbering operations.

Grobhiser & Crosby, table manufacturers of Sturgis, have increased their capital stock from \$25,000 to \$50,000.

Indianapolis.

A hearing on a proposed adjustment and equalization of all classified freight rates is in progress here before the Indiana Railroad Commission. It is probable that the hearing will continue for some time, as the subject is a broad one and will require the taking of much evidence from traffic men and shippers. The latter are hopeful that as a result the rates between this city and points within the state will be readjusted, thus making fairer competition between Indiana and outside dealers and manufacturers.

There is to be a concerted effort on the part of the government and the Indiana Board of Forestry to end the apparent waste of hardwood lumber at Indiana sawmills. With this end in view, Albert H. Pierson, representing the United States Department of Agriculture, has arrived and will begin an investigation of the state's timber supply and the method by which it is handled at sawmills.

The Schelosky Table Company, Evansville, is asking bids for the construction of a new plant in that city and the installation of new machinery. About three weeks ago the company was incorporated for the purpose of manufacturing tables and desks.

With the departure of Joseph Oliphant, a Louisville lumber dealer, for home the passing of the timber supply in one more Indiana county is noted. Mr. Oliphant has been buying extensively for his company in Bartholomew county and it is said there is no timber left in the county worth bothering with.

The Anderson-Smith Lumber Company has been organized at Franklin with \$10,000 capital and articles of incorporation have been filed. A general lumber business will be conducted by the company, which is composed of George W. Pierson, Roscoe W. Payne and Frank F. Smith.

Arthur T. Walker, manager of the West Terre Haute Lumber Company, died at the home of his parents in Danville, Ill., on Sept. 23. He was twenty-four years old and had been ill about two weeks from brain fever.

Gov. J. Frank Hanly and his private secretary, Fred Gemmer, have purchased a hardwood timber tract near Seymour. The tract consists of 223 acres, about 100 acres of which is said to be in fine hardwoods. A sawmill will be moved from a tract owned by the governor near this city and the timber will be cut immediately.

The Smith-Deckworth Planing Mill Company of Crawfordsville is preparing to build a two-story brick and concrete planing mill 80 feet wide and 130 feet long, in order to accommodate its increasing business.

S. F. Reel, living on the line of the old Erie canal in southern Indiana, has found that the bottom of the canal is lined with heavy white oak timbers of best quality. They are of large size, about 10 by 15 inches, and in a perfect state of preservation. The timbers will probably be made into railroad ties.

Labor troubles in the Tell-City furniture factories are still occupying the attention of George W. Purcell, state labor commissioner, of this city. A peculiar situation was discovered when one woman said she feared to join a union because her minister told her she could not join a union and go to a happy hereafter. Men working in the factories receive about \$7 a week and women about 67 cents a dozen for caning chairs. Some 200 laborers have gone to Evansville, while about sixty have gone to Owensboro, Ky.

Smith Brothers of Greensburg have bought a gasoline automobile truck for use in their local delivery work. So far as known this is the first lumber concern in the state to experiment with motor vehicles, although automobile companies have spent much time trying to interest them.

The Dynes Lumber Company has sold its yard and plant at Maryland and Shelby streets to a construction company and will locate elsewhere immediately. About one year ago the lumber company bought a tract between Twentieth and Thirtieth streets along the Monon railroad and will put in a large, modern lumber yard.

and a thoroughly equipped planing mill, with a side track of 600 feet running through its yard. The price at which the old yard and plant was sold was \$17,500.

Bristol, Va.-Tenn.

J. Y. Youmons of the American Central Lumber Company, Central City, W. Va., is in this city looking for a location for a hickory wood-working plant for his company. He spent several days of last week here and returned this week to further go over the field.

F. H. Winnich, representing the C. & W. Lumber Company, New York, was buying stock in Bristol last week. Mr. Winnich's company owns a large band mill at Decatur, Ala., besides other hardwood interests in the south.

Fred W. Hughes, local representative of Price & Heald, the Baltimore exporters, reports that shipments have been fairly good during the past fortnight, despite the car shortage, and that on Friday he was able to get five empties, which is somewhat unusual nowadays.

One of the biggest concatenations in the history of this section was held at Knoxville Saturday night, Oct. 5, by Supreme Scrivenor J. H. Baird of Nashville, and Vicegerent for East Tennessee Irving Whaley of Bristol. George A. McCrary of Bristol and many other kittens from Bristol and this section participated. A large number of kittens had their eyes opened and it was early in the morning before the strains of the orchestra died out and the last toast was given.

Local dealers report inquiries more plentiful and take this as pointing to improvement in business this fall. Some stocks which have been slightly off in demand are picking up.

H. M. Hoskins of the H. M. Hoskins Lumber Company has just returned from an important business trip in Virginia, and reports that his company is much handicapped by the car shortage, which has reached a very acute stage on the lines of the Norfolk and Western.

The Tipp City Lumber Company, recently organized by Paul Cline, lately in the sales offices of J. A. Wilkinson, and others, now has a number of mills running near Altapass, N. C., where it has purchased a tract of timber.

C. Hamilton Smith, Jr., representing R. A. and J. J. Williams, Philadelphia, reports heavy shipments from this section recently, though the car shortage has caused him much inconvenience and delay.

M. N. Offutt of the Tug River Lumber Company has returned from a trip to Virginia on business.

J. Alwyn Cannon of the Richland Lumber Company is now at Battle Creek, Mich., where he will spend several weeks.

W. C. Peery of the J. Walker Wright Lumber Company, Mountain City, Tenn., formerly cashier of the Bank of Bristol, was a visitor in the city this week.

C. H. Hett of the Kingsport Lumber Company, Johnson City, Tenn., was in the city this week and reports business with his company as very good.

W. Frank Kinsey will shortly go to Richmond, Va., to become connected with the Westmoreland Lumber Corporation, recently organized by C. Boice of Abingdon, and others.

Irving Whaley, formerly of the Tug River Lumber Company, this city, and now general manager of the East River Lumber Company, Talmash, Giles county, Va., was in the city on business this week and spent a day or two with friends.

L. H. Mortimer, superintendent of the West Virginia and North Carolina operations of the W. M. Ritter Lumber Company of Columbus, Ohio, and Miss Winnie Hickey, the latter a popular and accomplished young lady of Cranberry, N. C., were married at Pineola, N. C., last week. After a short visit to relatives of the groom in West Virginia, they will go on an extended bridal tour. Mr. Mortimer is well known in hardwood circles.

Cincinnati.

There was a lively tilt between the creditors of the Cypress Lumber and Veneer Company and Attorney Herbert Jackson of Covington, receiver for the concern, at a meeting of the creditors held at Hotel Havlin Monday afternoon, Sept. 30. Attorney Jackson held the meeting on an order of Federal Judge Cochran of the Covington court. Attorneys G. F. Osler and I. N. Longworth, claiming to represent certain creditors, put in an appearance, but Receiver Jackson held they had no right there and ordered them to leave the room. They refused and sent for a policeman, but before the officer arrived Messrs. Osler and Longworth left the room. In speaking of the ejection one of the attorneys said: "Osler and Longworth had no right to be present, as the meeting was one of creditors of the company and the two men are debtors. That is why they were requested to leave." Action that may result in startling revelations involving a number of Cincinnati people and lumber merchants from all over the country was taken at the meeting. They raised a fund to employ expert accountants to audit the books of the Cypress Lumber Company of Cincinnati; the Fincastle Sawmill Company of Louisiana, and the Tuthill & Pattison Manufacturing Company of Alabama, the three companies from which it is said the Cypress Lumber and Veneer Company, recently incorporated in Covington, was formed. The committee having charge of the employment of the accountants were also authorized to employ counsel to institute proceedings if the condition of the books warrant such action. It was stated by one of the creditors that there is between \$300,000 and \$400,000 unaccounted for. Another decision arrived at in the meeting was to close down the mills and discontinue the operations of all plants and have them sold as soon as possible. Herbert Jackson, receiver for the company, and the other attorneys in the case have prepared the papers and presented them to the United States court of Covington, asking that the assets of the concern be sold for the benefit of the creditors.

Frank P. Wiborg of the Wiborg & Hanna Company has returned from an extended European trip. Mr. Wiborg stopped off at Washington en route home and had a talk with Secretary of State Root and Francis B. Loomis, former Assistant Secretary of State. Mr. Wiborg embraced the opportunity of discussing the stimulation of foreign commerce and the part Cincinnati manufacturers would play in the improvement of international trade. Speaking of South America in particular, Mr. Wiborg said: "I firmly believe that the United States can get the greater part of South and Central American trade."

A real estate deal of much importance growing out of the recent conflagration at Hunt and Broadway has just been closed after negotiations of several weeks. The Morrison-Snodgrass Lumber Company disposed of its perpetual lease, which had a purchase clause, to the Eagle White Lead Company. The Morrison-Snodgrass Lumber Company will resume its business on a site in upper Reading road, selecting one of the several sites on which it has secured options during the past few days. The new plant will have excellent railroad facilities and being in a less congested district will be in safer quarters than formerly. The new structure will be on an improved scale and several new saws will be installed.

The attendance of the Carriage and Vehicle Exhibition held at the Music Hall during the week of Sept. 23 was as large as was expected. Business men from nearly every principal city in the United States were on hand. The local men gave them a hearty welcome and also distributed beautiful souvenirs. All in all, everyone had a delightful time and in a business way the convention was a big success.

Wilbur H. Murray, president of the Murray Carriage Company, with headquarters at 325-329 East Fifth street, died at his residence in Vernon place last week. So far it is undecided

who will take his place at the head of the concern, but a meeting will be held the middle of October to discuss that point. Murray leaves a widow and two children.

Great are the preparations being made by the Farrin-Korn Lumber Company for the new structure they are about to put up to take the place of the one destroyed by fire some weeks ago. The building will be larger and its equipment of new saws will not be run by steam as heretofore but by electricity. Both Chester F. Korn and M. B. Farrin are greatly interested in their new installation and hope when it is completed that they will be able to conduct their business in a more satisfactory way. M. B. Farrin in speaking of the plans of his company said: "We had been contemplating this before the destructive fire visited us some time ago, and when it came it allowed us an opportunity of doing it. This will do away with the boiler and engine room and thus protect us from every possible damage by sparks. The equipment of new machinery and the running of it by electricity will give us every opportunity to increase our business, as we will be able to turn out more lumber and at a smaller cost. All in all, I think it is the best move we have made since we have been in business, and now all that is wanting is the completion of the new structure. All the necessities for the structure are on the ground and work has been started, and within a space of a few months we will again be doing business as of yore, only with less cost."

The Continental Carriage Company has received permission from the Secretary of State to increase its capital from \$60,000 to \$75,000, which was done in order to increase its business, which has been constantly growing.

The Bayou Land and Lumber Company of this city, with a capital of \$25,000, was chartered at Columbus recently by Cliff W. Land, Fred M. Conn, George W. Land and Stewart Walker. The new firm has not established yards in Cincinnati as yet, but as their business increases they intend to locate possibly in the west end. The new company is comprised of young and ambitious men who will doubtless make their mark in the lumber world.

William Lodge of the Lodge & Shipley Company left on an extended European trip last week. He will remain away from the Queen City for several months and during his stay will forget all about business and seek pleasure for himself and wife.

The Carriage Woodwork Company of Hamilton, Ohio, has been incorporated with a capital stock of \$100,000 by F. W. Whitaker, C. E. Heiser, George P. Sohngen, S. D. Felton, W. L. Tobey, W. L. Huber and James K. Lullen.

William E. Delaney, general manager of the Kentucky Lumber Company, entered a new field when he was selected by the board of directors of the National Bank of Burnside, Ky., for their new President. Mr. Delaney intends to give the banking business the same boom that he has given the lumber trade here in Cincinnati since he opened up the offices of the Kentucky Lumber Company.

The Cincinnati Panel Company, which has been operated by a Board of Trustees, consisting of Sanford Tuthill, L. M. Radina and E. D. Albro, is making arrangements to take over the property of the Sterling Seating Company, a concern now occupying the planing mill plant of Keyer-Hang & Co. The Cincinnati Panel Company manufactures woodwork and panels for carriage manufacturers.

T. J. White of Moline, Ill., spent a few days here last week. Mr. White represents the Bennett & Witte interests in Illinois and has offices in Moline.

The two mills of the Kentucky Lumber Company at Burnside and Williamsburg were shut down for two weeks, as the supply of logs on hand was all sawed up. They have a large amount of them in the valleys and are awaiting a tide to set them adrift. The mills have been

running full time all summer and the company has stacked up with all the desirable lumber it will need. The mills will resume operations as soon as logs are obtainable. The other mill, however, is running full time and turning out great volumes of lumber.

A. W. Dunn of Glasgow, Scotland, after spending three months in this country and having accumulated enough lumber to last for several years, has returned to his home. Ralph McCracken of the Kentucky Lumber Company spent several days with him showing him the Queen City and also took him on a trip to their three mills. The "Scotchman" learned several new methods of how to do business and claims that he will practice them on his dealers across the waters.

The receipts of lumber during the month of September this year are a little bit lighter than for the same month last year, while the shipments this year were a little heavier. The following is the comparison: Receipts this year, 6,078 cars; last year, 6,124. Shipments this year, 4,856; last year, 4,731.

Lumbermen of this city, working through the Lumbermen's Club, are discussing the matter of turning over the weighing of lumber to the Weighing Bureau of the Chamber of Commerce. A conference was held last week between the railroad representatives, the lumbermen and the officials of the Weighing Bureau. This weighing applies to lumber on railroad cars only. Since this Weighing Bureau was established by the Chamber of Commerce for the purpose of taking over the weighing of grain the coal men have adopted it and now the lumbermen are seeking it.

Chattanooga.

The Case-Fowler Lumber Company is to operate here again. About a year ago the Case Lumber Company abandoned its yards at the East End and organized the Fowler-Personette Lumber Company at Birmingham. Considering Chattanooga as a great lumber center, the concern resolved to come here again and as a result the Case-Fowler Lumber Company has been chartered with \$35,000 capital stock. The incorporators are: William M. Fowler, W. H. De Witt, G. E. McGhee, W. A. McClure and J. M. Trimble. The company has already established offices in the First National Bank Building.

Capt. A. J. Gahagan, treasurer of the Loomis & Hart Manufacturing Company, has just returned from his honeymoon trip to New York, Buffalo, Saratoga Springs, Jamestown and other eastern points. Captain Gahagan was recently married to Miss Elizabeth Telford, formerly superintendent of the Erlanger Hospital. He is spoken of in connection with the Republican nomination for mayor against Col. W. R. Crabtree, the Democratic nominee. Captain Gahagan says he would rather live in Chattanooga than any other city in the world, not excepting the metropolis, which he says is too big.

W. C. Harter of the J. M. Card Lumber Company left recently on a trip to Europe with his wife and two children. He will be gone several months, but his family will remain four or five years, during which time the children will be educated in the best schools of Europe.

F. W. Blair of the Ramhurst Lumber Company of Ramhurst, Ga., was a recent visitor here.

J. M. Card, president of the J. M. Card Lumber Company, made a trip to the pine forests of Mississippi and Louisiana recently.

Snodgrass & Fields closed a deal giving them possession of 1,500 acres of land lying along the Clinch river. The tract has upon it about 20,000,000 feet of oak, ash, walnut, hickory and poplar timber. The purchase price was \$10,000. This timber will be sufficient to supply the local plant for the next five years. The trees will be cut as needed and the logs will be floated down the Tennessee river.

F. W. Wheeler of the M. B. Farrin Lumber Company of Cincinnati was a recent visitor here.

Nashville.

An unhappy finish, or what may prove to be the finish, has overtaken the John W. Love, one of the best known tow boats on Cumberland River. The boat was formerly the property of the Nashville Transportation Company and has probably hauled more staves and lumber than any other on the Cumberland River. The boat had been sold to W. O. Shriver of Cincinnati and was being taken to the upper Ohio to be docked, when she sank in the lock in Cumberland River just below Nashville. The craft has completely blocked passage up or down the river by Nashville, and traffic will likely be at a standstill for a week or ten days. Steps will be taken to raise the boat at once, but unless the work can be done in ten days the government will libel the boat and order it blown up to clear the right of way. Open seams above the water line and overloading were the causes assigned for her sinking. Preparations are being made to pump the water out of the lock and then caulk up the leaks in the boat, thus letting the lock serve as a regular dry dock.

A special from Jackson, Tenn., announces the destruction there by fire of the entire plant of the Banner Lumber Company. The property was owned by L. D. Abbott, who estimates his loss at \$15,000 with insurance of \$12,000. The origin of the fire is a mystery as the engine was not fired up when the plant burned.

D. F. Wren, a real estate agent at Greenfield, Tenn., has closed a deal whereby a tract of timber land containing 4,100 acres is sold to Coats & Malone of Greenfield, Tenn., for \$60,000.

Houston Moore, a prominent citizen and lumberman of West Point, Tenn., was killed recently in an accident on Knob Creek. Together with three other men Mr. Moore undertook to fell an enormous chestnut tree standing on a steep and rocky hillside. Misjudging the fall of the tree he ran in the wrong direction, got tangled up in some vines and then ran into an old stump. The great trunk hit him and crushed his body on the stump. Mr. Moore was 45 years old and leaves a wife and five children.

Judge Cordell Hull of the Fourth Congressional District of Tennessee and recently elected to Congress from the same, has secured the promise of the Forest Service to make a timber map of his district. Mr. Pinchot, chief forester, has given the assurance that an expert would be sent to the department in the near future. The Fourth District of Tennessee is said to be very nearly the hardwood center of the United States. Judge Hull says: "I am satisfied our people have practically given away hundreds of thousands if not millions of dollars worth of valuable timber, mostly walnut and hickory, simply because they did not realize its true value. I believe a timber expert among the owners of timber for a month or two will be of great benefit to the owners of timber lands. A timber map will prove valuable in advertising the riches of the forests of the Cumberland Plateau."

Specials from Camden, Tenn., state that never before in the history of the place have timber values been so high as now. In fact, the demand for timber is so great many firms are said to be buying farms just to get the timber, trusting to some opportunity of disposing of the land after they have cleared it. Not half the demand is noted for cleared land, it is said, as for timbered. Several syndicates are reported to have bought farms during the past week merely for the timber on them and having no earthly use for the land itself.

The hardwood championship of the South is all tied up, owing to the fact that both Memphis and Nashville have won a game of baseball, each one defeating a team of lumbermen from the sister city. Memphis captured the game played in that city a few Saturdays ago by the score of 5 to 2. Although defeated at Memphis the local lumbermen, a large delegation of whom went down, were banqueted and treated royally by the hospitable Memphians. On the following

Saturday the Memphis team came up to return the game. They brought one hundred rooters with them and landed in Nashville during State Fair week. They took in the sights at the Fair during the morning, including the Oriental Show, and then went down to Athletic Park that afternoon and tied up in a ball game with the Nashville lumbermen. On this occasion Nashville turned the tables and in a great game by the score of 9 to 7. Following the game the Nashville lumbermen returned the compliments showered upon them at Memphis and entertained the guests at a big banquet at the Wataugua Club, Nashville's most exclusive social organization. A big banner hung over the festal board on which was inscribed the following: "Memphis and Nashville, the dominating factors in the hardwood lumber trade of America." John B. Ransom officiated gracefully as toastmaster and the toasts responded to were gems every one. The banquet broke up with a vote of thanks to the Wataugua Club and the singing of "Auld Lang Syne." A third game to decide the tie will be played in the near future.

Furniture dealers in Nashville report big fall business and prices of hardwood stuffs are going up all the while. There are quite a number of furniture factories in Nashville, several of which own their own timber property. The E. & N. Manufacturing Company and the Greenfield Finney-Battle-Talbot Company in particular own big mountain tracts.

The Nashville Hardwood Flooring Company has completed a substantial addition to its already large plant in West Nashville and will be still better able to care for its rapidly enlarging trade.

The consolidation of The Rock City Lumber Company and the contracting firm of Patrick & Holt means that Nashville will have another big planing mill. The combination of these interests and the increased capital put into the business by the union enables the new firm to accomplish much greater things in the manufacture of building material.

Work on the big plant of the Roberts McGill Carriage Company is being rushed. The factory will work 150 men and it is expected will be in operation in November.

Memphis.

Lumbermen of this city and section are much interested in the announcement that the Frisco system has appropriated \$350,000 for the improvement and extension of its terminal facilities in this city and for the betterment of its trackage in territory tributary to Memphis. The facilities of this road at Memphis have long been inadequate, and this fact has been forcibly illustrated during the past few weeks when the congestion has been so pronounced that other roads have refused to take freight from the system. Included in the work at the yards will be the laying of sufficient tracks to take care of twenty trains in addition to the ones already in use. This will greatly facilitate the handling of both inbound and outgoing freight, including the large lumber receipts and shipments for which Memphis is famous the world over.

It is the consensus of opinion among traffic officials here that the movement of freight in the Memphis territory is 25 to 30 per cent larger than last year. This is true even before the movement of cotton is well under way, and when this takes place the gain will be perhaps even larger. Inquiry among traffic men elicits the information that the roads are much better prepared this season for handling freight than they were last year, but these officials are free to confess that the improvement in facilities has not kept pace with the growth in volume of traffic to be handled. The roads are meeting the situation squarely and they are endeavoring to do their best, but the fact remains that lumber shippers are seriously handicapped in handling their shipments.

Weather conditions have continued fairly favorable for hardwood production in this terri-

tory during the past fortnight and work has gone steadily forward. Practically all the mills in this territory are running on full time, except in some instances where there has been a rather sudden departure of labor from the mills and woods to the cottonfields which are "ripe unto the harvest." This latter condition is referred to today by one of the largest manufacturers of hardwood lumber in Mississippi and it will probably also soon be true of Arkansas, where the crop is slightly later than usual. The mills are, as a rule, well supplied with timber and the outlook for production, given average weather for the next five or six weeks, is regarded as encouraging.

The big double-band sawmill of the Three States Lumber Company at Burdette, Ark., which was closed down about four weeks for repairs and improvements, is in operation again. The management has installed a 600 horsepower Corliss engine and the daily capacity is now 90,000 feet. The increased motive power enables the mill to run steadily, and this output is against the old outturn of about 75,000 to 80,000 feet.

The firm of R. J. Darnell, Inc., has completed a big double band mill at Memphis which is located on a site adjacent to the old plant and this is now in operation. It is one of the largest, most modern and best equipped lumber plants in this city or section. The veneer plant which is to be operated in connection with the band mill has not yet been completed, but it will be pushed as rapidly as possible. The firm makes a specialty of thin hardwood stock on which it enjoys a large domestic and foreign trade.

The Paepcke-Leicht Lumber Company is making good progress on its new box plant at Helena, Ark., work on which was begun some time ago. It will not, however, hazard a statement as to the time when the factory will be completed and in readiness for operation. The company handles enormous quantities of cottonwood lumber, manufactured by its own mills, and a large amount of the lower grades will be consumed in this box plant.

The road being built by the Yazoo & Mississippi Valley Railroad Company from its main line to Charleston, Miss., the site of the big plant for the manufacture of hardwood being built by the Lamb-Fish Lumber Company, is reported to have been completed to within two miles of that point. The company is getting along nicely with the construction of this mill, which is to be an exceptionally large one, and it should be ready to begin operation shortly after the railroad is completed. The company maintains its headquarters in this city.

Application for an amendment to the charter of the Patton-Tully Transportation Company has been filed, seeking to secure the privilege of operating a dry dock here. The company owns and operates a number of boats for the handling of both lumber and timber. The application is signed by L. E. Patton, C. E. Patton and S. B. Anderson, directors, the latter being president of the Anderson Tully Company.

The Helena Manufacturing Company, successor to the Ford & Johnson Chair Manufacturing Company, has begun the operation of its big chair factory at Helena with a complement of 100 men. The plant has been completed for several weeks, but was forced to wait until water mains could be laid from the reservoir to the site of the big factory. The company will use large quantities of hardwood lumber in the manufacture of chairs.

Dispatches received from Meridian, Miss., state that M. R. Grant has transferred his planing mill at that point to C. L. Gray, the latter acting as trustee for certain interests strongly identified with the Mississippi Lumber Company. The consideration is not given. The mill is a large one and has enjoyed a splendid trade from several states.

The O. G. Gardner Lumber Company, which has headquarters at Jackson, Tenn., and which

owns extensive timber land holdings in Mississippi and Tennessee, has opened a branch office in Memphis.

The Rialto Lumber Company, which was incorporated some time ago with a capital stock of \$10,000, has begun the operation of its sawmills located near Covington, Tenn. W. S. Mays and others are interested in the company.

The Bellgrade Lumber Company, which is turning out hardwood lumber at a rapid rate at its big new mill at Belzoni, Miss., has laid off a new yard at its plant and this will be in charge of H. G. Goodwin. The company will continue to maintain its Memphis yards where a large stock of ash is carried, this being a specialty of this concern.

Friends of John W. McClure among the lumbermen of this city presented him with a handsome chest of silver on the occasion of his marriage to Miss Alline Crenshaw of Union City, Tenn., which occurred Oct. 2. Mr. and Mrs. McClure are now on their honeymoon and will not return to Memphis for some days.

Hal G. Stevens, of the Clements-Stevens Lumber Company, has started his sawmill across the Mississippi in Arkansas. The company will operate a shingle mill in connection therewith, but this has not yet been completed. The concern maintains offices in the Randolph building.

The Gilchrist-Fordney Company, which maintains sales offices in this city and which is now operating the big plant purchased from the Kingston Lumber Company at Laurel, Miss., announces that certain changes are being made therein which will enable it to widen the scope of the material to be used therein. The machinery for this purpose has already been ordered and it will be installed as soon as it has been delivered.

D. S. Hutchinson, who has recently become identified with the Arthur Hardwood Flooring Company in North Memphis, has gone to the Pacific coast in the interest of that firm. The company is preparing, through doubling its machinery here, to increase its output by about 100 per cent.

L. E. Campbell, president of the L. E. Campbell Lumber Company of this city, has written some of his friends here from Africa during the past fortnight. In this communication he stated that he would return to Memphis some time this month.

W. H. Russe of Russe & Burgess and president of the National Hardwood Lumber Association, will sail for Europe Oct. 12 to be gone for five or six weeks.

George D. Burgess of the same firm, who occupies the presidency of the Lumbermen's Club of Memphis, returned to this city some days ago after an extended automobile tour in southern Europe. He is looking exceptionally well and is prepared to tell some more of his French jokes whenever the occasion presents itself.

The lumbermen who went to Nashville to witness the second game between the lumbermen of the two cities have all returned. They bring a glowing account of the genial hospitality accorded them by the lumber fraternity of the Capital City and report that the same splendid spirit of good fellowship which marked the visit of the lumbermen of Nashville to Memphis a week before prevailed on that occasion. All of them came back at the same time and left there Saturday evening, probably because the lumbermen of the Capital City were unable to prove to them "that Nashville is a good place to spend Sunday." The Memphis team was defeated after piling up 7 runs in the first inning, but, while the Memphis delegation enjoyed heartily the hospitality accorded them, they are frank to admit that the umpire handed them the "hot end" of every decision, thus causing them to lose the game. No definite time has been set for the last game which is to determine the ownership of the magnificent cup offered by one of the lumber papers.

Lumbermen of Memphis took a most important part in the recent deep waterway convention

here. W. H. Russe, president of the National Hardwood Lumber Association, was president of the local executive committee and a vast amount of work fell upon his shoulders, all of which was performed with his usual ability. W. R. Barksdale, president of the Business Men's Club; F. E. Gary, vice president of the Lumbermen's Club; James E. Stark, George C. Ehemann, S. B. Anderson and other prominent lumbermen here were active workers during the convention. Lumbermen are great believers in the improvement of the waterways and the local members of the industry have done everything in their power to advance the cause of waterways improvement in the hope that this may prove the solution of the difficult traffic situation that confronts them almost every day in the year.

Chicago was chosen as the place for holding the next annual convention and New Orleans will be next in line for the honor of entertaining the distinguished body.

New Orleans.

The export situation here has not been helped by the general tie-up along the river front which became a stern reality several days ago when the various unions affiliated with the Dock and Cotton Council called a general strike all along the docks. Freight handlers, longshoremen, all handlers of cotton and all the other dock laborers are affected, about 10,000 men in all being involved. So far the tie-up is complete. Lumber which had been shipped in here for export is lying idle on the tracks, while other export shipments that had started this way are being diverted to other ports. Exports of lumber had not been in satisfactory shape, anyhow, and the strike along the docks has simply made the situation more acute.

More than the usual interest is being manifested in the first annual meeting of the Gulf Coast Lumber Exporters' Association, which is scheduled to take place at Gulfport, Oct. 15. A good deal of business will be taken up and the association will name a permanent secretary to take charge of all its work. Benjamin Thurlley of Mobile has been acting in that capacity and it was stated at the last meeting that he would hold the position until the annual meeting could provide for the appointment of a permanent secretary. The exporters are giving evidence of a good deal of interest in the work of their association and everything points to an important and interesting session.

In line with the recent action of the semi-annual convention of the Retail Lumber Dealers' Association of Louisiana and Mississippi, Attorney General Fletcher of the last named state has announced that he will very shortly take up the investigation into the affairs of the company and conduct a thorough examination with a view to definitely establishing the fact that the State officers are right in the contention that the association is a trust and that it is operating in violation to the anti-trust laws of the State. Mr. Fletcher states that the first step he will take will be to go to Yazoo City, the headquarters of the association, and there make an investigation of its books which are in the hands of Secretary W. G. Harlow. The latter has been instructed by the association to do everything he can to facilitate Mr. Fletcher's investigation, the lumbermen expressing absolute confidence that he will find nothing on which to base the trust charge.

The announcement from Wheeling, W. Va., that the Smith-St. John Lumber Company has been incorporated at that place has attracted a good deal of attention in lumber circles here. The principal offices of the company are at Parkersburg, W. Va., while its chief works are at Wisner, La., a new town being built in this State. The capital stock of the company is \$500,000. The company owns 27,000 acres of timber near Wisner, the tract being valued at something like \$300,000. George Bean and J. C. West of Wisner; M. A. St. John of Seymour,

Ind., and R. M. and J. H. P. Smith of Parkersburg, W. Va., are the incorporators.

Fire on the afternoon of Oct. 3 severely damaged the big plant of the Hammond Lumber Company at Hammond, La. Sparks from a burning scrap pile set fire to the blacksmith shop and oil house, and before the flames were extinguished heavy damages had resulted.

The new Labarre-Riggs Company, Ltd., organized here about thirty days ago, has bought for \$108,300 a good tract of land in the vicinity of Melville, La., near where it purposes to build a new town. There were 10,830 acres in the tract. G. J. Labarre of New Orleans is president of the company.

The Southern States Lumber Company has just filed articles of incorporation in this city. The company is capitalized at \$15,000. Charles W. Robinson of the C. W. Robinson Lumber Company is president, H. O. Dickinson is vice-president and manager, and J. G. Rainwater is secretary and treasurer.

Advices from Shreveport, La., state that the D. C. Richardson-Taylor Lumber Company, capitalized at \$2,000,000, has filed articles of incorporation at Shreveport. The company controls valuable tracts of timber on which there is a great deal of hardwood. W. F. Taylor, a well-known Shreveport merchant, is largely interested.

Minneapolis.

Twin city men have recently invested extensively in hardwood timber land in southern Missouri. The tract will be developed and the finished product marketed. The Forbes Everts Lumber Company was incorporated last week, filing articles with the secretary of state calling for a capital stock of \$200,000, every dollar of which is paid in. John E. Burchard of St. Paul, a prominent land dealer, is president of the company, and David D. Forbes, also of St. Paul, is vice president. George W. Everts, the well-known hardwood wholesaler of Minneapolis, is secretary and general manager. George B. Graves of St. Paul is treasurer. The headquarters will be in St. Paul, but eventually the main sales office will be located at Minneapolis in connection with Mr. Everts' other enterprises, the Works-Everts Lumber Company and the G. W. Everts Lumber Company. The new company has bought a tract of red and white oak timber in the vicinity of Van Buren, Mo., on the Frisco railroad, about 150 miles southwest of St. Louis. Oak is the prevailing wood, but there is also quite a little hickory on the tract. It was purchased from the Northwestern Land & Orchard Company of St. Paul. Mr. Everts expects to go down to Van Buren about the last of the month and superintend the erection of two mills at Chicopee, the railroad station half a mile from Van Buren, which will be the shipping point, but as it is not a postoffice the headquarters and the selling office, for the winter, will be at Van Buren. It is the intention to lease or sell the mills that are to be built, and have the logging and sawing done by contract, so as to leave the Forbes-Evert Lumber Company with only the selling end of the business. The output will be mainly oak ties, timbers and wagon stock.

Local lumber demand continues good, due largely to the way the building movement holds up to the very end of the season. Building permits for September came to an estimated cost of \$753,525, compared with \$711,525 last year, and this brought the total for the year up to \$8,060,420, compared with \$7,613,590 for the same nine months of 1906.

The Hobe Lumber Company of this city, hardwood, pine and hemlock wholesalers, has won an important piece of litigation, securing a \$4,000 verdict from the Pine City Lumber Company of Pine City, Minn., after four trials. The suit was over a contract to sell the "season's cut" of the Pine City Lumber Company for 1905, which the Pine City company claimed was modified by a later verbal agreement. On this plea they won the case at the third trial, but the

plaintiffs appealed. The supreme court laid down the rule that a written contract could not be so modified by verbal understandings, and sent the case back. The Hobe Lumber Company had sued for \$9,000 damages for breach of contract, and on the fourth and last trial was awarded \$4,000.

C. F. Osborne of Osborne & Clark, the well-known wholesalers of this city, is back from a vacation which he spent on his farm near Erie, Ill., recuperating from an attack of nervous prostration. Mr. Clark says that while in that section of the country the crop will be a third less than last year, it will bring perhaps sixty per cent more in price per bushel, which will even things up on the whole.

The regular monthly meeting of the Northwestern Hardwood Lumbermen's Association at the Minneapolis Commercial Club on Sept. 23 was addressed by George S. Loftus, secretary of the Minnesota Shippers' and Receivers' Association, which is organized for the purpose of campaigning for equal railroad rates and reductions in them. He reviewed the work that has been done in protecting the interests of the shippers, and the movement has the hearty support of nearly all the hardwood dealers.

The Bousfield Woodenware Company of this city is looking for a location in northern Minnesota where it can remove its factory and be convenient to a supply of timber that will last a number of years.

Charlotte.

The High Point (N. C.) Buggy Company is now doing a large business. The young hickory logs are hauled in by farmers and transformed into vehicle wheels of the finest quality.

Considerable damage has been done a number of lumber concerns in this state by fire within the past few days. The lumber yard of Frank Teeter, near Concord, N. C., was visited by fire which destroyed the dry kiln, several lumber shanties and 7,000 feet of well selected lumber.

The shingle mill and barrel factory of W. B. Ellis of New Bern, N. C., was burned, the loss being about \$40,000, with \$3,000 insurance. The origin of the fire is unknown.

The excelsior department of the High Point Veneering Company's plant at High Point, N. C., was burned recently, the loss amounting to about \$3,000, with \$1,000 insurance.

The Sumter Lumber Company of Sumter, S. C., suffered a considerable loss by fire recently. Damage on the dry kiln is about \$10,000, besides considerable lumber. About 60,000 feet of steam piping was destroyed. The loss is partially covered by insurance.

The Carolina Manufacturing Company, of this city, has just completed the erection of a large and commodious warehouse for the storage of made-up material, mantels, sash, blinds, doors, etc. The building is constructed of brick, three stories high and cost \$5,000.

The Welbourn-Airheart Furniture Company of Burlington, N. C., has been chartered with a capital of \$10,000 authorized and the privilege of beginning with \$3,500. J. M. Airheart, D. N. Welbourn and others are the incorporators.

The Oriental Manufacturing Company of Oriental, N. C., has received a charter with \$25,000 authorized capital and the privilege of beginning with \$3,000. W. I. Moore, A. H. Stephens and others are the incorporators. The company will buy and sell lands, operate sawmills, etc.

A charter has just been granted the Morris-Vyne Lumber Company of North Wilkesboro, N. C., at a capital of \$100,000 authorized and \$10,000 subscribed, to buy and sell lands, maintain and operate planing mills, sawmills, etc. The incorporators are L. C. Vyne, J. B. Norris and others.

The Thomasville Machinery Company of Thomasville, N. C., to deal in sawmill and all kinds of machinery, has been chartered. Capital is \$10,000 authorized, \$3,000 subscribed by J. H. Barnes of High Point, N. C., and others.

One of the latest enterprises at Kershaw, S. C., is a furniture factory, with a capital of \$5,000. S. W. Walsh is president; J. M. Carson, vice president; T. L. Clyburn, secretary; W. B. Threatt, treasurer.

The schedule of the liabilities of the Thompson Lumber Company of Greensboro, N. C., recently adjudged bankrupt, has been filed with the clerk of the United States court. The total assets are estimated at \$39,642.34, and its liabilities at \$37,521.83. C. W. Sapp is receiver of the company. In a few days the creditors will meet and a trustee will be elected, who will wind up the business and report to the referee in bankruptcy, G. S. Ferguson.

A company is being organized at White Plains, N. C., to manufacture vehicles. M. H. Sparger is working up the company.

Wadesboro, N. C., is soon to have a furniture factory. Mayor Brock has been soliciting subscriptions to the capital stock and in a short time secured \$5,000. An organization will be perfected soon and a charter applied for.

A \$15,000 chair factory is to be built at Ruby, near Marshville, N. C., in the near future.

The Forest Furniture Company of North Wilkesboro is building a three-story warehouse at its plant. It will be used for storing the finished goods. This company ships a great part of its product to California.

The Lindsay Chair Company of High Point, N. C., receiver's sale case came up a few days ago before Referee Ferguson in Greensboro, N. C., and was raised ten per cent above the amount placed on the plant at the former receiver's sale.

A certificate of discharge has been issued to the Ideal Furniture Company of High Point, N. C., and also to the individuals, Messrs. Lance and Bell, composing the partnership.

The Southern Excelsior Company of Lexington, N. C., is a new industry for Lexington, to begin operations at an early date. The capital is \$10,000 and Dermot Shemwell and others are the incorporators.

The Wendell Lumber Company of Wendell, Wake county, N. C., has just been chartered with a capital stock of \$2,000. J. T. Lea, R. C. Sears and others are the incorporators.

A. L. Tremain of Whiteville, N. C., has just gone to Maple Hill, Pender county, N. C., to open up a lumber camp for the Cape Fear Lumber Company of Wilmington, N. C. The Cape Fear people now have eight miles of railway extending from Maple Hill, where they own a fine tract of timber.

Toledo.

The new rules governing the car service of Ohio which were adopted by the state railway commission went into effect according to schedule, and shippers are now reaping the benefits. These benefits are more pronounced perhaps in nearly every other part of the state than they are in Toledo where the question of demurrage charges has not for a long time been one of very much annoyance. Toledo shippers have not been in the habit of paying demurrage charges unless they felt that the charges so made were just, in which case they have paid them as a matter of right and not because they felt that they could be compelled to. For a long time there has been what has been known as the Toledo Car Service Association in this city. What it is, or who is back of it remains to be discovered. It assumes absolute charge over all questions affecting the car service and demurrage charges of the twenty-two railroads entering the city, and from this fact it is presumed that it represents a combination of the railways for the purpose of fixing prices and regulations upon the subject. This is not admitted, for to admit it would be to admit a seeming violation of the Valentine anti-trust law, which admission might prove suicidal to the organization. For a long time the bills for demurrage charges were made out in the name of the association which undertook their collection but when the queries became

too pressing as to whom the association represented, and other prying questions were asked, the association changed its manner of doing business and began making out its claims in the name of the railway that delivered the goods. But shippers knew exactly how the matter stood and that the Valentine law not only provided an absolute defense to the bills, but that criminal penalties were provided and the road was open for damage claims, by the terms of that law.

Another question has claimed the attention of local lumber dealers, and is resulting in much annoyance—the staking of open cars. Recently some of the railways have insisted upon a literal construction of the rules requiring certain kinds of staking, and any car that has failed to meet all the requirements has been promptly rejected. The matter is made worse by the present car shortage which is pressing more open cars than usual into service. So marked has this shortage become that open cars of finishing lumber have been received here, which is something unheard of before. Several cars arriving have suffered the ruination of a third of their consignment by inclement weather.

The Ohio Shippers' Association will ask the State Railway Commission for the establishment of a seventh grade in freight classification. A committee composed of Walter B. Moore, president of the association; E. E. Williamson of Cincinnati, and J. W. Horst, attorney for the organization, has completed the work of compilation, and will file a petition with the state board within a few days. This grade will be made up of lumber, logs, shingles, lath and numerous other low priced commodities. It is expected that if the petition is sustained it will result in a material reduction in freight rates on such articles.

The cooper shop of Andrew Miller at Tiffin was recently damaged by fire caused by sparks from a chimney.

The Gallion Handle Factory has been removed from Attica to Gallion, Ohio. The change was made in order to secure better shipping facilities.

Gledhill & Morton have purchased the lumber yards and planing mills of Joseph King at Gallion. They have been engaged in the lumber business there for some time.

The Wauseon Handle Company has been incorporated with \$30,000 capital. Officers are: President, J. M. Cleveland; vice-president and secretary, W. H. Cleveland; treasurer, L. E. Kirkpatrick. They will manufacture handles for shovels, hoes, forks and rakes. Thirty-five men are now employed.

Wisconsin.

S. C. Phipps of the Glidden Veneer Company, Glidden, Wis., says business has been very satisfactory with his company and prospects for the future are bright for a continuance of this condition. The shipping department has just completed the shipping of a carload order of bellows stock for a large organ manufacturing concern at Louisville, Ky. C. P. Coon, manager of the local plant, is kept busy looking after the details of the work and issuing general instructions.

Since the destruction by fire of the Nash Lumber Company's mills at Shanagolden the company is cutting hardwoods to supply its contract orders only. It is devoting considerable attention to hemlock and reports good business along this line. The plant will not be rebuilt before next summer.

R. C. Schultz of the H. W. Wright Lumber Company of Mellen says his concern has enjoyed a fairly good season. It is now pushing business and planning for an active winter in hardwoods and hemlock. The company controls 200,000 feet of hardwood and hemlock stumpage in Lincoln and Marathon counties and will cut at the rate of 40,000,000 feet annually. It has just completed about 14 miles of railroad and installed a new Lima locomotive at its operations.

The recently organized Collier Stange Lumber

Company of Merrill is pushing the work of remodeling the old buildings and installing machinery for its plant here which will be one of the best in the vicinity when it is completed which the company believes will be some time about early spring. The company will manufacture veneers and box lumber and deal in all kinds of hardwood lumber.

The Robbins Lumber Company of Rhinelander now has ready for market a superior line of rock birch and maple flooring. The company has centered its efforts on this product and is turning out fine stock. For convenience and to give their line individuality, they have adopted an original trade-mark: Two robins perched upon a piece of flooring which bears the inscription: "Robbins Hardwood Flooring." The product is being well received by consumers.

A new concern in the wholesale hardwood field that is making great progress is F. R. Pollard of Marshfield, Wis. Mr. Pollard reports that he has recently bought the mill and standing hardwood of the Spirit Lake Lumber Company of Rib Lake, and will cut about 4,000,000 feet, including basswood, elm and birch. His concern expects to ship 15,000,000 feet of lumber this season.

H. F. Below of Vollmar & Below, Marshfield, has just returned from a business trip in northern Wisconsin, where he closed a timber land contract. He says that business is good and the future points to little decrease.

Marshfield can boast of at least two new concerns that specialize in hardwood lumber. The latest to join the hardwood family is the Blodgett-Booth Lumber Company, with spacious and inviting offices in the Hotel Blodgett. Mr. Booth, secretary and treasurer, reports business prosperous with bright future in view. The company opened its doors in December last and has enjoyed steady growth ever since. The concern will cut this season over 12,000,000 feet of oak, ash, birch, elm and maple, and over 1,000,000 feet of hemlock.

Since the destruction of the Roddis Veneer Company's plant at Marshfield in June they have continued business without interruption and have rebuilt their plant in modern fashion. W. H. Roddis reports everything busy around the factory and says they have enjoyed excellent business the past season.

G. W. Dakin of the T. D. Kellogg Lumber and Manufacturing Company, Antigo, Wis., says the concern is making preparations to open six camps about the middle of October, the principal ones being located at Polar and Campster. From their own timber they will cut elm, maple, birch, hemlock, etc. They report business very good.

E. P. Faust of the Wisconsin Bark and Lumber Company of Antigo says they are enjoying a splendid business, all hands being kept busy continually. The hub mill is running to full capacity.

The Ahnapee Veneer and Seating Company of Algoma, Wis., says that business is exceptionally good with them; they have just installed an automatic sprinkler device and alarm signals, made by the Automatic Sprinkler Company of Chicago, and are putting in a new 225 horsepower engine, made by the Vetter Manufacturing Company of Milwaukee.

Geo. E. Foster of the Foster-Latimer Lumber Company, Mellen, reports the hardwood end of their business very good this season and says the plant has been running night and day for some time. They will cut 14,000,000 feet of hardwood and 16,000,000 of hemlock this season. In compliance with the demands of business the concern has just completed an extensive addition on the west end of the present large building.

C. P. Crosby of Rhinelander has just returned from a flying trip up the state, where he has been looking over the hardwood field. He found plenty of stock but a large portion was not up to the required Crosby standard. The cost of logging has increased materially. Mr. Crosby says business has been good with him this year, and that he has shipped 12,000,000 feet

The Mason-Donaldson Lumber Company of Rhinelander reports exceptionally good business the past season. Their mills at State Line, Wis., are sawing hardwoods, hemlock and pine. Mr. Donaldson spends a day or two of each week at the mills, directing and giving attention to the details of the rapidly growing business.

C. E. Lovett, in charge of the hardwood department of the Brown Brothers Lumber Company, Rhinelander, says they are enjoying a steady business and are kept busy all the time.

Little Rock, Ark.

Evidently the depression that has come in soft wood circles, particularly in Louisiana, where, according to report, a number of the larger mills are closing down, has not affected the hardwood industry. At least not in this state. The output is still measured simply by the amount of labor that can be secured in the operation of the various mills and factories and the car capacity obtainable for shipping purposes.

Among the large plants opened up in the state the past week is that of the Helena Manufacturing Company at Helena, Ark., which will manufacture chairs chiefly. The plant opened with a hundred on the payroll, which will soon be increased to 300. The plant had been ready for operation some time, but had to wait for connection with the city water supply. This makes a valuable addition to the hardwood facilities at Helena, fast becoming one of the leading hardwood manufacturing towns in the state.

The Jacksonport mill of the Fee-Crayton Hardwood Company is being removed to Newport. The tree and yoke factory of the same company, now located at Jacksonport, is to be removed to Newport, and the company will begin shortly after New Years on the erection of a mammoth band mill for Newport.

A furniture plant for the manufacture of furniture from ash and similar woods is to be located at DeVall's Bluff in the near future. There is a large supply of raw material from which the mill may draw.

The shingle and sawmill plant of the Van Cleave Lumber Company at Perry burned last week, the total loss being about \$10,000. The plant was new and as the water system had not been installed the fire could not be checked. It is understood that the mill will be rebuilt.

The Louis Koers Wagon Factory of this city has the distinction of having put up much of the material for the Pine Bluff (Ark.) fire department. The order from Pine Bluff included a hose wagon, patrol wagon and a buggy for the chief of the fire department.

The Pleasant Grove stove mill in Perry county is cutting a large amount of material for northern shipment. The hardwood industry has only recently been opened up in that section, where the pine lumber industry has so long been dominant.

The National Cooperage Company's plant and other hardwood plants at Clarendon are running night and day shifts.

The Dardanelle Hardwood Company has erected a first class hardwood plant at Dardanelle, which will soon be in full operation.

The timber business along the Midland railroad is booming. The railroads can not furnish cars fast enough to keep the timber out of the way. Staves, heading blocks, ties and sawed stuff of all kinds fill the yards along the line. Patterson & Co. have two large band saws running, cutting wagon fellows.

W. A. Myrick has put in a new hardwood mill at Newport. He will work up oak, hickory and wagon stock timber particularly.

The Wynne Stave Company is reported to be making plans to open a branch factory at Earle, Ark.

The impetus lately gained by the hardwood industry along White river bids fair to resurrect the long-dead river traffic. At one time the river trade was supreme along White and St

Francis rivers, but that was years ago. The failure of the railroads to furnish cars promptly gave the Reuter Hub Company and other concerns in that section so much annoyance that the Reuter people decided to put in barges for towing and transporting their material. One of their steamers, in about two months' time, handled nearly 2,000 tons of hardwood material. The company is now engaged in the construction of two additional barges, with a capacity of 150 tons each, which will be put into commission as soon as completed.

The shippers along the river have been aroused by the hub company's efforts, and have taken up the question of establishing regular barge lines to ply up and down the river.

James Euart, formerly one of the managers of the Forrest City Lumber Company, Forrest City, Ark., has connected himself with the Central Lumber Company, one of the leading lumber concerns of this city.

Harry T. Alcott, formerly with the Bluff City Lumber Company at Pine Bluff but for the past year with the Alabama Shingle and Lumber Company of Memphis, has returned to Pine Bluff to reside.

H. Paepcke, president, and William Wilms, vice-president of the Paepcke-Leicht Lumber Company of Chicago, spent last week at Helena looking after the interests of the company there. They have just erected a new plant in that city, this being Mr. Paepcke's first visit since the new plant was installed.

George C. Borreson, one of the office men of the Sawyer and Austin Lumber Company at Pine Bluff, and Miss Cora Lee Buck, an accomplished young lady of the Bluff city, were married last week at the home of the bride's parents, Mr. and Mrs. T. E. Buck. The wedding was one of the prettiest solemnized in Pine Bluff this season.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

The hardwood trade in this city may be termed simply fair. There is considerable movement of lumber, but this is generally in small lots. Large buyers who at this time of year usually place orders for a good many million feet seem to be holding off and are buying only in comparatively small quantities when at all. The general conditions of the trade seem to be fairly healthy and there is a good prospect of increasing demand as the season advances. A considerable tightness of the money market is apparently the chief cause of restricted purchases. The trade well understands that no considerable quantity of lumber is being piled up in excess of current demand and is equally well satisfied that there will be no diminution in values.

Boston.

No abatement in the strength of the market for hardwoods can be reported. Car shortage now that the season of moving crops is at hand is beginning to be a serious problem. Dealers have been talking car shortage to buyers for several weeks, but with the high prices consumers have been slow to anticipate their wants. Stocks in the hands of consumers are of fair size. Furniture manufacturers are doing a fair amount of business and have good orders in sight. The falling off in building operations has resulted in manufacturers of interior house finish receiving a much smaller amount of new business. Few have the usual volume of orders customary at this season of the year. Demand for plain oak has shown no improvement during the past two weeks. For some little time it was evident manufacturers of lumber have been putting their oak into plain rather than quartered, as the offerings of the former are much larger than the latter. Prices of plain oak range from

Morehead, Ky.

The Clearfield Lumber Company has under construction about twenty dwellings. Its planing mill and dry house are about completed. The 18-mile extension of the Morehead & North Fork railway is now under construction, and will extend the road into one of the finest coal fields in the state. This will give Morehead and surrounding country the finest canal coal in the world.

S. M. Bradley has just returned from a trip through Pennsylvania and New York and reports a good trade in his lines. He closed a large deal with the Pennsylvania Railroad Company for railroad ties and timbers to be furnished next year.

The car situation has been a very serious matter. S. M. Bradley says he now has over 250 cars ordered, but cannot get enough to keep his inspectors busy one-half the time.

McGlone Brothers have sold their hickory spoke business to S. M. Bradley and will give all their attention to the stave business.

S. B. Reese Lumber Company of Farmers, Ky., is running steadily, with more than a three-months' run of logs yet at their mill. It is also complaining of car shortage, and its yard is blocked with lumber.

The Licking River Lumber Company, Farmers, Ky., is doing a nice business. The new manager, is looking forward to a good trade in lumber this fall.

W. H. Brown, Morehead, Ky., has purchased a new sawmill and will commence to manufacture lumber at once. He was in the lumber business for several years but met with reverses three years ago and has since been out of business.

The Farmers Lumber Company of Farmers, Ky., closed down this week, having finished their cut for this year. This company has considerable holdings on Licking river and expects to do a good business next year.

Poplar, ash and oak, which have been strong for some time, have moved up a point or two by reason of the increased market. Chestnut is also moving freely, and birch, maple and the balance of the list are holding their own very nicely. Basswood is absorbed as rapidly as offered. The dealers all look for an increased fall trade, and in fact the whole situation looks good for the balance of the year.

Philadelphia.

The hardwood situation has improved somewhat during the last fortnight. Values with one or two exceptions are stiffening and trading is brightening up. It is admitted, however, that considerable hustling is necessary to get orders, as buyers are still a little slow. Complaints are coming in concerning the inadequate car service, some stating that cars were not received until after a wait of three weeks. Building operations, especially on structural work, are holding up well, and September has broken the record for the same month of previous years. During this month 740 permits were issued for 1,384 operations, at an estimated cost of \$3,113,810. It is admitted by those posted that on account of the stringency in the money market considerable of this work will be deferred until capital is more easily obtained. Furniture manufacturers are buying a little more freely; floor makers and indoor finish workers keep busy; boxmakers are still active; sash and door mills are rushing out orders, and veneer and cigar box factories continue prosperous.

Among the hardwoods, poplar and ash are holding firm; chestnut varies a little, with a tendency to steady; basswood, maple and birch keep a good position. Cypress is in good demand, but oak is a little off. There is apparently no surplus stock of good hardwoods anywhere; consequently there is no fear of lower values, although here and there some small manufacturer is to be found cutting prices.

Baltimore.

There has been no decided change in the hardwood situation here during the past two weeks, but some feeling of uncertainty prevails. While stocks continue to bring about the same prices, there seems to be a disposition to proceed with caution. Good dry stocks are being taken up as fast as is practicable, and the distribution is of satisfactory proportions. The offerings, however, are quite free, but prices are steady, though the tone as to low-grade lumber remains fairly easy. Oak is about holding its own, the mills having enough orders to keep them running full time, and the markets of this section being as a rule receptive. Large quantities of lumber are being called for and delivery is now fairly good. The danger of a car famine, however, has not yet disappeared, and dealers are consequently more disposed to allow for delay in receiving orders, making them larger than might otherwise be the case. The export business is still quiet. Stocks abroad are still too large to make buyers eager to take lumber at any figure. Ash is moving with tolerable freedom, good stocks being in demand, and even the lower grades commanding acceptable prices. Other hardwoods are holding their own, with here and there some slight shadings in price, but the strength of the market generally unimpaired. Collections are slow. Altogether the situation affords ground for encouragement, even though it must be admitted that some reduction in buoyancy has taken place.

Pittsburg.

When all is said the hardwood man is by all odds the happiest fellow in the bunch. His joy is perennial this year, for he has had comparatively few hard knocks compared with his brothers. Just now he is congratulating himself that while the hardwood trade might be just a trifle better, there is no reason to kick, for he has much more than his share of the total of lumber sales.

New York.

The situation in the metropolitan district has shown considerable improvement during the fortnight, more especially in buying. This fact is undoubtedly due to an awakening on the part of the retail and manufacturing consumers to the fact that the car shortage and the scarcity of the better grades of hardwoods are such as to make necessary immediate purchases if they would be in possession of their usual fall and winter supplies. Such being the case, there has been a marked increase in quick shipment orders for all kinds of stock along the line. A majority of the orders is for quick or rush shipments, which is somewhat annoying to the wholesale trade by reason of transportation difficulties. The volume of building permits issued during the fortnight was fair and it is expected that building in the city proper during the fall and early winter will be about up to average. On the other hand, the trade in the suburbs and nearby sections is very active and the lumber market in good shape. Stocks are not plentiful in the hands of suburban yards and with the increased demand there is an accompanying increase in purchases.

His price books show very little cutting and his order sheets give good proof of the general activity among hardwood buyers. Moreover, for two weeks past practically every dealer in the city has noted a great increase in the inquiries, especially from manufacturers, and has also learned that they are getting impatient to have their wants satisfied.

Prices are reported firm on every hand. A few note an inclination to boost quotations on one or two woods, but this is generally discouraged. If present figures can be maintained until spring the wholesaler will be well satisfied. Oak is once more itself so far as price is concerned, and demand seems to be greatly stimulated. There is apparently no letup in the call for poplar lumber. Ash, elm, hickory, cherry and beech are among the most frequent subjects of inquiry. The fact that good salesmen are hard to find is not deterring many wholesalers from adding to their force at larger salaries than were ever paid in Pittsburg before and they say the results are justifying them in the move. The trade throughout the middle west is said to be improving steadily, but the immediate Pittsburg district is showing little change.

Buffalo.

Hardwood lumber is still the best thing in the trade, as complaints, though they are heard more or less, are not so general and far-reaching as in the pine trade. White pine dealers are charging the sawmills with grabbing all the profits, while the complaint on yellow pine is from the sawmill owners, who are not able to keep prices well balanced and so must sell their cut for what they can get.

There is some weakness in hardwood, inch plain oak being pretty plentiful, though if the holders of it would depart from the usual plan of reducing price in such cases and would wait a little the market would adjust itself all right, for the sawmills will go to cutting oak quartered now and plain oak will soon be less plentiful. The difficulty was brought about last winter and spring, when so many dealers gave out that there was going to be a scarcity of plain oak.

Birch is also in good supply, but if the trade will turn its attention towards the scarcer woods, ash and chestnut, and will manage to get elm and basswood at prices that the eastern consumer will pay, there will be sale enough for birch soon. There is demand for maple, but the mill prices are high, some of the mill owners saying that they are aware they are asking more than the jobber can pay and so are catering to the consumer direct.

There is no weakening in the price of poplar, for it is as scarce as ever and will remain so as long as the demand is fair, for the mills are not reporting any logs coming in. Other woods must be put in to take its place.

There is a good stock of hardwood lumber here and it is well assorted. Some yards are reporting supplies of such scarce woods as ash and chestnut and all are carrying fine assortments. Prices are stronger than is the case with pine and if any reduction is accepted it will be on the plan of lower prices for every article used, as seems to be the idea of some who are studying the future.

Saginaw and Bay City.

Trade in hardwood is fairly good and the market continues firm and healthy. The easing off of some industries does not appear to have affected the hardwood trade to any extent worth noticing. Prices are also firm for most woods. The small quantity of oak handled in this market of home manufacture has been apparent all the year, and dealers have brought in from other localities large lots of oak for their customers, and some ship from the manufacturing point direct to the seller. Ash has ruled firm during the season and the output is limited. Maple has been doing better. The output of a number of mills for the entire season was contracted for early in the year. Basswood has been doing

very well, and elm and birch have ruled steady. Dealers are picking up stock right along, and the mills are all doing well.

Indianapolis.

Business has been a disappointment during the past two weeks, and one of the largest local hardwood dealers says the outlook is not bright for the present, although good business is looked for later on.

The unexpected slump, however, has had no effect on prices, and it is believed that it will be over within a few weeks. All the yards are well stocked except on quartered oak and but little stock is being bought. The car service continues good, the supply being ample to meet the demand.

Bristol, Va.-Tenn.

Trade conditions in this section show slight improvement, though prices have not altogether recovered from the weakness attending the dullness of the past few weeks. The demand is growing better and there is an impression among the best informed lumbermen that fall and winter business will be quite satisfactory.

There is considerable stock on the yards, much of which is attributable to the shortage of transportation equipment. Complaint of slow movement of shipments to destination is heard and one local concern gives as an instance the fact that two months ago he shipped a car of lumber to Baltimore and it has never turned up. Another has a shipment for Cincinnati that has been out thirty days.

Exporters say the outlook with them is much brighter than it has been and that the prospects for complete recovery of trade at a very early date are bright.

Cincinnati.

Little change has been manifested in the local hardwood situation during the last fortnight. The best on the list of hardwoods is poplar as usual, that item finding outlet with little difficulty. Quartered oak is showing little trouble in being disposed of. The fall trade has been rather light so far, but change for the better is patiently being awaited by local lumber dealers. The money market still figures prominently in the hardwood situation, and if relief comes soon a decided difference will be noticed in the market. Other lines of hardwoods are steady in price and the demand is on a par with that of the last two weeks in September.

The general outlook for future business is brighter and things are expected to liven up within a short time.

Chattanooga.

With the approach of winter lumbermen in this territory are confident of good business. Trade in both foreign and home circles is reported on all hands to be prosperous and has been so all fall. For log supplies the month of September was a record breaker, and there are now more logs in the river here than have been seen at this season of the year for a long period. In spite of this fact the maximum amount of logs received will be far short of any previous year. Building operations continue active and there are a number of high-class residences, a large hotel and other expensive structures requiring hardwood finish under way. The car shortage is beginning to be troublesome again and is expected to grow worse. All woods are in good call and there is a general feeling among the local trade that there will be an unusual demand for hardwood lumber during the next two months.

Charlotte.

Market conditions here have undergone no appreciable change during the past two weeks. Some trouble is experienced in getting certain grades of hardwood, and on a few grades a fancy price is required, but on the whole there is no trouble in keeping well supplied with stock. Lumbermen state that orders continue to pour in

and that they find a ready market for all manufactured goods. Charlotte lumber manufacturers have a broad scope of territory to buy in and if conditions are unfavorable further south they are generally satisfactory in the mountains of this state. So far there has been little difficulty in getting a sufficient number of cars to carry on a normal business, and manufacturers are hoping they will not be forced to go through another car famine like that experienced last winter and spring.

Nashville.

Firm prices are noted locally in all the leading hardwoods, especially in the highest grade stuffs, in spite of the fact that many of the dealers are disappointed in the delayed fall trade. September did not prove anything like a record-breaker for business and the expected revival of fall trade did not materialize. In spite of this local dealers are now expecting things to open up quite a bit and are looking forward to an active trade.

The car shortage situation is causing much alarm in this market. Advices also from northern and eastern markets show that the same alarm is felt in those sections and that not only is the situation serious, but that it will probably get worse as the season advances. The cry for more equipment has already started among the shippers. The operators are claiming that there is more equipment in service than for years. Admittedly the volume of business has increased in like proportion, so that the end is not near. It seems the shippers figured for a while that the remedy was discovered in the advancement of the car rental per diem. It develops, however, this imaginary panacea was not of much benefit, for the same old cry is being heard of "more cars." Freight traffic officials are telling the local dealers that they are doing all in their power to prevent a car shortage by furnishing all the equipment at their command. In spite of their efforts, however, it is said this season brings them face to face with the biggest proposition in the way of a car shortage they have met with in years.

Memphis.

Demand for hardwood lumber is gradually increasing and there are more orders coming forward. But, even at this, there is not as much activity as the trade has enjoyed for several years at this season and there is some discouragement over this fact. However, there is no apparent disposition to cut prices for the sake of making sales. On the contrary, with the exception of red gum, narrow widths of cottonwood in the higher grades and low-grade plain oak, the market shows a very healthy undertone, prices being maintained close around the level which has prevailed for some time. Export demand is very disappointing and there is no improvement indicated in the near future. There is no surplus of dry lumber either in the larger yards here or at interior milling points, which is one of the chief factors in the strength shown by the general market. The trade continues to believe there will soon be an awakening of buyers to the scarcity of dry stock and this belief is largely responsible for the fact that there is no more pronounced disposition to throw stock on the market.

There is a very satisfactory demand for quarter-sawn oak in all grades. There has been more quarter-sawn white oak sold during the past fortnight than for some time previous. Plain oak in the higher grades moves very satisfactorily, with the white in rather better demand than the red. Ash is offered in only moderate quantities and holders are not meeting with much difficulty in getting their price for what they have for sale. Stocks of ash here are much broken and efforts to accumulate holdings in the local yards have not proven at all successful. Poplar is in good demand in all grades and there is very little of any description

Timber Estimates Guaranteed Correct

- ¶ Do you want to know, almost to a tree, just what timber there is on a tract?
- ¶ When you pay out your money for timber, it is important to know exactly what you are buying. The only way to know this is to have Estimates made of the timber.
- ¶ Our large corps of experienced timber men will do this right.
- ¶ We cross each forty, each way, four times.
- ¶ **THERE IS NO GUESS WORK.**
- ¶ We furnish maps showing exact location of timber—streams and surface conditions, affecting, in any way, logging operations.
- ¶ No tract too large—none too small.
- ¶ Correspondence solicited.

S. D. CHILDS & CO.
Chicago

We also make Time Checks, Stencils and Log Hammers.

for sale here. Cypress is offered, but moderate quantities and prices are fairly well maintained thereon. Cottonwood in all descriptions, except narrow firsts and seconds, is in good demand and is moving readily at satisfactory values. In fact, the lower grades are almost as scarce as they have been at any time this season, which gives them remarkable strength. There is more red gum in all grades than for some months and the market feels the influence of increased offerings. But the amount of price reduction, considering the high level at which gum sold some time ago, is remarkably small. The lower grades are in relatively better demand than the higher, a condition which has been evident here for some time.

New Orleans.

Generally the market conditions have changed very little in the last fortnight. As a matter of fact they are practically the same as they have been during the greater part of the summer. There is still a good interior demand, but the car shortage which is becoming acute is interfering with supplying this. At present the export demand amounts to very little, and what few export shipments are sent through this way are being delayed by the tie-up on the river front. As a rule the market is not in satisfactory shape and an improvement is being anxiously awaited.

Minneapolis.

Business in the twin cities and in the northwest generally is rather light in all lines, with hardwood no exception to the rule. The country trade is quiet and has been right along. The lateness of the season has kept back business and the yards are generally stocked up for their present needs. There is a good state of feeling all over the northwest, and later on some country improvement may be expected. In the cities the factories are all busy and are working up considerable hardwood, but they have been buying stock right along as offered, and at this time are not stocking up ahead. Purchases are only for present needs, so while the market is healthy in tone it is quiet. Prices are well maintained.

Birch has been a good seller, and is a little stiffer now in price, as stocks on hand are melting down to a low point, and a scarcity by spring seems to be probable. Basswood stocks are broken, the low-grade boards being sold out, and there is no wide stock in the market. Consumers who require it are obliged to send away for poplar and cottonwood. In the upper grades there are small offerings at full list price, which are being taken right along. Maple flooring has been selling freely, but is not as active now as a while ago. Rock elm is practically out of the market, and the same is true of ash. There is a little northern red oak to be had, and southern oak stock is offered, but the car shortage is giving trouble and mills cannot promise anything like a prompt delivery. On account of the car situation prices seem certain to remain on the present level at least, even if demand continues slow.

Toledo.

The hardwood market is becoming somewhat stronger as general conditions continue to improve. For some time the call has come almost exclusively from the manufacturers, but the recent impetus in the building business locally has created some demand from other sources.

Poplar is showing up somewhat more freely than it has for some time, but the market price on all the better grades remains unshaken. The shortage of poplar is due largely to the inability to secure transportation facilities from certain fields. Shipments are now coming more freely from all quarters, but with the increased supply has come an increased demand, so that there is no immediate prospect of a break in the poplar market here.

Basswood and gum are finding a ready market at local box factories, and it is with diffi-

culty that sufficient quantities are found to meet their needs.

Other hardwoods seem to remain unchanged, with about normal supplies and prices holding their own. Present indications point to a probable increase in the demand on all kinds of hardwood.

Some oak and other lumber is being received for export from this port, but the quantity is not large as compared with that of a few years ago, much of the better timber having been culled out in this state, leaving little for such purposes.

Liverpool.

Trade has been terribly quiet during the last fortnight and prices of most hardwoods have gone to pieces. We have heard an awful lot of grumbling and we are afraid many salesmen have had almost blank days with little or nothing to show for their trouble.

Ash planks are very much easier and undoubtedly will be very cheap if all reports as to the extent of demand and supply in America are true. We should advise shippers to realize as early as possible as the prices have undoubtedly seen their best days here. Oak planks are also in a similar state and we think that the same remarks apply to this stock. We also think that the top has been seen with poplar lumber. Shippers are beginning to send on their old contracts and buyers here are finding it hard to maintain their present high values and much cutting of profit is taking place. We advise shippers to realize their stock as near present values as possible as we have heard of some shippers who are offering stock and not finding buyers which is of course always a bad sign. The only two firm spots at this market are mahogany and hickory and in view of the ridicule that has been thrown at us it is rather interesting to note the present values of the latter wood. It would be very interesting to know what a good parcel of the latter wood would bring. Mahogany with the exception of Gaboon and similar cheap descriptions still continues its upward career.

From a large Liverpool firm the HARDWOOD RECORD received the following account of the recent mahogany sale at that place:

The usual monthly auctions were held here September 19 and 20; 2,570 mahogany logs, measuring about 1,580,000 feet, Liverpool mahogany measure, were sold.

The company attending these sales was smaller than usual. Several of the extensive home purchasers were conspicuous by their absence, and the contingent of American representatives, while present in full force, were, with two or three exceptions, certainly not up to concert pitch in the matter of bidding. As a result the sales dragged rather heavily at points, and quite a number of lots were withdrawn because the figures offered did not reach the auctioneer's ideas of their value.

There was a considerable quantity of medium and low-grade wood in the catalogues. For these there was a decided break in price compared with recent sales. Good and high-grade lumber and logs generally maintained their values, though occasionally, and especially on the last day, decided bargains were picked up. It is now pretty sure that buyers will have opportunities at the October, November and December auction to secure fair quantities of wood at reasonable rates.

After Christmas imports fall off and prices generally advance.

The principal items of the sales were 500 logs Lagos, sold at from 5c to 26c, averaging 8.08c per foot; 83 logs Grand Bassam, 4½c to 50c, averaging 11c per foot; 480 logs Axim, 4½c to 34c, averaging 7.12c per foot; 531 logs Sekondi, 4½c to 19c, averaging 6.30c per foot; 285 logs Cape Lopez, 4½c to 11c, averaging 6.50c per foot.

The wood is sold on Liverpool mahogany measure, which averages 30 per cent in buyer's favor compared with the actual measure of logs.

Wanted and For Sale -SECTION-

Advertisements will be inserted in this section at the following rates:

For one insertion 20 cents a line
For two insertions 35 cents a line
For three insertions 50 cents a line
For four insertions 60 cents a line

Eight words of ordinary length make one line.
Heading counts as two lines.
No display except the headings can be admitted.

Remittances to accompany the order. No extra charges for copies of paper containing the advertisement.

EMPLOYES WANTED.

BUYER AND INSPECTOR.

Wanted. Hardwood lumber buyer and inspector by New Orleans export concern. Please address application with full data as to former experience and with references to "NEW ORLEANS EXPORT," Care HARDWOOD RECORD.

A CITY SALESMAN

Of good address, who has had first-class experience in mahogany and veneer trade. Permanent employment to man who can show successful record. State salary expected. Address M. & M., care HARDWOOD RECORD.

OPERATORS WANTED.

Practical hardwood mill operators. An Ohio river double band mill. Easy terms. Contract to saw our logs. THE GENERAL LUMBER CO., Columbus, Ohio.

EMPLOYMENT WANTED

Position with large concern as buyer or salesman. Competent to take entire charge of office. At present manager for one of the largest concerns in the country. Thoroughly acquainted with the entire eastern territory. Address "F. G." care HARDWOOD RECORD.

LUMBER WANTED

WANTED IMMEDIATELY

500 or more No. 1 and No. 2 White Oak Ties. Terms cash. THE BRADLEY COMPANY, Hamilton, Ont.

WANTED, FOR SPOT CASH

And immediate shipment. 250,000 feet 3/4" to 6 1/4" Quartered Oak; Common & Better preferred. Shipping dry. THE FREIBERG LUMBER CO., Cincinnati, O.

A firm with offices in Philadelphia, capable of furnishing the highest testimonials as to ability and standing, is desirous of representing a first-class concern. Address "HARDWOOD," 341 Philadelphia Bourse.

DIMENSION QUARTER SAWED WHITE OAK

Wanted. Clear quarter sawed white oak 1"x1", 2", 3" and 4"x16" and 20". 1 1/2"x4" and up x 16" and 20". 1 1/2"x4" and up x 16" and 20". GRAND LEDGE CHAIR CO., Grand Ledge, Mich.

OAK.

We are in the market for plain sawed oak, all grades and thicknesses. P. G. DODGE & CO., 2116 Lumber St., Chicago.

WANTED.

4/4" and 6 1/4" Sound Wormy Chestnut, Louisville delivery.

4/4" Log Run Buckeye, mill culls out, Allegheny delivery.

Address LUMBER DEPARTMENT, NATIONAL CASKET CO., Hoboken, N. J.

SMALL DIMENSION HICKORY

Wanted. Good tough wood, 1"x1"—48", straight grain from end to end and free from all defects.

CANN & TAYLOR, Asbury Park, N. J.

POPLAR WANTED

For immediate shipment.

200 M ft. 8/4 No. 1 common poplar. WILLSON BROS. LUMBER CO., Hardwood Department, Farmers' Bank Bldg., Pittsburg, Pa.

WANTED—HARDWOOD LOGS.

200,000 ft. 28" and up White Oak logs. 200,000 ft. 12" and up Walnut logs. 50,000 ft. 12" and up Cherry logs. C. L. WILLEY, 1235 S. Robey St., Chicago.

OAK WANTED.

3 and 4 inch White Oak; also Mixed Oak; also 12x12 Timbers and Piling of all kinds. CONTINENTAL LUMBER CO., 1213 Monadnock Bldg., Chicago, Ill.

TIMBER LANDS FOR SALE

SOUTHERN TIMBER LANDS

We can sell you large or small tracts of Southern timber land. Write us for list and some very low prices.

LANDERS & COMPANY, 487 Broadway, New York.

SOUTHERN HARDWOOD TIMBER LANDS

For Sale. Will contract with reliable mill-man for manufacturing lumber, or will sell stumpage from lands.

THE BAYOU LAND & LUMBER CO., 70 & 71 Mitchell Bldg., Cincinnati, Ohio.

FOR INFORMATION

Regarding unusual bargain in Georgia Hardwoods for operation or speculation, 75,000,000 feet, board measure, of Oak and Gum, suitable for Sawmill or Slack Cooperage Plant, address "K.F.," care HARDWOOD RECORD.

THREE TO FIVE SECTIONS.

Hardwood timber near Foreman, Ark.; Red and Burr Oak, Scaley Bark Hickory, Sweet Gum, Black Locust, Ash, Gum predominating. Address, A. W. CLEM, Dallas, Texas.

ALBERT FRIEDSAM

Buys and sells timber lands. West Virginia stumpage a specialty. Some bargains in oak, chestnut, hemlock, etc. Can furnish large or small tracts. Correspondence invited with those who wish to buy or sell. Address 619 Park Building, Pittsburg, Pa.

Long distance Bell phone 644 Grant.

LUMBER FOR SALE.

FOR SALE.

250 M ft. Yellow Cypress, shop and better. 100 M ft. 2" Pecky Cypress, wide stock. 100 M ft. 1" Cottonwood, log run. 100 M ft. 1" Soft Elm, log run. 30 M ft. 3x6 Cypress, tank stock. At Mount City, Ill.

Address THE WISCONSIN CHAIR CO., Lumber and Veneer Dept., Port Washington, Wis.

WHO BUYS HARDWOODS?
DO YOU WANT THE LIST?

The Hardwood Record supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

**Name of State and Town
Name of Concern
Name of Buyer
Line Manufactured**

**Kinds, Grades and Thicknesses of Lumber
Kinds and Sizes of Dimension Stock
Kinds and Thicknesses of Veneers
Kinds, Thicknesses and Sizes of Panels**

Write us about this service.

ALPENA, - - MICHIGAN

Robinson Cut-off Saw Gauge

Best and Cheapest on the Market

Adjustable and automatic stops.

Entirely NEW principle not copied after any other gauge.

Sent on 30 Days'
Trial

Entire Satis-
faction
Guaranteed.

Patent
Applied
for.

Hardwood Rail, making continuous straight edge, plainly marked in feet and inches from saw with rule-maker's dies. Handy to use for cutting odd lengths for which it is not worth while to change the stops.

Round Steel Rod, threaded, so stops cannot be jarred along, but easily changed when so desired. At one point in the turn all the threads disengage and stop can be slid along the rod and re-engaged at the desired distance from the saw

LOW PRICE

J. J. Robinson Co., Bloomsburg, Pa.

A machine that declares saw mill dividends

AUTOMATIC SWING SAW GAUGE.

¶ An inexpensive little device that *saves a dollar a day* and upwards.

¶ Stops one of the biggest profit leaks at the mill. Pays for itself several times over during a year.

¶ Isn't it worth investigating?

**SMITH of
SMITHVILLE**

NO. 105-A, EXTRA HEAVY 12-INCH MOULDER

IT HAS been our purpose during the last half century to develop a line of wood working machines containing the best workmanship and material that American skill and wisdom can afford. This fact we are proud to say is well established in the minds of our many patrons. We have, however, now exceeded ourselves by the development of a remarkable Moulder, the excellence of which is due to our obtaining written suggestions from more than a thousand operators throughout America. This machine stands alone as being the composite idea of the thinking operators of this country. One year's test of its work has convinced us that it is impossible for you to compete successfully against the Smith Moulder with any other machine. Can't we send you prices and literature?

CHEAPER LOGGING Means spending less money and getting out more logs. It is also the title of our handsome new catalogue, which is by far the most beautiful work ever issued on steam logging machinery. It is intensely interesting and instructive for any lumberman, as it contains over one hundred views (in color) of various operations, and clearly shows just what our machines can do and are doing for others.

***One of the Largest Manufacturers
in the World
has Ordered 14 of these Machines***

BERLIN No. 238 TRIM SAW.

Fourteen machines to one concern.
Nice order, wasn't it?
Do you know why they prefer this machine?
Because it is simple, substantial and cuts accurately.
It is used largely to trim hardwood flooring.
It will trim anything up to 8-inches in width.

A GOOD TRIM SAW IS A NECESSITY.

The No. 238 has a V-shaped table, holding the boards firm to cut.
A 14-inch saw is used regularly, 12-inch may be substituted.
Floor space required 3x3½ feet. Belts from any position.
Table is at angle of 40°, lower edge 32 inches from floor line.
Controls cut by foot lever. Frame solid and durable.
Not built for looks, but for service.
Would you like the name of the firm who ordered 14 at one clip?
Ask for it and a large picture of the No. 238.

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock $17\frac{1}{2}$ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

Write for Full Description.

10% More Lumber

WITH THE

Same Machinery and Crew.

If you have to shut down occasionally to wait for steam to rise.

THE GORDON HOLLOW BLAST GRATE

will enable you to increase your cut 10 per cent. without buying an additional machine or hiring an additional man.

In many cases this is a very conservative estimate.

Just think of it! A gain of 10 per cent in your output without increasing your operating expenses one penny.

Can you wonder at it that users pronounce the Gordon Hollow Blast Grate

The Best Investment They Ever Made?

Every set sold is a standing advertisement.

The Gordon Hollow Blast Grate has been on the market sixteen years, and there are over 5,000 sets in daily use. All the men that reduced it to a practical basis and made it famous are still identified with us, and in soliciting your orders we are tendering you the services of those who have had many years' experience in the business.

**WE PAY THE FREIGHT
and
TAKE ALL THE RISK.**

Let us send you an outfit on approval. Use it for thirty days. If at the end of that time you conclude you do not care to keep it, ship it back. We will pay the freight both ways.

Would we make such a proposition unless we knew the grate would be all we claim?

The Gordon Hollow Blast Grate Co.

GREENVILLE, MICHIGAN

The Largest Manufacturer of Grates, Edgers and Trimmers in the World.

Stop that Waste

Your kiln is responsible for 20% of your waste. Our new drying process will cut this percentage in two.

Knurls and knots dried as straight, and planed as smooth as clear lumber.

Warping, checking and honeycombing absolutely prevented.

And all this in half the time you now require.

Looks good, don't it? And we guarantee to make it good, in old kilns or new. Write us.

GRAND RAPIDS VENEER WORKS]

GRAND RAPIDS, MICHIGAN

LET US KILN DRY YOUR LUMBER

Consign your carload lots direct to us.

Switch tracks to our new modern dry kiln make it most convenient to Chicago and vicinity.

No charge for unloading and reloading.

Our dry kiln has a capacity of 600,000 feet and contains every known device that money can buy for the perfect seasoning of all lumber.

Quantities less than carload lots receive just as careful attention.

All consignments will be returned to you promptly as soon as seasoned.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet "Is all about Hardwood Flooring and how to get it" is a free gift.
